Page 1 shows the overall IR&D and B&P costs incurred by 99 defense contractors during their fiscal years 1975 and 1976, amounts accepted by the Government, and the Department of Defense (DoD) share of amounts accepted. The amounts accepted by the Government are allowable and allocable to all contractor work performed—Government and commercial. The DoD share of the costs accepted each year is the contractors' allocation of such costs to DoD work. In addition, this summary shows related sales achieved by the 99 contractors, comprising 258 reporting divisions and/or operating groups.

The major defense contractors in this summary are those which had an annual auditable volume of costs incurred of $30 million or required 5,000 or more man-hours of DCAA's direct audit work a year. In previous DCAA reports, a major defense contractor was identified as having an annual auditable volume of costs incurred in excess of $15 million or requiring annually 4,000 or more man-hours of direct audit effort. Since these standards were no longer realistic, they were changed. The impact of this change on the IR&D/B&P reporting requirement is not significant because it affected nine contractors only, with the DoD share of IR&D/B&P totalling approximately $6 million, or 0.6 percent of the total DoD share of IR&D/B&P costs. This summary also includes other contractors which, although not meeting the above criteria, negotiated IR&D/B&P advance agreements so that the summary on page 2 will be compatible with the advance agreement reports prepared by Army, Navy, Air Force, and the Defense Logistics Agency. Contractors specifically excluded from this summary are construction companies; educational institutions; foreign contractors and overseas operations of U.S. contractors; insurance companies; marine transport contractors; and military medicare contractors. These contracting acticities incurred nominal or no IR&D/B&P costs.

DCAA obtained the IR&D/B&P cost and sales data from contractors' records, but such data do not necessarily represent audited amounts. Included in the costs shown are amounts accepted by the Government in overhead negotiations and through advance agreements. Where actual cost and sales data were not available, as in the case of contractors which had not closed their books for 1976, DCAA auditors obtained reasonable estimates.

Page 2 shows the extent of advance agreements in effect during 1975 and 1976. Page 3 shows costs not subject to advance agreements.

SUMMARY OF INDEPENDENT RESEARCH AND DEVELOPMENT AND BID AND PROPOSAL COSTS INCURRED AND SALES ACHIEVED BY MAJOR DEFENSE CONTRACTORS FOR CONTRACTOR FISCAL YEARS 1975 AND 1976

[In millions of dollars]

	1975			1976		
	Costs incurred	Amount accepted by Government	DOD share	Costs incurred	Amount accepted by Government	DOD share
Independent research and development (I.R. & D.)	1,235	1,015	501	1,323	1,061	543
Bid and proposal (B. & P.)	604	539	381	677	590	415
Total I.R. & D. and B. & P. costs	1,839	1,554	[1] 882	2,000	1,651	[1] 958
Sales—Total Government and commercial		[1] 46,024			[1] 48,962	
Sales—Total DOD			[1] 24,751			[1] 27,181

[1] Included in the data are the sales to foreign governments placed through DOD contracts and reimbursed to DOD by such foreign governments in the amounts of $2,158,700,000 and $3,364,600,000 for 1975 and 1976, respectively, as well as the applicable I.R. & D. and B. & P. costs allocable to these sales in the amounts of $71,000,000 and $112,800,000 for 1975 and 1976 respectively.

OUR DEEPENING FARM CRISIS

Mr. HUMPHREY. Mr. President, tragedy is brewing in the American countryside. Unless the Congress and the Executive move quickly and effectively to confront our emerging catastrophe, we and future generations will pay a heavy price.

The situation is clear. The price that farmers receive for basic farm commodities is rapidly tumbling downward. At the same time, farmers are faced with absorbing costs that seemingly only continue to increase. The ultimate result of this vicious cost-price squeeze is both financial and social disaster.

Getting at the heart of the financial disaster that farmers face is rather simple to do. Last year, farmers received an average of $3.15 for a bushel of wheat. This year, they will be fortunate to receive $2. In fact, farmers in the lower Great Plains where the wheat harvest currently is taking place are getting as little as $1.85 per bushel.

What does this mean? With a 2 billion bushel wheat crop being forecast, wheat producers, who will lose at least $1 a bushel, are facing at least a $2 billion drop in income, compared to last year. Part of this $2 billion was income or receipts in excess of expenditures. This year wheat producers will lose at least $1 billion below their costs.

Let me reflect for a moment on what all this means. This year we can anticipate thousands of individuals leaving the farm. We cannot afford to lose these individuals. They are family farmers but their farms are very productive. We need these producers.

Let us not forget that farming is a social as well as an economic institution in American culture. It is our family farmers that make up rural America. It is their income that supports small town banks, implement dealers, grain dealers, and other firms that depend on farm purchasing power.

A recent USDA survey talked about the farm credit crisis in the Great Plains and Midwest. In many States, one out of five farmers was in immediate danger of going out of business this year. In some of these same States up to one-third of the farmers were expected to refinance their assets because of their precarious financial condition. And this was when prices were somewhat higher than they are today.

Rural bankers are faced with a tragic choice. They can choose to finance individuals who clearly do not have, under current market conditions, any serious chance to make a profit. Or they can hang onto their money for more sound financial investment. Many rural bankers are risking their financial future by choosing to invest in our farmers. There is little doubt that these bankers are making this choice to invest on human rather than economic grounds.

Let us not forget how we got into this crisis. The previous administration had what it called a "fence row to fence row" farm policy. Conditions at the time dictated that we adopt such a course. There was massive food shortage in the Sahel region of Africa and in South Asia. Also, there was an increasing demand from our traditional and newer foreign customers. It seemed that there would be either a compelling humanitarian or commercial need for whatever our producers could grow. Our Government told our farmers to go out and have maximum production and plant from fence row to fence row.

It was Government policy that asked our farmers to maximize production. But will it be a Government policy to share the risk with our farmers?

As my colleagues know, the Senate Committee on Agriculture began extensive hearings in January in order to formulate a farm policy that would meet the needs of consumers while maintaining a sound farm economy. The committee heard scores of witnesses and held 2½ weeks of markup on all the legislative proposals that were generated by the distinguished Members of this body.

The legislation passed by the Senate seemed to be a prudent and wise course. We developed target price levels that were to roughly equal the cost of production and loan levels that would keep our farmers competitive in world markets. In late May the Members of this body made this approach the will of the Senate.

In its version of the farm bill the Senate adopted what I believe was a comprehensive range of sound farm policies. The 3-year, on-farm reseal program that the Senate adopted would help this Nation build stocks that would protect us against the vagaries of weather, the most significant factor in our agricultural production.

Wheat is not the only commodity that is in a precarious market condition. Corn, milo, barley, soybeans, flaxseed, sugar, and cotton all are in very serious condition with plunging prices.

Soybeans, the golden crop just a few short weeks ago, are down to $5.93 from the near $10 high of earlier this year. A year ago, soybeans were selling for $7.07. Corn, another critical commodity, is down nearly $1 a bushel from a year earlier. And sugar, which is the orphan of our farm policy, left at the mercy of subsidized foreign dumping—the only commodity of importance without a program—is down almost 6 cents a pound from last year, costing its producers nearly $1 billion.

Mr. President, I have a chart detailing the situation from a recent edition of the Wall Street Journal. I ask unanimous consent that it be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HUMPHREY. Mr. President, it is important that we fully understand the gravity of this crisis. Statistics do not tell the full story. The farmers and rural entities that will go broke this year are really only the tip of the iceberg. Those that manage to hang on will be burdened with debts that will inhibit their viability for years to come. These producers will have no solace in thinking back to the Government policies that got them into this situation in the first place. I can only hope that it will be Government policy to assure their survival.

Agriculture is the backbone of the U.S. economy. Even though only 1 of every 25 Americans claims farming as his occupation, agriculture touches the well-being of us all. Falling farm prices, which are never accurately reflected at the grocery shelf, have never really benefited consumers. Severe swings in a downward manner have historically been met by radical actions to reduce production. Ultimately, supply will fall below demand and prices swing sharply upward out of control.

Stability characterizes the farm economies of many countries, but not ours. It may be that at one time we could afford instability. Today the price we pay is much higher. Regardless of what we may wish to think, we have a farm econ-

omy that is capital intensive. Even minor shifts in farm income will have a ripple effect in associated industries. The crisis we have today is shaking the foundation of the economies of the entire farm belt, indeed, the foundation of rural America.

The situation in my home State of Minnesota is particularly precarious. Only this spring were our farmers able to come out of one of the most serious droughts since the great depression. When prices were high a couple of years ago, Minnesota producers had nothing to sell. Now they have record production and limited markets.

It is, indeed, perplexing that American agriculture, the most productive and effective system of farms that the world has ever seen, remains subject to wild economic swings. We must reflect on the current lesson and try to design policy alternatives that will bring stability to the countryside. In the meantime, the Congress must seriously assess the current situation in its approach to current farm legislation. To do otherwise would be to act in a manner that is inconsistent with the interest of this Nation.

EXHIBIT 1.—LIST OF COMMODITIES AND PRICES

Commodity	July 11, 1977	Year ago	Price decline
Wheat, No. 2 ordinary hard Kansas City (bushel)	$2.34½	$3.64½	—$1.30
Wheat, No. 2 Dark Northern 14 percent pro Minneapolis	2.55¼	4.30	—1.74¾
Wheat, No. 2 Soft Red, Chicago (bushel)	2.20½	3.31½	—1.11

EXTENSIONS OF REMARKS

CLIMATE PREDICTION

HON. HARRISON "JACK" SCHMITT

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, July 15, 1977

Mr. SCHMITT. Mr. President, on July 6, 1977, the Science, Technology, and Space Subcommittee conducted formal hearings in Albuquerque, N. Mex. The purpose of these field hearings was to examine the special needs of our southwestern States for long range climate prediction and to consider S. 421, the National Climate Program Act. This bill was introduced by Senator PEARSON and I am happy to be a cosponsor.

New Mexico and the southwestern United States have as great, if not greater, interest in climate prediction as most other areas. Our basic climate is compatible with ranching and farming, but just barely. The more often and the more accurately we can predict annual and multi-annual climate variation, particularly the adverse years, the more economical will be our agricultural activities.

This lesson from New Mexico has more general application. The industrial nations of the world are pushing the limits of the availability of energy. Thus, annual and multi-annual variations in climate, specifically heat and cold, can cause major crises of energy supply. We saw this demonstrated last winter in this country.

The rapidly increasing populations of the developing nations of the world are pushing the limits of the availability of food supplies. Thus, small annual and multi-annual variations in climate, specifically snowfall and rainfall, can cause major seasonal shortages of food. We see these crises each year in many parts of the world.

The common factor is that the world is pushing at the present limits of the earth's ability to support the material and population growth we demand. Technology offers major relief from these limits in the future; however, for the next several decades much improved climate prediction is absolutely necessary if we are to buy time for politics and technology to sort themselves out. This is as true for New Mexico and the Southwest as it is for the world.

New Mexicans and other southwesterners were able to make a number of unique and significant contributions to the hearing record which will eventually improve the effectiveness of the proposed legislation. Witnesses included a broad spectrum of interests from scientific investigators to farmers and ranchers to government officials. Testimony was given by a number of private citizens, organizations, and institutions including: University of Arizona, Tree Ring Institute; Sandia Laboratories; U.S. Geological Survey; National Weather Service; State of New Mexico; State of Texas; New Mexico State University; All Indian Pueblo Council; Navajo Tribal Council; New Mexico Farm and Livestock Bureau; City of Albuquerque; Northeast New Mexico Range Management Assn.; New Mexico Cattle Growers Assn.

Mayor Harry Kinney of Albuquerque made special note of the importance of accurate climate information to city planning related to construction and weather related operational costs. For example, the city recently completed expensive upgrading of the flood control system used to protect residents from the hypothetical "100-year flood." Data uncertainties lead to what he believed may have been substantial and expensive over-design of flood levies and culverts. Dependable, long-term climate information may have been able to reduce the engineering costs of the project and to permit the diversion of scarce funds to priority services for city residents.

Harold Malde of the U.S. Geological Survey and Harold Fritts of the Arizona Tree Ring Institute made particularly effective statements regarding the need for a multidisciplinary approach to climate research. Dr. Fritts pointed out for example, the importance of dendroclimatology—climate study through the analysis of tree rings—in testing current theories proposed by meteorologists. Robert Roosen of Sandia Laboratories explained the contribution of the systems analyst in coordinating data input so that predictive models, particularly those using solar data, can be developed using the most sensitive indicators of future climate.

Mr. Joe Skeen, a sheep rancher from Picacho, N. Mex., and W. O. Culvertson of the Northeast New Mexico Range Management Association expressed the plight of range managers in dealing with climate problems. Sensitive western rangeland can be overgrazed in unexpected periods of dryness, leading to long-term damage to the root systems of grasses. Accurate rainfall predictions would permit sale of stock in excess of the level which could be supported by the range or permit purchase of additional stock in wet periods resulting in higher yields.

Hearing testimony included acknowledgement of the strong correlation between some solar phenomena and climate conditions in certain geographical regions of the Southwest. It was noted for example that periods of relative wetness and dryness in southwestern New Mexico closely follow the 11- and 22-year sunspot cycles. Similarly, periods of relatively high rainfall may follow solar flare activity by about 6 weeks.

Mr. George Gregg of the National Weather Service Forecast Office in Albuquerque noted that substantial data generated by National Weather Service offices and State offices are not in a form suitable for climate analysis. It was his opinion that a relatively large quantity of useful information has remained untapped for this reason and that preparation of that information for data analysis will be a tedious but ultimately fruitful operation. In the same vein, State climatological and weather offices have not been wholly successful due to inadequate funding as well as lack of relevance of many of the functions assigned to the offices. However, all witnesses agreed that the concept of State climatological offices should be pursued vigorously. Mr. Skeen and Bob Storey of the New Mexico Farm and Livestock Bureau pointed out that climate prediction capability would be particularly valuable in directing agricultural research. Modern hybrids can be adapted for optimum yields if it is known that growing seasons will be unusually long, short, or variable. Also, it is possible to establish different

crop rotation schedules which would improve agricultural yields when climate variations are known.

As a member of the Commerce Committee, I was pleased to participate in the series of climate hearings and to chair those conducted in Albuquerque. While no one should expect immediate results from these very early efforts, the long term financial return from effective climate research is in the billions of dollars annually. I am pleased to report to the Senate that the people of New Mexico are most interested in the progress of this initiative and are vitally affected by its potential results.

THINGS SEEM GRAVELY AMISS

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. UDALL. Mr. Speaker, things seem gravely amiss when in the face of a 35-percent construction unemployment in an area of the United States, our own Department of Labor makes it possible for a German construction company to import German bricklayers.

The situation is detailed in a recent article by the Journal of the International Union of Bricklayers and Allied Craftsmen. I commend it to my colleagues.

The article raises serious questions about not only the interpretation of law under which labor certifications are issued but also the policy view taken by the Department of State vis-a-vis impact on U.S. workers.

Here is the Journal article:

STATE DEPARTMENT ACTION DENIES U.S. BRICKLAYERS EMPLOYMENT OPPORTUNITIES

In the face of 35 percent construction unemployment in the Mobile, Alabama, area, and in direct contradiction of the U.S. immigration laws, a German construction company is currently being allowed to import German bricklayers and laborers to construct a feed plant in Theodore, Alabama.

DeGussa Alabama, Inc., a firm with its parent office in Germany, awarded the masonry contract for the feed plant to another German firm, the Hof Company, after bids had been received from at least two American contractors. The company claims that the work involved necessitates materials and specially trained workers not available in the United States. However, the American contractors and local union officials dispute this claim saying that the work is not unique and that both the materials and the skilled workers are available.

The German workers were issued B–1 visas by the American Consuls in Dusseldorf and Munich, Germany. However, such visas are intended for businessmen and supervisory personnel, not for "purely local employment or labor for hire."

Labor certifications for either the temporary or permanent employment of aliens in the United States may be issued only after the Secretary of Labor has determined that there are not sufficient United States workers who are available to perform the work and that the employment of aliens will not adversely affect wages and working conditions of United States workers.

E. A. Lewis, Business Agent of Local 2, Mobile, Alabama, charged that "one-third of our trained bricklayers are sitting idle while these German bricklayers are imported to work on the DeGussa project." He said that if the German bricklayers are allowed to complete the projected 21-week "Stage Two" of the project, Local 2 members will have lost more than $400,000 in wages and benefits. Laborers in the Mobile area will also have lost another $90,000 in wages and benefits. At the same time, U.S. unemployment benefits amounting to about $110,000 will have been paid to Local 2's members who could have been employed on this project.

"The law has obviously been bent to fit the wishes of the Hof Company and the German based DeGussa Corporation," IU President Thomas F. Murphy asserted. "The importation of foreign workers, who conceivably will work for wages less than those required by American union standards, while American workers remain unemployed, is damaging to the economy and contrary to Congressional intent."

Some evidence of the U.S. State Department's misunderstanding of the problem and of its impact is reflected in the comment of a State Department official who maintained that because the German bricklayers are paid by a German employer, their wages and working conditions do not adversely affect workers in the United States.

"If such false impressions are allowed to stand unchallenged, the decent wages and working conditions that American workers have fought to obtain over the years will mean nothing," IU Secretary John T. Joyce stated. "Over the past few years, American workers have watched their jobs disappear as American companies moved to foreign countries for cheap labor. But to allow, even give permission, to foreign companies to come into our own country and deprive American workers of jobs that they need and are trained for is in direct contradiction to our immigration laws and is a gross violation of the rights of American workers."

Letters of protest have been sent by the IU Executive Board, Local 2, Alabama, and Robert Georgine, President of the AFL–CIO Building and Construction Trades Department to President Jimmy Carter, Secretary of State Cyrus Vance, Attorney General Griffin Bell, Secretary of Labor Ray Marshall, Senators John Sparkman, James Allen and James Eastland, and Representatives Jack Edwards and Joshua Eilberg.

Local 2 Business Agent E. A. Lewis and IU officials met recently with Senator John Sparkman and Senator James Allen's representative in Washington, D.C., seeking action on the situation.

In addition, it is understood that the National Legal Center for the Public Interest is investigating the case.

THE MENDED HEARTS, INC.

HON. PETE V. DOMENICI

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, July 15, 1977

Mr. DOMENICI. Mr. President, few of us have been untouched by heart disease—members of our families, close friends, perhaps even ourselves have been victims. The American Heart Association estimates that over 28 million Americans are affected with cardiovascular disease, and 1 million deaths a year are attributed to it. This is more than from all other causes combined.

For most, there are no cure-alls, yet medical specialists have determined that for some 80,000 persons annually in the United States, heart surgery can be performed which may correct their problem. However, as with all surgical procedures, there are risks involved, and the physical and psychological torment preceding the operation may be immense. The patient and his or her family need reassurance and guidance, not knowing where to turn.

Recently, I have become aware of an organization which attempts to fill the needs of the patients and their families. The organization, The Mended Hearts, Inc., is a voluntary affiliation of persons throughout the world who have undergone heart surgery. This worthy organization was started in 1951 by 4 post-surgery heart patients who wanted to share their experiences and advice with those who were to follow the same painful path.

Today, there are over 8,000 members including those who have undergone heart surgery and those associates interested in the cause. The objectives of the organization are manifold—to distribute information, provide advice and services to patients and their families, visit heart patients, and assist in established rehabilitation programs. Another very important objective is to cooperate with the American Heart Association to assist in their heart fund drives and other activities.

In cities where heart surgery is performed, doctors, nurses and other hospital personnel welcome these trained and accredited visitors who answer nonmedical questions, sit with families during surgery and offer encouragement with empathy possible only from a recovered heart surgery patient.

Members active in a chapter of Mended Hearts, Inc., headquartered in Albuquerque, have often offered their services to many New Mexicans. I mention the organization today to share with my colleagues the nature of this service in order to make this information available to others who have similar needs.

VETERANS' PENSION—MORE THAN AN INTERIM SOLUTION IS NEEDED

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DRINAN. Mr. Speaker, I was pleased to support H.R. 7345, the Veterans' and Survivors' Pension Adjustment Act of 1977, which was approved by the House earlier this week. This measure provides a 7-percent increase in pension rates and also raises the annual income limitation for pensioners so as to provide some protection against a loss of income due to increases in social security benefits. Of equal importance in H.R. 7345 is the provision which grants a 25-percent increase in widows' pension for those 78 years of age and older. This "add-on" is intended to assist the elderly widows of of World War I veterans who were not included in the "add-on" which was granted to World War I veterans last year.

The Congress has determined that the current pension program does not fully provide assistance required to meet the needs of the veterans and their dependents whom it was intended to serve. Accordingly, the Congress directed the Veterans' Administration to conduct a comprehensive review and evaluation of the pension program. The Veterans' Affairs Committee has pledged itself to hearings on the pension program once this report is received. H.R. 7345 was reported as an interim measure to meet some of the critical problems of those veterans living on fixed incomes.

It is estimated that 80 percent of those eligible for veterans' pension also receive social security and for most of these people this nicome is their sole means of support. In 1973 the Congress took the first step in recognizing the burden inflation places on those living on fixed incomes through enactment of an automatic cost-of-living adjustor in the social security benefit program. The intention of this provision was clear—benefits were to keep pace with inflation. Yet, to a large extent, that honorable gesture has become a hoax, for this increase has over and over again served as a basis for reduction and in some situations termination of benefits from another program. One of my constituents summed up the feelings of the many who have experienced such reductions by saying, "What is given to us by one hand of the Federal Government is being taken by the other".

Under legislation enacted in the 94th Congress steps were taken to prevent loss of income and H.R. 7345 also provides some resolution of this problem through an increase in the overall income limitation on which veterans' pension eligibility is determined. Yet in all too many cases the veteran is still left in a worse financial situation in terms of total income.

The problem requires a permanent solution for inflation is going to continue to wage economic warfare on the budgets of those elderly and disabled Americans who are forced to live on fixed incomes. Since 1972 I have called for the enactment of legislation which would totally exclude social security cost-of-living increases from consideration as additional income in other programs. In no way does a cost-of-living increase result in extra money for those on fixed incomes as it is quickly consumed by increases in food, housing and medical costs. When comprehensive reform of the pension program is proposed, I would hope that provisions will be made to exclude social security cost-of-living adjustments from consideration as additional income in the veterans' pension program.

Likewise it is my hope that the interim provision of a 25 percent add-on in the pension of World War I veterans and their widows will be replaced with a permanent program allowing an unrestricted pension to this group of veterans. Less than one-fourth of the 4,744,000 Americans who served during World War I survive today. These individuals average 79 years of age and very few are able to work. Most retired from their jobs almost 15 years ago when public and private retirement plans were not as good as they are today. In addition World War I veterans suffered both through the war and at home through the Great Depression which was particularly devastating for the breadwinner whose livelihood had been interrupted by military services.

World War I veterans never had the same benefits as their younger counterparts and legislation to provide the assistance they need is long overdue. A flat pension allowance regardless of income should be included in any pension reform measure which intends to place equity in the program.

HELSINKI'S UNFULFILLED PROMISE

HON. MAX BAUCUS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. BAUCUS. Mr. Speaker, today I am adding another chapter, to the many which have already been written regarding the denial of fundamental human rights in the Soviet Union. I am honored to join with many of my colleagues who are protesting the existence of "Helsinki's Unfulfilled Promise."

The United States was founded upon certain freedoms. Three of the most fundamental were freedom of speech, freedom of association, and freedom of religion. These precepts remain part of the foundation and goal of life in the United States.

We also believe that there are basic human rights which all men and women are entitled to, even though we recognize that differing political philosophies exist. It is for this reason that 35 nations, including the Soviet Union, were signatories to the Helsinki Final Act in August 1975.

This is a particularly appropriate time to address this question, since the United States and Russia are now meeting in Belgrade to discuss human rights matters. The Helsinki Accords are an attempt to come to grips with the universal question of human rights. America perceives these accords as an affirmation of basic human rights such as freedom to emigrate, to practice one's religion as one sees fit, and to freely express oneself without fear of repression.

My good friend, the gentleman from Massachusetts—Mr. DRINAN—recently brought a particularly tragic case to my attention which seems to be a violation of the Helsinki Agreement. It involves a physicist named Eitan Finklestein, and his wife and 3-year-old child.

Eitan and his wife Alexandra are dedicated spokesmen for the Zionist community in Russia. Not only have they applied for visas themselves, but they have bravely spoken out for the rights of all Jews who wish to obtain permission to emigrate. Albert Kaplan, Eitan's cousin who lives in New York, writes of their struggle:

"For some time, Eitan was unemployed. He lost his job soon after he applied for an emigration visa to Israel. After much searching, he was able to get a job as a laboratory technician in a hospital. In order to secure the job, he had to accept a much lower salary than that ordinarily secured by a laboratory technician.

Alexandra and the baby live in Moscow, but Eitan, unable to get a residence permit to live with his wife in Moscow is required to live in Vilnius (550 miles from Moscow). The authorities have made it quite difficult for him to visit his wife and child in Moscow and he has been threatened with imprisonment if he does so.

Eitan and his wife are dedicated Zionists. Because of their desire to emigrate, their lives have been disrupted by the authorities. Eitan has been somewhat demoralized, although he has not given up hope."

Eitan has filed many protests to Soviet authorities regarding their denial of exit permits to Israel—all without success. These denials are moral and legal violations of the Helsinki Accords. Eitan writes:

"As a first hand observer of the life of Soviet Jewery for the last 15 years and as a direct participant of many important events in this life, I declare that a cultural genocide of the Jews is being conducted in the Soviet Union."

It is this total and severe repression which I feel Members of Congress must speak out against. Many Jews see emigration as the only way to lead a full Jewish life, and for this reason, I hope that the conference in Belgrade will address this question, not only for Eitan Finklestein's sake, but for the sake of millions of Soviet citizens.

A TRULY OUTSTANDING PUBLIC SERVANT

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. MINETA. Mr. Speaker, it gives me great pleasure to rise today in honor of a woman I have known for many years, Mrs. Dorothy Trevethan.

A third generation Campbell, Calif., resident, Mrs. Trevethan has been city clerk of Campbell since the year the city was incorporated in 1952. She was appointed to the position of city clerk and has been elected to that position for six consecutive terms.

Mrs. Trevethan has not only devoted her life to the city of Campbell, but has been active in many community affairs. She has served as a board member of the Multiple Sclerosis Foundation, as treasurer of the Campbell Chapter of the American Cancer Society, and is presently a member of the board of directors of the San Jose Postal Consumers Council.

Professionally, Mrs. Trevethan has been actively involved with the Business and Professional Women's Club of Campbell, having served as president of the club. She was instrumental in forming the Northern California City Clerk's Association. In October of 1971, she was certified as a municipal clerk, one of eight throughout the State of California.

Mrs. Trevethan was honored by the Campbell Business and Professional Women's Club as "Woman of the Year" in 1969 and in 1971 as the "Woman of

Achievement." In 1973, she was cited by the California Federation of Business and Professional Women's Clubs as "Woman of Achievement."

Mr. Speaker, tonight, Friday, July 15, 1977, Mrs. Trevethan will be honored in her retirement as the city clerk of Campbell, Calif. I ask you and my colleagues to join me today in congratulating and giving best wishes to Mrs. Dorothy Trevethan, a truly outstanding public servant.

PRESIDENT CARTER ON HUMAN RIGHTS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. EILBERG. Mr. Speaker, we have read recently in the news media of a considerable amount of controversy surrounding President Carter's actions in the field of international human rights.

I commend to the attention of my colleagues the following analysis of this discussion. This article has been prepared by the Student Struggle for Soviet Jewry, and it includes several well made points relevant to this issue:

CARTER ON HUMAN RIGHTS: RIGHT ON!

President Carter's determined policy of speaking out strongly against violations of human rights wherever they are to be found has drawn increasing criticism of late from many of the editorialists who help mold American opinion. These writers charge that by taking a negative approach, Mr. Carter does more harm than good, alienating friends and infuriating enemies. What is often overlooked in these discussions is the other side of the coin. President Carter's forthrightness on human rights has had and promises to have a beneficial impact on all four groups involved in the dispute:

The American people, cynical to the point of open distrust about the goals of their government and its means of attaining them after the long years of Vietnam and Watergate, are being infused with a new pride. This spirit of rededication to values and their open espousal is the most positive factor in our political life since the youthful idealism of the early Kennedy years.

The peoples of the world are understandably skeptical. America's long tradition of dedication to civil liberties is not generally shared abroad. The Third World in particular is suspicious of the reasons behind the new American emphasis on rights and even the intellectuals who favor it doubt the U.S.'s staying power on the issue. There was a time, however, when oppressed nations around the globe looked to the U.S. for moral leadership and support. A consistent focus on human rights could well regain for us that role.

The governments involved, especially the Soviet Union, which has become the focus of the human rights debate, are understandably displeased. In the short run that displeasure may often rebound to the diplomatic disadvantage of the United States. But economic issues and the overriding need for international cooperation are likely to bring them back into the fold. Once they realize that American foreign policy will not surrender its moral pillar they will, of necessity, accommodate themselves to it.

What then of the last of the involved groups, Soviet Jews, dissidents and others oppressed? Are they now suffering more as a reaction to the U.S. initiative as governments, again chiefly Russia, try to prove that they will not knuckle under? The evidence suggests that this is not the case.

1. Russia's current crackdown against dissidents and Jews began in October 1976, well before the Presidential elections, much less the declaration of a new direction in foreign affairs. These waves of oppression periodically sweep the USSR, regardless of the Western posture at any given moment, and seem more dependent on internal contingencies than external events.

2. Far from rejecting the American initiative, the dissidents themselves encourage it. Their morale immeasurably raised, they note that their only defense against further Soviet repression is continued Western pressure. This alone has made possible the dramatic flowering of the dissident movement and the renaissance and massive exodus of Russian Jews in the course of the last decade. When the times of Western silence coincided with periods of oppression, the dissidents were invariably subjected to the harshest treatment.

3. Are we, as some critics have charged, returning to the days of the Cold War? Again, the answer appears to be "no." The Cold War of the 1950's was marked by a turning inwards of our national attention and, beyond our global anti-Communism, a lack of concern for the lives of others in the world. Human rights were not only irrelevant to our foreign policy, but were disregarded domestically as well. There is no similarity to our current concern with the oppressed in all parts of the world.

4. It is only proper to consider, lastly, the wishes of those most directly at risk themselves. Anatoly Sharansky, a leader of both the Jewish and human rights groups in Russia, has been the prime scapegoat in the latest Soviet squeeze. On which side of the discussion does his voice weigh in? "Whatever happens to us, we maintain the same position—Western pressure is the only possible way of saving the movement and having real detente," he said.

In the final analysis, that may be the most telling point. The Carter policy on human rights is both practically and morally correct. The President deserves our admiration, our encouragement and our vocal support.

SURVEY REJECTS ORGANIZED MILITARY

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. GAYDOS. Mr. Speaker, I recently conducted a survey among residents of the 20th Congressional District of Pennsylvania on the question of organizing the members of the Nation's Armed Forces, an issue that is attracting growing attention throughout the country.

The residents were asked a two-part question: Should members of the armed services have the right to join a union? Was the head of the voting household a member of a union?

Nearly 20,000 responses were received with 95 percent—19,001—expressing their opposition to allowing servicemen and women to organize. Regarding the second part of the question, 5,000 of those responding indicated they were union members and of that total 93 percent opposed organizing the military.

Mr. Speaker, in accordance with past practices, I have informed President Carter of the results of this survey and I take this opportunity to bring them to the attention of my colleagues in the Congress.

NAVIGATION DEVELOPMENT ACT

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. JOHNSON of California. Mr. Speaker, the Navigation Development Act was introduced yesterday to pave the way for imposition of a fee on inland waterway users and to reconstruct a key Mississippi River navigation facility. Prompt action is scheduled by the House Committee on Public Works and Transportation and the Committee on Ways and Means.

Designed to accommodate administration recommendations and concerns of transportation modes affected, the bill, H.R. 8309, has been set for hearing by the Water Resources Subcommittee Monday, July 18, and the Ways and Means Committee Thursday and Friday, July 21 and 22.

Title I identifies 26 major inland waterways whose users would be subject to a user fee expected to be considered simultaneously by the tax-writing Committee on Ways and Means, which shares jurisdiction over the package with the Public Works Committee.

Title II, the revenue portion of the legislation, will be developed by the Ways and Means Committee after its hearings.

Title III mandates a study of various types and levels of charges possibly to be levied by subsequent legislation and the types of waterways and facilities—including ports—and users to be covered, plus the impact on carriers, shippers, consumers, and regions affected.

At this point, there is a strong case for applying the principle of cost-sharing to the commercial navigation industry as is the case with such modes as highway transportation and civil aviation.

At the same time this represents a substantial policy change affecting waterways which should not be undertaken beyond an initial interim measure without exhaustive efforts to gage the impact on all concerned.

The study mandated by the bill would be conducted by the Secretary of Transportation within 3 years, and subjected to independent evaluation and recommendations by the National Transportation Policy Study Commission within 6 months of completion.

The navigation facility slated for reconstruction is the badly deteriorated Locks and Dam 26 at Alton, Ill., to be rebuilt at a site 2 miles downstream from the existing locks and dam.

Estimated costs for reconstruction, including another related study, are $452 million for the facility, vital to barge operations serving agriculture and other transportation users in the Midwest.

The inland waterways affected include all or parts of the following: Allegheny River, Apalachicola-Chattahoochee and

Flint Rivers, Arkansas River—McClellan-Kerr Arkansas River navigation system—Atlantic Intracoastal Waterway, Columbia River—Columbia-Snake Rivers Inland Waterways—Cumberland River, Green and Barren Rivers, Gulf Intracoastal Waterway, Lower Mississippi River, Upper Mississippi River, Missouri River, Black Warrior-Tombigbee-Mobile Rivers, Monongahela River, Illinois Waterway—Calumet-Sag Channel—Kanawha River, Kentucky River, Tennessee River, Kaskaskia River, Alabama-Coosa Rivers, Pearl River, White River, Red River, and Atchafalaya River.

ST. CROIX ISLAND CENTER FOR THE PERFORMING ARTS

HON. RON DE LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DE LUGO. Mr. Speaker, it is my honor to share with my colleagues in the House of Representatives some brief remarks about the St. Croix Island Center for the Performing Arts on the occasion of its 10th anniversary.

During the 10 years of its existence, the center has been a showcase for the arts, enriching the cultural life of the islands and providing local as well as Stateside entertainers with a stage upon which to demonstrate their talents. While this cultural center has had its assortment of difficulties the people of St. Croix rightly view it as a resounding success. Accordingly, I believe we should pause and pay tribute to the original sponsors and steady benefactors for their foresight, sacrifice, and dedication in making Island Center a reality, a continuing institution, and an asset of which all Virgin Islanders can be proud.

In particular, I want to commend the tremendous efforts of Dan Eckley and Byron Case. Their belief in and commitment to the Island Center is well known and deeply appreciated.

I insert in the RECORD the editorial from the St. Croix Avis of June 24, 1977:

ISLAND CENTER IS 10 YEARS OLD

That institution, for that is exactly what it is, came about because this Island needed a "home" in which the finest and best in the performing arts could be enjoyed. Island Center is that "Home".

Like so many of the significant events in the life of a community, the emergence of this center called for the imagination, the resourcefulness, the grit, and the endless hours of work to put it together, and come up with a finished product of which not only the proponents could be satisfied, but the entire Island could look back with justifiable pride upon its accomplishment.

It was time that St. Croix had a place where it could present—and hear—any performer, of the highest level, whether in dramatics, music, or any art form. Now, believe it or not, 10 years have passed, a history has been made, and everyone looks forward to bigger and better things for the next decade, and beyond.

Among those who worked tirelessly and with optimistic enthusiasm are Dan Eckley and Byron Case. While these names come to mind, this is not to say that any number of others, in one degree or another, contributed in many ways to the fulfillment of this dream.

No thought, or mention of Island Center could honestly be made without going back to these men and women who first had a vision, then a plan, and the grit and determination to work toward the accomplishment of that dream.

But there was more. While the immediate pioneers, workers and dreamers had the thought, turned it over in their minds again and again, and planned everything, from the largest and most complicated detail, they had to make sure that an entire community was with them. For only in this way could this venture truly become a product of the Island, which bears its name. Cooperation, support and the funds came in to make the Center possible, and these came from every quarter.

Audiences at Island Center have been treated to some of the finest in the performing arts. And that is no mean accomplishment, since it helped to raise our level and our sights.

Certainly, a word of appreciation and gratitude is due those who helped to make this dream come true. Through their efforts St. Croix now has a home for the arts.

PERSONAL EXPLANATION ON H.R. 2777

HON. JIM GUY TUCKER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. TUCKER. Mr. Speaker, yesterday afternoon I was unavoidably absent for the vote on final passage of H.R. 2777, the National Consumer Cooperative Bank Act. I deeply regret my absence for this important vote, and would like for the record to show that had I been present, I would have voted in favor of H.R. 2777.

The cooperative concept is not new to this country. Indeed, cooperatives have been an important part of the American economic scene for the last century. Private lending institutions and existing Government programs have traditionally provided financial sponsorship for cooperatives. However, the record of testimony of H.R. 2777 has clearly demonstrated that these financing sources for a variety of reasons generally have not been available to consumer cooperatives.

When a credit vacuum of this nature has existed in the past, Congress has responded with well-reasoned programs. We are all familiar with the successful efforts in this area by the Small Business Administration, the Rural Electrification Administration, and the Cooperative Farm Credit System. These successes have clearly established the validity of combining Federal seed money with local self-help programs.

The National Consumer Cooperative Bank will now carry this proven concept to urban communities and nonfarm rural areas. In doing so, the bank will strengthen the private enterprise system by enhancing marketplace competition and broadening the base of small business ownership.

I believe three particularly important points should be made about this concept. First, the cooperative concept enhances each member's stake in the private enterprise system. It does so by providing those individuals and families who have only modest resources with a piece of the action. It provides them the opportunity for ownership in a business enterprise and, in the process, strengthens and encourages a respect for law and the opportunities afforded by initiative and cooperation.

Second, this is not a giveaway program. Indeed, this legislation provides only for a loan which must be repaid by the cooperative bank at a full rate of interest to the Federal Government. Thus, the taxpayers will receive not only a return of each dollar loaned, but interest on that money as well. This stands in sharp contrast to the enormous number of Government programs which involve direct subsidies and giveaways.

Third, this legislation will not allow a subsidization of the cooperatives which are started. All loans made by the bank must be made at commercial interest rates, and must be repaid in the same fashion as any other commercial loan. All this legislation does is provide a source for such loans. It was precisely this type of approach that allowed the establishment of the enormously successful system of producers' cooperatives that are now a mainstay of the agricultural economy of our Nation.

Certainly, Mr. Chairman, the bank deserves the support of the Congress and the American people.

WAUKEGAN ALDERMAN BOB EVANS FETED BY FELLOW CITIZENS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. McCLORY. Mr. Speaker, it is with great pride and pleasure that I call to your attention and to the attention of my colleagues, the record of service and dedication established by Waukegan Alderman Bob Evans. Bob Evans is a native of Waukegan, Ill., the most populous city in my congressional district.

Mr. Speaker, as a citizen who has developed his talents and personality through the great community and educational services offered in this area, Bob Evans as a youngster enjoyed the advantages of the Happy Day Nursery, established and administered by our most honored senior black citizen and my cherished friend, Anna Thomas.

Mr. Speaker, Bob Evans became a leader in the student body at Waukegan Township High School, where he earned particular fame as a star wrestler. Later, he had a business career at Johns-Mansville and with the United Insurance Co., of America where he is presently employed.

Mr. Speaker, it is far more than Alderman Bob Evans' business career to which I wish to call your attention. While his educational and business backgrounds are appropriate to mention, his service in the community in helping establish the YMCA in his ward and his interest in promoting the development of the new Happy Day Nursery facilities are actions which are consistent with his interest in

the young people and citizens of all ages in Waukegan.

Married to Trudy Evans, Alderman Bob Evans and Trudy are proud of their children, Rhonda, Robert Jr., and Rochelle. Alderman Bob Evans likewise has brought special pride to his parents, Willie and Alderman Raymond Evans, with whom he serves on the city council.

Mr. Speaker, on Saturday, July 23, the citizens of Waukegan will honor Alderman Bob Evans for his tireless and exemplary service to the community and particularly to the people of the second ward of Waukegan.

Mr. Speaker, I will be privileged to be in attendance at that time and expect to extend to Alderman Bob Evans my warm congratulations and good wishes, and to recall these remarks which are delivered here today for the benefit of all of us who recognize and encourage honorable public service—such as the record established by Alderman Bob Evans.

THE SOCIETY FOR NUTRITION EDUCATION

HON. MATTHEW F. McHUGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. McHUGH. Mr. Speaker, on July 13 I had the opportunity to speak at the annual convention of the Society for Nutrition Education. The topic for its 3-day session this year was "The Challenge of Change," and I was favorably impressed with the seriousness of the participants as they addressed themselves to this most important issue.

Since the society was founded in 1968, it has played an important role in the field of nutrition education. Its major publication, the Journal of Nutrition Education, is published quarterly, and is a source of information for both those working in the applied field of nutrition and for educators generally.

The society began operation as a membership organization in 1970, and now has over 4,400 members. Its activities are many and varied. One arduous task that the society has undertaken over the years is to evaluate the ever increasing amount of published materials on nutrition through its National Nutrition Education Clearing House. The clearinghouse collects, evaluates, and communicates data on educational resources available for teaching nutrition. In some cases, the society has gone one step further, producing some of its own audiovisual aids for special needs.

The society is not simply devoted to education, however. It is also involved in many of the day to day struggles to improve governmental programs in this area, and its permanent Washington liaison member and its legislative committee have participated in congressional hearings.

Members of the society are currently exploring the need for standards for school nutrition education specialists; for better communication between food industry representatives, and consumer and nutrition educators; and for guidelines for cost/benefit analyses of various nutrition programs.

The work of the society, and the foresight of its members in making an ongoing contribution to improving our understanding of nutrition issues, deserves the support of all of us, and I would like to commend the society for the useful role that it plays in our society.

NEW YORK AND ITS LOOTERS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. ASHBROOK. Mr. Speaker, once more we see the spectacle of those charged with protecting life and property running for cover, cowering at the spectacle of looters rampaging a city. New York and its government should be condemned for allowing such a horrible spectacle. All Americans are shamed by these 20th century pirates and vandals.

Oh yes, the bleeding hearts will say it is because these looters have been denied this or that. Yes, they have been denied something, but it is the strong force of law to stop those who loot in their tracks, not more welfare or spoonfeeding.

A continuing pattern in our big cities develops a twofold problem. First, radical elements appeal to the basest elements in some minority communities by telling them they have been oppressed and what other people have they deserve whether this is so or not. How many times have I read the euphemism in the radical press that stealing is not stealing, it is merely "liberating the peoples' goods" or, in effect, taking what is already yours. Yes, there was a lot of liberating of the peoples' goods on Wednesday night in New York. Arson goes hand in hand with looting and we say that, too.

The second problem comes in the political leadership in those cities and in the country. How can the Abe Beames, the John Lindseys, the Ramsey Clarks take a tough position on looters and rioters? These are their constituents. These are the ones for whose votes they pander. They bask in the adulation of these groups who, on occasion, take to the street to liberate the peoples' goods, their political supporters, and deceive or even lie to the worker, the businessman, the productive Americans whose votes they also need.

Good, law-abiding citizens, workers, productive people ought to take a hard look at these liberal types. They only induce more lawlessness, more looting, more rioting. They wink at the looter and take you for suckers.

Abe Beame will have the affrontery to ask American taxpayers to cough up their tax dollars for the looting and rioting. Yes, this spineless mayor will not have any qualms to seek hundreds of millions, even billions to pay for his maladministration. New York has been systematically looting the Treasury for years so what is one more trickle he will think. We should give him a resounding "No" on principle.

Looters should be shot. That sounds hard but the infectious virus of plundering must stop. Historically, looters have always been considered as the lowest form of human life. The dregs of society. They have always come out from under rocks when there is flood, fire, plague, disaster. Historically they have been treated just as they deserved—shot on the spot. They are like predatory animals, they feed on the misery of other humans.

Looters deserve neither your sympathy nor your psychiatric analysis. Watch the libs try to explain away in social, philosophic terms the action of these un-American vandals. The American people know better even if their mayors, their attorney generals, their leaders, do not.

DRINAN OBJECTS TO PROPOSED APPOINTMENT OF LYMAN B. KIRKPATRICK TO CIA

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DRINAN. Mr. Speaker, I am astonished to learn that President Carter is seriously considering the appointment of Prof. Lyman B. Kirkpatrick, Jr., as Deputy Director of the Central Intelligence Agency.

Mr. Kirkpatrick served as the Agency's Inspector General from 1953 until 1961. Nothing in his record indicates that he is the right person to assume the No. 2 job at an agency whose excesses and blatantly illegal activities have outraged millions of law-abiding Americans.

Mr. Kirkpatrick never saw the need to share with the public the horrifying details of the death of Army biochemist Frank R. Olson, who died in 1953 when he plunged from a New York hotel window after using LSD in a Central Intelligence Agency experiment. Mr. Kirkpatrick later admitted, according to a report in today's New York Times, that he had not recommended sufficient disciplinary action against the CIA employees involved in the Olson case.

Moreover, Mr. Kirkpatrick has acknowledged that he was fully aware of massive illegal mail opening made by the CIA during his years of service at the Agency. President Carter can hardly convince the Congress and the American people that he sincerely wants to clean house at the CIA if he appoints as Deputy Director a man so insensitive to civil liberties as Lyman Kirkpatrick. Those people who countenanced breaking the law in the name of enforcing it should hardly be rewarded with positions of high authority in the executive branch.

In an article he wrote for the New York Times 4 years ago, Mr. Kirkpatrick expressed complete satisfaction with the good job Congress had done in checking on CIA activities. The fact is that Congress exercised almost no control over the CIA, which has been allowed to escape the standards of accountability to

which other Federal agencies must conform. I hope Mr. Kirkpatrick does not believe that Congress can most faithfully discharge its oversight responsibilities toward the CIA by giving the agency a blank check, by investing trust in an organization which has done nothing to earn our trust.

Mr. Speaker, if we intend to move the Central Intelligence Agency away from wholesale violations of civil liberties, away from assassinations, away from illegal domestic activities like mail openings, away from covert acts which violate the sovereignty of other nations, we need a CIA leadership not wedded to the mistakes, gross indiscretions, and illegalities of the past.

The appointment of Lyman Kirkpatrick to so sensitive a post as Deputy Director of the CIA would represent distributing evidence that President Carter will not insist upon critically needed changes in our intelligence agencies. I hope Mr. Carter will reaffirm a commitment to a new day at the CIA by passing over Mr. Kirkpatrick, and I trust that the Senate will carefully weigh Mr. Kirkpatrick's qualifications if he is nominated.

BYRON KENT BURTON—VIENNA MAN CALLED "OUTSTANDING"

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. ROUSSELOT. Mr. Speaker, it is a pleasure for me today to be able tc say a few words in tribute to Mr. Kent Burton, a former member of my staff.

Two years ago Mr. Burton joined a congressional office, like so many young people—bright, dedicated, and full of new ideas. Two years later, unlike so many, he still brought to his job the freshness and the vigor and the good humor with which he first began. His work, therefore, was not merely professional. It was innovative and creative as well.

Kent has now left Capitol Hill for the real world and I have mixed feelings. It is sad to see someone of his caliber leave. It is especially so when he has developed such warm and personal relationships. Nevertheless, it is a compliment to the free enterprise system, which Kent worked so hard to defend, that the American Trucking Association so quickly recognized his worth.

Mr. Speaker, I would like to introduce for the RECORD an article which shows that I am not the only one who thinks Mr. Burton is an outstanding young man:

[From the Northern Virginia Sun, May 24, 1977]

VIENNA MAN CALLED "OUTSTANDING"

Byron Kent Burton, of Vienna, has been selected by the U.S. Jaycees as an Outstanding Young Man of America for 1977. The award is part of an annual program sponsored by the Jaycees to recognize young men who exhibit outstanding professional achievement, superior leadership ability and special service to the community.

Burton is currently employed as senior legislative assistant to Congressman John H. Rousselot (R-Ca). He is also a member of the Republican Communications Association and serves on the advisory Board of the Washington Chapter of the Utah State Alumni Association.

He is an active member of the Church of Jesus Christ of Latter-day Saints, where he serves as public communications director for the Oakton Stake as well as executive secretary for the church's advisory committee on national and economic affairs. He is also president of the Oakton Ward Choir.

Mr. Burton is a cum laude graduate of Utah State University (B.A. 1975) and is a member of Pi Sigma Alpha National Political Science Honorary Fraternity. He and his wife, Winnie May, reside in Vienna.

HUMAN RIGHTS AND FOREIGN AID

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. HARKIN. Mr. Speaker, I have long been an advocate of legislating uniform mandatory human rights language to govern U.S. participation in the multilateral lending institutions. Last April, the House of Representatives did pass such a provision during consideration of H.R. 5262. Opponents of this approach, including the administration, claimed that it did not provide policymakers with enough flexibility.

There is a fallacy in the administration's approach which became evident during House consideration of the Foreign Assistance Appropriations Act. Writing in the Boston Globe on July 6, 1977, James Morrell and William Goodfellow of the Center for International Policy recently examined this fallacy:

WORLD BANK, U.S. MUST CUT AID TO COUNTRIES USING TORTURE

(By James Morrell and William Goodfellow)

WASHINGTON.—A medical study released last month by Amnesty International reveals that doctors have been advising torturers in at least three countries under military rule.

The doctors, working today in Chile and Uruguay, and earlier in Greece under the former military government, recommend the appropriate instrument of torture. They also offer their professional opinion as to how much pain a victim can stand. They then step aside and let the torturers do their grisly work.

Of interest to Americans is the fact that both South American countries that are achieving such progress in the dubious science of torture are also recipients of major U.S. aid. Increasingly, this aid is channeled through international agencies rather than through the U.S. bilateral aid program where it is easier to spot.

The World Bank, for example, has been cautiously increasing its aid to Chile ever since the military junta seized power in 1973. It made no loans to the elected government of the late President Salvador Allende because it disapproved of its socialistic economic policies. But since the military took over, the World Bank has increased its aid from $13 million in fiscal 1974 to $60 million in 1977—and plans to go to $110 million in 1979.

The U.S. throws in $1 out of every $4.

The World Bank also sent a record-high $52 million to Uruguay in the most recent fiscal year. According to Amnesty International, torture is now "routine" in political arrests in Uruguay, and the country holds the highest per-capita proportion of political prisoners in the world.

The Inter-American Development Bank, with the U.S. providing 52 percent of the funds, has lent $168 million to Chile since the coup. It made no loans to Uruguay last year, but plans to send $74 million in the near future.

The implication of all this is not entirely lost on Congress, some of whose members have taken steps to make human-rights issues a consideration in international loans. Last spring, Rep. Tom Harkin (D-Iowa) pushed through an amendment reflecting that consideration to the Inter-American Bank's replenishment bill. It requires the American director on the bank's board to oppose any loan to countries that "engage in a consistent pattern of gross violations of internationally recognized human rights." (Congressional sources suggest that the Treasury Department bureaucracy has been making policy in this area.)

The House passed the Harkin amendment in April, but in the Senate the amendment lost 50 to 43 after heavy lobbying efforts by the Carter Administration, which prefers a more "flexible" formula. The Administration's version directs U.S. representatives at the various banks to use their "voice and vote" to channel loans away from human-rights violators. Whereas the Harkin amendment flatly mandates the U.S. directors to vote "no" on such loans, the Administration version meekly avoids the issue, thus giving the Treasury Department complete discretion to continue such loans.

This strategy has already backfired, however, because, in the absence of uniform, binding human rights legislation that would affect all countries equally, the House has passed amendments to deny U.S. funds for seven particular countries—Vietnam, Laos, Cambodia, Cuba, Angola, Mozambique and Uganda. These amendments, sponsored by anti-foreign aid conservatives, tie the Administration's hands far more inflexibly than the Harkin amendment ever could.

(In fairness, it should be noted that Sen. Edward Kennedy successfully introduced a separate human-rights measure cutting all U.S. military aid to the repressive government of Argentina.)

Sen. James Abourezk, one of this year's sponsors of the amendment rejecting the Administration's plea for easier standards so as to eliminate the "inflexibility" in dealing with human-rights violators, said during the Senate's debate, "I do not subscribe to the theory that we are putting anybody in chains. In a sense what we are trying to do is get some of them out of chains."

Getting the torture victims out of their chains will be no easy task, for the World Bank is now planning vast increases in aid to many governments that are repressive. Fifteen of the world's most repressive governments will get $2.9 billion in 1979, one-third of the World Bank's loans that year.

Loans to newly repressive countries—namely Argentina, Chile, the Philippines and Uruguay, all formerly democratic countries that have had military takeovers or martial law since the early 1970s—will rise more than twice as fast as World Bank loans to all other countries.

And while the World Bank increases its flows of aid, the prison guards of the repressive regimes are sharpening—with expert medical advice—their instruments of torture. Only an aroused public opinion, forcing an uncompromising stand on the President and Congress alike, will succeed in cutting off the flow of aid and comfort to the world's torturers.

James Morrell and William Goodfellow are associates of the Center for International Policy, a privately financed research organization based in Washington.

A DOUBLE STANDARD FOR TWO CHINAS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DERWINSKI. Mr. Speaker, in view of reports that the Carter administration is considering moving toward full diplomatic relations with the People's Republic of China, I think it is appropriate that an informed discussion of the implications of such a move take place in the media and in the Congress before an irretrievable decision is made.

In my opinion, the article, "A Double Standard for Two Chinas," which appeared in the July 15 edition of the Washington Post, makes a significant contribution to an informed and meaningful debate of this crucial issue. I know my colleagues will find it of interest:

A DOUBLE STANDARD FOR TWO CHINAS

(By Ray S. Cline)

A MIG-19 pilot recently defected from the People's Republic of China by flying his plane to the Republic of China (Taiwan). He says he was motivated to make the daring break by President Carter's call for respect of human rights, pointing out there is in neither principle nor practice any regard in the People's Republic for the rights of individuals.

The irony is that the Carter administration only a few days earlier made a public commitment to improve its relations with the mainland, despite Peking's insistence that the United States break diplomatic ties and abrogate its mutual-defense treaty with Taiwan—where the pilot fled for freedom.

Secretary of State Cyrus Vance's June 30 speech on China and President Carter's remarks on it at his press conference the following day said nothing meaningful about the U.S. commitment to Taiwan. This ambivalent style in policy pronouncements presents Washington pundits as well as foreign observers with a now-familiar puzzlement over what the administration actually intends in practical terms.

The standard method is to enunciate a high-minded policy of great simplicity and moral rigor, and then to shade or obscure what these high principles mean in practice. The impression is spreading that the young ideologies carried over from the Carter campaign staff enunciate popular concepts for the domestic audience while older, wiser heads like Vance modify them to adjust to political realities in the international arena. After all, Carter can understand that an abstract moral position that unrealistically works against the security of U.S. allies and disturbs friendly U.S. relations with other nations is really neither moral nor wise.

Examples of this kind of ambivalent policy-making are the arms-control package Vance took to Moscow, subsequently watered down at Geneva; the Mideast negotiations pattern that has so far produced no movement toward Arab-Israeli peace; and—most confusing—the rhetorically fervid endorsement of human rights accompanied by a drive for closer relations with the world's most oppressive regimes: Havana, Hanoi, and Peking.

The Carter administration says its position is based on the 1972 Shanghai Communique, which they interpret to be a promise to break diplomatic relations with Taiwan and abandon the mutual-defense treaty guaranteeing the security of Taiwan. Actually the Shanghai Communique is a masterpiece of diplomatic ambiguity, and both Richard Nixon and Henry Kissinger have recently said they did not explicitly promise to change our present relationship with Taipei. In fact, the only official elucidation of the Shanghai Communique, given by Kissinger in 1972, specifically stated that the U.S. mutual-defense treaty with Taiwan "will be maintained" along with "our friendship" and "our diplomatic ties."

Of course, Peking would like to have the plum of Taiwan dropped into its hands. Taiwan is the most modern, economically advanced part of China, having a standard of living three times higher than that of the People's Republic. Its 16 million Chinese conduct a larger foreign trade than all of the mainland's 950 million people. The catch is that none of these Chinese want to be incorporated in a Communist one-party dictatorship with a stagnant, command-type economy and an oppressive internal-security system modeled on the Stalin era in the U.S.S.R.

While political democracy in Taiwan is flawed by the continuation of a (largely theoretical) state of war with the mainland and occasional recourse to martial-law court procedures in trying internal-security cases, there is an open, pluralist society in Taiwan, and the goal toward which Taiwan is consciously and steadily moving in accordance with the Constitution of the Republic of China is representative government with firm guarantees of human rights. To consign a U.S.-oriented, pluralist Chinese society with a free-enterprise trading economy to dictatorial Communist Party control from Peking is not merely amoral—it is immoral.

The Carter-administration ideologues cop out on this moral dilemma by saying that somehow the United States will assure Asians of its intent to protect Taiwan's security despite cancellation of our formal treaty guaranteeing its defense. This will be the neatest trick of the year. The Japanese, the Koreans and the Chinese will never believe such a policy. Since the "peaceful life of the Taiwanese, the Republic of China" has been repeatedly guaranteed by Carter himself, only a superficial gimmickry of tacit assurances from Peking would permit moving ahead on Peking's terms. Such gimmickry cannot really protect the right to exist of the Western-oriented society in Taiwan, which is not only a longtime loyal U.S. ally but also the 40th largest independent nation in the world.

Accepting Peking's terms for full normalization would upset the strategic applecart in all Northeast Asia. The question is whether the wiser heads in the government who know these things will prevail over the pro-Peking ideologues when final decision-making reaches the presidential level. Only then will we know whether the MIG–19 pilot found freedom in Taiwan or whether he will in due time be delivered back to totalitarian control by U.S. China-policy officials.

JAMES C. WOOLLEY, AN OUTSTANDING CITIZEN

HON. MARJORIE S. HOLT

OF MARYLAND

Friday, July 15, 1977

Mrs. HOLT. Mr. Speaker, I would like to share with you the accomplishments of an outstanding citizen of my congressional district, Mr. James C. Woolley. Mr. Woolley was recently named "Legionnaire of the Year" in Anne Arundel County, Md.

Mr. Woolley is a well-respected member of his community, and has been involved in many Legion-oriented service programs. He has been active in dealing with alcoholism and drug abuse in Anne Arundel County, and has spent many of his Sundays visiting with men in the Anne Arundel County Detention Center suffering from these two diseases.

Mr. Woolley is also a tireless worker for veterans' rights and veterans' benefits, and is one of those rare individuals that does more than just complain. He regularly assists the elderly veterans in such things as filling out claims forms, aiding them with social service problems, and in general being there to lend a hand when these veterans need some help.

I commend Mr. Woolley for his "Legionnaire of the Year" award, and thank him sincerely for being willing to give of himself to help his fellowman.

REVOLUTION ON THE FARM: PART III

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. ALEXANDER. Mr. Speaker, I would like to share with my colleagues the third in a series of articles that appeared in the Arkansas Gazette that deal with emerging trends in Arkansas agriculture. I commend this article to my colleagues:

REVOLUTION ON THE FARM—III—COSTS CRUSHING SMALLER OPERATIONS

(By Tom Hamburger)

McCRORY.—Because he and his wife have taken outside jobs, Billy Joe Bull has been able to continue farming his 500 acres of cotton and soybean land at McCrory and support his family comfortably.

As farms around him become larger, however, or are purchased by corporations, Bull finds it increasingly difficult to compete.

Bull continues farming because he loves it, but he says that one bad season could force him out. A look at Bull's operation shows why it is difficult for a small farmer to stay in business. The large farmers have all the advantages.

Bull used to devote full time to his farming, but the cost of land and equipment rose so rapidly that in the mid-1960s, he realized he couldn't support his family without taking an outside job. He is now director of the McCrory Housing Authority, and his wife works as a secretary for the Farm Bureau.

The increase in farm costs is staggering. Bull said it cost him $25,000 a year to farm his 500 acres 10 years ago. Now it costs $80,000. For a small farmer like Bull, the "profit margin is so small that unless you are farming a large amount of acreage, you can't stay in business," he said.

The figure includes the cost of three tractors and attachments, a cotton picker and a combine. It does not include land cost. Bull would like to have more land to spread the equipment investment over, "but its hard to find good land to rent and buying at these prices is impossible, he says.

The increasing costs, of course, increase the amount of money a farmer needs to borrow. For his 500-acre operation, Bull borrows $50,000 a year in a corp loan from the Production Credit Association. In addition, Bull has machinery payments amounting to $12,000 or $15,000 a year.

He pays $5,000 to $7,000 interest and the same amount for harvesting the crop. In addition he employs one full-time hand and a nephew who helps drive a tractor. A decade ago, Bull recalled, he could hire labor at $4

an acre to chop weeds from his cotton fields. Cheap labor is no longer available, and Bull now spends $15 to $20 an acre on chemical herbicides.

Not far from McCrory, the Northern Illinois Trust Company has just bought a 960-acre farm on behalf of a trustee. In the year to come, Bull will find it difficult to compete with the corporation-owned land.

Bull is faced with several disadvantages. He does not get the quantity discounts for large purchases of seed, feed, fertilizer and chemicals, nor does he have the capacity to store his crop and wait for a higher price. Several farmers in the McCrory area have seed and grain storage bins. They keep their crop until market conditions are ideal and then sell. Bull must sell his crop when it is harvested.

The trust company does not have to fear a bad year. Its assets can cover a one-year loss. The company, of course, has few credit worries, a major problem for Bull.

Bull said that another drouth, like the one he experienced in 1976, could wipe him out. In several years, the Illinois Trust land will probably have an elaborate sprinkler irrigation system. Droughts will not seriously affect the crops there. Even the larger landowners in the McCrory area have not installed such devices.

Because of his tight profit margin, Bull is unable to make some of the improvements he would like.

The Illinois bankers, however, have made $50,000 worth of improvements in the land since it was purchased last year. They dumped 1,500 tons of lime on the 965 acres and cleaned and improved ditches and drainage.

Darrell Larker, who is farming the land for Illinois Trust says that the system is "better for the renter, because they [the new owners] are willing to go the extra mile to improve the ground. They'll bring that land up to potential." Larker predicts there will be more corporate landowners coming into the area. The only disadvantage he sees is that "it's keeping us out of the land. We can't buy land or improve it like this. I think you'll benefit from it but it won't be your land."

Economic analysts and farmers interviewed recently think efforts like Bull's to continue farming are important for the stability of Arkansas's economy and rural areas. If present trends continue, however, Bull says the future is shaky.

MARIN COUNTY POOL

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. KETCHUM. Mr. Speaker, the front page of Tuesday's Los Angeles Times reported that Marin County, Calif., received $1.1 million for construction of a 600,000-gallon Olympic-sized swimming pool. Most astonishing about this report was that the funding came from the Economic Development Administration. Considering that Marin County is recognized to be an extremely affluent area which enjoys high employment, I would not consider it a priority target for economic development. Remembering the many grim reports of Marin County's critical water shortage, I would not say that such frivolous use of water is warranted. Bearing all those thoughts in mind, I can only conclude that EDA must not review applications submitted too thoroughly. This thinking may come across as sour grapes since I represent an area which cannot boast of one dime received from EDA, but it is not. While we may not enjoy Marin County's level of wealth, we can claim that any applications submitted were for viable, responsible projects. For EDA to sanction luxurious swimming pools in an area suffering greatly from a drought is the height of absurdity, and demonstrates total lack of responsibility in allocating funds.

KOREAN INVESTIGATION

HON. DAN QUAYLE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. QUAYLE. Mr. Speaker, just at a time when Congress is gaining the confidence of the American people, the langour of Washington summer has settled over the Korean investigation.

Ethics Committee counsel Philip Lacovara has left for vacation in Europe after circulating a memo criticizing Chairman John Flynt for moving the committee at a snail's pace. Certainly Lacovara did not leave for a European vacation while he was counsel to the Watergate prosecutors.

Throughout the 95th Congress, the Members have urged an end to the foot-dragging which has been evident throughout this investigation. In April 51 Members wrote Chairman Flynt pleading for an accelerated investigation and asking for regular reports to Congress.

As a Republican member of the freshman class, I joined in May in a request to come to the bottom of the Korean investigation as quickly as possible. But we are in the middle of July and we have seen no discernible movement.

I do not expect we will see any action without the appointment of a special prosecutor. President Carter has been reluctant to name someone to head this investigation preferring to rely on the current activities of the Department of Justice.

Two weeks ago the Senate passed the Executive Code of Ethics bill which includes an amendment to name a special prosecutor if Attorney General Bell does not certify there is no basis to the allegations within 90 days. My colleagues in the House have failed to act on similar legislation.

After seeing news reports of the 115 Congressmen who have accepted gifts and support from the Korean Government, there is an urgent need to intensify and accelerate this investigation.

Public confidence in the House has been threatened by these allegations. It appears by our lack of attention that we accept these practices. We are waiting for the committee to report to the House on the legality of these charges and either deny, condemn, or condone the actions of its Members.

But the investigation has become too sensitive to be carried out by the usual procedures established by the Congress. We experienced this same problem during Watergate and realized the executive could not carry out its own investigation.

It is time for action. I call on President Carter to act with dispatch and appoint a special prosecutor to fully investigate the abuses so we can shore up the ethics and constitutional issues involved here and get back to matters of national importance—like energy legislation.

STATEMENT OF PERSONAL, FAMILY, OFFICIAL AND CAMPAIGN FINANCES, 1976

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. HORTON. Mr. Speaker, increased public awareness of government and its officials and increased public concern about the way in which the stewardship of public trust and of public funds is conducted has led me for the past 3 years to enter into the RECORD a complete statement of my personal, family, official, and campaign finances. I am pleased today to enter into the RECORD a similar statement again this year.

I make this annual disclosure statement for two purposes. My first purpose is to go beyond the disclosure requirements of the House Committee on Standards of Official Conduct in making clear that I conduct my office with neither actual nor potential conflicts of interest. My second purpose is to provide sufficiently detailed information to my constituents to illustrate what is involved financially in the proper operation of a congressional office and in the conduct of a Congressman's job.

It is for these reasons that I submit the following summary of my personal, family, official, and campaign finances for 1976. The statement includes full disclosures of my personal and family tax payments, income and sources, my official expenditures and my use of Federal reimbursement accounts, funds returned to the U.S. Treasury, my campaign finances during 1976 and my personal assets and debts as of July 1, 1977. The statement also includes my organizational affiliations and my handling of congressional papers and records:

FINANCIAL STATEMENT

I. PERSONAL AND FAMILY FINANCES AND TAXES

A. Taxes:

1. Federal income tax paid for 1976 (joint return filed by Frank and Marjorie Horton), $6,822.58.

2. New York State income tax paid for 1976 (joint return), $3,030.42.

3. Montgomery County, Maryland real estate tax on personal residence (jointly owned) paid for 1976, $1,684.48.

4. Herkimer County, New York real estate tax on cottage (jointly owned) paid for 1976, $525.72.

Total Income and Real Estate Taxes Paid: $12,062.90.

B. Sources of all income:

1. 1976 annual salary as U.S. Congressman, $44,600.00.

2. Total dividends received on common stock in 1976, $29.70 (received jointly).

3. Interest received on savings account and on notes outstanding in 1976, $1,527.81.

4. Income from rentals of Big Moose cottage in 1976, $2,010.00.

5. Other: During 1976, I received a total of $500.00 in honoraria for a speech to the Nebraska League of Women Voters given in Lincoln, Nebraska. I did not receive any other honoraria during 1976.

It is my policy not to accept honoraria or expenses from persons, groups or organizations for appearances within my Congressional District.

6. Withdrawal from Stationery Allowance (taxed as income), $2,121.10 (see II. A. 1.).

C. During 1976 my wife received several small honoraria totalling $432.00 in connection with her work with Christian organizations and they are listed as follows:

Women's Aglow Fellowship, Falls Church, Virginia Chapter	$75.00
Praise Ministries, Rochester, New York	75.00
Laurel (Md.) Women's Aglow Fellowship	25.00
Resurrection Lutheran Church, Rochester, New York	25.00
United Presbyterian Church (Retreat), Webster, New York	100.00
Women's Aglow Fellowship, Clarkesburg, West Virginia	50.00
Women's Aglow Fellowship, Albany, New York	50.00
Women's Aglow Fellowship, Clinton, Maryland	32.00
	$432.00

The total amount of $432.00 was contributed to Christian charitable organizations by my wife.

Total 1976 joint income: $51,220.61.

D. Summary of personal assets and liabilities:

1. Family residence at 9607 Hillridge Drive, Kensington, Maryland: Approximate value, excluding furnishings, $70,000.00 as of 1973; jointly owned with Marjorie Horton; mortgage amount outstanding as of May, 1977, $33,746.87.

2. Until February, 1977, Mrs. Horton and I owned a cottage at Big Moose Lake (Herkimer County), New York. We sold the cottage in February, 1977; a portion of the proceeds of the sale were deposited in a savings account (see D.5. below).

(Note: My residence in the 34th District is a rented apartment at 2123 East Avenue in the Town of Brighton, New York, in which I have no ownership interest.)

3. Common stocks (all owned jointly with Marjorie Horton):

a. 10 shares of Eastman Kodak Company stock, valued in May, 1977 at $59.00 per share, total value, $590.00.

b. Two shares of Xerox Corporation stock, valued in May, 1977, at $45.00 per share, total value, $90.00.

c. 10 shares of Rochester Community Baseball, Inc., stock, valued in May, 1977, at $5.00 per share, total value $50.00.

4. Automobiles:

a. 1973 Buick valued in May, 1977, by a Washington area credit union at $2,125.00.

b. 1972 Buick valued in May, 1977, by the same Credit Union at $1,700.

5. Savings account: $30,000.00 (see D.2. above).

6. Other assets:

a. I am owed $34,700.00 by the partnership of Johnson, Reif and Mullan law firm as the proceeds for my sale (to them) of shares of stock in Blackacre, Inc., a Rochester, New York, real estate corporation which owns the building at 47 S. Fitzhugh Street in which the law firm of Johnson, Reif and Mullan has its offices. I ceased all active practice of law at the time of my election to the Congress in 1962, and I am no longer affiliated with this or any other law firm. I no longer hold any stock in Blackacre, Inc.

b. Not included in this statement of assets are such miscellaneous items as clothing and household furnishings, and cash value of life insurance, which have not been appraised and all of which are within the normal range of expectation for a man of my age and income.

E. Personal debts: None except for mortgage liability for home in Kensington, Maryland, which is disclosed under D.I., assets summary.

II. OFFICIAL EXPENSES AND REIMBURSEMENTS CONNECTED WITH MY DUTIES AS A U.S. CONGRESSMAN (FOR THE CALENDAR YEAR 1976)

(Note: With the single exception of the stationery allowance, any unused portion of which was taxable to a Congressman as income in 1976, none of the other accounts accrue any personal benefit to a Congressman or to members of his staff.)

A. Office accounts:

1. In 1976, each Congressman was authorized a stationery allowance of $6,500.00 for office use. I expended $4,378.90 for the operations of my Washington, Rochester and Wayne County offices. At the end of 1976, I withdrew $2,121.10 in cash from the stationery account which will be used in 1977 to defray official expenses.

2. Each Congressman was authorized a postage allowance of $1,140.00 in stamps for the year, of which I withdrew the full amount, some of which was carried over for use in 1977.

3. Each Congressman was permitted an actual transportation expense (auto mileage or air fare) reimbursement for 26 round trips to his home district per year during 1976. I claimed blanket reimbursement for these trips, at a total reimbursement of $2,570.40 plus $159.80 provided by the statutory mileage allowance paid by the Sergeant at Arms. In addition to these 26 trips, I made at least 17 additional trips to the 34th District at my own personal expense. Transportation expenses for these additional trips and for car rentals, meals and other expenses for all trips not reimbursed by the government amounted to personal travel expenses of $5,046.81 for me in 1976.

4. The staff of each Congressman was allowed a total of six government-reimbursed round trips to the home district per year during 1976. As in the case of the Congressman, the reimbursement is limited to actual transportation expense (auto mileage or air fare). Meals, lodging and other expenses are not reimbursed. Similarly, there is no reimbursement for mileage expenses of staff members or Congressman who travel within the congressional district on official business. In 1976, nine reimbursed trips were utilized by my administrative assistant, for a total reimbursement of $1,300.20 (three trips were carried over from 1975). He made several additional trips to the district at his personal expense in 1976. I believe that personal contacts with government officials and constituent groups in my district by professional staff members contribute a great deal to the quality of my service and representation. However, this practice has had to be carried out at considerable expense to myself and members of my staff.

5. Each Congressman was permitted 18 staff positions and a total annual staff salary allowance of $243,724.00* in 1976. The number is uneven because one change was made in this allotment during the calendar year. I utilized a total of $210,354.72 from this amount, with the balance of $33,369.28 reverting to the U.S. Treasury. I currently employ 12 full-time and one part-time staff members, with eight of the full-time people serving in Washington and the remainder in my district offices.

6. Each Congressman was authorized a telephone and telegraph allowance of 125,000 message units in 1976. I carried over 127,563 units into 1976 for a total of 252,563. I used 93,538 telephone message units in 1976 and 506 telegraph units for a total of 94,044 units used. At the end of 1976, I had 158,519 units unused and at 11 cents a unit, I reverted back to the U.S. Treasury $17,437.09. Unused message units may not be carried over from one year to the next starting in 1977. All units used were for official communication by myself or my staff and the bulk of them were consumed in communications to constituents in Monroe and Wayne Counties about federal matters affecting the 34th District.

7. Each Congressman was permitted reimbursement up to $6,000.00 in 1976 for the rental of space for District Offices. Since my Rochester office is in the Federal building, and my Wayne County office is in the county office building, I did not claim any portion of this amount. Thus, $6,000.00 reverted to the U.S. Treasury.

8. Each Congressman was permitted reimbursement up to $2,000.00 for district office expenses in 1976. Since my district office expenses exceeded this amount, I claimed the full $2,000.00 and I paid $3.92 in out-of-pocket expenses.

9. Each Congressman was permitted to obligate the House of Representatives for a total of $9,000.00 in office equipment rental payments for 1976. I utilized $8,434.40 of this amount for rental of photocopying, typewriting, telecopying and other articles of office equipment. An unused portion of $565.60 reverted to the U.S. Treasury. Each Member of Congress was also able to authorize expenditures from a continuing allowance of $5,500.00 a year which the House Representatives uses to purchase office equipment for use in the Congressman's offices. At the close of 1976, I had an unused balance in the office equipment purchase account of $3,037.82.

10. Each Congressman was permitted $5,000.00 in 1976 for constituent communication expenses. I carried over from 1975 $3,485.63 giving me a total of $8,485.63. I used $2,939.42 in 1976. Since carryover is no longer permitted, $5,646.21 reverted back to the U.S. Treasury in 1976.

11. Each Congressman was entitled to a special $3,000.00 tax deduction for living expenses in Washintgon during 1976. Since living expenses at a temporary place of employment are generally deductible for all citizens, and since living expenses during the year in Washington far exceed this figure, this "allowance" is not a financial advantage but a limitation on the deductibility of special living expenses.

B. Official expenses met personally:

Out of my personal income in 1976, I expended $5,050.33 for official expenses above and beyond the amount of reimbursements I received from accounts listed above. These official expenses met with personal funds were property deducted from my Federal and New York State taxable income.

Summary:

Total Allowances (including telephone units)	$309,661.96
Total Expended	$245,743.78
Returned to the U.S. Treasury	$63,018.18
Official expenses met personally (not reimbursed)	$5,050.73

III. POLITICAL AND CAMPAIGN FINANCES

A. It has been my practice neither to accept nor expend any monies personally for campaign purposes. All campaign contributions for my re-election campaign was received and expended by one campaign committee which has been organized for this purpose.

1. The Committee for the Re-Election of Congressman Frank Horton was reorganized in 1972 for the purpose of that year's congressional election campaign and subsequent campaigns. Its treasurer is Alan J. Underberg, a Rochester attorney. The Committee has submitted all required disclosure reports to the Clerk of the House of Representatives (Washington, D.C. 2015) and to the Secretary of State in Albany, New York, as re-

*This amount includes $1,000.00 for the LBJ Congressional Intern Program and is included in the utilization total for my office.

quired under Federal campaign finance disclosure laws. These reports are available for public inspection at those offices.

Summary of the Committee's finances in 1976:

Cash on hand, January 1, 1976	$1,805.47
Total receipts	50,599.05
Total expenditures	52,163.61
Cash on hand, December 31, 1976	240.91

Note: None of the funds in this committee is subject to my personal control.

B. Each Republican Congressman was allowed $2,000.00 by the National Republican Congressional Committee for use to defray public information expenditures in 1976. I utilized $2,000.00 for purposes such as the production of public service radio and television broadcasts, photographic services and other public information expenses related to my duties as a Member of Congress.

IV. AFFILIATIONS

A. I hold no directorships or partnerships in any professional or corporate profitmaking entity, except I do serve, without pay, as a director of the Rochester Community Baseball, Inc., which I served as president prior to my election to Congress in 1962.

B. I also serve on the board of the Genesee Valley Arts Center, Inc. and on the advisory boards of the Center for Migrant Studies at the SUNY College at Geneseo, of a group called Citizens for Decent Literature, National Amputation Foundation, and on the Honorary Board of Directors of The Kidney Organization.

(Note: These are relatively inactive, honorary positions in which I serve without fee.)

C. I am also a dues-paying member of a large number of Rochester area civic, masonic and community organizations, a list of which I would gladly provide upon request.

D. In my official capacity as a Member of Congress, I serve as Ranking minority member, House Committee on Government Operations; member, Ad Hoc Committee on Energy; Chairman, Commission on Federal Paperwork; Cochairman, Northeast-Midwest Economic Advancement Coalition; member, Northeast Economic Action Council; member, executive committee of Republican Committee on Committees.

V. CONGRESSIONAL PAPERS

In 1967, I selected the University of Rochester as the repository for all files and papers resulting from my service in the Congress. In that year, I executed a document making a gift to the university of my congressional papers then in existence as well as those that would result from further years of service as a Congressman. A substantial portion of my papers, from my first 13 years in the House, are already filed at the university. At the time of this gift, university officials brought to my attention the availability of a tax deduction for the appraisal of these papers. Because much of the paper itself as well as much of the staff work, which created the files, was properly paid for by the government, through stationery and staff allowances, I declined the opportunity to take any tax deduction for this gift. In fact, I declined to have the papers appraised.

Therefore, the gift of my congressional papers to the University of Rochester did not result and will not result in any tax or financial benefit to me whatsoever.

YOUNG FAMILIES HOUSING ACT

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. KASTEN. Mr. Speaker, in recent weeks I have been discussing the Young Families Housing Act, a bill I have introduced which would help the single person or family just starting out to afford to buy a home.

While I was in Wisconsin during the recess, I noted an article in the Post newspapers, one of our local publications which further illustrates the dimensions of the problem facing young Americans who want to buy a home.

A recent report by the Joint Center for Urban Studies of MIT and Harvard University has reported that more families are pooling resources and stretching their budgets in order to afford a home. I insert this article in the RECORD for the benefit of my colleagues:

TWO INCOMES BUY ONE HOUSE TODAY

A recent report by the Joint Center for Urban Studies of MIT and Harvard University reports that more families are pooling resources and stretching budgets to afford the price of a new home. The median sales price of new houses rose from $23,400 in 1970 to $44,200 in 1976, an increase of 89 percent, while median family income rose only 47 percent—from $9,867 to $14,500.

Both husband and wife held jobs in 43 percent of families who bought new houses during 1975–76. And these figures closely parallel the proportion of married women in this country who work.

Among first time home buyers, 59 percent of the families who purchased new homes had two family incomes.

The monthly cost of homeownership (including fuel and utilities, taxes, insurance and maintenance) increased even more rapidly than sales prices. These combined costs rose 102 percent between 1970 and 1976.

ELIMINATION OF THE PURCHASE REQUIREMENT

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. LEHMAN. Mr. Speaker, as we begin consideration of the "Agricultural Act of 1977," I would like to bring to the attention of my colleagues a letter which I received from one of my constituents, Ms. Ellie Kurtz.

This letter illustrates a particular difficulty faced by the disabled and homebound due to the purchase requirement presently in effect. Clearly, the very poor are not the only ones who will find relief in the elimination of this requirement as provided for in the bill reported out of committee.

I urge my colleagues to read this letter carefully and to vote against any attempts to reinstate the purchase requirement:

My question concerns the issuance-by-mail of food stamps.

Physically disabled adults who are designated eligible to receive food stamps are able to arrange to get them by mail—but they are not allowed to pay for them by check, even though they have resided at the same address and had the same bank account for years, and pay their rent, electric, and phone bills by check, and even—in Dade County—purchase their Transportation Vouchers by check.

Such recipients aren't even allowed to send cash to the Food Stamp Office if someone else goes there to get stamps for them. Only money orders are acceptable.

Most physically disabled persons have mobility problems. Going somewhere to purchase a money order is often difficult, and even post offices aren't always open. Having to ask someone else to go and buy a money order, becomes burdensome. Besides that, money orders cost money—at least 50 cents apiece and for the person who is not able to earn a reasonable living in the first place, 50 cents does not grow on trees. Even the recipients whose stamps get mailed to the same address month after month, are not allowed to pay for them by check.

Can something be done about this—at least, for disabled persons who are doing their best to "make it" on their own?

AWACS TO IRAN: A RISKY SALE

HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. STUDDS. Mr. Speaker, on July 11, I introduced a resolution to disapprove the proposed sale of seven early warning aircraft—AWACS—to the Shah of Iran. I took this action primarily because the proposed sale would clearly violate the President's own 2-month old arms sales policy which promised that the United States would never again be the first nation to introduce a new weapons system into a region of the world.

I was further disturbed to see a press report on July 14 which indicated that Central Intelligence Director Stansfield Turner believes that the sale might jeopardize the security of the United States. Because of the critical importance of this issue, I thought that my colleagues would be interested in this article which appeared in the Washington Post:

CIA CHIEF CITES SECURITY RISKS IN SALE OF RADAR-JETS TO IRAN

(By Harold J. Logan)

Central Intelligence Director Stansfield Turner has told the General Accounting Office that the proposed $1.2 billion sale to Iran of seven highly sophisticated airborne radar systems might jeopardize the security of the United States.

Turner's reservations were expressed in a letter to GAO which is part of a still-classified report that concludes that apart from political considerations, the sale of the radar systems to Iran is not justified, sources said.

The proposed sale, announced secretly to Congress by the Carter administration late last month, has drawn a storm of protest from Congress. Motions to block the sale will be filed in both the House and the Senate, congressional sources said.

The GAO report, of which Turner's letter is a part, was requested by Sen. John Culver (D-Iowa), a leading Senate opponent of the sale. It is expected to form the basis of congressional opposition to the sale when hearings on the motions are held next week.

In response to a question from GAO, the sources said, Turner wrote that the potential for an all-Iranian crew to defect to the Soviet Union with the radar system, a technology the Soviets do not now possess, could constitute security problems for this country.

A CIA spokesman yesterday refused to elaborate on Turner's opinion cited in the GAO report.

The full report, the sources said, concludes that the Boeing and Westinghouse-produced radar system, known as the Advanced Warning and Control System (AWACS), was too limited to serve Iran's needs, and that "an adequate search for other alternatives was not made."

The report does not address the question of whether preferable alternative systems exist, the sources said.

Meanwhile, Culver yesterday released the text of a "Dear Colleague" letter he and nine other senators have sent to the full Senate, arguing that the potential compromising of new technology and the new arms sale policy Carter announced in May make the proposed sale unwise.

"President Carter's policy is that the United States will not be the first supplier to introduce into a region new or significantly higher combat capability," reads Culver's letter. "It would be a serious mistake to set a precedent by making this sale to Iran a major exception."

Culver said he will introduce a motion Friday to block the proposed sale. Rep. Gerry E. Studds (D-Mass.) has already introduced a similar resolution in the House. Both must be approved by Aug. 6 if the sale is to be blocked.

The revelation of Turner's opinion of the AWACS sale may touch off a new round of controversy within the intelligence community. Sources said analyses by intelligence agencies in the Defense and State departments concluded that the risk of AWACS falling into Russian hands is minimal.

The sources said others in the intelligence community are angered that Turner did not coordinate his response to GAO with them, and view his maverick opinion as designed to further his stated goal of consolidating intelligence operations under one man.

The system at issue is a modified Boeing 727 jet, with a circular plate of the most advanced radar and communications equipment manufactured by Westinghouse mounted atop it. The plane the Iranians want to purchase would not have all of the advanced devices the U.S. planes carry.

Estimates of AWACS' cost vary from source to source. The cost per unit is around $50 million if research and development costs are not factored in, sources said, but if development costs are included the unit cost soars to well over $100 million, making AWACS the most expensive plane in production in history.

When hearings on the AWACS sale open before the Senate International Relations Committee next week, opponents are expected to use Culver's arguments, and to add that selling AWACS to Iran would require more American technicians—the GAO report estimates 400, sources said—in Iran.

Supporters of the sale, which was initiated during the Ford administration and carried toward culmination under Carter, will argue that AWACS is less lethal than other American weapons the shah wants but has been refused, and that the United States should not risk alienating an important Persian Gulf ally.

In a related matter, sources yesterday confirmed a report that there exists an internal Navy memo that indicates the Defense Department prevented Iran from seeing a Grumman Aircraft Corp. plane that is a less expensive and complex version of AWACS.

The source said, though, that other Iranian officials, including Vice Minister of War Gen. Hassan Toufaniau, had seen the Grumman plane and chose AWACS instead.

WARREN TOWNSHIP HONORS MEMORY OF HARRY THOMAS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. McCLORY. Mr. Speaker, the officials of Warren Township in Lake County, Ill., have developed a modern and highly serviceable complex of offices and recreational facilities with the support of the citizens and taxpayers of the township.

Mr. Speaker, my friend, the township supervisor, Bob Debke, initiated action to designate these facilities in honor of a long-time resident and public official of Warren Township, the late Harry Thomas.

Mr. Speaker, until his death in 1975, Harry Thomas lived the entire 78 years of his life in Warren Township, where he served in various public and civic capacities, primarily as the road commissioner for a total of 36 years.

Mr. Speaker, it is entirely appropriate that the township officials should honor the memory of Harry Thomas. On Sunday, July 24, the township officials will dedicate the Harry Thomas Recreational Complex, at which time his widow, Catherine Thomas, and his six children, Kathleen, Lorette, Joan, Timthoy, Harry, Jr., and John are expected to be present.

Mr. Speaker, I am planning also to be present on this auspicious occasion, and to express congratulations and good wishes to Supervisor Bob Depke, Town Clerk Josephy Dada, Jr., to Frank Thomas, the nephew of the late Harry Thomas, who is the present road commissioner, and all other township and public officials who are assembled, and to express the pride which all of us in public office have in our colleagues who devote their lives and energies to responsible and honorable public service.

INCREASES IN HOSPITAL COSTS

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. CARTER. Mr. Speaker, proposals to contain the dramatic increases in hospital costs have been a topic of much discussion in the Congress in recent months. As a physician and as ranking minority member of the House Subcommittee on Health and Environment, I too have become increasingly concerned about this problem. I have listened carefully to the methods proposed to solve it, including the legislation advanced by the administration, H.R. 6575. Although I share the administration's desire for timely action to remedy the problem of rapidly escalating hospital costs, I feel that the administration's proposal is not properly focused, nor can it accomplish the long-term goals toward which we should be working.

The goal of a cost containment system should not simply be defined in terms of how many dollars are spent for hospital care or for any other type of health services. Instead, the goal of a cost containment system should be the provision of effective, efficient, high quality care for all Americans. Accomplishing this goal is a difficult task indeed, but I do not think we can do it with the inflexible, nonspecific approach proposed by the administration.

Hospitals and the problems they face are as varied as the diseases with which we become infected; and an effective cost containment system must have the ability, and the sensitivity, to deal with these variations. Given the wide variations among hospitals in size, location, services, case-mix, and efficiency, I do not believe that it is technically feasible, or desirable, to institute a cost containment program at the Federal level. For this reason, I am announcing today my intention to introduce legislation which will encourage the formation of State cost containment programs as the best approach to a long-term solution.

The President's proposal has focused on the short-term goal of controlling hospital costs without attempting to do much about our long-range goals. I believe that we must begin now to develop a program of rational management of our health care resources. Establishment of State cost containment programs will take time and effort, but the payoff in terms of a coordinated, balanced approach to the problem will ultimately benefit our health care delivery system.

This should not be an issue of Federal versus State power; the important point is the ability of State and local officials to institute selective and cooperative approaches which allow all concerned to participate in maintaining and improving the care we provide our people.

In contrast to the administration's legislation, my bill will focus on the establishment of State Commissions on Hospital Budgets to review prospectively the budget of hospitals within the State. Key elements in my proposal will be:

Flexibility in the selection of a prospective budget review methodology;

Positive incentives to hospitals to control costs;

Uniform definitions of reimbursable costs;

Federal support for "startup" costs of State Commissions;

Establishment of policy review boards at the State and Federal levels to monitor health financing policies; and

Provisions for Federal oversight of State budget review.

I submit that only a program instituted at the State level as I have proposed can achieve the level of specificity and sophistication necessary to insure the desired efficiency is achieved while maintaining quality of care. Such a program must insure that needed facilities are not forced to close; it must insure that base year budgets are "reasonable" and it must insure that utilization levels represent care which is needed. This is a complex and difficult task and cannot be accomplished by the imposition of a simple formula, as proposed by the administration. More importantly, an effective budget review system must be linked to the planning and utilization review systems if it is to insure support for needed, effective, efficient health care institutions. The Federal Government has already instituted planning programs under Public Law 93–641, and utilization review and quality assurance programs, under Public Law 92–603, which are based at the State and local level. It is difficult to see how these activities could be effectively linked to the cost con-

tainment program if it were based in Washington.

My proposal will link these efforts by providing:

Planning—HSA—and utilization review—PSRO—representation on the State policy review board;

Budget Commission support of planning activities through joint financial feasibility studies and support of decertification decisions; and

Cooperative quality assurance mechanisms.

In addition, Mr. Speaker, I realize that a transitional program, in some form, may prove appropriate, if we commit ourselves to move aggressively toward development of a long-term program, as I have proposed. In considering a transitional program, two points must be kept in mind; first, we must insure that the program is indeed transitional, and second, we must insure that the program is as equitable as it can be.

The President has proposed one such transitional program, and much discussion has ensued as a result of that proposal. I submit that the following changes are those which are minimally necessary to insure that a transitional cost containment program will not harm needed components of our health care system. I commend them to you for your consideration:

No hospital's actual revenue increase should be less than the GNP deflator;

Insolvency alone should be a basis for exception;

No hospital in an underserved area should suffer reductions in per admission revenue for volumes higher than the base year; and

Needed capital expenditures for National Health Resource Centers—tertiary care institutions serving several States, such as the Mayo Clinic—should not be subject to an individual State's allocation under a capital expenditure program.

Finally, Mr. Speaker, I would like to say that I look forward to working with my colleagues and other concerned citizens in developing this proposal further. I would hope that this announcement will encourage a thorough exploration of the issues and concepts I have only touched upon today.

MANDATORY RETIREMENT LEGISLATION

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. SARASIN. Mr. Speaker, the mandatory retirement legislation which we have been considering, H.R. 5383, has now been reported out of the Education and Labor Committee and I would like to place in the RECORD my statement before that committee:

Mr. Chairman: My service during this Congress as Ranking Minority Member on the Employment Opportunities Subcommittee and as a member of the Select Committee on Aging has afforded me a most enlightening education in the problems confronting the older American worker. While great strides have been made in the field of medical technology and disease control resulting in increased life expectancy for all Americans, Congress has not, until this time, taken any steps to enable older workers to retain their jobs past the age of 65.

Thus, with physically healthier and more mentally alert American workers, the issue of mandatory retirement had to be addressed by this Congress. Attaining the age of 65 does not terminate one's innate ability to contribute productively to society and seems unfair and inhumane to extend a person's life span and at the same time deny them the right to work.

Older workers must have the opportunity to continue as productive members of society and utilize their expertise in maintaining themselves and our country's economy. It is only through the ability to remain productive that the individual fully develops a sense of self-worth. Mandatory retirement is a cruel sword which severs older workers from a position of productivity and forces them into a position of hopeless inactivity.

I wholeheartedly endorse H.R. 5383 as reported out by the Committee and hope that the Chairman will make every effort to bring this legislation to the floor as quickly as possible.

NATURE OF ARMED FORCES TODAY SPELLS END TO DRAFT

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. STEIGER. Mr. Speaker, Col. Robert Heinl, Jr., is one of America's best known military analysts. A retired Marine colonel, he is considered one of our top experts in military affairs.

Colonel Heinl recently addressed the question of the all-volunteer military versus the draft. His firm conclusion is that a return to conscription would be expensive and that it would not cure any of the ills cited by critics of the volunteer force.

I would like to commend Colonel Heinl for clearing up some of the misconceptions of those who are critical of today's military. He responds to such concerns as racial and economic representation in the force, manpower costs and military pay, and recruiting.

Colonel Heinl's article is a thoughtful one. I hope it will receive careful attention. The article follows:

[From the Detroit News, June 20, 1977]

NATURE OF ARMED FORCES TODAY SPELLS END TO DRAFT

(By Col. R. D. Heinl Jr. USMC (Ret.))

WASHINGTON—Those who always wanted to retain the draft—or in some cases would like to regiment the country into universal conscription—have launched a drive to write off the all-volunteer armed forces as a failure and go back to some form of compulsory service.

Such an uproar might have been predicted.

The persons who are now making a great deal of alleged failures of the all-volunteer force (AVF) are the same anti-volunteer experts who a decade ago said, "It can't be done."

During the AVF's remarkably successful first four years, the critics were silent. Now, spearheaded by a handful of diehard Southern conscriptionists in the Senate, Messrs. Stennis, Nunn and Baker, among others, the old arguments are again being raised but in contemporary dress. These are roughly as follows:

1. That the volunteer armed forces (for which in this context, read Army, where the problem, if problem it is, really lies) are "socially unrepresentative," which is academic language for black and poor.

2. That volunteer manpower costs are going out of sight, are responsible for the fact that 56 percent of the defense budget goes for people, and that we could remedy all this by reverting to the draft.

3. That, no matter how much we pay, volunteer recruiting will not attain, and is not now attaining, necessary goals either in numbers or in basic quality.

However plausible, none of the foregoing holds much water and, even more to the point, a return to conscription would be a poor remedy for the ills cited.

The Army, it is true, is about 26 percent black. But the armed forces as a whole are just below 17 percent, hardly any cause for great alarm. Anyway, in the words of my colleague, Carl T. Rowan whose column appears from time to time on this page, says:

"What is so wrong if blacks find equal opportunity and social mobility at a living wage in a volunteer Army?"

More profoundly, the "socially unrepresentative" complaint, dear to the hearts of the liberal left where, surprisingly, much conscriptionist fire smolders, demands in effect that the enlisted ranks of the Army comprise a perfect social cross-section, notably including college graduates and prep-school boys digging latrines, humping mortar baseplates and picking up butts from the parade ground. This may be satisfying egalitarian and "democratic," but is a grotesque misuse of potential leaders.

Manpower costs for the U.S. defense establishment are high. But to attribute this fact to the volunteer-force decision is to set up a straw man.

The 56 percent people-component in the defense budget not only includes enlisted pay but the pay of the Pentagon's swollen million-person civil service force, military retired pay and a miscellany of so-called personnel-support costs which have nothing to do with pay.

But, you will say, the Russians get by with paying only 25 percent of their budget for people-costs.

The base pay of a Russian private is the ruble equivalent of $3 a month. This affords quite an advantage over our $307 a month to a private before he even learns port arms. Another way the Russian defense ministry shaves personnel expenditures is that its large retirement-pay budget is funded under their equivalent of Social Security.

Still another comparable economy enjoyed by the USSR armed forces is that all personnel transfers, which are a heavy portion of our Pentagon's "personnel-support" costs, are paid for, not by the military, but by the Soviet ministry of transportation.

One widespread misunderstanding in the return-the-draft outcry is that there would also be a return to the old-time slave-wages we used to pay soldiers and sailors. A corollary misstatement often heard is that today's equitable wages paid the troops result from and are an inducement specially enacted for the volunteer force. This is untrue.

As early as 1967, when conscription was in full flower, Congress decided in principle that military pay was to be comparable to civilian pay. Each military pay grade was equated to a civil service level, and future military and civil service raises were tied, as they now are.

In view of the foregoing, even if the draft were returned, Congress would certainly not go below minimum-wage scales for the military, let alone the bad old starvation-wage scales. In tellingly precise terms two years ago, Andrew Uscher, a respected Pentagon systems analyst, went deeply into the real

vs. oft-assumed relative costs of volunteer and conscript forces. Uscher's conclusions, which nobody has ever challenged, were that to restore the draft would actually cost the Defense Department over $50 million a year more than present AVF arrangements.

It is true, but not seriously disturbing, that the two manpower-oriented services, Army and Marines, are a little behind on their recruiting quotas. The Army (short 11,000 men on a total strength of 789,000) is 6 percent down; the Marines are off about 2 percent (4,000 men) and are cheerfully accepting this shortage as the price of a dramatic rise in quality (from 68 percent to 75 percent high-school graduates in the last year, with the current recruit input running about percent.

Anyway, in volunteer forces where quality and motivation are all important, the services have always preferred to accept shortage in numbers rather than compromise quality, and that is what now seems to be happening.

But something more profound is happening.

The looming combination of new technologies, of instant high-speed future war and of increasingly wide spread social resistance to conscription, is sounding the knell of the draft.

In the words of Prof. Morris Janowitz, the University of Chicago sociologist who has devoted his career to study of military institutions:

"Since 1945 we have been witnessing a fundamental transformation in the armed forces of Western democracies—the end of the mass armed force. Conscription is at an end whether you like it or not. That is a fact of the modern world."

FREEDOM OF RELIGION IN POLAND

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. WALGREN. Mr. Speaker, as a member of the Delegation from the United States Congress to the Parliament of Europe meeting prior to the review of the Helsinki Accords, I want to recommend to my colleagues the testimony of Mr. John M. Szostak, on the failure of the communist regime in Poland to allow full expression of the basic human right of freedom of religion.

For over 1,000 years the Roman Catholic Church in Poland has exercised a very important role not only in religion but also in social, moral, and educational matters. The social and educational work of the church has been greatly hampered in the past 30 years by closing down of schools and the liquidation of its religious centers and organizations. Religious instruction has been banned from the school curriculum and it is also being obstructed even outside the schools. The construction of new churches is met with enormous obstacles and social activities of the parish are greatly impeded.

Poland's record of religious freedom in those past 30 years is a dismal one due to violations of the basic human rights that its citizens cannot fully enjoy and practice openly. The Polish Constitution guarantees the freedom of religion in theory only, however. Active participation impedes ones success in the professions and career advancement. It is a known fact that a practicing Catholic cannot hold high office or head a department or any other executive position in the state or the economic sector.

The so-called guarantee of religious freedom under the Polish Constitution is systematically violated. The people of Poland, especially its youth, are constantly persecuted and harassed for having exercised this basic human right. Only the old people are left alone to practice their faith with very little opposition. The present regime feels that it would be counterproductive and next to impossible to stamp out religion in Poland overnight without bloodshed. Therefore, time is their only weapon. The strategy is to indoctrinate the youth by stepping up their campaign of atheism via materialism to create a new generation of nonbelievers as an answer to the Marxist dream of creating a perfect Communist state society.

Poland and other Eastern European nations, including the Soviet Union, are today witnessing a great spiritual renewal among its youth, as well as the older generation. Much of this is going on underground for fear of social and economic repression. The movement of religious renewal is there and growing. This movement has become a great concern to the Polish Govermnent officials. They do not know what to do or how to cope with new problem as they consider it to be.

A card-carrying party member who wants to protect his career must send his children for religious instruction in secret and practice his faith in the same manner—oftentimes traveling to a distant town where he will not be recognized and in disguise. Although religious instruction is allowed in Poland, obstacles are put in the way to discourage this kind of practice via the school curriculum that has made it extremely difficult for the students to attend. The Polish Catholic Episcopate has sharply criticized this tactic as a direct and open violation of the constitution that guarantees religious freedom—in theory—to the people of Poland.

The Communist regime here again systematically obstructed the construction of new churches and religious facilities, blaming it on the lack of material and skilled labor. The overflow of faithful attending religious services is not only an example of religious devotion, but most of all, the lack of new churches that are desperately needed by the Polish faithful.

Catholic publications are restricted on the pretext of paper shortage, so are publication of books that are only permitted to be printed in very small quantities so as to avoid mass circulation. Pastoral letters are confiscated, and recently attempts have been made by the regime to forge the pastoral letter of Cardinal Wyszynski in hopes of creating confusion within the Catholic Church in Poland—this has failed. For the average Polish citizen, the pulpit and foreign broadcasts are the only avenues of truth and information from the west.

The Polish Government considers religious holidays—such as Christmas and Easter—as nothing more than social affairs at which to eat and drink, rather than meaningful religious experiences. The same is considered of weddings and baptisms. Every effort is being made by the regime to promote atheism especially among its youth during these solemn occasions, proclaiming that God is dead and that religion is a novelty for the old people.

Foreign publications, especially of a religious nature, are strictly prohibited and are confiscated if brought into the country by a foreign visitor or by a Polish national returning. The chairman of the Central Committee for Customs in Poland stated on January 31, 1976, that "such material be forbidden since it leads public opinion into error by giving information not in agreement with reality or information otherwise potentially damaging to the welfare or interests of the Polish Peoples Republic."

Forty years ago, Pope Pius XI issued the encyclical Divini Redemptoris in which communism was condemned in that organized religion cannot collaborate with communism because Marx condemned all religion as the opium of the people. Atheism is the very core of Communist doctrine. To deny this fact is indeed living in a fool's paradise.

The history of communism in Poland and in the other parts of the captive world is an uninterrupted chain of violations of the fundamental human rights—especially the right to worship. The ultimate goal of the present Communist regime is to stamp out religion in Poland altogether because communism can only survive by total elimination of the rights and dignity of man. This is what the Catholic Church in Poland stands for and preaches. The basic principles on which Catholic social teaching is built on is the dignity and freedom of the individual. Communism in Poland and elsewhere is totally opposed to any system which defends the dignity of man as an individual. Pope Pius XI, in his encyclical Divini Redemptoris stated that, "The problem of communism lies in the cultural revolution which aims at producing a new type of man without faith, without hope, without love and also without personal freedom and responsibility."

The present Communist regime in Poland feels that the Roman Catholic Church poses a threat in that it is an elaborate international organization undermining the authority of the Communist state. Because of the prospect of outside influence which is considered to be in conflict with their Marxist doctrine, it is therefore considered to be a very serious threat.

Kazimierz Kokal, head of the Office for Religious Denominations, in May of 1976, flatly stated that, "The Church is the enemy which should be annihilated. Religion has, in the long run, been extricated from human consciences and thought." Furthermore, Kokal stated, "We shall yield nothing to the Church." Therefore, after 30 years of Communist rule in Poland, very little has changed in regard to the Government's policy of church and state relationship. It can be compared to nothing more than a cat and mouse existence. Today the regime continues to strive through a sophisticated campaign of atheism and social

harassment in its goal to stamp out religion in Poland altogether.

The West often asks why do the Polish people enjoy more freedom than the rest of the Soviet bloc? The answer is quite simple. After 1,000 years of Christianity and survival of the Nazi barbarism during World War II, the Communist regime in Poland has been unsuccessful in their efforts to stamp out religion without creating additional problems and obstacles for the regime. The Polish Catholic Episcopate knows and understands that as long as there is a Communist government in Poland, this struggle will continue. Another reason for this so-called Polish freedom is that the Communist regime knows that the true power in Poland is the Roman Catholic Church, under the pastoral guidance of Stefan Cardinal Wyszynski, the Primate of Poland. This tradition of the church being supreme in Poland has been around for over 1,000 years.

The Polish nation would have gone through many devastating revolts against the present regime if it were not for the plea for peaceful cooperation by the Polish Catholic Episcopate. The Communist regime knows this and so does the Polish nation.

The Roman Catholic Church in Poland is prepared to uphold the virtues of the gospel that is committed to her, regardless of what obstacles are put in the way by the present Communist regime. The Polish Catholic Episcopate believes that the God-given dignity invested in man should be restored to the human individual if there is to be genuine peace and harmony in Poland. The basic virtues of the gospel are the right to maintain and develop one's corporal, intellectual, and moral life—especially the right to worship and education in private and public. Pope Paul VI stated that,

> The Church is concerned, above all, with the right of God and can never dissociate herself from the rights of man created in the image and likeness of his creator.

Therefore, man can only foster and penetrate these rights through the guidance of the Holy Spirit.

The Catholic Episcopate in Poland believes that the responsibility of evolution in the area of Human Rights and genuine religious freedom in Poland rests not upon a single international organization but upon everyone without exception. The Roman Catholic Church in Poland feels that the Helsinki Commission can be instrumental in strengthening the international juridical mechanisms for the purpose of making effective the full operation of human rights for the people of Poland and other captive nations in the Soviet bloc a possible reality. This can only be achieved through evolution not by revolution.

The Catholic Episcopate believes that the suppression of the right to worship and other basic human rights in Poland have become institutionalized and this violates the most fundamental rights of life, liberty, and the pursuit of happiness. The Catholic Church's mission of evolution is to create or reactualize world opinion by an auto-critical conscience in the hopes that, with the cooperation of the various international human rights organizations, an effective mechanism may be achieved and thus assure the realization of genuine religious freedom and human rights to the people of Poland.

ENERGY PROGRAM QUESTIONNAIRE

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. WOLFF. Mr. Speaker, earlier this year I announced to this body that I had mailed my constituents a questionnaire to solicit their opinions on President Carter's energy program. Since that time, almost 10,000 of my constituents responded with their views. A forthcoming newsletter to my constituents will announce the results of this districtwide survey and I am pleased to make this newsletter available to my colleagues:

NEWSLETTER

DEAR FRIEND AND CONSTITUENT: In a recent newsletter I sought your views on President Carter's proposals to ease our Nation's energy crisis. I am gratified by the significant number of responses to this questionnaire and again wish to thank those of you who took the time to answer, for it is through such two-way lines of communication that I am able to maintain close contact with all constituents. Your opinions help me to better represent you.

The results indicate a direct correlation between your views and my legislative efforts to achieve solutions to crucial issues. As graphically shown by the tabulations on the reverse side of this page, the thinking of the residents of the 6th Congressional District parallels my own on the energy problem.

The number of responses, 9,877—7 percent of those surveyed—confirms the premise that it is the responsibility of Government representatives to provide opportunities for citizens to express their views and offer suggestions for resolving problems. As your Congressman, I have consistently maintained one of the highest voting records in the House, 99.2 percent on recorded votes and 93.4 percent on the "yeas and nays" this session alone—independent judgments that are responsive to your needs as well as those of your neighborhood and your country.

The overall concept of President Carter's energy plan is sound, but be assured that I share your disapproval of any standby tax on gasoline. Already rejected by the House Ways and Means Committee, this tax would not encourage conservation but rather would penalize those who can ill afford it, senior citizens of fixed incomes and commuters with no ready access to mass transit. However, Congress should provide the President with emergency standby power to impose gasoline rationing in the event a major energy crisis involving our national security erupts. We must protect America's security by insuring adequate energy resources—our Nation's lifeline.

The majority of respondents want a lid placed on domestic crude oil process, not an increase through added taxes. Rebate or not, higher costs are not the answer. If our Nation is to become independent of foreign oil sources, we must increase energy production and make our supplies available at prices that do not gouge the American consumer. Further, the price of natural gas must be equalized between regulated interstate and unregulated intrastate markets to stabilize nationwide costs and distribution. We cannot afford another winter crisis that shut down entire cities under the guise of questionable gas shortages. Energy supplies, be they oil or natural gas, are a national problem, not a regional privilege, and we must see to it that no one sector is shortchanged again.

Greater conservation efforts are of paramount importance to safeguard the fragile balance between adequate supply and reasonable demand. An excise tax on new "gas-guzzling" cars would encourage the use of more efficient small cars. Buyer incentives through tax credits and rebates to homeowners and businessmen would emphasize energy saving insulation and solar heating equipment. Enabling legislation to this effect and to speed up the development of alternate sources of energy is forthcoming this Congress.

There is no doubt that the energy crisis has cut short our Nation's ability to respond to the challenges of the times. If we are to win the "energy war" and regain our economic viability in the world market, we must pledge priority to the enactment of a strong comprehensive program that will meet future requirements and contingencies. To do less would be callous disregard for America's vital needs.

HERE'S YOUR OPINION

(Results of the 6th Congressional District Survey on President Carter's Energy Proposals—May, 1977)

1. Place a standby tax on gasoline (with annual increases unless Federal targets are met) to encourage conservation: Yes, 3300, 33.4 percent; no, 6298, 63.8 percent; no opinion, 279, 2.8 percent.

2. Impose excise taxes on the purchase of new "gas guzzzling" automobiles and provide tax rebates to purchasers of more efficient small cars: Yes, 6524, 66.1 percent; no, 3195, 32.3 percent; no opinion, 158, 1.6 percent.

3. Provide tax credits to homeowners and businessmen who insulate (weatherize) their premises: Yes, 8111, 82.1 percent; no, 1594, 16.1 percent; no opinion, 172, 1 8 percent.

4. Provide tax credits for the installation of solar heating equipment: Yes, 7772, 78.7 percent; no, 1779, 18.0 percent; no opinion, 326, 3.3 percent.

5. Impose higher Federal taxes on factories and utiliites that do not shift to clean coal as their primary energy source: Yes, 6193, 62.7 percent; no, 2977, 30.1 percent; no opinion, 707, 7.2 percent.

6. Phase out utility pricing policies that afford discounts to big users of electric power: Yes, 7278, 73.7 percent; no, 2183, 22.1 percent; no opinion, 416, 4.2 percent

7. Reform present licensing requirements of nuclear plants, without letup in standards, to reduce delays in construction: Yes, 7323, 74.1 percent; no, 1915, 19.4 percent; no opinion, 639, 6.5 percent.

8. Raise the price of domestic crude oil, now being pumped (old wells) by imposing higher Federal taxes to be rebated to the public: Yes, 3736, 37.8 percent; no, 4995, 50.6 percent; no opinion, 1146, 11.6 percent.

9. Equalize the price of natural gas sold in regulated interstate markets and unregulated intrastate markets to balance nationwide costs and distribution: Yes, 8136, 82.4 percent; no, 1084, 11.0 percent; no opinion, 657, 6.6 percent.

10. Are you generally in support of the President's energy package? Yes, 6023, 61.0 percent; no, 3047, 30.8 percent; no opinion, 807, 8.2 percent.

PANAMA CANAL NEGOTIATIONS SHOULD BE ENDED IMMEDIATELY

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. RUDD. Mr. Speaker, I believe that the President should immediately terminate any further negotiations for a new Panama Canal treaty, and recall our negotiators.

The news today that Panama's dictator Omar Torrijos is holding us up with a blackmail demand of more than $5 billion to allow continued U.S. control of the Panama Canal for the next two decades under terms of a new treaty should be enough to bring our negotiators home and scrap any further talks with this despot with the instincts of a sidewinder.

Torrijos and his henchmen have been living fat lives and are undoubtedly stashing away millions of illegitimately gained dollars for future plush living, in private bank accounts overseas, while Panama has slowly gone bankrupt.

More than 45 percent of Panama's total budget is tied up in debt service to pay off current loans.

As a result of this sorry financial situation, Torrijos is trying to steal away America's sovereign right to the Panama Canal, which the United States has paid for and operated through these many years. To add insult to injury, Torrijos now wants to rip off the American taxpayers for more than $5 billion for the honor of taking this vital U.S. property.

If he took over control of the canal, Torrijos would undoubtedly raise the canal's use fees to exorbitantly high levels to raise additional money from American sources.

Since when did American leaders seriously sit down and negotiate matters of our country's vital national interest with such low blackmailers?

Why are representatives of one of the world's most powerful nations grovelling at the feet of this man, while with impunity he insults the dignity of our great Nation and our people with his back-alley blackmail demands?

I believe that we should maintain our U.S. sovereignty, ownership, and control of the canal. We should terminate all further negotiations with Torrijos' representatives forthwith. We should tell Torrijos to bail out his government through honest policies and hard work, rather than through common thievery and blackmail. And we should announce our intentions to continue operation of the canal under current treaty provisions.

There are those few outspoken politicians in the United States who will continue to say that we should deal with this dictator, just as they want to rush into the arms of Fidel Castro and other gangster leaders around the world. These politicians will be joined by the usual cabal of pro-Marxists and internationalists whose loyalty is not with the primary national interests of the American people.

But we should ignore these pleas. They do not represent the majority view of the American people, whose national interests are foremost and who are sick and tired of being the whipping boy for those who live off U.S. handouts.

If the Panama Canal is in need of improvements and repairs, which it is, the United States is in the position to do them. If the canal is threatened by another world power or a suitcase bomber, there is no country better able to prevent such action or defend the canal than the United States.

Continued operation of the canal, necessary repairs, and its continued defense can all be accomplished for a lower cost to the pocketbooks of our people and to our national dignity than payment of Dictator Torrijos' blackmail demands. And we can maintain our legitimate sovereignty over the canal and the Canal Zone.

I urge the President to immediately order home Ambassadors Ellsworth Bunker and Sol Linowitz. Let us immediately end the Panama Canal negotiations which have become a farce.

Mr. Speaker, I would like to include at this point in the RECORD the news article from today's Washington Post outlined Dictator Torrijos' blackmail demands to the United States:

[From the Washington Post, July 15, 1977]

PANAMANIAN DEMAND FOR $5 BILLION SNARLS CANAL TREATY TALKS

(By Oswald Johnston)

An unexpected Panamanian demand for more than $5 billion as a condition of continued U.S. control over the Panama Canal for the rest of this century may pose a serious obstacle to completing a new canal treaty this summer, administration officials said yesterday.

In an effort to defuse the issue, which emerged in the canal treaty negotiations only in the past few weeks, senior U.S. and Panamanian officials have opened separate talks on an aid program which Carter administration negotiators hope will satisfy at least part of the Panamanian demands.

Potentially the most serious obstacle is a demand by Panamanian President Omar Torrijos for a $1 billion lump sum down payment as soon as the new treaty goes into effect. This money is seen as a potentially fatal obstacle to Senate ratification of a new treaty.

Only slightly less serious is a parallel demand for an annual payment of nearly $200 million for each year the new treaty remains in effect, compared to the $2.3 million "annuity" the United States pays now.

Under the tentative treaty draft under negotiation, the agreement would expire in the year 2000 and ownership of the canal would revert to Panama. The United States, however, would be granted in perpetuity a right to intervene to protect the "neutrality" of the canal if it should come under any outside threat.

To counter these cash demands, which U.S. officials consider exorbitant, negotiators Ellsworth Bunker and Sol Linowitz have adopted a two-fold strategy.

First, they have refused to discuss the $1 billion lump sum as part of the treaty, on the grounds that their authority from President Carter extends only to negotiating an equitable annual rent schedule.

Second, they are insisting that all payments to Panama under a new canal treaty be derived from canal tolls and that all additional payments, if any, be negotiated separately.

Officials said yesterday that the Panamanians have agreed in principle that only the "annuity"—annual rental payment—will be included in the treaty.

The separate demand for additional cash is being treated as a request for development aid, and separate negotiations have now opened between the Panamanians and ranking officials in the State Department, the Treasury Department and the Agency for International Development.

Details are unclear, but it appears the strategy will be to distinguish the aid program altogether from the treaty when congressional approval is sought, and to redefine Torrijo's demand for a $1 billion lump sum into an aid program extending over several years.

On the equally difficult question of annuity. Bunker and Linowitz are asserting a bottom-line U.S. requirement that the annual payment be covered entirely by revenues from canal tolls.

These currently gross about $230 million a year, but operating costs are so high that the canal at present is run as a non-profit enterprise. Officials calculate that a contemplated 20 to 30 per cent increase in tolls plus a reduction in operating responsibilities under the new treaty will leave an excess of about $50 million a year for rental.

DEFINITION OF NEW NATURAL GAS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. COLLINS of Texas. Mr. Speaker, the deep Ellenburger pool shown on the attached graphs was discovered in 1963 in Pecos County, Tex., and development is still continuing 14 years later. Cumulative production of the Ellenburger zone to January 1, 1976, was 2.4 trillion cubic feet gas. January 1977 production from 113 wells was 24 billion cubic feet gas.

The Wolfcamp pool was discovered in December 1973, 10 years after the Ellenburger discovery. The Wolfcamp Wildcat well was completed 1.5 miles west of the nearest existing Ellenburger gas well and at a depth of 11,000 feet which is 11,000 feet shallower than the Ellenburger gas production at 22,000 feet. In May 1977, there were 17 completed wells and 10 locations. Cumulative production for the Wolfcamp pool to January 1, 1977, was 4.6 billion cubic feet gas and 643,910 barrels condensate.

The Wolfcamp gas reservoir would not have been developed had it not been for the unregulated price of intrastate gas. However, this gas would not qualify for new gas prices under the Dingell amendment, since the pool is less than 2.5 miles from existing production and less than 15,000 feet deep. This fact was very much on my mind when I supported the deregulation of the price of newly found natural gas.

STATEMENT BY THE HONORABLE RICHARD NOLAN OF MINNESOTA

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. NOLAN. Mr. Speaker, I am today introducing an amendment to H.R. 7171, the Agriculture Act of 1977. The amendment I offer will restrict Federal price support and crop disaster payments from going to large, diversified corporations and trusts when the ownership of those bodies is not held by bona fide farmers.

The best agricultural policy is one benefiting both urban consumers and family farm producers. We believe it is in the best interests of both groups for agricultural production to remain in a widely dispersed system of small family farms. Corporate concentration in agricultural production will inevitably result in higher food prices and a channeling of wealth away from family farm operators and the rural economy.

Federal price support payments and crop disaster payments are intended to help stabilize production and to supplement the income of farmers who would otherwise be forced out of business. When overproduction occurs, supply overtakes demand and prices fall. The small family farmer gets less per unit for his production when he has produced a good yield, but more per unit when the yield is low. In either case, his income is controlled. Crop disaster and price support payments are necessary to support farmers when weather conditions or market prices are so low that bankruptcy becomes the only option for many.

Nonfarm corporations are not primarily dependent upon these conditions. Through practices which allow them to rely on marketing profits to offset their production losses they are able to maintain production, and expand their market at a time when small farmers are forced to cut back. In addition, these production losses are often of little consequence if the nonfarm corporation is primarily interested in farming as a tax loss investment or for farm real estate speculation.

CORPORATE CONCENTRATION IN THE FOOD INDUSTRY

The encroachment of large, non-farm corporations has already begun in our domestic food industry. In agricultural production, the largest farms have been concentrating an ever larger share of the market.

Census data shows:

1. In 1929, 12 percent of the existing farms accounted for 45 percent of total farm sales.

2. In 1964, 12 percent of the existing farms accounted for 60 percent total farm sales.

3. Eleven years later, 1975, 16 percent of the existing farms accounted for over 70 percent of all farm sales, with 4 percent of farms accounting for 47 percent of the total farm sales.

Even more dramatic has been the corporate concentration of the food processing industry. Consider the following: Four firms control 91 percent of all breakfast cereal sales; four firms control 75 percent of all bread and prepared flour sales; four firms control 70 percent of all dairy product sales; four firms control 80 percent of all canned good sales; and one company produces 90 percent of all soups.

Large food processors have already begun to concentrate holdings within the food production industry as well through diversification known as "vertical integration." Food processors who control vital production and transportation sources can circumvent market losses by relying on higher profits charged to consumers. Small family farm producers do not have that advantage.

As an example, corporate contracts were responsible for: 97 percent of chickens raised as broilers; 95 percent of processed vegetables; 85 percent of citrus fruits, and 100 percent of sugar cane and sugar beets processed, with outright corporate ownership of nearly all sugar cane production.

CONSUMERS PAY

In 1972, a Federal Trade Commission study revealed that anticompetitive techniques within 13 food industries alone resulted in consumers being overcharged by $2.1 billion in that year.

Consumers pay in terms of quality as well. According to the Inter Religious Task Force on U.S. Food Policy, concentration of agricultural production on very large, highly mechanized farms will also bring some inevitable costs in terms of food quality. While such mass production techniques as harvesting vegetables while still green and using large amounts of coloring and preservatives are not intended to reduce food quality, reduced quality is the unavoidable result of management primarily concerned with the mass processing and distribution of products and the elimination of competitors.

MORE EFFICIENT FAMILY FARMS

As Americans, we can still boast that our people spend less than 17 percent of their disposable income on food, less than any other nation on earth. Food production in the United States is still dominated by 2.8 million family farmers dependent on the market as their primary source of income.

In the early 1960's, many large corporations bought huge farmland holdings and set up corporate farms. These corporations boasted diversified investment portfolios, with large sales and accounting departments, and used the latest technology together with modern professional management. Most of these corporations suffered huge losses and have since retreated from full scale operations.

The reason why corporations failed on this effort was expressed very aptly by one of my constituents recently, "Who's going to work 18 hours a day for a corporation?"

Small family farm operations often operate on margins that are well below "cost of production," let alone "a fair rate of return on investment." As long as American agriculture is primarily dependent upon small, hard working, thrifty family farm operations, not only will consumers benefit, but so too will rural communities and the rural economy continue to thrive.

CORPORATE INVASION OF FARMLAND

Although corporations have learned the hard realities of the marketplace, this has not exhausted their enthusiasm for control of agriculture. Large corporations have lately discovered that purchase of farmland as an investment, with production handled through crop share leases with farmers, is a very practical and potentially very profitable way of increasing their control of agriculture.

Earlier this year, the subcommittee I chair on family farms, rural development, and special studies conducted hearings on a new investment scheme proposed by Continental Bank of Chicago, and Merrill Lynch stockbrokers. "Ag-Land Fund I" was designed as a tax free investment for nonfarmers whose purpose would be to engage in farm real estate speculation.

Increasingly, farm ownership gets more and more difficult for young farmers. The present demand on farmland has driven land prices up over 20 percent per year in most States, with some States like Illinois experiencing over 41-percent jump in just 1 year. As long as farm real estate continues to respond to the speculation market, rather than a market derived on the basis of its productive value, fewer farmers will be able to own their own land, and greater will be the corporate involvement.

A chief executive of one of the banking firms investing heavily in farmland expressed the attitude of many this way—

> Through the years, the typical farming venture has had four essential components—land, labor, capital and management. Among these four elements, the most treasured of all to the farmer is entrepreneurship, which is encouraged and fostered by the important role leasing plays in farming today. Historically, the emphasis has been on ownership, while leaseholders have sometimes been regarded as second-class farmers. More recently, farmers have come to think of themselves as farm operators and managers.
>
> In fact, land ownership in and of itself is less important than the profit of his overall operation.
>
> If this country is going to try to hold to the earlier mode in which ownership is revered above entrepreneurship, then the family farm as we know it is indeed an endangered species and it is going to become even more so in future years . . .

Wrong.

The bank executive was trying to defend his bank's investment scheme. So unpopular was his idea, that 2 weeks later the bank announced it was withdrawing its proposal.

CORPORATE PAYMENT LIMITATION

The annual farm programs for wheat, feedgrains, cotton, and rice are designed to provide the farmer with some degree of protection against catastrophic loss due to a depressed market price, or natural disaster. These Treasury dollars are highly controversial, but desperately needed by small producers.

Family farmers can compete with remarkable efficiency against a market that treats equally the farm supply capa-

bility and consumer demand. Corporations, however, have built in a hedge against the consumer price while expanding their control over domestic production. Especially guilty are those corporations that take advantage of the Federal price support and disaster payments while using a farm investment for real estate speculation, or when recording "business losses" for tax shelter reasons. Notable were the corporate payment recipients whose ownership is held by nonfarm interests.

Over 10 midwestern States have recognized this problem and now have laws prohibiting large corporate agriculture. The Senate has adopted language in S. 275 which will prohibit payments to large nonfarm organizations.

THE AMENDMENT

The amendment I am introducing will specify that no payment will be made to any corporation on trust whenever the controlling interest is held by people who themselves are not legitimate farmers.

Exempted from this exclusion is any farmer cooperative, family farm corporation, or tax exempt charitable organization.

It is estimated that this amendment will exclude approximately 2,000 current nonfarm corporate recipients who account for 3 to 5 percent of total production, and 3 to 5 percent of total Federal payments. While not all corporations are excluded, this amendment will result in a substantial savings to the Treasury.

Since the amendment only deals with 2,000 corporate recipients, administration will be fairly simple. Since the amendment only deals with 3 to 5 percent of total production, elimination of those recipients will not dramatically undermine the mandatory set aside provisions of the price support program.

Most importantly, however, this amendment will eliminate some of the competitive advantage now enjoyed by nonfarm corporations. A much greater Federal effort is necessary if small farm agriculture is to survive. Adoption of this amendment will be one solid step in that direction.

FINANCIAL DISCLOSURE STATEMENT—1977

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. MURTHA. Mr. Speaker, this represents the fourth annual, voluntary financial disclosure statement I have made since becoming a Member of Congress.

Earlier this year I voted in support of ethics legislation that will make similar disclosure mandatory by all Members. While I philosophically believe it is preferable for these statements to be voluntary because of legitimate right-to-privacy concerns, I am hopeful the passage and practice of the ethics legislation will increase public confidence in Congress and our decisionmaking.

My 1977 report on 1976 personal and office financial activities goes further in many areas than will be required by law next year.

Mr. Speaker, I would now like to insert into the RECORD my financial statement covering Jan. 1, 1976, through Dec. 31, 1976:

FINANCIAL STATEMENT

PART 1: PERSONAL FINANCES

A. Taxes

1976 Federal income tax paid, $11,217.

1976 Pennsylvania State and local, $1,429.

Real estate tax on personal residence paid to Dec. 31, 1976, $536.

B. Sources of all income

Salary of U.S. Congressman (total for 1976), $44,600.

Wages from Johnstown Car Wash of which I am Secretary (through Dec. 31, 1976), $1,100.

Interest on savings account (held jointly with my wife) total through Dec. 31, 1976—account at the Dale National Bank, Johnstown, $1,874.

Income other than wages, $751.

Total income for 1976, $48,325.

C. Holdings and interests

1. Living accommodations—My wife and I jointly own the same home we have lived in since 1961. This is also the home of my three children. At the end of 1976, two of my children were attending college. The house is located at 109 Colgate Avenue in Westmont Borough, Johnstown. In Washington I rented an apartment during 1976.

2. Stocks.—I own stock in the Johnstown Car Wash located on Roosevelt Boulevard. I have served as Secretary of the Car Wash organization since 1966. I have a few shares of AT&T and First Tyler Bank of West Virginia.

3. Bonds.—The only bonds I own are U.S. Savings Bonds.

4. Loans.—The only money I owe is to the Dale National Bank where I have been banking since 1958. The loans are for routine home and family expenses.

5. Transportation.—I own a 1976 Ford and my wife owns a 1974 Ford and 1973 Ford.

6. Other assets.—The only other assets I have are life insurance policies with a cash value, and a joint savings account at the Dale National Bank.

PART II: OFFICE REPORT

A. Office supply account

In 1976, I received $6,500.00 for the purchase of office supplies including paper, envelopes, stationery, paper clips, pencils, recording supplies, and other daily office needs for the entire year. The office used the full amount.

An additional cost to this fund I would like to note is the purchase of American flags flown over the U.S. Capitol. In general, I ask persons requesting flags to pay for the flag themselves. There are cases, however, where a constituent or organization deserves to be honored for outstanding service to our area or nation. In such instances, I purchase the flags from this account. Examples during 1976 included the 200th anniversary of a church, a number of community service clubs, senior community centers, and a few cases of outstanding personal accomplishment.

B. Postage

During 1976 the postage allowance for each Congressman was $1,140.00. This is to purchase stamps for official business use not covered by the Congressional frank. This includes foreign postage, special delivery, and cases of routine office procedure not covered by the frank. The occasion where our office uses the fund most is in purchasing special delivery stamps where it is important that we return a report or inquiry to a constituent or community official as quickly as possible. The entire sum was expended in 1976.

C. Transportation

Each Congressman was reimbursed during 1976 for 26 trips to and from his district, or a total of $2,324.40. This is the same type of reimbursement a company would give to an employee traveling on official business. I traveled between Washington and the 12th Congressional District every weekend in 1976 that Congress was in session with 1 or 2 exceptions. I traveled by car which I drove myself in virtually every case. My total travel to and from the 12th Congressional District greatly exceeded the reimbursement mileage. I received the full reimbursement to which I was entitled of $2,324.40.

My family continues to reside in Johnstown, I believe these trips are essential to hold Congressional workshops, office hours, and other meetings to keep in touch with the people, and give the citizens an opportunity to meet and talk with me so I can hear their opinions and problems.

D. Staff

In 1976 I was permitted a maximum of 18 staff positions and an annual staff salary of $242,724.00. Of this amount I filled all positions, and returned $33,268.33 to the Treasury in unused funds.

I have 8 persons in my Washington office. This includes: an administrative assistant, a legislative assistant, two secretaries, a receptionist, and three case workers to handle individual problems such as black lung, social security, veterans, military, and other problems involving the Federal Government, plus community requests for assistance.

The other staff members serve throughout the five district offices and handle district problems. The local offices are located in Indiana, Kittanning, Johnstown, Punxsutawney, and Somerset. All the staff members working in the district offices, and all but three of my Washington staff either presently live or formerly lived in the 12th Congressional District. The volume of information, requests for assistance, expressions of opinion, and other communications coming into a congressional office require strong staffing. Our offices have developed experts in housing policy, veterans, social security, black lung, water and sewage problems, community development, and other areas that help me provide a quick, accessible link between the people of the 12th Congressional District and Washington.

E. Telephone and Telegraph

My allotment of telephone and telegraph messages was 125,000 units for 1976. A unit is a term equivalent to one-quarter of a phone minute. Said differently, 4 units equal 1 minute of time on the phone. In 1975 I had 49,707 units remaining on December 31. Under the House rules I was allowed to carry these over to the next year. Thus, I began 1976 with a total of 174,707 units. I used 131,155, leaving me with 43,552. These units are used for long distance calls to the 12th Congressional District on official business or Federal agencies located outside Washington, or State offices. At the close of 1976, the House adopted new rules by which phone units could not be carried over to a new year, thus the 43,552 went unused, at a taxpayer savings. Amounting to an approximate dollar savings of $4,790.72 based on an average phone-per-minute cost.

F. District Offices

All of the district offices are in Federal buildings except for the office in Indiana. Federal building space was rent-free during 1976. Total allowed for rent is $2,400.

The total rental cost in Indiana was $1,836. Thus, a total of $564 was not spent.

Each Congressional office is allowed a total of $2,000 to cover district office expenses. This includes routine office needs (paper, pencils,

etc.), and upkeep of the facilities. The entire amount was spent in 1976.

G. Communications allowance

Beginning in 1975 the U.S. House authorized $5,000.00 to each member for the production and printing of newsletters, questionnaires, and similar correspondence qualifying as official business and mailable under the legal requirements of the frank. The fund covers production costs such as printing ink, stencils, machine rental, paper, and other direct supplies.

The account was started by the U.S. House to limit the use of outside funds for such communication costs. In the new ethics bill we totally prohibit the use of any such outside funding. In 1976 I used no such outside funding.

From 1975 I carried $27.65 remaining in the official account over to 1976. This was added to the $5,000 allowed for a total of $5,027.65. In 1976 I spent $5,015.13 from the fund and $12.52 was carried over to 1977.

The money was used for the printing and production costs of newsletters, questionnaires, workshop information, and other office items.

H. Government travel

I took three domestic trips in 1976. All were part of my work for the Interior Subcommittee and Military Construction Subcommittee of the Appropriations Committee. Each trip led to reports and work I did on the subcommittee.

January 13—January 15: Trip to Seattle, Washington to inspect Trident Submarine construction site and investigate questions on cost and construction time. I also stopped in San Francisco for a meeting relating to energy development. Transportation and per diem reimbursement totaled $408.06. All this covered transportation except $35.14 which I filed for in per diem expenses (the law allowed a per diem claim up to $150).

August 13: Inspection of Frankford Arsenal and Picatinny Arsenal in New Jersey concerning relocation of facilities. Transportation provided by military. I claimed $9 in per diem expenses (the law allowed $50).

Fall trip: I made the first of my personal inspection tours of military bases located in the Washington area to review housing, equipment facilities, and other matters relating to subcommittee work. This trip was made in my own car and no reimbursement occurred.

A REVISED VERSION OF SOCIAL SECURITY BENEFITS DECOUPLING ACT OF 1977

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. WHALEN. Mr. Speaker, today my colleague from Iowa, Mr. BEDELL, has joined me in introducing a revised version of the Social Security Benefits Decoupling Act of 1977.

The purpose of this legislation is threefold: First, to correct an existing error in the benefits formula which by the turn of the century will result in workers receiving greater retirement benefits than their wages before retirement; second, to substantially simplify the method by which benefits are computed, thus making it comprehensible to those who participate in the program; and third, to provide fair and equitable benefits to present and future retirees.

I am including in the RECORD at this time the section-by-section analysis of the bill.

THE PRINCIPAL PROVISIONS OF THE SOCIAL SECURITY BENEFITS DECOUPLING ACT OF 1977

Section (1) of the bill contains the short title of the bill—the "Social Security Decoupling Act."

Section (2) of the bill would provide a new benefit computation procedure for benefits based on the earnings of people who retire, die or became disabled after 1978. Benefits for people who qualify before 1979 would not be affected by the proposed change.

As under present law, all benefit amounts would be based on a PIA (primary insurance amount) derived from an individual's average earnings in covered employment. Under the new procedures the PIA would be determined from a benefit formula rather than derived from a table in the law. For 1978 benefit computations the formula would be:

112 percent of the first $110 of average monthly earnings, plus

31 percent of the next $1,050 of average monthly earnings, plus

20 percent of the remaining average monthly earnings.

Each year the Secretary of Health, Education, and Welfare would update the formula to take account of rises in the average earnings taxed for social security purposes. In the updated formulae, the dollar amounts would be changed but the percentages would not. For example, assume that average earnings rise 10 percent for the first revision of the formula. The formula, then, for 1980 would be:

112 percent of the first $120 of average monthly earnings, plus

31 percent of the next $1,155 of average monthly earnings, plus

20 percent of the remaining average monthly earnings.

By basing benefits on the 10 years of highest earnings the bill seeks to prevent the reduction in benefits which would otherwise occur because of the lengthening computation period in present law.

The average monthly earnings to which the new benefit formula would be applied would no longer be averaged over a working lifetime minus the 5 years of low earnings. Rather, the bill redefines average monthly earnings so that only 10 years of highest earnings are included in the computation.

The provisions of present law which provide for increases in the maximum annual earnings used for social security purposes would not be changed. Under the present law, these earnings are increased following each cost-of-living increase in benefits. The increase is based on the increase in average earnings taxed for social security purposes.

The change which would be made by subsection (g) gives the bill its short title. This subsection would revise (decouple) the automatic cost-of-living provisions of present law. Under present law, cost-of-living increases apply not only to people who are entitled to benefits at the time each increase goes into effect (which is the practice in all other programs with a cost-of-living provision), but also to all future beneficiaries (which is unique to social security). Future benefits, however, are based on earnings which rise, in part, as the result of increases in prices. Thus, wages which were increased to take account of rising prices are multiplied by a formula which was also increased to take account of the same rise in prices. The bill would eliminate this compound cost-of-living increase by providing that each future increase would apply only to people who are entitled to receive benefits for the month in which the increase becomes effective.

The section contains a transitional provision so that people who qualify for benefits after 1978 and before 1989 (the first ten years the new computation is in effect) could not be paid a smaller amount than the benefit computed from the benefit table in effect under present law for December 1978.

Section (3) of the bill would provide a method of determining the maximum amount to be paid to a family on the basis of an individual's earnings.

Under the present law, the maximum monthly payment to a family is determined for each PIA from a table in the law. Inasmuch as the bill would eliminate this table, a new method of determining the maximum payable to a family seems necessary. Under the bill, the maximum would be determined by a formula which would be adjusted each year in the same ratio as the benefit formula is increased. The formula for 1978 would be:

150 percent of the first $230 of the PIA, plus

275 percent of the next $1,050 of the PIA, plus

130 percent of the next $95 of the PIA, plus

175 percent of the remaining full retirement benefit.

As in the adjustment of the benefit formula, only the dollar amounts would be increased each year.

Section (4) of the bill would provide necessary conforming changes so that other provisions of present law would not be changed.

SANTA MONICA MOUNTAINS ARE NOT OUT OF THE WOODS

HON. ANTHONY C. BEILENSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. BEILENSON. Mr. Speaker, earlier this year I introduced a bill to create the Channel Islands and Santa Monica Mountains National Park and Seashore. Legislation to protect the Channel Islands—which are the westernmost peaks of the Santa Monica Mountain range—and to provide additional public parkland in the mountains has been before the Congress for more than two decades. Meanwhile, the price of land has increased, and numerous proposals for large residential developments now threaten to scar areas of prime parkland in these mountains. If we do not act this session, the mountains will be leveled, the hillsides carved up, and the canyons—which are places of incredible beauty—will be destroyed as they are used for landfills or concrete flood channels.

I would like to share with my colleagues an article from the July 3, Los Angeles Times which points out that, despite congressional inaction, there is still strong public support for a national effort to save the last great recreational resource in California to serve the needs of the 10 million residents of the Los Angeles metropolitan area and the 8 million annual visitors to southern California:

SANTA MONICA MOUNTAINS ARE NOT OUT OF THE WOODS

(By Mary Ellen Strote and Susan Nelson)

The Santa Monica Mountains have been "saved, haven't they? The creation of three state parks in the mountains and the City of Los Angeles' commitment to preserve the Mulholland Parkway all seem to assure that the mountains will be set aside for the public's enjoyment.

A nice thought, but unfortunately it isn't true. Even though they take in 28,000 acres, the three state parks—Topanga, Malibu Creek and Pt. Mugu—are relatively small green spots in a region now threatened by speculators with subdivision maps and blueprints rolled under their arms. Every day bulldozers scrape more chaparral from the sides of the Santa Monica range's steep hills; every day ancient sycamores are uprooted and high ridges leveled to make way for building pads.

Despite these pressures, much of the Santa Monicas remain, at least for now, a valuable and unique wilderness which long has been discussed as the obvious site to become Southern California's first national park. The introduction of legislation by U.S. Rep. Anthony Beilenson (D-Los Angeles) in May is the latest in a series of attempts in Congress to achieve this aim.

Stretching west from the crowded picnic tables of Griffith Park, the Santa Monica is a picturesque range of mountains which divides the cultural and business centers of Los Angeles' mid-Wilshire district from the suburban San Fernando Valley. Along the way the mountains take on other names—Hollywood Hills, Beverly Hills—but they continue west in an uninterrupted upthrusting, passing rocky streams in Topanga Canyon and fern forests near Malibu.

They tower over oak-studded straw-colored grazing lands in Calabasas and Agoura and finally ease down into the coastal marshes of Ventura County. Thirty miles offshore, they rise again, this time as isolated mountaintops known as the Channel Islands—including Santa Cruz and Santa Rosa, now devoted to ranching; San Miguel, owned by the U.S. Navy, and Anacapa and Santa Barbara, which have been designated as national monuments.

Bielenson's bill, which would create the Channel Islands and Santa Monica Mountains National Park and Seashore, would enable the acquisition of land to tie together existing city, county and state facilities in the mountains and bring the offshore islands into the chain. Hikers, cyclists and pleasure drivers would be able to follow an uninterrupted path of parks, greenbelts and scenic traffic corridors all the way from the densely populated heart of the city to the shores of the Pacific. But if land acquisitions are not made now, the opportunity to preserve this open space will be lost forever.

The idea of linking the mountains with the offshore islands as a national park is a new one, but efforts to protect the islands date back 20 years in Congress, and conservation groups have been seeking a national park in the Santa Monicas for 14 years.

The reasons for such a long delay in winning approval remain a mystery. Horace Albright, an early director of the National Park Service, offered one explanation recently when he said that "had the Santa Monicas been located in any other part of America, they would long ago have been set aside in the national interest. Only in California, which boasts such an abundance of spectacular scenery, has it been possible to ignore them."

We have scenery, yes, but not enough of it is open to the public for recreation. For many reasons, the park is a necessity:

Southern California is one of the most park-poor areas of the country. Only 2% of the City of Los Angeles is reserved for open space, parks and beaches. In contrast, San Francisco has set aside 14% and New York 18% of their land for parks.

Recreation needs in Southern California are growing even faster than the population. More than 10 million residents of metropolitan Los Angeles are increasingly demanding more space for hiking, bicycling and camping; 8 million visitors a year also place strains on existing facilities.

Smog in Los Angeles is bad, but it could be worse. The Santa Monicas sit squarely in the path of our fresh-air flow from the ocean. Developed, the mountains would be an additional source of pollution. Reserved as open space, they are a lifeline to the city's major source of clean air.

Southern California deserves a national park. Northern California has five, including Yosemite and Sequoia, and within the last decade acquired the Pt. Reyes National Seashore as well. Southern California has none. During the federal Legacy of Parks program of the early 1970s, new urban parks were created near San Francisco, New York and Cleveland—but not Los Angeles. Delegates at a recent Washington conference sponsored by the Urban Environment Foundation rated the Santa Monicas national park as one of the four most needed such projects in the country.

Both islands and mountains are truly unique and must be protected. The Channel Islands contain important archeological sites in addition to plants and animals found nowhere else in the world. These are threatened by uncontrolled contact with man. In addition, waters around the islands offer an unusual opportunity for development of marine sanctuaries. The Santa Monica Mountains are unmatched anywhere for providing the beauty of a wilderness in the middle of a metropolis.

Certainly the state has made an excellent beginning in establishing three state parks in the mountains. In addition, the new state Coastal Commission and the Santa Monica Mountains Comprehensive Planning Commission are working on land use plans for the area. Officials of Los Angeles' city and county governments are being pressured to preserve the mountain land, much of it along Mulholland Drive and Mulholland Highway, under their control.

The critical need now is for land acquisition, particularly along the seashore and around the state parks, which are threatened by development on all sides. The federal government is in the best position to make these acquisitions. The Beilenson bill provides $100 million for land purchases in the mountains and $50 million for the islands, three of which are already federally owned.

Private landowners would be compensated. The great parks of America's past were carved out of vast tracts of federal land containing few private holdings. Today, it is much harder to acquire desirable land in urban areas, but the government has worked out a whole new process for dealing with the problem.

Nor would a national park crowd out all private development. Land zoned for private recreation and agricultural use often serves as a valuable buffer for such parks.

The Santa Monica Mountains bill has been referred to the House Interior and Insular Affairs Committee's national parks and recreation subcommittee and has the support of several key Congressmen and government agency heads. In addition, public support has reached such a level that the Department of the Interior reported recently that it had received more mail on the Santa Monicas than any previous park proposal.

Thus Los Angeles now stands a chance of getting its own national park and seashore. The opportunity will not last a decade or so this time, however. We are looking at a classic case of now or never.

WHY WE LOVE THE OLD LAND

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. O'NEILL. Mr. Speaker, I would like to take this opportunity to insert in the CONGRESSIONAL RECORD the acceptance speech given by Edward B. Hanify of Belmont, Mass. on April 29, 1977 as he was awarded the Eire Society of Boston's Gold Medal. Among past recipients of this coveted medal were the late Richard Cardinal Cushing and President John F. Kennedy as well as Speaker John W. McCormack. It is my honor to present to you Mr. Hanify's speech entitled, "Why We Love the Old Land."

The speech follows:

WHY WE LOVE THE OLD LAND

(By Edward B. Hanify)

Mr. Toastmaster, Mr. Chairman, Madame President, The Honorable Consul General of the Republic of Ireland, Very Reverend and Reverend Fathers, Members of the Eire Society and your guests.

I accept this Eire Society medal with appreciation and alacrity. For, in the course of some forty years of commerce with the world and many a perfunctory handshake, as I look around tonight I see genuine friends.

"From quiet homes and first beginning out to the undiscovered ends,

There's nothing worth the wear of winning But laughter and the love of friends."

If I started to remininsce about my keen personal memories of the laughter and happiness attendant upon the privilege of personal friendship with so many here, I would never begin, not to say conclude my remarks. As you know, I have been at this rostrum in various capacities for more than two decades. I had the privilege of presenting this medal to Father Terrence Connolly, S.J. in 1960 and to Siobhan McKenna in 1971. I was your President when our beloved friend Joseph Gannon was the Medalist in 1962. I presided as Toastmaster when John Houston received it in 1968, and Ambassador John Moore in 1976. Imagine my feelings of joy, humility and incredulity when I learned from your President on St. Patrick's Day, 1977 that the happy best man at so many ceremonies was now the groom in his own right.

My formal acceptance requires a few clarifying statements. The old timers in that best of cities Fall River used to tell the story that in St. Louis Parish in the pastorate of Father Fogarty, where many Gaelic speaking families settled there was a fine outstanding family with the name of Farrissey—F A R R I S S E Y. When the good pastor came to those passages in Scripture where the Lord had occasion to rebuke the Sribes and Pharisees, he was always careful to say that those Pharisees were not the Farrissey family in the parish. Although the name Hanify in Gaelic means "sons of the storm", I owe you the analagous explanation that the Muslim Hanafis, who have caused so much recent tragedy and tumult in Washington, are not members of my family.

I have also discovered that my middle name "Benno" in the announcement of the award, has aroused a certain mild curiosity—and the conjecture that I have the distinction of having a blood relationship to the noble Italian race of Rafael, Michaelangelo, Leonardo and a succession of artists, statesmen and prelates. In truth "Benno" was the first name of my German maternal grandfather, Benno Brodkorb. All his brothers had been conscripted into the Prussian army and his father, anxious to save the youngest boy from the jaws of militarism, sent him from Germany to Boston. He was a musician by profession and a wood carver by trade. Around 1872 he went to Fall River after a few years as organist at nearby Saint Cecilia's Church in Boston. He married a young lady of Irish blood. For fifty years he played the organ and directed the choir at Saint Mary's Cathedral in Fall River. Probably, no German in the history of man pealed forth the solemn or joyous tones of the Cathedral organ at the funerals or weddings

of so many Irish immigrants and their children as did my grandfather in old Saint Mary's. He was the only one of my grandparents I ever knew—all others had died before my birth. I remember the genial kindly man, plagued by rheumatism in later years, trudging for miles through rain and ice and snow to be sure the early Cathedral Masses had appropriate music. Occasionally he let me sit in the choir loft at the Solemn Masses of the Great Feasts. There for the first time I heard, and even now wish I might hear again, the majesty of the ancient Latin Kyrie, Gloria, Credo, Sanctus, Agnus Dei.

So much for the clarification of "Hanify" and "Benno". A final caveat in my acceptance. Every realistic man here knows that any accomplishment he has to his alleged credit in the external world is the happy result of a joint effort with the one who has inspired the entire endeavor, sacrificed selflessly and effectively in its pursuit and then sat modestly in inconspicuous places while he received the plaudits she really deserved.

In that spirit I accept the award jointly with the former Jane Dillon of Waterbury, Conn., now and for the past thirty-seven years Mrs. Edward Benno Hanify—and moreover I now publicly concede what I have privately contested hitherto, that in the life of the old land the Dillons have played a much more conspicuously heroic role than the Hanifys—from Viscount Dillon of the Wild Geese to the John Dillons of recent Irish history. (Parenthetically, in lawyer's language this concession has no extra-territorial effect, does not bind the Hanniffys in Ireland, and could be reopened if newly discovered evidence proved that Brian Boru was a Hanify.) Both here and in Ireland, however, the Hanifys have had the incomparable good sense of intermarrying with the Dillons.

I wish that I had one single profound thesis to advance tonight about Ireland, her problems, her future or Irish-American relations. I have none. Rather, I propose to give you a simple account of why Jane and I love the old land.

Frankly, I am tired of instant American Expertise on Ireland. A few nights in the Dorothy Draper designed habiliments of Bernard McDonough's Drumolin Castle, with a chauffeur driven tour of the environs has produced more Irish American experts on the old land than Ireland can possibly use. We have experts on what is wrong with the Irish and what is wrong with Irish Americans—and whatever their credentials, their views always have the most definitive and authoritarian ring.

Thus one learned author in a collegiate publication in 1974 devoted to "The Irish Issue" diagnosed the division between North and South as related "to sickness in the Irish soul".

Said he: "If it is true that England created the ulcer, then it is true that the Irish themselves now perpetuate it. They want to keep it bleeding so that they can live in the past, the bitter past. It is from their bitter memories of the past, that they draw their sustenance to go on living in the present."

I respectfully suggest that there is no evidence to sustain this proposition that Ireland derives her sustenance to go on living in the present from keeping the old ulcer bleeding. Indeed, you know that the contrary is true from the eloquent remarks of the distinguished Consul General of the Republic here tonight.

If you think this picture of the native Irish attitude is a caricature, you should read the picture of Irish Americans which the official Bulletin of the Irish Department of Foreign Affairs, "Ireland Today" published in an article celebrating the American Bicentenary on July 4, 1976 by the Rev. Andrew M. Greeley of Chicago, entitled, "On Top of the Heap and No Place to Go." The Rev. Greeley says of the modern Irish American in this country: "Our learning is practical and pragmatic. We drive our story tellers out of the community and tend to be suspicious of those who write. . . . We are still loyal to the Church of Rome though increasingly fed up with its leadership (and completely unconvinced now about its teaching on sexual morality) and no longer proud to have our sons become priests. We still drink too much, talk too much, politic endlessly . . . etc."

Without comment, I simply leave it to you as to whether the typical Irish American would no longer be proud to have a son become a priest or is completely unconvinced about the teachings of the Church on sexual morality—by which is meant of course artificial contraception and abortion.

The time has arrived for a cessation of this process of denigation and depreciation of the Irish character on both sides of the water. Vapid generalizations about how an entire race or social group conduct themselves are inherently misleading. It is not over sensitivity to critical comment that prompts that suggestion. It is just common sense. None of us individually really gives a tinker's damn what "experts" of the kind I have quoted think of modern Ireland or Irish Americans in this country. What counts is that the unchallenged dissemination of such vacuous broadsides under apparently authoritative or respectable auspices tends to destroy the constructive work of cultural exchange and mutual respect created by this organization over the years between Ireland and the United States.

We are told that Oliver St. John Gogarty once rented a house of his in Galway which had all the amenities for gracious living. Unfortunately he rented this lovely home to a super critical, constitutionally unhappy tenant who upon entering the premises sent Gogarty a blazing telegram, "Your house is unfit to house a dog." Gogarty showed the telegram to a friend who knew it was a lovely house. "What do you intend to do?" the friend asked. "I've already done it," said Gogarty. "I've telegraphed him I am sorry, and am sending a lamp post!"

Perhaps we need a few lamp post awards to these super critics on our side of the water who see the men they most admire in their own mirrors and bow obeisantly before them and create the dogmatic pronouncements of a collective *"we"*.

Some years ago I had the privilege of showing the Hanniffy family of Ballinasloe the national monuments hereabouts related to our American independence—Lexington, Concord, Fanueil Hall, the Old North Church. They were thrilled and delighted with these scenes and symbols of our two hundred years of national history. Then when I visited them I discovered a few miles from their homestead the ancient remains of Clonmacnoise, a centre of learning and sanctity on the banks of the Shannon founded about the year 548 A.D. where at one time seven ships packed with foreign students landed in one day and no less than six thousand scholars thronged its confines. On that day, which I spent alone on those ancient premises, with my sole companions the ripple of the Shannon's waters and the quiet wind, I decided that a people who had adhered for centuries before this nation was even discovered to the principles of the natural moral law upon which Western Civilization is based has the maturity to deal with the ancient intractable heritage of her immemorial woes without external harassment or violent interference with the policies of her own government—and the best we can do is to pray for and encourage her own dignified autonomous efforts to quench bloodshed, quell violence and achieve peace. When you cannot help an extremely complicated problem with whose total aspects you are perforce unfamiliar the least you can do is to avoid throwing the fuel of fiery rhetoric or the logs of ill directed assistance upon the fire. So I turn to a brief account of what Ireland has meant in joyful significance to the Hanifys.

On one of our visits in 1965, we were celebrating our twenty-fifth wedding anniversary, and also the fiftieth year in the Society of Jesus of my old teacher and friend from Holy Cross days going back to 1929, the Rev. John P. Flanagan, S.J., who gave the beautiful Invocation this evening. Father John was accompanied by his brother Father Edward, an Oblate, and the Fathers were visiting, preaching and lecturing at various Irish Trappist monasteries at the instance of another brother the famous Trappist author Father M. Raymond, or Joseph Flanagan. The tour was planned so that after a few days of separate activities, the group rejoined for a day or two of reunion—then started off again. When I returned, from the letters home which the family preserved, I put together an account of this visit. I begin from these notes now more than a decade old.

"We arrived, Jane and I, in Cobh aboard the Holland American ship, the Nieuw Amsterdam on July 8, 1965. Thence the ship was to go to Southampton, LeHarve and Rotterdam. Ireland, that morning, beckoned to all the passengers, not just those who planned to disembark. The fresh, clean, serene charm of the land reached out to the ship when first her shores were visible in the dawn. Viewed from the sea, the Irish land creates an impression of immemorial tranquility; the Irish sky incessant motion, not nervous spasmodic agitation, but grand, powerful, ceaseless vitality—the domain of massive clouds, acting roles in gigantic sky-sagas, as fresh and majestic as if they had been newly generated by forces attending the creation.

We will never disembark unless I leave for a while that Irish sky. The tender which met the ship turned landward to the town and the spires of St. Colman's Cathedral rising high above all else. This was the third time we entered the customs shed at Cobh. Previously our customs formalities here had taken place when we were leaving Ireland, having arrived by air. This time we reversed the prior procedure, arrived by ship and departed by air.

The customs' shed to the arriving passenger is the locus of a few brief formalities. To the departing passenger it is the scene of very poignant dramas. At least it had been in the past for us. Here we had witnessed the last farewells of family groups to the departing son or daughter. There were dignified, but heartrending tableaus, now for decades repeated with new actors in the inveterate roles. As you observed, you felt that someone whose name you bore, or whose lineaments were yours, or whose great grandchild you were, had once stood in this barren barracks, and said "Farewell"—and then from the tender watched the green land fade. Now as we arrived, we recognized in our hearts that we were about to see again those scenes which our ancestors carried as the ineffaceable vistas of youth and home to the edges of the world and the far reaches of the sea.

Thus I step on Irish soil with reverence, and feel that wheresoever I go there some unknown ancestor walks with me. I cannot see this land as a casual tourist. Always I must see not only with my own eyes, but through other eyes long, long closed. The amazing thing is that I have never met, even as a child, a single forebear of mine born in the old country. Thus the influences that move me are as anonymous and mysterious as the "Connemara wind."

May I interpolate to say I have since wondered whether the influences that moved me are quite as anonymous or mysterious as they then seemed.

I have since learned that in the same week in May 1886, in the same neighborhood in Fall River, two young mothers went to

their graves. One was the thirty-one-year old wife of my grandfather Benno Brodkorb, Elizabeth. Her health had declined after the loss of two of her three children through sickness or accident, leaving only my mother aged five. In the same neighborhood in the same month of the same year, another Elizabeth, the young wife of Michael Hanify my grandfather, deceased, leaving five surviving children, the youngest of whom was my father, also aged five.

What influences kept these families together, bereft of mother; the father in each case, a recent immigrant from Germany and Ireland, an organist and a sea faring man respectively? Clearly of course there was religious faith. I recently came across the little prayer book Benno Brodkorb gave his daughter, my mother, after he started at midnight, trudged for miles through a January blizzard to attend her First Communion at the local convent where he had placed her. The prayers were not German-Catholic prayers or Irish Catholic prayers or American Catholic prayers. They were the prayers of the universal one holy and apostolic church, loyal to the See of Peter. Apart from religious Faith, what sustained family life in the tragic circumstances I have enumerated? I believe that it was the concept that the family unit was not restricted to the nuclear group—father, mother, children—but embraced grandparents, aunts, uncles, cousins—all of whom had a sense of obligation to the core unit and sacrificed themselves to preserve it when death or tragedy struck—a concept which needs to be revitalized today. The older sister substituted for the deceased mother with the younger children. The maiden aunt stepped in to care for an orphaned child. This is an ideal our forebears shared with all other Americans of their day. Clearly it is part of the cultural heritage this society should transmit to generations yet to be in an age where the family is the most imperiled of all social institutions.

Let me now return to the itinerary our Irish odyssey in 1965. When your wife is an angler, one is bound to see the most beautiful parts of all countries. So here we are at Ballynahinch in Connemara whence I write on July 22, 1965:

"Now for our present abode—Ballynahinch Castle. Every fisherman is given a "beat"—that is the part of the river bank assigned to him for the day. His "gilly" takes him to his "beat". The beats and the gillies are rotated among the guests so no one gets a corner on a particularly good spot. The gillies assemble each morning in the game room of the Inn. I do not know what else to call it. It has a few tables, the walls are covered with mounted fish, the bar is nearby. The gillies are for the most part venerable men who assemble with the dignity of the College of Cardinals.

Michael the head gilly then makes the assignments for the day. The salmon are actually jumping out of the water. At this time of year each beat normally averages about a salmon and a half per beat per day. But—wouldn't you know—this year the river and the lake are at low water because however much it has rained in other parts of Ireland it has not rained enough here. So on her two experiences on the beat mother has seen the salmon practically looking with disdainful eye at her fly, and although she has caught trout which would delight her at Stone Pond, she is currently feeling frustrated—but after all she has well over a week to go.

"Ballynahinch Castle in ancient times was the stronghold of the O'Flahertys. When they were dispossessed, and after decades of Engish ownership, it finally came into the posesssion of the Jam Sahib of Nawanagar-Ramjit Singhi, in 1926.

Ramjit's presence in Connemara, as might be expected, aroused much local interest. The older gillies still remember him. Despite rumors that he had a harem, they assured me he was "a good living man." He liked to fish in comfort, if one can judge by the elaborate piers he had constructed into the river. Quaere, how adept he was at the art. The story is told that he once "got into" a good salmon. "Keep your rod up, Your Excellency" exhorted the guide. Ramjit faltered. "Keep your rod taut, Your Highnerr" implored the guide. Ramjit did his best. "Keep it up, your Lordship. Hold it up, your Holiness", But Ramjit did not succeed—he was overanxious, he gave the line a convulsive jerk, fell over and lost the fish. The exasperated gilly changed his tone: "You big baboon, how in the hell would the likes of you ever land a salmon."

"I do not quite believe the story since I met no gilly who seemed so vehement. But forty years have passed, and they are now ancient men. There was Martin Joyce—the senior of them all, laconic and selfcontained. Then there was James Kane, the gentlest, and Frank Cummings, who seemed the most adept in achieving results for his companion.

"For a while things were quite frustrating for Jane. With the salmon darting all around her she went several days without a bite. It reached the point where she deserted the river for two entire days. Then we toured the countryside. There was Clifden and Moynard, Roundstone and bleak Inishnee—and Cleggan. The harbor of Cleggan is a very melancholy spot—not far removed from the scene of the great Cleggon disaster when practically every man in the town was lost when the fishing fleet was caught in a violent storm.

Finally one day there came a change in Jane's fortune. It was brighter and less cloudy than usual. I was walking along a path through the woods across from her beat. Martin Joyce, her guide, passed me going in the opposite direction. He was preparing to move to a new spot farther down the river. Then he came back to me breathless. "She's into one," he said, "Run with the net." I was somewhat faster than Martin—or he thought I should be. I grasped the net, like a runner in a relay race, darted(?) across the bridge—and there she was, her rod bending and the fish in the strong current resisting.

"For one hour and forty-five minutes the effort went on. It was near lunch time when the effort started. Martin, anxious for his lunch, with all the regularity of an elderly man who had been through this experience times unnumbered, recommended drastic action. His theory seemed to be either get the fish in or lose it—but don't be here all day. Fortunately, Frank Cummings came by—and told Jane to continue what she was doing—keep the rod up and play the fish and no lurching pulls. "She's into a monster," said Frank, and sent young Michael, the chief gilly's son, into headquarters to bring out a gaff. By this time Jane had at least five advisors: Joyce recommending strenuous tactics, Cummings patience, young Michael ready with the gaff (it was never needed), her husband aligned with Cummings since he likes to try long lawsuits, and a very cosmopolitan Frenchman, a guest, who watched the proceedings with the somewhat jaded ennui of a veteran of the French Foreign Legion on leave in Morocco. The Frenchman had one very bright idea: He suggested that I send in for lunch, dinner and several dry martinis because the current was with the fish and not Jane—and the process was apt to go on for hours. However, about 2 p.m. Jane landed the salmon—about seven pounds, not as large as some she got later, but the first."

On this and other Irish journeys, I believe we have visited every spot associated with the poet William Butler Yeats—the melancholy of Lady Gregory's Coole, the high square Norman Tower in Ballylee where Yeats settled in 1918, the Lake Isle of Innisfree, and Drumcliffe Church Yard where Yeats rests. I write:

"We next proceeded to Bundoran in County Sligo, and I made my Pilgrimage to the Yeats country. We stopped at Yeats' grave in Drumcliffe Church Yard. The year before he died, Yeats wrote a poem that contains his epitaph. It goes something like this:

" 'Under bare Ben Bulbens head, in Drumcliffe Churchyard
Yeats is laid. An ancestor was rector there
Long years ago. A church stands near
Beside the road an ancient cross,
No marble, nor conventional phrase;
On Limestone quarried near the spot
By his command these words are cut:

"Cast a cold eye
On life, on death
Horseman, Pass by!' "

"Bare Ben Bulben is a strangely shaped mountain which dominates the region, and as we arrived at the grave of Yeats the mountain was enveloped in a dark rain cloud. The words 'Cast a cold eye on Life, on Death, Horseman Pass by' stand out in white letters on a plain limestone marker with the words, 'W. B. Yeats 1865–1938.' On the grave was a withered wreath from the Yeats Society blown by a cold wind."

It is significant that when Yeats settled at Ballylee he wrote a poem commemorating his oldest friends. "Lionel Johnson comes the first to mind", Yeats wrote—and few today have ever heard of Lionel Johnson. Yet Johnson's Ode "Ireland" has been described by a competent critic as "The complete and noblest expression of love for Ireland". If Yeats was the poet of the Celtic Twilight, Johnson was the poet of the Christian dawn.

Frankly, I have never understood those lines of Yeats:

"Cast a cold eye
On Life, on Death
Horseman Pass by"

I believe man is incapable of "casting a cold eye" on the great gift of life or the mystery of death. Certainly, it never occurred to me in Drumcliffe churchyard in 1965 that those lines:

"Cast a cold eye
On life, on Death
Horseman pass by"

would become the unwritten epitaph for the unmarked graves of millions of defenseless unborn children in this nation by decision of the Supreme Court of my own country.

Our Irish 1965 journey certainly closed on a happier note than that suggested by Yeats' admonition. I wrote the concluding account thus:

"This tale must end sometime; From Connemara via Galway to Shannon and home on July 31st. I wish I could recapture here not just fragments, but the whole experience. I wish that whoever reads this could have joined the repeated reunions of the Fathers Flanagan with Jane and Ed Hanify at various inns in Ireland in July 1965. Our paths would diverge for a few days. Then we would rejoin forces. There was always an evening of exchange of our separate experiences, and the talk of those evenings was a great joy. We can never forget that reunion time of the pilgrims; We can never forget Ireland; There was one of us who was constantly attuned to its message and its meaning, and kept us all in tune. That was Rev. John P. Flánagan, S.J. in his fiftieth year in the Society of Jesus. There was another of us who was always alert and ready for adventure, who loved the splash of rain in her face when the fish were biting, and who seemed to have an eternal fountain of happiness in her heart. That was Jane Hanify in her twenty-fifth year in the state of matrimony. Then there were the two Eds—Ed Hanify and Ed Flanagan, and If I must say it for both of us, we were good pilots—

and we would not have missed the adventure or the company!"

And may I close this happy evening of my life with something Yeats friend Lionel Johnson wrote which applies to all of you who have given me your friendship these many years, and this honor tonight.

"O Guardian Angel. Patron Saints
You who have cared for me:
You who have borne with all my plaints
So patiently!
I ask but one thing now: I pray,
God grant through you, each friend
Be mine within Eternal Day,
World without end."

BOSTON GLOBE COMMENDS CONGRESSMAN EILBERG'S BILL TO REFORM GRAND JURIES

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DRINAN. Mr. Speaker, for many months now, Congressman EILBERG, chairman of the Judiciary Subcommittee on Immigration, Citizenship, and International Law, has been working assiduously to reform the Federal grand jury system. He and his subcommittee members have spent much energy and time in hearings and markups to develop a bill which will truly bring needed change to this ancient institution.

The Boston Globe recently recognized the magnitude and importance of the work of the Eilberg subcommittee of the editorial page, the Globe noted that the legislation being developed "could well serve as a model for similar State actions," where reform of the grand jury is also needed. It is unfortunate that the Carter administration is not giving the effort more support.

The Globe editorial is a fine tribute to our distinguished colleague and it is inserted into the RECORD here for all to see:

GRAND JURY REFORM

There were undoubtedly those who saw a certain irony in the complaints by General Motors last month that the Federal government was abusing the grand jury process by hauling in GM officials to testify under oath about corporate tax matters. In recent times at least, complaints about grand jury abuses have come most frequently not from the offices of the nation's corporate executives but from political radicals charging grand juries have been employed to quash their activities.

In theory, the grand jury serves a laudable purpose. It allows possible criminal charges against an individual to be screened in secrecy by an independent panel of the accused's peers before they are publicly lodged.

In fact, however, the grand jury has become a tool of the prosecutor. By both establishing the grand jury's agenda and orchestrating the quality and quantity of the evidence presented, the prosecutor almost invariably determines who is and is not indicted.

But the grand jury can still provide valuable protection to individuals and the most prudent course now is to increase those safeguards. At the Federal level, legislation to do this—which could well serve as a model for similar state actions—has been introduced by Rep. Joshua Eilberg (D-Pa.). It received a cool reception from the Carter Administration at a hearing last week but it points in the right direction.

It would repeal the "use" immunity law enacted at the urging of the Nixon Administration under which witnesses can be compelled to testify before a Federal grand jury and then, despite the constitutional guarantees against self-incrimination, be tried for activities about which they testified as long as the specific testimony is not used. The Eilberg legislation would return the Federal system to "transactional" immunity under which a witness compelled to testify could not later be tried for crimes detailed in that testimony.

The Eilberg legislation would also allow defense attorneys into the grand jury room to advise their clients (now they wait outside the room and their clients can go out to them) and, not incidentally, to monitor the process. A similar proposal for Massachusetts grand juries was recently approved by the state Senate.

Another meritorious provision of the Eilberg legislation would require that a judge screen Federal grand jury indictments prior to their issuance to make sure that they are based upon sufficient admissible evidence and that the procedures were appropriate. The proposal is designed to avoid needless damage to reputations arising from improper indictments.

None of these proposals has won the general approval of prosecutors. Yet none should generally impair prosecutors' work. Whatever the grand jury's original function, in a complex industrial society, where crime is commonplace and crime fighting sophisticated, the professionals—the prosecutors—will play the dominant role. But it is in exactly such a society that sufficient measures must be taken to protect the rights of individuals.

"GRAIN RESERVE AND FOOD FOR THE WORLD"

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. PANETTA. Mr. Speaker, in deciding to co-sponsor H.R. 7871, "The Stocks Management and Reserve Act of 1977," introduced by JIM WEAVER on June 17, I did so in the belief that this country needed the protection of an effective domestic grain reserve.

Two articles published in the Washington Post on July 3, during the House recess, reinforce my opinion that the Weaver bill offers benefits to all of us—and particularly U.S. producers. The articles by Washington Post staff writers, Bill Curry and Dan Morgan, point to the bountiful harvests that are leaving American farmers with a glut of wheat and market prices that do not come close to cost of production. And with export markets limited due to good harvests and surpluses virtually worldwide, U.S. farmers are financially desperate—receiving declining prices for their crops while their production costs continue to escalate.

The need for grain reserves is cited by the authors as a major remedy to this temporary surplus problem. Much of this surplus grain—would be pulled off the market until prices rise to a higher level. The Weaver bill, H.R. 7871 proposes to do just this, by offering U.S. farmers a Commodity Credit Corporation extended loan to meet their cash flow needs, and to enable them to hold up to 35 million tons of their stocks off the market until prices rise to a level that will offer them an adequate return on their production. If we are to expect farmers to continue to produce adequate supplies of food in the future, we should be willing to offer them the kind of support the Weaver bill provides.

I ask that the two Washington Post articles be submitted into the RECORD:

NEW FOOD CRISIS: TOO MUCH WHEAT

MIGHTY TORRENT OF GRAIN ENGULFS DEPOTS

(By Dan Morgan)

Two years after the world emerged from the shadow of famine and food scarcity, a new world food crisis plagues governments at home and abroad.

This new crisis is one of too much wheat, not too little, and its dimensions and statistics are the reverse of those that prevailed when food supplies were disrupted from 1972 to 1974, and when some economic prophets predicted that the world might be running out of food.

A mighty torrent of grain engulfs storage depots as the harvest of 1977 sweeps across North America, Europe and Western Siberia. The world now has 40 million to 50 million metric tons more wheat on hand than it will need in the coming year, and even countries that normally live from harvest to harvest have a comfortable margin of grain.

India—a country that often faced food deficits in the last two decades—still has 18 million tons of food stored away as it harvests more rice and wheat.

And Bangladesh—the focal point of famine relief efforts in 1974 and 1975—has begun repaying its wheat debts. In May, it bought 40,225 tons of wheat, but ordered it shipped to Russia as partial repayment of 200,000 tons it received earlier on loan.

In the United States and Canada, which together control almost two-thirds of the global wheat trade, prices are sliding down toward the level they were in early 1972, the point at which world food price inflation began.

There is a strong element of good news in this turnaround of a situation that threatened some countries with famine and squeezed the treasuries of others that depend on important wheat.

But food experts warn that the situation also poses grave dangers. One of these is complacency about the lingering problem of world hunger. The full grain bins do little to alleviate the malnutrition of an estimated 450 million people who have no money to buy food or who live beyond the reach of food pipelines.

"We are in the eye of the storm," a White House official said.

According to E. A. Jaenke, a Washington food consultant. "The world is rapidly approaching another food crisis which may well be of even greater magnitude than the last crisis of 1972 to 1974."

The main reason for such gloom in the midst of apparent plenty is the absence of any international system for evening out the boom-and-bust cycles in the wheat trade.

Advocates of an unregulated free market in grain say that supply and demand is the best controller of the food supply. In the short run, the forces of the marketplace could push grain prices still lower. But these same forces are also likely to push prices up later on. When that happens economies of countries all over the world can be strained.

A 1967 agreement between wheat exporters and importers established ceilings and floors on wheat prices. But that agreement quickly collapsed, leaving countries exposed to pressures that sent wheat prices from $1.75 a

bushel to more than $5 a bushel between 1971 and 1974.

The Carter administration has made a general pledge to support the renewal of such a cooperative system. Secretary of Agriculture Bob Bergland said last week that he favors "guidelines" under which governments would have to take certain controlling actions when prices reached agreed-on levels.

One element of this system might be grain reserves which governments accumulate when prices get too low and release when they get too high. However, the administration plan is still in the drafting stages.

Substantive talks on a food reserve will not begin until later this year. In the meantime Bergland admitted, there is nothing to prevent a "free-for-all" in world wheat markets this summer.

As domestic pressures to unload the costly-to-store surpluses mount in exporting countries, there is an immediate threat of economic confrontation.

Both Bergland and Otto E. Lang, the Canadian cabinet official in charge of grain marketing, have expressed hopes that a price war can be avoided. Nevertheless, pressures are increasing and some officials at the U.S. Department of Agriculture are still angry at Canadian tactics last summer.

Faced with a bumper wheat crop, falling world wheat prices and the costly prospect of storing much of the unsold grain for months, the Canadian secretly sold 4 million to 5 million tons at up to $13 a ton below the American price.

The wheat was sold to international grain companies, which channeled it to the Caribbean, the Philippines, Indonesia and Europe.

Minnesota wheat farmers who tried to sell their wheat during this period often found there were no buyers at the prices quoted in American grain exchanges. Farmers were puzzled—until word finally leaked out that the Canadians were using the private companies to funnel wheat into markets often served by American wheat growers.

When the U.S. agricultural attaché in Ottawa asked for details about the selling prices, the reply was "We're not going to tell you that."

A few months later, Argentina began marketing its wheat below the U.S. price.

In the short run, importing countries would benefit from another round of price-cutting this year by the major exporters—the United States, Canada, France, Australia and Argentina. But food experts say that depressed wheat prices could result in adjustments that send prices spiralling upward again in the absence of international controls.

Bergland said last week that if the wheat buildup continues in this country through Aug. 15 he will seriously consider having farmers idle between 10 and 12 percent of the nation's 80 million acres of wheat growing lands.

That would be a step back a government limitations on wheat production which existed before 1972. Such a step would be dictated by domestic political realities here. But it would be a reluctant one for Bergland because of its possible impact on world hunger later.

According to Harry E. Walters, assistant executive director of the World Food Council in Rome, the current wheat price in the United States is "much lower" than the price in 1971 when the farmers' increased costs of fertilizer, pesticides and fuel oil are considered.

And the significance of bargin wheat prices was demonstrated in 1972 when Americans learned that large grain stocks can be depleted rapidly—with results that affect people's pocketbook.

Wheat prices were under $2 a bushel then, and had been for years. But governments abroad wanted to buy more American food to improve the diets of their populations, and the Soviet Union, in particular, took advantage of the bargain prices to launch a raid on the U.S. grain stocks. Food prices inflated steadily from 1972 to 1974.

Wheat prices are determined mainly by how much buyers and sellers think will be left over right before farmers start their new harvest. If a great deal is left over, as is the case this year, prices stay low. But some experts believe that when American wheat farmers start harvesting their crops in the middle of 1978, somewhat less food will be in the grain bins than is there now. There are a number of reasons for this assessment.

For one thing, cheap wheat is certain to increase demand for it. The International Wheat Council in London says the wheat trade will increase by at least 8 million tons next year because wheat is now such a bargain. Also, American farmers have begun using more of it to fatten their hogs, cows and chickens.

Developing countries have the largest stake in preventing a new price spiral. They buy about 40 per cent of the wheat exported.

Their requirements for wheat to feed growing populations cannot be reduced easily. Bread made from imported wheat—a food that was almost unknown in Asia before World War II—is now a staple in the diets of city populations of Korea, Taiwan, the Philippines and Indonesia.

And for some regimes overseas, the ability to obtain this wheat at reasonable prices is a matter of political survival. American and Arab officials said last week that Egyptian President Anwar Sadat could face political turmoil at home if wheat prices rise sharply again.

Wheat is a crucial component of Egypt's fragile food system. Egypt buys the wheat from abroad and resells it to local flour millers for less than it cost. Food subsidies of this kind cost the government nearly $1 billion a year.

Rioters forced the Sadat government to rescind a threatened end to subsidies on bread, vegetable oil and tea in January. If the cost of imports increases, the government either will have to increase the subsidies even more or face possibly new demonstrations.

Policymakers say a way to spare Egypt, other nations and U.S. consumers from the impact of a sudden rise in wheat prices would be to create an international stabilization plan.

Some officials in Washington say the conditions establishing such a system are more favorable than at any time since New Dealer Henry A. Wallace championed an "ever-normal granary" in 1933. Wallace never achieved his dream of getting nations to cooperate to prevent the ruinous cycle of scarcity and surplus in the global wheat trade.

The Carter administration, however, has indicated broad interest in commodity agreements, including one for wheat. Wheat prices fluctuated 45 per cent between 1971 and 1976.

Canada and the United States both want to maintain a system where buyers abroad rather than taxpayers at home pay for the cost of continuing wheat production in North America.

The United States would have to pay private companies subsidies if world wheat prices slipped below the present $2.25-a-bushel support price.

Similarly, the Canadian government would have to make payments to prairie wheat farmers if prices declined below the guaranteed minimum of $3 a bushel.

The American export subsidies were sharply criticized in Congress in 1972 on grounds that the government subsidized wheat that the Soviet Union would have bought anyway.

Canada's Lang and Bergland agreed informally in February to try to keep prices above these levels. That meeting of the minds caused talk abroad that the two big wheat exporters were planning a wheat cartel. Lang denied that, saying both countries wanted wheat importing countries to join any price stabilization plan.

New Food Crisis: Too Much Wheat

Yield is bountiful, but harvest hollow

(By Bill Curry)

Syracuse, Kan.—Slowly but voraciously the combines are working their way across the great grain fields here, cutting and threshing the thousands of acres of dry, bleached wheat. Then the trucks, nearly 300 of them, take some 120,000 bushels of wheat a day to the local co-op elevator as Kansas, the nation's largest wheat producer, reaps its biggest wheat crop ever.

The yield is bountiful this year, but the harvest is hollow. With towering supplies left over from last year's crop and stunning, near-record production this year, wheat now sells for far less than it costs to grow.

"Marketing this crop here is going to be a real booger," said Richard Gilgrease, 39, who recently sold the last of his 1976 crop at about the same price he sold his 1972 wheat—$1.75 a bushel.

So severe is the prospect for large losses that many farmers here in southwest Kansas, who openly attribute their plight partially to the fickleness of government, find themselves forced to turn to the government for help. And that has put Congress and the President in a dialogue of disagreement over how much to raise farm support levels in the coming year, with the President talking veto if Congress gives too much.

For its part, the Carter administration is virtually certain to impose acreage reduction on wheat for the 1978 crop—the first crop in five years to be curbed by government controls.

"I don't know whether the government ought to be in it," said wheat farmer Roger Potter, "but I don't know whether the farmers can control it." Potter fears he will have to sell some of his wheat at the current $1.85 to $1.90 a bushel price regardless of the losses, just to get cash to keep operating.

Yet despite signs last fall of sliding prices and large surpluses, Kansas farmers planted 300,000 more acres of wheat for this year's crop—expected to be 396 million bushels—than for last year's. So, once again, U.S. farm policy, designed to assure farm income, is dealing instead with losses.

It is here, though, where the big John Deeres' work ant-like across the vast fields, endlessly cutting at the thigh-high wheat day and night in 24-foot swaths, that the abstract of policy becomes the reality of life. The rumble hum of the combine is carried to the distance by hot Kansas winds blowing in from the southwest on a 100-degree day—perfect for harvesting the wheat that was planted last fall and nourished to ripeness this spring.

By all accounts, most of the farmers here have come through the past years intact. Higher prices at last year's harvest—about $3.25 a bushel—and slightly lower prices after that enabled them to make some money.

Many were also able to reduce their debts with the riches of high prices of 1972 to 1975.

Most have avoided putting their wheat under government loan programs. At $2.11 a bushel locally it "is just a farce, it's no price at all," as Gladys Kaiser, who with her husband still has 1976 wheat in storage, put it. (The national support level is $2.25, but is adjusted for local differences.)

The government will lend that much to a farmer and then after a year, if he can't sell it for more, the farmer forfeits his wheat. The government, in effect, has bought the crop at that price. However, many farmers are still sowing wheat on their own that could have sold several years ago for more, as they gambled that the price would go higher.

Jerry Schmidt, manager of the local co-op elevator, says he began this year's harvest with 300,000 bushels of farmers' wheat in storage at $1.95 a bushel from at least last year. The co-op added a 368,000-bushel elevator this year to give it 1.3-million-bushel capacity but Schmidt says even that may not be enough.

The co-op's leftovers were part of a 1.109-billion-bushel surplus that existed when this year's harvest began. With another estimated 2 billion bushels being harvested now, the U.S. Agriculture Department estimates that this time next year the nation could have as much as 1.4 billion bushels of wheat on hand—almost two years' supply of domestic wheat. The nation uses about 35 per cent of what it produces; the rest is available for exports, which have been declining since the food short years of 1972–75.

So the squeeze for farmers in the coming year is whether they can sell the 1977 harvest for enough money to cover their costs, costs that have edged higher at a time of declining prices. Thus, more and more farmers talk of turning to the government's loan program, whatever the price.

Their fate, then, may hinge on whatever Congress and the President work out on loan levels. The Senate has proposed $2.47 a bushel, the House Agriculture Committee $2.35 and the administration $2.25. The administration's version of all farm price supports could cost $2 billion, and the Senate's an estimated $2 billion to $3.9 billion.

For many farmers here, however, that will still not be enough to cover costs; they say they need to get $2.50 to $3 a bushel just to break even. They cite the seemingly endless increases in their costs, such as for fuel and farm equipment. "Everything we go to get keeps going up, and everything we sell keeps going down," said Potter. "I can't afford to leave wheat in storage forever" waiting for the price to go up. Potter with his brother and father farms seven 1-mile-square sections of wheat land and is carrying 2,400 bushels from his 1975 harvest. This year he feels he may be forced to use the government loan program.

Already, the economy of surrounding Hamilton County (population 3,141) has begun to feel the impact of low farm prices. Despite increased retail prices, total sales in the county have shrunk to 1975 levels, as measured by sales tax collection.

Business here is tied directly to the roughly 350 farmers who have some 430,000 acres of crop land, about half of it in wheat. Other crops, primarily seed grains like corn and milo, are also beginning to feel the pressure of low wheat prices as cattlemen stop feeding those grains to their cattle, replacing them with cheap wheat.

The surfeit of wheat has depressed prices but consumers have apparently not benefited. A recent report by the President's Council on Wage and Price Stability concluded that while bakers raised bread prices five years ago to offset increased wheat costs, declining prices over the past three years have not been translated into lower bread prices.

Instead, the council found, "Wholesale bakers have experienced offsetting, non-ingredient cost increases and have fully restored profit margins to their pre-1971 levels. The profitability of the large wholesale bakers rose sharply from 1973 through 1975 and appeared to have stabilized in 1976."

But excess wheat has allowed the Carter administration to make progress toward an international food reserve for use in times of world shortage. The Agriculture Department is now allowing farmers to keep their wheat under loan for three years instead of one year, with incentives to sell when prices rise to certain levels.

Administration officials believe, however, that the United States cannot afford to store endless quantities of wheat forever until the next crisis and that this country and food-poor ones must consider using their resources to make poorer nations less dependent on U.S. farms. Thus, the seemingly imminent return to acreage reductions on wheat.

"I really don't like to see acreage controls," said Potter as he stood at the edge of a lush wheat field being harvested by his brother. It is hot, and the Kansas sky is a clear blue. "But I do like to make some money. There is going to have to be a change somewhere."

HERBITS ANALYSIS OF THE KING REPORT—PART IV

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. STEIGER. Mr. Speaker, the fourth segment of Steve Herbits' analysis of Dr. William King's report on national service versus an all-volunteer Armed Force contains his response to chapters 1, 2, and 5 of that report. The past 3 days, I have placed his analysis of chapters 3 and 4 in the RECORD.

Today's portion begins with chapter 5, which Herbits discussed along with chapters 3 and 4 in the first part of his analysis. Chapter 5, "A Retrospective Analysis of the Assumptions of the Gates Commission," was, Herbits concluded, an attempt "to destroy the Commission's credibility."

Herbits' response challenges King's suppositions about the draft. In addition, it stresses the importance of making the distinction between peacetime and wartime situations. Included is information on why young men and women enlist in the Army.

The fourth part of Herbits' well-stated analysis follows:

HERBITS ANALYSIS OF THE KING REPORT—PART IV

CHAPTER 5

In the context of the previous four chapters, it is no surprise to find Chapter 5, "A Retrospective Analysis of the Assumptions of the Gates Commission," attempting to destroy the Commission's credibility. Any knowledgeable student of the AVF will know he fails. What is so clear in 1977 is that where practice has varied from the Gates Report has been in the concept's implementation, not the expectations. He generally concludes that the AVF is bad because many of the assumptions that the Gates Commission used had not been borne out. However, the failure to implement these assumptions is not the result of the AVF but rather the fault of DOD managers and the Congress, which failed in proper oversight responsibilities. Because he does not draw sufficient distinctions, he loses an important lesson—that there must be constant vigilance to insure that proper management techniques are applied and that proper oversight is provided to guarantee that quality management initiatives are undertaken for the continued success of the AVF.

There are serious problems with Dr. King's last paragraph on the Selective Service System. Again, the question must be raised about what is being done to put a back-up draft system in place. King makes the mistake of implying a similar system to that which is on the books now. He should, instead, be thinking conceptually, as Pentagon planners have done, about new systems which give the greater flexibility necessary to foreign policy makers.

King's point is invalid in another respect. Dire analyses such as his about the problems in resuming a draft are without justification in light of past experience. When we became involved in World War I in 1917, the first registration was held 17 days after enactment of a draft bill, and the first inductions came within four months. In 1940, only 63 days elapsed between draft law enactment and first inductions. This was done with virtually no standby planning organization and without maintenance of any standby machinery. Why should there be so many problems today? The standby proposal currently under review by the administration can supply people as fast as military reception stations can process and begin to train them.

Paragraph 3 of the section entitled "Enlisted Personnel Turnover" misses the point. In complaining about the actual requirements for new accessions as opposed to Gates Commission estimates, King skips over the essential analytical point of asking why. Again, he allows the reader to assume that the concept is faulty, rather than the management of the concept. Knowledge of the details of how the accession requirement is determined—particularly for the Army—would show that solutions are available and implementable. For instance, if attrition were reduced, as noted earlier, accession requirements would be reduced accordingly. See the "Changes in Army Manpower Data" paper in the appendix for further detail.

In the last paragraph on page 37, King talks about features of the government accounting system which do not serve to motivate military managers to consider civilianization. I agree; and it is true for all levels of the Pentagon hierarchy. Much has been done here over the last several years; more can be done. It is the job of Congressional and Departmental managers. The Army does plan to civilianize 1,000 positions by FY 79.

The same question can be raised about reenlistment rate improvement, mentioned on page 38. It is a policy problem under the subcommittee's purview. This is yet another demonstration that the AVF does not have conceptual problems, but rather managemcnt problems.

Also on page 38, King has a brief discussion of turnover-related costs. It is correct to point out that a return to 1974 attrition levels would reduce those costs, but again we have to gauge what the additional costs would be in terms of morale and of expenditures for disciplinary procedures if the services retained the number of malcontents who were forced to stay in the service during the draft era. Furthermore, King makes no mention of the savings resulting from the longer terms of enlistment (3, 4 and 6 years) for those filling full first terms, as opposed to the preponderant number who served two year obligations under the draft. That omission amounts to a misrepresentation.

The first paragraph on page 39 is one of the most flagrant examples in the study of Dr. King's penchant for mixing apples and oranges and for using disputed and discredited figures to try to justify his particular point of view. He again pulls out the $5,500–$12,000 per recruit figure, which is considered highly inflated. He shrugs off the Gates assumption on the ratio of recruiting expenditures to enlistment rates, when the detrimental effect of recruiting appropriations cutbacks on enlistment was demonstrated last year. Finally, he uses, without regard to inflation or the comparability pay increase in 1971, the Gates Commission's estimate of the additional cost of going to a 3 million man force. In contrasting that figure with the much higher, and questionable, figure he feels is accurate today, he attempts to discredit the Gates assumptions, making absolutely no mention of what the Gates

figures would be in today's dollars with the pay raise calculated into the equation. This is an unscholarly approach at best.

The first paragraph of Dr. King's discussion of attitudes and morale in the AVF, on page 42, is misleading. Had he cut anywhere below the surface, he would have found that the high attrition has in fact produced a much higher morale, because it gets "the bad apple syndrome" out of the services early. Referring back to the statistics cited earlier on the marked decline in disciplinary problems within the Army will give the lie to his unfounded conclusions.

As noted earlier, the new attrition policy is too easy and makes it too convenient for officers out in the field to discharge personnel for reasons that may be inappropriate. It has to be tightened, it has to be managed better, and it has to be thought through more thoroughly and effectively. Nevertheless, the freedom held by officers does not necessarily indicate a drop in morale; rather, it would seem to suggest a degree of irresponsibility in the management.

The distinctions between peacetime and wartime situations is important, in that there is a much greater tendency in peacetime to dabble more in questions such as attrition and whether or not people should be in the services and what the problems are. People, in effect, have more time to worry about smaller problems. Those who have looked at this, senior officers, unit commanders and the like, not only point repeatedly to the statistics of reduced disciplinary problems, but they consistently emphasize the quality, enthusiasm, professionalism and high morale of those serving under their commands. Army Chief of Staff Bernard Rogers has said this is the best Army in his 34 years of service, and his comments have been echoed by innumerable others who have been a part of the Army since World War II and have viewed it in various stages over the years.

The quoted paragraph from Barkman and Blair, which appears on page 44, begs the question of career-oriented men and women by ignoring the controls of the enlistment rate. Let us again examine the motivation for people enlisting for the term, remembering that they are totally separate from the rest of the military. A 1976 Department of the Army survey found the main reason for enlisting was educational opportunity or job skill training (49%). The chance to travel made up another quarter of enlistments. Pride in country applied to 12%, about the same as 5 or 10 years ago.

We must keep in mind that those who have reenlisted are automatically career, regardless of whether it is a drafted or volunteer military. Therefore,, what we are talking about are individuals in their first term, what their motivations, are, what impact they have on the system, whether their motivations versus those of draftees are different in kind, quantity, or quality, and whether they have an impact on the military decision process. These individuals are at the bottom of the entire system, they don't have a major impact, they cannot be used to "civilianize" the force, they cannot be used to restrain a runaway military at the higher ranks, and it will not matter one iota that they are first-termers in a volunteer, rather than a draft-motivated, Army. The quote and the conclusion are rhetorical devices used to place on the shoulders of some 19 year-olds the responsibility of our constitutional system, including the Congress, for maintaining civilian control of the military.

While Chapters 3 through 5 were of greatest pertinence in terms of the status of the all-volunteer force itself, Chapters 1, 2, 6, and 7 also deal with important issues relating to the AVF and the concept of national service. Part II of this analysis looks at those chapters and Dr. King's conclusions.

CHAPTER 1

In Chapter 1, "Introduction and Objectives," Dr. King notes that the U.S., for most of its history has supported its peacetime defense establishment on a volunteer basis. The short period from World War II until the last draftees were inducted in December, 1972, is the only period of sustained conscription in our nation's history. The tradition of individual freedom, coupled with the national turmoil created by the inequitability of the draft and the Vietnam War, was a key to the return to our historical concept of volunteer service.

As Dr. King notes, the transition back to a volunteer force went quite smoothly. He points out that many skeptics appear to have been converted, and he acknowledges that Defense Department statistics show "that the military forces are generally meeting targets, that the 'quality' of accessions is improving and, generally, that the concept is working."

Dr. King begins building his "selective" deep cloud of doubt over the long-term viability of the AVF by citing two sources: 1) "disquieting rumors, magazine and newspaper articles and study results," and 2) a Defense Manpower Commission report of 1976 which stated the obvious, that "the sustainability of the All Volunteer Force during peacetime will depend upon the economic situation and other interrelated factors, some of which—such as public attitudes toward the armed forces—cannot be predicted with any certainty." These are both weak sources when contrasted to the many thorough analyses holding more confident views: the Congressional Budget Office, RAND, Inc., the Department of Defense's transition document of December 17, 1976, and numerous speeches by Secretaries of Defense and Army in the last two years.

CHAPTER 2

Chapter 2, "National Service and the AVF in the Context of National Goals," is an early subtle indication of the preconceptions Dr. King brings to his work. In effect, he takes us from rumors about the AVF immediately to prominent mention of national service. That "National Service" precedes the "AVF" in both this title and the title of the study as a whole is not accidental, and I suspect Dr. King himself would acknowledge that.

Dr. King states that "for such service to be 'universal,' and for it to achieve its desired impact, it must be at least 'minimally coercive.' " This sentence, and particularly the last four words, should be of deep concern to all who believe in the American tradition of individual rights and freedom. Perhaps even more troubling is the beginning of his next sentence: "Such a program would require the registration, evaluation and counseling of all young Americans . . ." though he softens that by adding "without the necessity of a corresponding requirement for service." A massive federal program of tampering with our youth and their rights could only have a deleterious effect on our democratic tradition. In addition, the cost of such a registration, evaluation and counseling program would be staggering. These problems would only be amplified within the national service system itself, with massive managerial headaches, high implementation costs and further "minimal coercion" to see that proper numbers of young men and women are channeled into the government service slots—"civilian" and military—envisioned by Dr. King.

On page 9 of his study, the professor credits the AVF with having "been shown to be feasible in terms of aggregate measures applied to the recruitment of personnel in sufficient quantity and quality to permit the armed forces to function according to its assigned role. Thus, in direct contradistinction to the issues surrounding the national service concept, the AVF has been demonstrated to be generally feasible—at least under the current peacetime conditions."

This, however, doesn't satisfy him. He says the real issues don't involve the AVF's general viability, but rather its overall effectiveness and its overall impact on the society and national goals. He throws out a number of issues that he feels "have not been finally resolved." Following are the questions he poses, and answers I feel could legitimately be made to them:

"Is the AVF solely a peacetime concept, and does it therefore fail to achieve some basic national security objectives?" The AVF is basically a peacetime concept, as it has been throughout the nation's history. Still, King raises this question without stating any national security objectives which the AVF fails to meet. As Sen. Barry Goldwater said during the March 2 hearings held by Senator Nunn's subcommittee: "But we have had over 200 times in the 200-year history of our country when the Presidents the Commander in Chief, has called out the troops for one reason or another. Only five of those have involved the draft, and we have gotten along pretty well without it." The answer to Dr. King's question is clear—the volunteer force is primarily a peacetime concept, but it does not fail to meet national security goals simply because it is volunteer.

"Does the AVF unfairly distribute the burdens of defense to various segments of the population?" As statistics clearly show, this is perhaps the most representative military force in the nation's history. How quickly we forget the discriminatory nature of the draft and the national turmoil resulting from it!

"Will the AVF ultimately undermine the nation's defense capability through an erosion of public confidence in the military which leads to decreasing support for defense expenditures?" There was little evidence of erosion of public confidence in the first 165 years of the nation in which we had no draft. If anything, the draft played a key role in public cries for reduced defense expenditures and in erosion of military support by the public. The public favored the end of the draft by a nearly 2–1 margin, and now overwhelmingly backs the AVF. Furthermore, the third and fourth years of restitution of an AVF have been accompanied by real growth in the Defense budget for the first time in over a decade.

"Will the AVF ultimately undermine the level of patriotism of the American public?" Seven years ago, the Gates Commission answered this question: "Compelling service through a draft undermines respect for government by forcing an individual to serve when and in the manner the government decides regardless of his own values and talents. Clearly, not all persons are equally suited for military service—some are simply not qualified. When not all our citizens can serve, and only a small minority are needed, a voluntary decision to serve is the best answer, morally and practically, to the question of who should serve."

"Will the AVF lead to greater isolation of the military from the rest of society?" Once more, there is no evidence this took place between 1776 and 1940. Historically, voluntary service, freedom and civilian control of the military have gone hand in hand. England and the U.S. are the best examples of this tradition. As the Gates Commission said: "It is hard to believe that substituting a true volunteer for a draftee or a draft-induced volunteer in one of every six positions will so alter the military as to threaten the tradition of civilian control, which is embodied in the Constitution and deeply felt by the public. It is even less credible when one considers that this substitution will occur at the lowest level of the military ladder, among first-term enlisted men and officers, and that turnover of these first-term personnel in an all-volun-

teer force will be approximately three-fourths of that in a comparable mixed force. The truth is, we already have a large professional armed force amounting to over 2 million men. The existing loyalties and political influence of that force cannot be materially changed by eliminating conscription in the lowest ranks." While it is important to point out that the number of military personnel in the career force is no larger today than it was during the period of the draft, it ignores the fact that with or without the draft, a significant segment of our military forces are career professionals.

"Does the nature of the AVF restrict the range of policy choices available to our leaders in using military forces to achieve national objectives?" It does only if Congress (which retains the authority to draft if appropriate for national objectives) is considered not part of "our leaders" who may wish to use military forces.

The reasoning used by Dr. King in concluding Chapter 2 is difficult to follow. How does he deduce that "a 'more organized' national service program might therefore be the next logical step in the direction in which the nation embarked in 1973" when the draft was ended? It is especially difficult to comprehend how such a "minimally coercive" national service program would enhance the nation's defense capability and give the nation "a more effective mechanism for pursuing a broader array of national goals—including those associated with individual freedom." It's a broad, pleasant sounding generalization, with no basis in fact.

TOBACCO DEFENSE

HON. JOHN W. JENRETTE, JR.

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. JENRETTE. Mr. Speaker, the following is a speech by a constituent of mine, Mr. Collins Spivey of Conway, S.C. It is a tongue in cheek defense of the tobacco program. Mr. Spivey is not only a delightful humorist but a fine gentleman and personal friend. He tells in this speech a story that should be told:

IN DEFENSE OF TOBACCO

(By Collins Spivey)

Tobacco, commonly known as the golden weed, is one of nature's greatest contributions to the social and economic life of mankind and especially as it relates to these United States of America.

Tobacco made itself known when the world was first created, for we are inclined to believe that this plant was found in the Garden of Eden, and perhaps, could have been that forbidden fruit. Certainly Eve's first dress must have been those tobacco leaves since that style has been continuous, and even today, it is the prescribed bathing attire for all lovely women and is generally titled as a bikini. The common belief that Eve first wore a figleaf could have been a figment of the imagination of the historians since the figleaf will not cover the subject and is hardly desirable to form the two-piece drapings that women now want.

When Adam sat beside the cool stream in the late afternoon and dangled his toes in the sparkling waters while enjoying his pipe of tobacco, Eve nestled up and said, "Honey, blow some of that delightful aroma my way and breathe it to me." She further said what has turned out to be the first axiom that is often quoted today when she told Adam, "Where there is smoke, there is bound to be fire!" This indeed was true, 'cause 'ere long Cain and Abel made their appearance and the population explosion had its beginning.

Since that day in the Garden of Eden, tobacco has played a prominent part in history and records show that throughout the centuries tobacco has been a chosen delicacy of the kings and queens. It has been only in recent years that the common man has been allowed to enjoy the satisfaction and soothing effects found in using this delightful product that also contains remarkable health-giving qualities in addition to its temporary pleasures.

It is an undeniable fact that each of you listeners or readers have since a few minutes after your birth deposited something into your mouth, whether it was done by taking milk from a bottle, chawing on a toy, eating food, drinking water, using toothpicks, nibbling on your fingernails, chewing gum and blowing bubbles, or sucking your thumb. Some politicians have even been accused of putting their foot in their mouths. Since nature and our habits call for this attention to the mouth about every hour, I ask, "What could be a better or more desirable way to satisfy this need than to puff a fag and enjoy the pleasant flavor and satisfaction gained by inhaling the delectable aroma?"

Over the years tobacco and cigarette smoking have often played the part of Cupid, for many couples have been brought together into lasting romances with subtle introductions like, "Do you have a light?", "Could you lend me a match?", or "Would you like a cigarette?". Cigarette smoking can also influence marital relationships. Some days ago, a golfing friend of mine told me that his wife enjoyed her smoking so much that during their thirty years of marital bliss they had never had a serious, unsettled argument. She was ever in agreement, he said, to take a part in anything that he suggested, but he was somewhat frustrated when her reply was always the same, "Wait 'til I finish smoking this cigarette." This caused a dilemma, he said, since about half the time, when she had finished her smoke, he had forgotten what he had suggested that they do, and the rest of the time he had already fallen asleep.

Tobacco also played a large part in the life of the American Indians since it was used in barter and trade, and in smoking the weed, the Indian found a measure of relief from his daily problems. Sitting Bull, not knowing the Surgeon General's suggested ban, proclaimed a procedure which was followed by other chiefs in which he ordered, "Before pale face talk, he must pause and smoke pipe of peace with Indian." This ritual was followed before, during, and after conferences and would be a practice that we today could well emulate whether it be in private conferences, statewide confrontations, or even in the chambers of Congress. The soft mellow aroma from smoking the picturesque pipe of peace always softens conversation, reduces the slings and arrows in temperamental outbursts, and helps transfer frayed nerves into peaceful solutions.

While it may be true that overindulgence in the use of tobacco in its various forms may have ill affects to the user, smoking when done in moderation can help to relieve tension and soothe frayed nerves in this rat-race that is today a normal pace of living.

Surely the golden weed can be classified as preventive medicine, and that fact is brought to our attention when we realize that measles, mumps, whooping cough, small pox and literally hundreds of other maladies are found primarily in children under the smoking age where they have not yet been exposed to the benefits of this pleasant germ-destroying aroma. All people that smoke will eventually die, but when we study the graphs and the longevity charts of mankind, we find that in the past 100 years, the life span of man has gone up in almost the same proportions as tobacco usage and cigarette smoking.

From experience, most of you know that a good whiff of tobacco smoke will chase away a full-grown mosquito. If this observation is true, it surely must follow that after a smoke, literally thousands of small unseen microbes that surround our bodies are driven away and destroyed leaving our vital organs cleansed in much the same fashion that our homes are purified by the spray of the Orkin man.

The man that dies in his 80's or 90's from some problem caused by smoking perhaps would have died in his 50's of a heart attack or hypertension had he not enjoyed the "pause that refreshes" in smoking a fag. The smoker's death in his 90's is further saddened by the fact that his non-smoking friends have long since passed on and sit not on the mourner's bench in his passing.

In this morning's news media, some health institute gave twelve ways in which a person finds his nerves aggravated with tension mounting and blood pressure rising, all of which contribute to a shortage of life. This same person could have found a remedy had he only relaxed, lit a cigarette, and enjoyed that pleasant experience that only smokers have found.

The Surgeon General with his dictatorial powers has ordered that all packers of cigarettes carry a message which says, "Warning: The Surgeon General has determined that cigarette smoking is dangerous to your health." A normal question for the layman would be, "Why pick out cigarettes for this condemnation when it would be appropriate to add such a warning to literally thousands of things that humans consume?" Too many prunes will cause diarrhea and too much cheese will have the reverse effect; too many baked beans will make one unpopular, and surely all doctors and dentists (and perhaps husbands or wives) should be warned against the use of garlic and onions. Even water, we read in this week's news items, is among the leading causes of cancer, and too much of this fluid consumed almost always causes a loss of sleep.

Traffic accidents account for approximately a quarter million deaths each year. Whiskey drinking adds other thousands to the mortality count, and these together with deaths caused by sexual abuses and drug overdoses add to a staggering number compared with the small number of cancer deaths caused by smoking. These high-rate death causing areas should have the attention of the governing powers, and they should leave such pleasant habits as cigarette smoking in the hands of the average man without legal interference.

If there is any scintilla of truth that continuous smoking will contribute to brown lung in the many years to come, it would be helpful to those that smoke to assume the attitude taken by Aunt Carrie when she and Uncle Joe visited the doctor on their 60th anniversary. When the doctor found after questioning that they still enjoyed their love life, he told Aunt Carrie that continuation of that practice could well give Uncle Joe a heart attack. Her reply to the doctor's warning was, "Doc, me and Joe has long since passed the normal life expectancy, an' us ain't now gonna change 'cause if that happens to be the time for Joe to go, I want 'im to leave here with a smile on he face!"

The various ecological commissions of our nation cannot but be pleased with the residue of ashes found in smoking. It is estimated that if all of the ashes from every American smoker were collected, perhaps in a month's time, they would not even fill an open grave. In fact, this ash makes a good fertilizer when sprinkled around plants and on the open lawn. In contrast to the small amount of dust left from cigarette smoking, we find that if all of the empty beer cans and soft drink containers were collected and

placed end to end, in one year's time they would surround the earth more than 246 times, which is equivalent to a four-lane highway circling the globe. If these containers were stacked end on end upward, the astronauts would have had a good ladder to climb to the moon and would not have needed a space capsule to make their journey.

Perhaps the strongest point for the use of tobacco in its various forms comes in the area of finances. Large segments of Virginia, the Carolinas, Georgia, and Kentucky rely heavily on tobacco production, manufacture, and sales, and contribute to the employment of several million persons in a gainful occupation. It has been pointed out that for each dollar that the producer receives, that more than ten dollars goes into the coffers of the various city, state, federal, and other tax agencies. Last year, in the state of South Carolina alone, the producer's sales of $163 million added over $1½ billion to the various tax collecting agencies. Should the midwestern states of Idaho with its potatoes, Kansas, Minnesota, and Montana with their wheat and corn, and the border states with other related farming products donate to the general tax structure in amounts equal to the contributions from South Carolina, the amount would be staggering.

Should this utopian dream come true, then Congressmen could increase their salaries without apologies, President Carter could spend at will, and smiles would play on every official's face because the books would be balanced and the present deficit would be wiped out. I feel that it comes in poor graces for those officials of the northern and western states to castigate the tobacco program when this very same program indirectly pours millions into their states and helps to subsidize their farm programs. Truly, these subsidies could not be made without the aid from others including their good friends in the tobacco states.

In closing, I would like to say, that any essay or speech should direct the listeners to some positive course of action. These remarks will exhort you to follow the simple rule made famous by Sitting Bull when he ordered those faced by trials, tribulations, problems, arguments, or even the small daily vexations, to pause and enjoy the refreshments found in the delightful aroma of smoking. So again, I say the prescription for a long and contented life can be found in this P.S.:

"PAUSE AND SMOKE!"

(NOTE: The above remarks are rambling thoughts expressed by C. A. Spivey in the defense of the tobacco program and are not documented. The facts and figures given are estimates only.)

THE ERRORS AND EVILS OF THE CARTER-BELL FOREIGN INTELLIGENCE SURVEILLANCE BILL

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. DRINAN. Mr. Speaker, the Carter administration is presently asking the Congress to approve a bill which would authorize electronic surveillance against persons in the United States who have not committed, are not committing, or are not even suspected of committing any crime. These broad powers are sought in the name of national security.

On June 3, 1977, I commented extensively on this measure in a RECORD statement—page 17450, criticizing it as a radical departure from the values and traditions inherent in the fourth amendment.

In the July 11 issue of the New York Times, Professor Christopher Pyle, a staunch and outspoken defender of civil liberties, added his voice once again to those opposed to this insidous idea. Using the historical setting of the colonial period immediately preceding the American Revolution, Professor Pyle of Mount Holyoke College, Massachusetts, portrays the bill for what it is: "regressive legislation which takes a backhanded swipe at fourth amendment values and which could effectively authorize many of the surveillance abuses Congress has so recently deplored."

I insert the article in the RECORD:

AUTHORIZED SPYING

(By Christopher Pyle)

SOUTH HADLEY, MASS.—Proposed legislation on a revised national security wiretap bill, enthusiastically supported by the C.I.A., the F.B.I. and the military, would require the Government to obtain judicial warrants before tapping the phones or bugging the premises of foreign powers or foreign agents.

The bill seems to be a substantial improvement over unrestrained Government spying. In fact, it is regressive legislation which takes a backhanded swipe at Fourth Amendment values and which could effectively authorize many of the surveillance abuses Congress has so recently deplored.

To understand why, imagine that the year is 1774 and the same bill has just been introduced in Parliament. Its primary purpose, according to Lord North, is to restore faith in the Government following the scandalous Wilkes affair in London and the overzealous customs searches in Boston.

The bill's secondary purpose—some say its main objective—is to legitimize covert political and economic intelligence operations against the colonists and the French. In response to questioning in Parliament, Lord North will say little, citing the need for secrecy, but he has conceded that the bill could permit surreptitious surveillance of some Englishmen who, without violating any laws, seek to represent certain foreign economic interests or who report on British industrial advances to certain foreign merchants.

Rumor has it that Lord North decided to give up his opposition to judicial warrants for all forms of covert surveillance in return for clear legislative endorsement of eavesdropping and burglaries to gather information on merchants and shipowners who attempt to evade the mercantile system. Thus, where the bill authorizes covert surveillance to obtain "information essential to the security of the nation" or "essential to the successful conduct of foreign affairs" it is referring to noncriminal information about commercial activity.

Tories on both sides of the Atlantic praise the bill as an historic step toward restraining the Crown's agents, but there are Whigs and colonists who disagree. In colonial Boston, James Otis has denounced Lord North's warrant scheme as "a hoax." "His so-called warrants," Otis has declared, "are little better than the infamous writs of assistance by which the Crown has been ransacking our warehouses and offices. They are general warrants, forbidden by the common law, and would authorize the King's spies to indiscriminately search the communications of law-abiding persons without probable cause to believe that a crime has been committed."

John Adams agrees with Otis. In a letter to the Boston Transcript, he notes that the bill would empower only seven magistrates, each handpicked by the conservative Lord Chief Justice, to receive applications for the noncriminal, intelligence warrants. The judge would be permitted to decide whether probable cause exists to believe that the target of the proposed surveillance is "a foreign power" or "an agent of a foreign power," but the bill would compel the judge to accept Lord North's assurance, unsupported by any facts or inferences, that the information sought is "essential" to the "security of the nation" or the "conduct of foreign affairs." "The function of judges when hearing applications for warrants," Adams writes, "is not to accept anything on faith, but to make an independent judgment on all the facts and suppositions. This bill would reduce the judiciary to passing empty blessings on ministerial whims.

"Incredible though it may seem," Adams continues, "there is even a provision in this bill that would permit the handpicked judges to compel the keepers of boarding houses and other private persons to spy for the Crown. General Gage cannot conscript us into his army, but with the help of this law and a friendly magistrate, he could dragoon us into his spy corps."

Adams concludes: "This bill is not to capture spies; espionage is one of those crimes for which judges can already issue warrants. The so-called 'foreign agents' Lord North would like authority to spy on are not the secret agents of Louis XVI but Swedish trade negotiators, British and colonial representatives of Dutch trading companies, some foreign journalists, and perhaps even the British friends of American independence. The sweeping powers Lord North seeks should not be granted to any government, least of all one with a fresh record of abuse."

Of course, the time is not 1774. The bill is not before Parliament. These words were never uttered.

The year is 1977. The bill is before the Congress of the United States and like Lord North's "Intolerable Acts," it stands a good chance of passage.

NATO AND THE NEXT CENTURY

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. FINDLEY. Mr. Speaker, the July 3, 1977, issue of the Washington Post's magazine, Parade, carried a front cover article by Henry Steele Commager, entitled "200 Plus 1." Mr. Commager is Simpson Lecturer at Amherst College and the author of some 40 books on American history.

In this article, Professor Commager concludes that the sense of common purpose and interest among the nations of the West needs to be revived.

For 30 years, the vision of the Marshall plan and the institutions it spawned have sustained free peoples everywhere and served as the bulwark in the fight to ward off expansionism by totalitarian governments. Compelling vision of comparable breadth is needed now to light our way into the 21st century. Professor Commager eloquently states the case for such vision and I commend this article to the attention of my colleagues.

Text of article follows:

"200 PLUS 1"

(By Henry Steele Commager)

One year after our Bicentennial—and 200 years of one of the great success stories of

history—is our luck or our talent running out on us? More realistically, can we still count on the natural resources, the immunity from outside dangers, a resourceful people and a leadership enlightened enough to cope with the problems that glare upon us from every quarter of the horizon?

Certainly no other nation was born under such auspicious circumstances: a boundless continent with seemingly limitless resources, immunity from the wars and deprivation of other peoples, a rich inheritance, the wisest leadership ever vouchsafed to a single nation, and an enlightened people "advancing rapidly," as Jefferson said, "to destinies beyond the reach of mortal eye."

Very little in our experience or in the experience of other peoples has prepared us to deal with our present problems, for they differ greatly, even fundamentally, from those we have faced and overcome in the past. The old assumptions, the old rules, the old certainties with which we so long consoled ourselves are no longer relevant, and we find ourselves—as did those who first came to these shores—in a new world.

To begin with, for the first time in our history as a nation we are no longer masters of our own destiny. Every major problem that confronts us now is global and to be solved only through cooperation with other nations. A frightening prospect, this, to a people who in the past could take satisfaction in their freedom from "foreign entanglements" and involvements and rejoice in being able to work out their own destiny free from the burden of the past and from dependence on the vagaries of other nations.

Second, we can no longer fall back on the comforting assumption that our resources are infinite. Now we must face the fact that these resources, as well as those of other nations and continents, are finite; that we are running out of oil and gas; that we may be running out of water for farming, running out of ocean food, and running out of breathable air. We must realize that if we are to reverse what now seems the inexorable exhaustion of natural resources, we must do so in cooperation with all other major powers.

Third, we who heretofore have not been able to face even the possibility of defeat are now required to take the possibility of annihilation into our calculations. All of our most fateful decisions are made under the shadow of the atomic weapon. Here, again, we are not free agents. Decisions to control or destroy nuclear weapons must be worked out with other great powers; if they are to be enforced against reckless fanatics, they must be enforced by international agencies or organizations.

Dr. Samuel Johnson once observed that "when a man knows that he is to be hanged in a fortnight, it wonderfully concentrates his mind." Will awareness of the threats that hang over us concentrate our minds? Can we who have been living off our political—and, to some extent, our moral—capital build up new political, scientific, technological and moral resources in time to stave off disater?

The prospects are not encouraging.

OUR PRIME ROLE

One thing, however, should be clear: that though we cannot save ourselves merely by our own efforts, the world cannot save itself without both our efforts and our leadership. Because we invented modern federalism, because we were chiefly responsible for the League of Nations and the United Nations, we have had longer experience with international cooperation than any other major power. Because we are not blinded by ancient animosities or ideological commitments, we can see what should be done more clearly than can most nations. Because—thanks in large part to the exceeding bounty of Nature—we are rich and powerful, we can afford to be magnanimous. And because we invented the atomic weapon and are the only nation ever to use it in war, we have a special responsibility to dissipate the threat of an atomic holocaust.

What is called for is a revival of the wisdom and resourcefulness that presided over the birth of our Republic and gave us those institutions which still serve us so well and have been so widely copied throughout the rest of the civilized world. We must invoke that creativity to reconcile nationalism—with its assumption that nations can live by and to themselves—with the reality that, in almost everything that counts, the world is interdependent. We must invoke it to summon up an inventiveness in the realms of politics and economics comparable to that which we display in science and technology.

That same inventiveness must be invoked to organize the immense but desperately fragmented resources of over 150 independent and competing nations—some vast like the United States, China and the Soviet Union, some tiny like Fiji, Bhutan and Guyana—to solve those common problems which simply do not recognize national or even continental boundaries. Now it is up to us, together with other nations seeking in their way the prosperity and happiness of their own people, to summon up our wisdom and skills to solve the problems that threaten us all.

On July 4, 1776—201 years ago—Benjamin Franklin said to John Hancock as they both signed the Declaration of Independence: "We must indeed all hang together, or, most assuredly, we shall all hang separately."

His remark is as true today as it was then—and for the whole world.

A FIRSTHAND REPORT ON WHAT IS HAPPENING IN THE SOVIET UNION

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. KEMP. Mr. Speaker, my extremely able administrative assistant, Randal Teague, recently had an opportunity to serve as the cochairman of an American Council of Young Political Leaders delegation trip to the Soviet Union. This was the last in the present series of exchange programs between the ACYPL and the Committee of Youth Organizations of the USSR. The U.S. delegation consisted of six Republicans and six Democrats, and the Democratic cochairman was Robert E. Rose, the lieutenant governor of Nevada.

The purpose of this particular trip was to participate in a seminar on the problems of U.S.-Soviet relations, sponsored jointly by the ACYPL and the CYO. It was held in Alma-Ata, the capital of the Kazakh S.S.R. in central Asia. The delegation was also in Moscow and in Kiev, the capital of the Ukraine S.S.R. In the course of those 16 days, they met with the director of the Institute on the USA and Canada, the secretariats of the presidiums of the Ukraine and Kazakh S.S.R.'s, the chief justice of the Supreme Court of the Ukraine, the chairman of the 37 million member CYO, the Metropolitan of Kiev and many others. They also participated in the seminars 4 day commission sessions on general U.S.-Soviet relations, perspectives on disarmament, and the role of youth in society.

I asked Randal to pull together his impressions on what is going on in the Soviet Union today—to the extent one can deduce that from a 16 day trip consisting of access to a substantially higher level of party and government official than customary even for U.S. Government officials.

He has done so, addressing himself to the prospects for genuine reform within their system, the tone and extent of the ideological commitment and nationalist spirit today, the differences seen in the younger generation's perspectives, the Soviet reaction to President Carter and his foreign policy actions, and the contrast between the Soviet Union and other major industrial nations.

There are some very important points made in this excellent memorandum, especially the way in which the quest for the good life may be a drag on reform instead of its stimulus; the extent of the Soviet's nationalistic feelings, even devoid of their ideological overtones; some serious questions about the effects of U.S. economic assistance; and how what the Soviets do not say about President Carter may indicate what their true feelings are.

I hope this exchange program is renewed. It is valuable training and experience for these young leaders.

The memorandum follows:

WHAT'S HAPPENING IN THE SOVIET UNION

THE PROSPECTS FOR GENUINE REFORM

1. There are no slums in Moscow on the order of, say, New York City or Washington, D.C. Brezhnev has put his influence behind a massive public housing program. But housing is only one facet of life. In almost every other I observed, the class distinctions in that "classless society" are myriad, and from conversations with people who were there from three to fifteen years ago, those class distinctions have grown.

We flew first class in a classless plane. Maybe there are no formal distinctions, at least not to be found in a travel agent's handbook, but we flew forward of the galley, had better food and more comfort than those aft. We had also waited in the lounge which had all the semblances of a VIP one. Let me put it this way: Those who sat aft were not there. I saw more limousines in Moscow than I've ever seen in Washington, as national capital the comparable city, and they were not diplomatic cars, for the license plates gave those away. The black automobiles of the government and communist party functionaries were newer and better than the others, and, of course, they are usually chauffeur-driven and the cost don't come out of the functionaries' own pockets. Time after time, we saw the flash of a communist party member's card open doors, cut in line, or get better seats, privileges not available to others.

And this seems to be the basis of the new class system. I've always thought the sum of those many years of work by Crane Brinton (at Harvard, studying the course of revolutions) was this: revolutions replace one status quo with another. And the monarchy and aristocracy of Czarist Russia have been replaced with the party-based meritocracy of Soviet Russia. (And, while of much lesser importance, birth still has something to do with it; ask the child or grandchild of someone high in the party structure.)

The question here, it seems to me, is what flows from this realization? It has to be more apparent to the man on the street than to the tourist. We see it on tour, we can leave; he sees it every day, but he cannot leave. Does it build tension in the society? Does it build a tension which can lead to some type of internal reform? Since no one can forecast the future which holds the answer, let's look at both sides of that answer. Yes,

because tensions produced by resentment of privileged stations in life (economic or otherwise, but most typically economic) form the basis for revolutionary or evolutionary change. Yes, because generally speaking, almost everyone's quest is for creature comforts, the good life. But there's a hard reality here, and it's the other side of the coin. No, because the dominance of the party is so profound, and the party is the guardian of the public purse, the guardian of the purity of Marxist-Leninist dogma (which, in the Soviet Union today, is clearly more Leninist, than Marxist), and the component of society from which the goodies would have to be taken to be shared.

There is a dramatic quest for material comfort in the Soviet Union today. Dialetical materialism is materialism, pure and simple. It should come as no surprise. But my guess is that in the short-run, it will lead to greater class distinctions because only the party members have access to them, and party membership (and you have to be elected to it, you just can't join) is only 7-percent of the total population.

The only crack I see in this wall would come from inner direction. The man or woman more concerned with the next pay raise, with making car payments, with getting a better apartment, has less time to worry about the global ideological war. And, as he acquires these goodies, he also has more to lose.

But couldn't that be a drag on reform, rather than a stimulus? If you can get the goodies only through the party and your rank in the party determines how many of the goodies may come your way, you are not about to get out of line, are you? You are not about to risk losing it all to criticize an invasion of Czechoslovakia in 1968 or spending too much on the military budget in 1978?

IDEOLOGICAL FERVOR AND SOVIET NATIONALISM: ON PAR

2. A few words have to be said about Soviet nationalism, the successor of Russian nationalism.

I am not one who buys any thesis that all Soviet foreign policy today can be understood in light of old Russian nationalism. That is not the story of the empire which has been consolidated under Brezhnev and continues to expand in Europe, Asia, Africa, even the Americas. To me, it seems to be a buttressing force behind the ideological struggle.

Anyone who has been to the Soviet Union, student or adult, can tell you the endless stories of the Great Patriotic War, as the Soviet Union's share of the Second World War is called. Reliving it everyday, as they do, has to bolster the populace's support for Soviet military spending; at a minimum, it sustains militarism, as an emotional experience, needed to justify those expenditures from the top down when there are demands for reallocations.

In my personal opinion, Soviet nationalism today is on par with the ideological commitment. Stripped of its ideological component, the Soviet Union today is one of the two strongest military super-powers. If the Soviet Union foresook its ideological goals tomorrow and became a capitalist economy, it would remain one of those two powers. This is an important point.

The attempts by the West to make some cracks in the Kremlin Wall have been based on the supposition that a move toward true peace would come as the ideological fervor of the Soviet Union diminished. Given 1000 years of Russian history and 60 of Soviet, given the swelling of pride and power when they reflect on their world status today, I must now question that. There are two points which, taken together, lead me to this conclusion.

First, our efforts have been principally economic, essentially trade in commodities they have sought. The human rights dimension is both new and a separate question. Surely, over the past decade, economics and trade have been the ingredients of our thrust at "softening 'em up."

Second, if there's one thing you can say about the Soviet system today, it is that it just doesn't work. Cars and trucks are routinely broken down along the roadside. Their new construction is inferior by western standards. Nothing ever seems to be finished off, as we say in western construction trade terminology. Telephone service competes with the French, and it's very hard to be that bad. State planning has all but assured shortages of virtually everything, except where it has assured surpluses. The average Soviet waits in line everywhere, everywhere, everywhere. Outside the stores, inside the stores, from apples to eggs. And, of course, most of the year—the winter months—you are without altogether.

These two points relate this way: To the extent our economic assistance helps them improve the efficiency of their state socialism, are we not making them a stronger nation? A stronger nation in relation to us within all the parameters of the world community—economically, militarily, etc.? We'd probably better be glad the Soviet Union is not a capitalist country today.

When you add the points in section 1 (concerning class distinctions in the classless society, possible resentments, etc.) with those in section 2 (Soviet nationalism and its future), you must ask another question: Won't the philosophical inconsistencies (emergence of private agricultural plots, class distinctions, permeating of the ideology with Soviet nationalism, etc.) and the technological deficiencies (nothing works) be compensated for by the dominance of the party internally and Soviet world power externally? I tend to think they will.

IS THE YOUNGER GENERATION THE LONG-SOUGHT CRACK IN THE KREMLIN WALL?

3. The generation with whom we traveled and associated most when we were there (ages 22–40) is clearly more traveled outside of the Soviet Union, has had greater exposure to the West both through travel and some access to magazines, music, movies, etc., than the previous generation(s). Those in party or Komsomol positions in this generation can speak one or more foreign languages, almost all are able to speak or read English; this is a marked contrast with the Politburo today.

There is hope in this, but it has to be cautious. Answers come from two sources; emotions and logic. Those emotions sometimes come from paranoia, and you have to assure this is true in the highest rungs of the party and government today. To the extent this exposure to the west lessens the paranoia on the part of this new generation, all the better. But they can still be true believers without the paranoia. Marxism-Leninism certainly couches itself in terms of scientific socialism. Perhaps the avenue of change would be through the weakening of the historical determinism through the dialectic. Marxism-Leninism rest on the conviction that the advent of the dictatorship of the proletariat is 100-percent inevitable, that being based on its assertion that it has seen history as a progression leading to it. Perhaps, just perhaps, their exposure to the West, its history, its material progress, etc., and what they show about capitalism and what it refutes about Marxism-Leninism, will cause some second-thoughts about the 100-percent inevitability of their march. Even if they're still 80-percent sure after these exposures, we've won something. Because anything less than 100-percent destroys the inevitability of it; it makes a "hoped for maybe" out of it.

THE SOVIET REACTION TO CARTER

4. I must turn to the question of Carter, the Carter Administration, and the substance and procedure of our relations with the Soviets over the past six months. It is crucial.

We heard repeatedly in the Soviet Union what we had heard repeatedly here, that Jimmy Carter was gumming up the works in U.S.-Soviet relations. The two reasons cited in the Soviet Union are the two recited here—the breakdown in the initial strategic arms limitation talks and his assertion of the importance of human rights.

The Soviets said his diplomatic style was abhoring, in that he sent Secretary of State Vance to Moscow in late March with a take-it-or-leave-it offer. (This is probably an overstatement, because Vance gave them a preferred, comprehensive proposal, as well as a deferred one.) They said that his human rights campaign meddles in their internal affairs which are not rightly the concern of the United States, besides "everything's alright" in that regard anyway, with "freedoms guaranteed under the new Constitution," etc. They long for the return of "the progress" found under Presidents Nixon and Ford and Secretary of State Kissinger. They said the human rights issue was a propaganda ploy at best, but probably an intelligence-gathering device at worst. They even said that if a conscious plan had been devised to derail detente, it could not have been better done.

And, when they gave him the benefit of the doubt because of his own lack of experience in international relations, they said they were still totally confused, and confusion was no basis for relations between countries.

Because it was so often stated and the message was uniform, I think our delegation had a strong tendency to take these criticisms on face value. Some caution has to be added here though, because the Soviets are known in their discussions with Westerners for what they don't say, as much as for what they do say.

Can the Soviets really be all that disappointed with an American President who—

(1) Has begun the process which may lead to removing the trade embargo on Cuba, an embargo which, for as long as it remains, drains $4 million a day from Soviet coffers in support of Castro?

(2) Has started the negotiations which may lead to normalizing relations with the Communist government in Vietnam, and whose Department of State has opposed Congressional efforts to stop U.S. contributions to international funds to aid in the reconstruction, costs which would otherwise have to be borne, in part, through Soviet assistance?

(3) Has canceled the B–1 bomber program?

(4) Has in his concentration on human rights, Basket 3 of the Helsinki Accords, not questioned the other provisions which legitimatize Soviet domination over Eastern Europe?

(5) Has taken the United States out of any efforts to help the governments of Italy, France, etc., resist the burgeoning efforts of the communist parties to seize majority parliamentary power?

(6) Has allowed his Ambassador to the United Nations to serve as the cutting edge against the only anti-communist governments on the African continent?

(7) Has permitted his Secretary of State and strategic arms negotiator to arrive at tentative agreements in the working group sessions following the aborted Moscow SALT talks, which agreements are quite satisfactory to the Soviets?

(8) Has refused to assist an African nation (Zaire) with direct assistance in resisting an invasion from a Soviet-and-Cuba-dominated Angola?

These are crucial questions, and they have to be raised. I do not know the answer.

SEEING A FUTURE WHICH IS THE PAST

5. It borders or cliche status: "Well, you have to admit the Russians are a lot better off today than they were under the Tsar." You hear it here, you hear it there, and,

unfortunately, like any cliche, it is said unthinkingly. That has to be so, because a moment's reflection shows the absurdity of it.

Economists, engineers, scientists, all agree that the technological progress of the past 200 years probably equals the technological progress from the beginning of recorded history to the 1770s. It's been 60 years since the Tsar fell from power, nearly one-third of that 200 year march. It's impossible for the Soviet Union not to have enjoyed some of the advantages of it. In fact, *the material progress,* increase in economic prosperity, etc., which they have enjoyed have probably been *more a product of technology than the economic system*

If one searches for *a true comparison,* it cannot be found in contrasting Tsarist Russia of 1917 with Soviet Russia today. Neither can it be found in trying to ascertain where they are today with where they might have been under the Tsars? Or under the democratic socialism in which Kerensky was moving the Duma?

I would take the three countries which suffered the greatest damage in the Second World War, because that is a much closer point in time and because it left them essentially at the same starting gate. That means Germany, the Soviet Union, and Japan. Contrast West Germany today with the Soviet Union. Contrast Japan today with the Soviet Union. Contrast West Germany with East Germany, the Soviet Union's puppet regime and colonial economic partner. No more convincing argument could be made on where the Soviet Union is in 1977 and where it could have been under a different economic system.

Lincoln Stephens, upon his return many years ago from the Soviet Union, said he had seen the future and it was the Soviet Union. *I have seen that future, and it is the past.* It is the land of waiting, waiting, and waiting. It is the land of shortages. It is the land of manual labor. It is the land of growing class distinctions. It is a land of silence, where nobody speaks to anyone else without reason. It is a land where even spontaneity seems controlled. It has changed one opiate of the people for another, and this one comes in a bottle, vodka. It is a land of a new kind of deism, and their god is a waxed body in a cold mausoleum to which they come as the Moslems to Mecca, never questioning the fact that his judgments were so far off base he thought the revolution would come first elsewhere.

Mr. Speaker, the full text of Randal's report is available through my office.

PLEA BY THE FAMILIES OF STUDENT PRISONERS IN KOREA

HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mrs. MEYNER. Mr. Speaker, many of us have been very pleased by news reports suggesting that President Park of the Republic of Korea may soon release some of the thousands of political prisoners currently being held in that country. Nevertheless, the fact remains that as of this date a large number of Korean citizens, especially students, are imprisoned simply because they are suspected of antigovernment views. Since the beginning of March, more than 40 students have been detained. A massive number of arrests took place around the time of April 7–13, just after I completed a visit to that country and visited with some dissidents.

Rev. P. Schneiss, the executive secretary of the United Church of Christ in Japan, has supplied me with a letter addressed "to the wives and mothers of the world" from over 50 wives and mothers of imprisoned Korean students. I recommend it to all of my colleagues who are concerned about the human rights situation in South Korea and throughout the world:

OPEN LETTER

To The Wives and Mothers of the World:

We give thanks to God that we are sisters with you in our Lord Jesus Christ. We are also thankful for the existence of the Body of Christ, for it surmounts all those things which, in the midst of today's situation, divide and separate because of discord and misunderstandings caused by differences of nationality, colour of skin, doctrines and systems.

We are already deep in debt to the World church for its love. Nevertheless, in view of the circumstances we are facing today we must make our appeal and again ask all of you to pray together with us. We are now in a period of difficult testing which we are trying to cope with by a movement for Human Rights and for the democratization of this country.

Our husbands, sons and daughters, ousted from their jobs and expelled from their colleges because they made their declaration on behalf of the restoration of Democracy and for Human Rights, spend day after day in their prison cells, longing to see the blue sky. Hundreds of students are now sitting on damp, narrow floors, in the dark, letting their precious youth rot away. Though they are not robbers or murderers, yet they are treated more cruelly and surveilled more strictly than those that are.

As for us, our warm beds become cushions of thorns—our fine food catches in our throats and won't go down. Even the flowers, now in the full bloom of a balmy spring, cannot console our hearts. Rather, the tears stream from our eyes as we pray night and day for our imprisoned sons and daughters, buds of flowers held back from blooming.

As we see these youth who have rebelled son or daughter of Korea who declares even one word of expression of conscience is thereby labeled anti-government and must be expelled from school and have his or her name wiped out from the school register. Now, numbers of our sons and daughters, driven out of their beloved schools, are roaming the streets. As mothers, our hearts are being torn to pieces; things are so difficult we can no longer possibly cope with our strength alone. So this is our appeal to the mothers of the world. We can no longer simply stand by and watch lives, given by God, being punished in such a way and suffering such deprivation.

World history will be the judge of the fact that, in a democratic country, expression of concern for the restoration of Democracy, Freedom and Justice is being suppressed. In the history of this world, we have seen an example of the saying: "absolute power corrupts absolutely." The state of affairs is this—our sons and daughters who see injustice and criticize or rebel against it are taken mercilessly, shut up in prison and oppressed.

But we are not asking you to pray just so our husbands, sons and daughters will be released one day sooner. We say this because of the boiling ardour of the students. They do not seek to avoid the door of suffering, but, even today, in a manner most dignified, march bravely through it. It is for this that we would ask you to pray—along with us—for the overall Human Rights of this country and the restoration of Democracy.

As we make this request, our handwriting is blurred by tears already filling our eyes. Nevertheless, we quickly wipe away those tears and return thanks to the Holy Spirit who enables us to view the horizon. We feel that this problem of suffering which we face today from the horizon of history, is not our problem alone, but a matter entrusted to the whole world.

Indeed, through it we have been enabled to become aware of God loving us as he stands at the crossroads leading towards the establishment of a new Jerusalem. This has been a great blessing.

As we see these youth who have rebelled against injustice, choosing of their own accord the road of suffering, we do not despair or become disheartened. With hope in our hearts, we will go on living today, tomorrow—following in the footsteps of our Lord Jesus Christ.

Mothers of the World Church who love—
Pray for the world, we beseech you.
With and for the suffering of Korea—
Pray . . . we beseech you.

MORE QUESTIONS AND ANSWERS ON THE BREEDER REACTOR: SET NO. 2

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. BROWN of California. Mr. Speaker, I would like to insert into the RECORD more questions and answers which are relevant to the controversy over the Clinch River breeder reactor. For those of you who may have missed my first set of questions and answers, I inserted them into the RECORD on July 12—page 22635. Also, I highly recommend reading the excellent speech by Robert Fri, Acting Administrator of ERDA, before the Edison Electric Institute, which I inserted into the RECORD on July 14.

Do not be confused by attempts to characterize this vote as either (i) for or against nuclear power or (ii) for or against energy independence for the United States. We are not talking about a new energy technology to substitute for oil. The issue is when, in the nuclear sector, we displace the cheaper light water reactor by the more expensive, but more uranium-efficient, breeder reactor—or other advanced nuclear technology. Because of a threefold drop in the estimated number of light water reactors in the year 2000, our uranium supplies will stretch much further in time. Consequently, the era in which the light water reactor represents optimum economics is going to be much longer—well into the next century. That, of course, is the basic premise of Schlesinger's economic argument—it never makes economic sense to invest high sums in facilities which will not be needed or economical for a long time—especially since the CRBR already has an outdated design. All the President is asking for is a pause in the commercialization program; research and development on the breeder will continue. Moreover, we should not forget that the breeder is not the only possible energy source for the 21st century; the breeder

will have tough competition from both solar electric and fusion.

The continuation of the questions and answers follow:

QUESTIONS AND ANSWERS—CONTINUED

6. What is the relation of the Clinch River breeder reactor project (CRBRP) to breeder commercialization?

The CRBRP is an integral component of a commercialization program as distinguished from a research and development program. Although one-third full size and called a demonstration plant, the project has the purpose of demonstrating the commercial feasibility and acceptance of the breeder reactor. This fact is illustrated by the following: (i) TVA will purchase the electricity and may even purchase the plant after five years of operation, (ii) the CRBRP was authorized as a cooperative effort, managerially and financially, of the electric utilities and the government, and (iii) the CRBRP is to demonstrate the licensibility of the breeder reactor. In other words, the CRBRP is to break down the institutional barriers to the commercial operation of a breeder reactor.

Dr. Schlesinger stated on June 7: "The Clinch River plant is intended not as technical R. & D. but really as commercial R. & D. Its chief underlying characteristics are that it will permit the utilities to demonstrate that they can sell electric power produced by a breeder reactor. That is no vast step forward in my judgment. If you can produce electric power, you can sell it. It will demonstrate that you can license a breeder. Once again that is not a question of R. & D., but it is a question of institutional arrangements which in an emergency we indeed could change."

7. How much money is left in the ERDA budget for breeder research and development without the CRBRP, and what effect will the deferral have on Tennessee?

Even without the CRBRP, there still remains roughly one half of a billion dollars in the FY 1978 ERDA budget for research and development solely on liquid metal fast breeder reactors (LMFBRs). This is more money than the breeder programs of all the European countries put together. Another $200 million dollars exists in the budget for R. & D. on other advanced nuclear reactors and fuel cycles. The total advanced nuclear program alone receives as much money in the President's budget as solar energy and energy conservation put together.

Even without the CRBRP, the State of Tennessee will receive roughly $900 million dollars (approximately 12 percent of the FY 1978 ERDA budget, more than any other State (more than California and New York put together).

8. How much uranium really exists and what is the relation to the timetable for breeder commercialization?

Only when uranium supplies are sufficiently depleted will the light water reactor (LWR) be replaced by the breeder reactor (and even this assumes that there will be no energy alternatives in the next century, such as solar electric or fusion, to compete favorably with the breeder reactor). When the Clinch River project was originally authorized, the Atomic Energy Commission projected 1,200 large nuclear plants (LWRs) on line in the year 2000. Revised forecasts by ERDA now indicate that there will be only approximately 380 plants in that year. Consequently, our resources of uranium can be stretched out for a much longer period of time than originally thought. ERDA, which has the only complete data, estimates that total reserves and potential resources of uranium (at $50 or less per pound) are 4,300,000 tons. This amount of uranium would mean that the breeder program could be delayed roughly 25 years without any detrimental effect. For those who like to use a "prudent planning base", ERDA gives a very high confidence level to at least 2,350,000 tons of uranium being found. Even if there were no more uranium than this, all the reactors built between now and the year 2000 would be guaranteed a 40-year supply of uranium. ERDA will be exploring vigorously for more uranium during the next decade. Many experts feel that much more uranium exists than even the higher ERDA figure, especially when lower grade and more expensive uranium is included.

9. What does the current cost-benefit analysis have to say about CRBRP and a breeder commercialization program?

In 1974, ERDA estimated the gross benefits from the liquid metal fast breeder reactor (LMFBR), excluding R. & D. costs, of 19.4 billion dollars (discounted to 1974). In 1977, ERDA and the Council on Economic Advisors found a strikingly different result, primarily because of the drastic drop in projections of electricity demand. Even taking into account the price rise for uranium and enrichment services since 1974, the total benefits of the LMFBR is now negative when the R. & D. costs are included. In other words, it is not economical to commercialize prematurely an expensive new technology—no one will buy it.

10. What are the benefits of a pause on the design of the breeder?

Profs. David Rose and Michael Driscoll of the MIT nuclear engineering department conclude that the CRBR is an old design and given the opportunity to start again, a better breeder could be designed. In a 1976 study Burns and Roe, architect-engineer for the CRBR (and author of the infamous secret 1973 memo), conclude that the pool design like the French Phenix is cheaper and five times safer than the loop design like CRBR. Thus, a deferral of CRBR would mean that we could design a far better breeder for demonstration when it became necessary and economical to do so.

11. Are there nuclear alternatives which are more proliferation resistant than the LMFBR and more uranium efficient than the LWR?

A denatured uranium thorium fuel cycle (U233 mixed with U238 and thorium) used in currently commercialized light and heavy water reactors could reduce their annual uranium requirements by 50 percent to 75 percent relative to light water reactors on the current once through uranium fuel cycle. This means that large uranium savings, if uranium supply is really a limiting factor, could be achieved earlier by shifting today's reactors to this uranium conserving fuel cycle over the next 15–25 years than by phasing in the breeder reactor. Moreover, the special advantage of the denatured uranium thorium fuel cycle in these reactors is that it would be significantly more proliferation resistant than either the uranium-plutonium fuel cycle or the denatured uranium-thorium fuel cycle in an LMFBR. Also, the inventor of the light water breeder, Professor Alvin Radkowsky, believes that it is possible to decrease the annual uranium requirements of an LWR fourfold without reprocessing. A pause in the breeder commercialization program will allow time to investigate these alternatives.

12. What non-nuclear competitors are there to the LMFBR?

The LMFBR is an energy technology for the 21st century as are solar electric and fusion. However, according to the new study on solar energy by the Office of Technology Assessment, small solar equipment should be able to provide electricity for between 5 and 15 cents per kilowatt hour (current residential electric rates are between 3 and 4 cents per kilowatt hour). Consequently, if electricity rates increase by factors of 1.5–2 over the next few decades, small scale solar electric facilities would be attractive in many areas of the country. Fusion has not yet been demonstrated, but of course it offers a great potential and is being aggressively pursued by ERDA.

AN AMERICAN TRAGEDY IN THE MAKING

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mr. TEAGUE. Mr. Speaker, in the course of investigating every aspect of the Clinch River breeder reactor, I received from Prof. Bernard L. Cohen, Ph. D., professor of nuclear engineering, University of Pittsburgh, an article which describes plutonium. The information, based on fear rather than reason, which directly associates Clinch River with plutonium poisoning, proliferation, and death is deliberately misleading. Mr. Speaker, Professor Cohen is a respected physicist who knows plutonium and its effects. I ask you to consider the following pertinent aspects taken from his paper so that we may all approach an important decision armed with knowledge. Plutonium must be respected, but we have the ability to control it. Clinch River is needed to demonstrate this ability, to remove the fear and to move into the future confident in our technology and its application. We cannot remain a free nation by burying our heads in the sand:

What has gone wrong? What drove the President to reject plutonium? This wonderful, magic material that could save us has fallen victim to an insidious campaign of slander and half-truths that has blackened its public image beyond recognition. Let's see how it was done.

One line of attack has been on the toxicity of plutonium. It is frequently called "the most toxic substance known to man". Not so! Botulism toxin, for example, is a thousand times more toxic. A widely read and quoted book states that plutonium-239 is "1000 times more toxic than modern nerve gases". Again not so! Per ounce inhaled, the two are about comparably toxic; but plutonium is a solid material which can only be harmful if inhaled in the form of a very fine dust, so mechanisms are required to suspend it in air. Given the choice of being in a room with an open one pound can of plutonium or nerve gas, the latter would be infinitely more dangerous. A recent favorite statement in newspapers and magazines is that "a single particle of plutonium inhaled into the lung will cause lung cancer". Absolutely false! The largest particle that can get past the body's defense mechanisms and enter the lung is about 5 microns (0.0002 inches) in diameter and it would take about a million plutonium particles of this size to give a 50-percent risk of lung cancer.

The principal source of misinformation on these matters is the so-called "hot-particle" theory of plutonium toxicity put out by two professional nuclear critics—I use the word professional advisedly, as they draw their livelihood from opposing nuclear power with salaries largely financed by the Ford Foundation. Their theory, which claims that plutonium is much more dangerous than indicated by all information available in the scientific literature, was investigated and declared invalid or irrelevant by the following groups: an investigating committee of the U.S. National Academy of Sciences, the U.S. National Council on Radiation Protection and Measurements which is comprised of several dozen of our country's most dis-

tinguished radiation research scientists, the British Medical Research Council, the United Kingdom Radiological Protection Board, the U.S. Nuclear Regulatory Commission, and the former U.S. Atomic Energy Commission in a scholarly report written by some of the world's experts on plutonium toxicity. In addition, the U.S. Environmental Protection Agency and the International Commission on Radiation Protection have decided to ignore the "hot-particle" theory in setting their standards, and no prestigeous group anywhere in the world has accepted it. One of the many reasons for these rejections is that there are 25 men who worked with plutonium in the 1940s (when precautions were much less elaborate than at present) and inhaled millions of plutonium particles into their lungs, enough so that the "hot particle" theory predicts each should have had an average of 200 lung cancers—but none of them has yet had lung cancer.

We often hear that in producing plutonium we will be creating a poison in unprecedented quantities. But if all our electric power were derived from plutonium, we would still be producing hundreds of times fewer lethal doses of it per year than we now produce of chlorine or of other poisonous gases. Moreover, when a tank containing chlorine or these other gases breaks open, the poison is immediately dispersed, whereas if a container of plutonium breaks open, only a tiny fraction of it becomes dispersed in air as a fine dust.

There is a widespread impression that plutonium is also dangerous if it gets into food; Senator Ribicoff, one of the best informed men on Capitol Hill on plutonium issues, said on the Senate floor "one thirty millionth of an ounce . . . will cause cancer if . . . swallowed". Wrong by a million times! Only a tiny fraction of swallowed plutonium gets through the intestine walls into the blood stream; nearly all of it passes rapidly out of the body, so swallowing plutonium is less dangerous than swallowing some common poisons we keep in our homes. In fact it is not much more poisonous per ounce than caffeine.

The same factors that keep plutonium from getting through the intestine walls also hinder its uptake by roots of plants, which is part of the reason why plutonium in the soil is not very dangerous. In fact plutonium in the soil is hundreds of times less dangerous per ounce than radium, which is a naturally radioactive material in all soil. From this it can be shown that if all the world's electric power were derived from plutonium, all the plutonium in existence would be about as dangerous as the radium in each half inch of depth of the earth's soil. It hardly need be mentioned that the Earth's soil contains a great many half-inches of depth, so plutonium can never cause anywhere near the long term radioactivity hazard of the radium we have always lived with.

We have been producing and handling plutonium for our military weapons program for over 30 years. Ten thousand pounds of it has been vaporized in the Earth's atmosphere in bomb tests, about a million times the total releases expected annually if all our electricity were generated from plutonium. Plutonium is used as an energy source in our space program and in cardiac pacemakers that are keeping the hearts of many hundreds of our fellow citizens beating, and there are plans for using it to power a completely artificial human heart. With all of this, there is no evidence that any human being has ever been injured by plutonium toxicity in this country or anywhere else in the world.

So much for plutonium toxicity. Another line of attack is that plutonium can be used as an explosive in bombs. If banning the use of plutonium for producing electricity would rid the world of the curse of nuclear weapons, it might be worth the sacrifice, but that is not the issue. Nuclear weapons are known to be in the arsenals of six of the world's most powerful nations, and it is suspected that they may soon be available to a few others, all without any connection with nuclear powerplants. In fact the plutonium used in generating electricity has characteristics making it ill-suited to bombs, and no bombs have ever been made with it.

Then what's the issue? It can be used to produce low quality bombs, and some saber-rattling dictator might decide to divert plutonium from his power reactors for that purpose. There are lots of things that can be done to prevent this, but there is one easy solution—don't export nuclear technology. This still has nothing to do with using it to solve our own energy crisis.

By this time you'd think the enemies of plutonium would be running out of gas. But no, they've come up with another angle—terrorists might steal plutonium and use it to make bombs.

They tell us that once you have plutonium it's very easy to make a nuclear bomb. Then how come it took the Indians, the French, and other national programs hundreds of man-years of scientific effort and tens of millions of dollars to develop them even using bomb grade (not powerplant) plutonium? Well, it's much easier to make a crude bomb, capable of blowing up a large building. That, then, is what the discussion is about. Senator Ribicoff has stated that such a bomb could kill 100,000 people, but his statement is based on the fact that it could destroy the World Trade Center in New York, and that building sometimes contains as many as 100,000 people. In more typical situations, such a bomb could kill a few thousands, or perhaps a few tens of thousands. That still sounds pretty awful, and we'll come back to it later.

Let's consider some of the problems a terrorist group would have to face in this endeavor. First they would have to steal the plutonium, either from a plant where it is processed or by hijacking a truck carrying it between plants. But plutonium is protected by a very elaborate "safeguard" system. It is handled only by a relatively few authorized people who must have security clearances. In plants it is kept in closely guarded areas, and everyone leaving such areas must pass through a doorway monitor which is capable of detecting a quantity 10,000 times less than what is needed for a bomb even if it is put in a capsule and swallowed. The inventory of plutonium is accurately measured and computer processed so that a theft would be detected very rapidly. The entire plant is heavily protected by armed guards, fences, and electronic surveillance devices. When transported, plutonium is carried in armored trucks with armed guards in radio-telephone communication with a home base. The trucks must make no stops between pick-up and delivery points, and the guards have "shoot-to-kill" orders. The amounts of plutonium involved are not large—our national inventory will never be too large to fit into a good-sized living room—so careful guarding is not difficult.

The next problem faced by the terrorists would be design and fabrication of a bomb. This requires reasonable expertise in nuclear reactor physics, chemistry, electronics, machining and mechanical operations, and high explosives technology, plus some familiarity with health physics and miscellaneous areas. There was a television program about an MIT student who designed a bomb that had a small chance of exploding (this latter point was not mentioned), but he only did the design on paper which involves only the first of the skills listed above; it is by no means the most difficult part of the task. The work would require thousands of dollars worth of equipment and would take many weeks or months of concerted effort. There would be substantial danger, perhaps a 30 percent risk of fatal injury, and the bomb would be far from certain of working.

The fruit of all this effort and risk would be to kill the occupancy of a large building. But there are many easier ways to accomplish that end; for example, they could release a poison gas into the ventilation system of that building. They could kill as many people with conventional explosives or incendiaries in large crowds as at a sports stadium. They could kill many more people by blowing open a large dam—note that these dams are often built as an alternative method of producing electricity. They could poison a city's water or food supplies. Any of these measures would be much simpler, safer, cheaper, and faster than stealing plutonium and making a bomb.

We may take considerable comfort from the fact that terrorists have never committed mass murder—rarely have they killed more than a dozen or so in a single incident. Perhaps they feel that it would lose the public sympathy (or at least apathy) they so sorely need. Or perhaps they fear the public wrath and determination to bring them to justice for such a heinous act. Or maybe they have more morality than we credit them with. We can't be sure why terrorists have never opted for mass murder, but we can be certain that it has not been lack of the ability or opportunity to do so. The use of plutonium bombs would add little to their capabilities.

But are we really worried about terrorist mass murder? If we were, we would be guarding building ventilation systems, practicing security measures where crowds gather, deploying guard forces around dams, and limiting access to city reservoirs. We would require that terrorist actions be considered in design of buildings and sports stadiums. We would control the sale of explosives, toxic chemicals, biological agents, etc. We do none of these things.

If we were to follow the plutonium pattern, we should write stories in magazines about how terrorists can blow up dams, incinerate crowds, etc. The government should sponsor scientific studies of other methods by which terrorists might perpetrate mass murder and we should publicize the results—we need an informed public. We should consider setting up a Federal guard-force to protect against terrorism. Is anyone recommending such actions?

How then can anyone claim that the terrorist bomb problem is a reason for giving up the great benefits to be derived from use of plutonium for generating electricity? It just doesn't make sense, and in fact, is counterproductive. Our safeguard system is so tight that aspiring thieves would probably choose to steal from foreign sources where safeguards are much looser. The best answer to this problem is for us to exert pressure by example—show how carefully we protect our plutonium and ask them to do likewise. If we give up our use of plutonium, our influence in this matter is lost.

What about the expense of all these safeguards? Essentially negligible—they would add about 1 percent to the cost of electricity from plutonium. Ralph Nader says that all this guarding will convert our Nation into a police state—but the total guard force would be comparable to the present security forces in airports. The simple fact is that it isn't that hard to guard a national inventory that would fit into a living room. And cost can never be a problem because the electric power generated by this plutonium is worth about $50 billion a year—you can afford a lot of guarding for even 1 percent of that kind of money.

That, believe it or not, is the whole story. We are giving up this magic substance that can save us because people say it is toxic—although no human has ever been injured by its toxicity—and because people say it

may be stolen to make bombs—although none has ever been stolen, no bomb has ever been made with this type material, and such bombs would give their users no major new capabilities. Never mind that producing electricity by burning coal is killing 10,000 Americans each year with its air pollution and over 1,000 coal miners each year in accidents or mine-bred diseases. Never mind that our energy crisis could easily lead us into an economic depression that would result in 10,000 extra suicides per year plus millions of lives in poverty and frustration. Never mind that our oil imports are making us arms merchants to the volatile Middle East which could easily lead us to bloody wars or even worldwide conflagration. Never mind those "minor" problems—our magic substance is too dangerous! The enemies of plutonium have worked their slander campaign very effectively. An American tragedy is in the making.

Mr. Speaker, let us not create a tragedy. Instead let us approach Clinch River with strength and knowledge so that we can give the American public power at a price they can afford.

REMARKS OF SECRETARY-GENERAL WALDHEIM

HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 15, 1977

Mrs. MEYNER. Mr. Speaker, Mr. Kurt Waldheim, Secretary General of the United Nations, recently addressed the Rotary Club of New York. His remarks pertained especially to some of the "misunderstandings and distortions" about the United Nations which deserve to be corrected. I found his remarks to be most interesting and thoughtful and I recommend them to my colleagues:

ADDRESS BY SECRETARY-GENERAL AT ROTARY CLUB LUNCHEON

Following is the text of an address by Secretary-General Kurt Waldheim at the Rotary Club luncheon being held today at the Roosevelt Hotel, New York City.

I am delighted to be here today with so many old friends. One of the more pleasant aspects of my job as Secretary-General is to meet with concerned and dedicated supporters of the United Nations. This of course is not the first time that Rotary has invited me to speak about developments in the world and I still remember the warmth of the welcome I received when I spoke to Convention of Rotary International just a year ago in New Orleans.

I am tempted to repeat much of what I said then. But Rotarians, I know, have long memories, and you are already familiar with the work of the United Nations. It also would not enable me to express my thanks to you for designating today as International Appreciation Day. Actually, though, I think a word is missing in that title. From the United Nations point of view, to be accurate it really should be Rotary International Appreciation Day for all that Rotary has done—and all it is doing—to "advance international understanding, goodwill and peace". In your work you have faithfully supported the aims and work of the United Nations, and for this we are the ones to be appreciative and grateful. It is heartening to have such support, but regrettably we must also cope with the lack of it among others who do not understand, as you do, what the United Nations is all about.

So you will forgive me if I do not devote much of what I have to say to the current state of the world and to the great crises and problems of our time. Instead I would like to deal with some of the misunderstandings and distortions about the United Nations, and seek your help in clarifying them not only here in the United States but in all countries in which Rotary plays such an important role. In seeking your help in this, I do not wish to give the impression that there are no shortcomings in the United Nations or reasons for criticism. No one is more aware of this than I am. However, sometimes I have the feeling that even after 32 years, far too little is known about the United Natitons and its vital importance in the building of a new, decent and forward-looking world community.

In the building of that community, every nation and its people have both the right and the obligation to ask what they get out of their membership in the United Nations and how that membership serves their national interest. The answers to these questions may well be another question, "Is peace worthwhile?" If the answer is yes—and who can doubt it in a world in which man's capacity to destroy is the paramount reality of our time—then the words of the Charter still have validity and deserve to be recalled.

It is true that to some the ideals set forth in the charter may seem to be utopian. But if man cannot hope for a better tomorrow and strive to fulfill those hopes, he has little left. For the first time in history man has the power to shape his own future—the power to create and the power to destroy—and viewed in that light, the words of the charter are not so utopian at all. They are a practical statement of the only viable option open to him.

In the past 32 years since the founding of the United Nations, the number of sovereign states in the world has almost tripled. There are now 147 members of the United Nations and the number is still growing. Each of the new members is as proud and jealous of its new sovereignty as the original 51 founding members. Thus, the solutions to the problems and crises that are the daily agenda of the United Nations must be found within a secure structure of peace and an equitable economic order that recognizes the reality of national concerns and aspirations.

I have thought it important to clarify this almost elementary fact because some of the most persistent criticism of the United Nations is aimed at what is called the organization's "ineffectiveness." This usually means its failure to exercise supranational authority to settle disputes and to impose peace. I can sympathize with the frustration felt on these grounds. I myself sometimes dream of how simple international life would be if there were some higher authority which could, with total objectivity, decide on the merits of any dispute and then impose a decision that automatically would be accepted by all parties. But such a simplistic approach obviously overlooks political realities and the sovereignty of our member States. Obviously we are not at the utopian point in history, and in all likelihood never will be. The United Nations has to deal with the world as it is, and in doing so to try to change the world for the better.

This is not easy, nor can it be done overnight. But does this mean we should stop trying? Definitely not. The fact alone that for nearly one-third of a century there has been no global war justifies, in my opinion, the existence of the United Nations.

There have been, and still are, many regional or local conflicts, but with all their agony, they have at least been contained. The nuclear deterrent has undoubtedly contributed much to this situation. But it is important to recall that it was the United Nations peacekeeping operations that have maintained cease-fires and quiet in Kashmir, the Congo Cyprus, the Middle East and elsewhere. It is the Security Council on countless occasions which has cooled a dangerous situation, provided the necessary safety valve or put the damper on an incipient conflagration. United Nations peacekeeping forces are still holding the ring on Cyprus, and in the Middle East while the search for peaceful solutions goes on.

The United Nations Charter envisaged the establishment of a system assuring "the least diversion for armaments of the world's human and economic resources". It is unfortunately true that in spite of this, the world is now spending 350 billion dollars, or more than 5 per cent of its gross product each year on armaments, and the amount is growing. This, however, should not obscure the fact that the United Nations has made some important progress in disarmament, but its continuous efforts have certainly not produced the real and effective disarmament which the authors of the charter had in mind. That is all the more reason for the efforts to be continued.

Disarmament must remain at the top of the international community's agenda. At least six nations now have atomic capability and two dozen or more are on the threshold, producing as a by-product of their energy programmes the starting kit for several thousand atom bombs, if they so wish. Conventional arms of incredible sophistication are now sold freely and introduced in large quantities into sensitive areas of the world. This is a major and continuous threat to world peace. Efforts to bring this vicious circle under control must be intensified, and I look to next year's special session of the General Assembly, which is to be devoted to disarmament, to take further specific steps towards this objective.

Peace is still its primary task, but the other main preoccupations of the United Nations show the ability of the organization to meet new challenges, new perils and new priorities, while at the same time continuing to cope with the legacies of the past. The United Nations' daily agenda ranges from such political problems as those in southern Africa, the Middle East and Cyprus to economic problems such as the search for a new international economic order. Then there are the many new problems mankind is faced with today—the environment, the population explosion, the sharing of the rich resources of the seabed, to mention just a few. These and many others spill over national boundaries and affect all people. They are incapable of management by any one nation or even group of nations. This is the reality of an interdependent planet which depends for its survival on global solutions to global problems.

This is also the reality that underscores the fact that political stability cannot be maintained in a world of economic instability. The great gap that now separates the rich and the poor countries of the world is bound to increase tensions. National societies have learned that the stark contrast between the rich and the poor often leads to violence. An interdependent world will learn this lesson too unless steps are taken to narrow the gap and to bring about satisfactory conditions in all countries. This is what is at the heart of negotiations going on in the United Nations and elsewhere to develop a new international economic order.

I have tried to give a general picture of some of the main concerns of the United Nations to provide a backdrop, incomplete though it is, against which one can perhaps better measure its value. Because the United Nations is a global organization, it is widely assumed that the costs involved must be astronomical. This assumption is frequently made by those who seek to discredit the United Nations, and distorted figures are mentioned that bear no relation to reality. In 1976, the regular budget expenditure of the United Nations amounted to less than $360 million. It should be of particular inter-

est to Americans that of this total amount, the United States paid one-quarter or $89 million, about 40 cents for each American citizen. The United Nations spends about half of its annual budget in the United States, and as New Yorkers you will be interested in knowing, for example, that $2 million is spent to rent commercial office space each year. In addition, members of the United Nations Secretariat and diplomatic corps spend an estimated $200 million in the United States for official and personal expenses. As against these amounts, the United Nations costs New York City and the Federal Government about $15 million in diplomatic tax exemptions and special police protection.

When higher costs are attributed to the United Nations they usually include the budgets of the 12 autonomous international organizations which make up the so-called United Nations system. These organizations deal with widely different matters. The oldest has been in existence for 100 years—70 years before the United Nations was established. To lump them all together into one organization with one budget, as it was recently done by a newspaper in New York to prove how expensive the United Nations is, is to give a totally distorted picture of the expense of international cooperation through the United Nations. But even when this is done the total cost of the United Nations system to Americans would be about $2 per person per year—two round trips on the New York subway system. This is a small additional price, I think you will agree, for such services ensuring international safety standards for air carriers, the eradication of smallpox from the world, the World Weather Watch, or the vital work carried on by the other agencies to improve food production, eradicate illiteracy, regulate and improve postal and telecommunications services throughout the world. To this sum must be added a global peacekeeping cost of $90 million, to which each American contributes 11 cents a year. If full-scale war were to break out in Cyprus or the Middle East, the cost in terms of lives and money, not to mention economic dislocation, would obviously be incalculable. United Nations peacekeeping forces are buying time while intensive efforts are going on to work out just and lasting solutions.

Given these facts, I think you will agree that the sums involved are relatively small when weighed against the benefits achieved for the world community. I can assure you that these expenditures, as indeed all United Nations finances, are subject to the most stringent auditing by international experts who report to the General Assembly on all aspects of our financial administration. Furthermore, there is a major United Nations committee, of which the United States is a member, which keeps a close eye on all aspects of the United Nations' budget and administration.

If I have gone into such detail today, it is because, as I said at the outset, I feel it urgent to clarify misconceptions and distortions about the United Nations. I strongly believe in the public's right to know the true facts, for these are essential to the support this organization must have to carry its worldwide burdens.

For the first time in history there is the opportunity to bring about a better life in larger freedom for all the world's peoples. To this end the dedicated international civil servants in the United Nations system are working in a vast range of activities in an experiment unique but essential in the story of mankind.

They come from all the member nations of the United Nations, and constitute a dramatic proof that peoples of different nations, different backgrounds, different ideologies can come together in support of the common cause of peace, justice and progress. In a world in which nations mistrust each other as they do, their creative and constructive cooperation is an inspiring example of men and women from all corners of the Earth working in harmony for great aims and great ideals. The largely overlooked story of the International Civil Service is an encouraging story of faith in an ideal and the determination to make that ideal work.

It confirms my conviction that the United Nations offers the world its best hope for accomplishing all that must be done in the closing years of this century. The United Nations, however, can only be as successful as its members wish it to be, and only as strong as the political will that governments provide for it. It is here that nongovernmental organizations such as Rotary have a key role to play. With your help the necessary popular support can be generated.

The world is not as bad as people sometimes think. In fact, never before has mankind been confronted with such great opportunities. Our weakness lies in our inability to understand each other and cooperate. This, in my view, is the great challenge of our time. Let us face it with determination so we can build a better world for ourselves and future generations.

HOUSE OF REPRESENTATIVES—*Monday, July 18, 1977*

The House met at 12 o'clock noon.

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. WRIGHT) laid before the House the following communication from the Speaker:

WASHINGTON, D.C.,
July 18, 1977.

I hereby designate the Honorable JIM WRIGHT to act as Speaker pro tempore for today.

THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives.

PRAYER

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Be of one mind, live in peace; and the God of love and peace shall be with you.—II Corinthians 13: 11.

Dear Lord and Father of us all, the Giver of life and the Author of liberty, above the multitude of many voices clamoring for our attention may we hear Thy voice summoning us to walk in Thy ways and to live in Thy love that we may worship Thee in spirit and in truth and work through this day with dedicated devotion and disciplined diligence.

Draw the people of our land together in a common loyalty to Thee, the highest and best we know, that strong in Thee we may lead our Nation in the paths of peace and along the roads of righteousness. Give to the Members of this House of Representatives a greatness of mind and a goodness of heart that they may be more than a match for the movements of this generation. Lead us, O God, and may we follow Thee to the end of our life on Earth and then with Thee enter the life everlasting. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4975) entitled "An act to amend the Public Health Service Act to authorize appropriations for fiscal year 1978 for biomedical research and related programs."

The message also announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 25. Concurrent resolution providing for the acceptance of a statue of the late Senator Ernest Gruening presented by the State of Alaska for the National Statuary Hall collection, and for other purposes.

APPOINTMENT OF CONFEREES ON H.R. 7553, PUBLIC WORKS FOR WATER AND POWER DEVELOPMENT AND ENERGY RESEARCH APPROPRIATION ACT, 1978

Mr. BEVILL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 7553) making appropriations for public works for water and power development and energy research for the fiscal year ending September 30, 1978, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama? The Chair hears none, and appoints the following conferees: Messrs. BEVILL, BOLAND, WHITTEN, and SLACK, Mrs. BOGGS, and Messrs. DICKS, SHIPLEY, CHAPPELL, MAHON, JOHN T. MYERS, and BURGENER, Mrs. SMITH of Nebraska, and Mr. CEDERBERG.

JUSTICE FOR LOOTERS AND ARSONISTS

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SIKES. Mr. Speaker, as anticipated, a few voices are calling for a strict justice, that is, law enforcement, for those arrested for looting and arson in

New York City during the blackout. But there are many more who are stressing the sad lot of the individuals who are accused. We are told of the plight of the hungry and unemployed. The do-gooders are complaining about poor prison facilities, inadequate food service, or anything else that will bring sympathy for the more than 3,700 locked up for breaking the law.

Unemployment is not an excuse; that the accused were hungry is doubtful. New York has the most generous welfare laws in the Nation.

Much the same attitude has been shown in assessing blame for the problems concerning the blackout. ConEd, the electric utility, is the goat. The blackout was unfortunate. It is impossible to state whether or how much blame can be attributed to failures of ConEd. There is a National Guard. It was not called out. Presumably New York has police and firemen reserves. I see nothing to indicate that they were fully utilized. The press has stated that the police stood by in many cases, watched the looting in progress and made no attempt to maintain law and order.

The New York City administration cannot be held blameless in this unfortunate situation.

Most of us would like to see concern expressed for those whose businesses were wrecked or burned and their livelihood ruined. The victims are the ones who are entitled to concern.

COMMITTEE ON STANDARDS OF OFFICIAL CONDUCT

(Mr. BRODHEAD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRODHEAD. Mr. Speaker, when the Committee on Standards of Official Conduct began its investigation of the Korean matter, I had serious doubts that the investigation would be properly conducted. However, I decided to withhold judgment because I believe it is important that the House cleanse itself.

It is now obvious that the so-called Ethics Committee as presently constituted is totally incapable of performing the task. The House and the Nation wants the committee to move quickly to point out the relatively few wrongdoers and to remove the blot on the whole House. Instead, the sins of the few have been covered up and the reputations of the many have been damaged.

Many details about the matter—dates, places, names, and amounts—have been reported by the news media. Yet the committee, with its subpena power, its staff of skilled investigators, its high-priced legal counsel, and its huge budget has so far reported nothing.

It is an outrage that the committee has moved so slowly. It is an outrage that members of the committee refuse to reveal whether or not they are involved in the matter under investigation. And it is an outrage that the committee cannot even meet on a regular basis.

The House is capable of resolving this matter with speed and justice. All that is lacking is the will to do so. I call for the appointment of a new committee chairman as soon as possible. I also call for a review of the membership of the committee and the rules under which it operates. We must move on this matter with all possible speed. Until we do, the House is operating under a cloud of suspicion.

RESIGNATION OF PHILIP A. LACOVARA

(Mr. KOSTMAYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOSTMAYER. Mr. Speaker, the resignation this weekend of Philip A. Lacovara as special counsel to the House Ethics Committee indicates what many of us in the Congress have suspected for some months: when it comes to policing itself, the Congress moves too slowly.

Mr. Lacovara's departure raises new doubts about the committee's ability, let alone willingness, to pursue the investigation in a no-holds-barred-way.

The public perception of the House investigation grows more cynical each day. The Justice Department's investigation seems to inspire no more confidence.

The weekend's events raise some serious questions about whether or not the current leadership of the House ethics panel can meet the task before it.

While the House deals with the ethical questions, as it should, I urge the President once again to direct the Attorney General to appoint a special prosecutor to deal with any possible criminal violations.

Only such an approach, by the committee and the special prosecutor can get our House in order. To delay, does a great injustice to those who are only involved in a passing way or in no way at all.

We must not wait any longer to give the people who send us here the investigation they deserve and which will maintain confidence in the Congress.

PERMISSION FOR SUBCOMMITTEE ON INVESTIGATIONS AND REVIEW OF THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION TO SIT DURING THE AFTERNOONS OF JULY 19 AND 20, 1977, WHILE THE HOUSE IS IN SESSION

Mr. GINN. Mr. Speaker, I ask unanimous consent that the Subcommittee on Investigations and Review of the Committee on Public Works and Transportation may be permitted to conduct public hearings during the afternoons of July 19 and 20, 1977, while the House is in session.

I also ask unanimous consent that the full Committee on Public Works and Transportation may be allowed to sit on the afternoon of July 20, 1977, for the purpose of a markup session.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, what is the committee request?

Mr. GINN. The first request is for the subcommittee to conduct public hearings on the entering of toxic substances into streams.

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, there will be no markup on that 1-day session?

Mr. GINN. Not on July 19 and 20 for the Subcommittee on Investigations and Review.

Mr. ROUSSELOT. No markup?

Mr. GINN. None.

Mr. Speaker, the second part of my request was for the full Committee on Public Works and Transportation to sit on the afternoon of July 20 for the purpose of a markup session and that will be, for the gentleman's information, involving lock and dam 26.

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, what is it that we have on the legislative calendar for that day? Why is it so important to have to sit and mark up?

Mr. GINN. Well, the committee is being urged to go forward promptly on the reporting of lock and dam No. 26 in order that the Ways and Means Committee be able to consider that legislation.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman be willing to separate his requests?

Mr. GINN. Yes; I would separate the requests.

Mr. ROUSSELOT. Would the gentleman be willing to ask unanimous consent on the first one, so we could check on the second one, in which event I will withdraw my reservation of objection?

Mr. GINN. Yes. My request, then, is that the Subcommittee on Investigations and Review be permitted to sit while the House is in session during the afternoons of July 19 and 20.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. ROUSSELOT. Mr. Speaker, would the gentleman withhold the second request?

Mr. GINN. I would, Mr. Speaker. I withhold the second request.

The SPEAKER pro tempore. The gentleman withholds the second request.

REINTRODUCTION OF SPECIAL PROSECUTOR RESOLUTION, WITH COSPONSORS

(Mr. GOODLING asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GOODLING. Mr. Speaker, I am gratified by the response I have been receiving to the introduction of House Resolution 684, submitted last Wednesday. This resolution expresses the sense of the House of Representatives that the Attorney General of the United States should appoint a special prosecutor to serve in the Department of Justice to investigate, and prepare prosecutions with respect to, acts by agents of foreign governments or by other individuals to obtain by means contrary to the laws of the United States influence from officials of the United States.

I am reintroducing the resolution to-

day, with cosponsors, and will list their names at the conclusion of my remarks so that their views will become part of the public record at once. I hope others will join us in this legislative call for action.

While much attention is being given to allegations about persons acting in behalf of one nation in particular, I want to call attention to the broader scope of my resolution. Through its adoption, we can put all nations on notice that the foreign policy of the United States will be conducted and influenced only by lawful means.

I wish to commend the following colleagues joining in sponsoring the resolution formally putting the House of Representatives on record about the need for a special prosecutor: Mr. WALKER, Mr. WINN, Mr. KINDNESS, Mr. CUNNINGHAM, Mr. PURSELL, Mr. BAFALIS, Mr. PATTERSON of California, Mr. KETCHUM, Mr. LUJAN, Mr. GRADISON, Mr. KEMP, Mr. COLLINS of Texas, Mr. RANDALL, Mr. RHODES, Mr. SIMON, Mr. EDWARDS of Oklahoma, Mr. KASTENMEIR, Mr. CORCORAN of Illinois Mr. STOCKMAN, Mr. QUIE, Mr. KOSTMAYER, Mr. PRESSLER.

ADMINISTRATION FLUBBING

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, on July 14, 1977, Mr. REUSS, the distinguished chairman of the House Banking and Currency Committee, stated in remarks made on the floor:

If there is one program the administration is flubbing in an almost ignominious manner it is the war on inflation.

Mr. Speaker, I would like the distinguished chairman and prominent Member of the President's own party to know that he took the words right out of my mouth. I would just like to say that if there is any other important Democrat who wishes to strongly criticize a Democrat President in an important area, he or she should feel free to do so. I am willing to yield on such a matter.

DISCHARGE AND REFERRAL OF H.R. 8215 AND H.R. 8259 TO COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

Mr. BROOKS. Mr. Speaker, I ask unanimous consent that the Committee on Government Operations be discharged from further consideration of the bills H.R. 8215 and H.R. 8259, and that these bills be referred to the Committee on Public Works and Transportation.

The SPEAKER pro tempore (Mr. WRIGHT). Is there objection to the request of the gentleman from Texas?

There was no objection.

RESOLUTION OF DISAPPROVAL TO REORGANIZATION PLAN NO. 1 INTRODUCED

(Mr. BROOKS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROOKS. Mr. Speaker, on Friday, President Carter submitted his first reorganization plan to the Congress. Submission of this plan dealing with the Executive Office of the President is in keeping with his commitment to propose a reorganization of the executive branch of the Federal Government.

I am today introducing a resolution of disapproval to reorganization plan No. 1. In doing so, I am not taking any position on the plan itself. The legislation enacted earlier this year renewing the President's authority to submit reorganization plans, requires that a resolution of disapproval be introduced no later than the first session following the transmittal of a plan.

This is part of the new procedure we have adopted that is intended to insure that the House will have a chance to vote on all reorganization plans so they will not go into operation by default.

The resolution of disapproval will be referred to the Committee on Government Operations, and it is my intention, as chairman of the committee, to begin hearings on the plan as soon as possible. It makes extensive changes in the way the Executive Office of the President functions, and we will want to look at it very closely.

PROPOSALS TO MAKE LAWS GOVERNING LABOR-MANAGEMENT RELATIONS WORK MORE EFFICIENTLY, QUICKLY, AND EQUITABLY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–186)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, without objection, referred to the Committee on Education and Labor and ordered to be printed:

To the Congress of the United States:

I am transmitting to Congress proposals to make the laws which govern labor-management relations work more efficiently, quickly and equitably.

I have pledged to make Federal regulatory agencies more responsive to the people they serve. Government regulation only works well if it is fair, prompt and predictable. Too often this has not been the case with the regulatory process that governs collective bargaining and labor-management relations. Our labor laws guarantee employees the right to choose freely their representatives, and to bargain collectively with employers over wages, fringe benefits and working conditions. But legal rights have limited value if many years are required to enforce them.

The National Labor Relations Board (NLRB) administers our labor laws. In recent years there has been growing agreement that those laws should be amended to ensure that the Board can function more effectively to protect employees rights. While the great majority of employers and unions have abided by the labor laws, a few have unfairly abused the procedures and practices under which the Board must operate.

As a result, the American Bar Association, many Federal courts, and the NLRB's own Task Force each recently suggested ways to improve the Board's procedures. The NLRB's internal report, which proposed a number of administrative changes, has already produced some beneficial changes. But it seems clear that legislation is actually needed to enable the Board to administer the labor laws properly.

Unnecessary delays are the most serious problem. In even the simpler cases, the NLRB typically takes almost two months to hold an election to determine whether workers want union representation. The enforcement of Board decisions is also subject to unnecessary delay: lengthy proceedings before the Board and extended litigation can sometimes delay final action for years.

The problem of delay has been compounded by the weakness of the Board's remedies. One of the reasons the regulatory process has worked so slowly is that a few employers have learned that, because of the problems the Board has in enforcing its decisions, delay can be less costly than initial compliance with the law. In one case, for instance, workers who were illegally fired for their union activities in 1962 are still awaiting payment for lost wages.

Because of these problems, workers are often denied a fair chance to decide, in an NLRB election, whether they want union representation. The same problems often deny employers the predictability they too need from the labor laws.

To help reduce the problems of delay, and to cure a number of related problems with our labor laws, I am today recommending to the Congress a set of reforms for the National Labor Relations Act. These reforms are designed to accomplish three important goals:

—To make the NLRB procedures fairer, prompter, and more predictable.

—To protect the rights of labor and management by strengthening NLRB sanctions against those who break the law.

—To preserve the integrity of the Federal contracting process by withholding federal contracts from firms that willfully violate orders from the NLRB and the courts.

I believe these goals can be met through the following changes in our labor laws:

—An election on union representation should be held within a fixed, brief period of time after a request for an election is filed with the Board. This period should be as short as is administratively feasible. The Board, however, should be allowed some additional time to deal with complex cases.

—The Board should be instructed to establish clear rules defining appropriate bargaining units. This change would not only help to streamline the time-consuming, case-by-case procedures now in effect, but would also allow labor and management to rely more fully on individual Board decisions.

—The Board should be expanded from five to seven members. This change would enable the NLRB to handle better its increasing caseload.

—The Board should establish procedures that would allow two members of the Board to affirm summarily the less complex decision of its administrative law judges. Similar procedures have already been adopted by the Federal courts of appeal.

—All appeals of Board decisions should be required to be filed within 30 days of the Board's decision. If no appeal is filed, the Board should refer its orders to the courts for enforcement without further delay. This procedure is similar to that used by such other Federal regulatory agencies as the Federal Trade Commission.

—When employers are found to have refused to bargain for a first contract, the Board should be able to order them to compensate workers for the wages that were lost during the period of unfair delay. This compensation should be based on a fixed standard, such as the Quarterly Report of Major Collective Bargaining Settlements published by the Bureau of Labor Statistics (BLS). Workers would be entitled to the difference between the wages actually received during the delay and those which would have been received had their wages increased at the average rate for settlements reported during that period, as recorded in the BLS index.

—The Board should be authorized to award double backpay without mitigation to workers who were illegally discharged before the initial contract. This flat-rate formula would simplify the present time-consuming back-pay process and would more fully compensate employees for the real cost of a lost job.

—The Board should be authorized to prohibit a firm from obtaining Federal contracts for a period of three years, if the firm is found to have willfully and repeatedly violated NLRB orders. Such a debarment should be limited to cases of serious violations and should not affect existing contracts. This restriction could be lifted under two conditions: if the Secretary of Labor determines that debarment is not in the national interest, or if the affected Federal agency determines that no other supplier is available.

—Under current law, the Board is only required to seek a preliminary injunction against a few types of serious union unfair labor practices, such as secondary boycotts or "hot cargo" agreements. The Board should also be required to seek preliminary injunctions against certain unfair labor practices which interfere seriously with employee rights, such as unlawful discharges.

There are related problems that should also be reviewed by the Congress in this effort to ensure that our labor laws fulfill the promise made to employees and employers when the Wagner Act was passed 42 years ago—that working men and women who wish to bargain collectively with their employers, in a way fair to both, shall have a reasonable and prompt chance to do so. In that way, the collective bargaining system, which has served this country well, can be strengthened for the benefit both of American workers and employers.

I have asked the Secretary of Labor to work closely with the Congress in the months ahead to explore these and other possible ways of improving our labor laws.

I ask the Congress to move promptly to pass legislation implementing the reforms I have recommended.

JIMMY CARTER.

THE WHITE HOUSE, *July 18, 1977.*

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule 27, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule 15.

After all motions to suspend the rules have been entertained and debated and after those motions, to be determined by "nonrecord" votes have been disposed of, the chair will then put the question on each motion on which the further proceedings were postponed.

FEDERAL ELECTION COMMISSION

Mr. THOMPSON. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6936) to amend the Federal Election Campaign Act of 1971 to extend the authorization of appropriations contained in such act.

The Clerk read as follows:

H.R. 6936

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 319 of the Federal Election Campaign Act of 1971 (2 U.S.C. 439c) is amended by striking out "and" after "1976", and by inserting after "1977" the following: ", and $8,123,000 for the fiscal year ending September 30, 1978".

The SPEAKER pro tempore. Is a second demanded?

Mr. FRENZEL. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New Jersey (Mr. THOMPSON) will be recognized for 20 minutes, and the gentleman from Minnesota (Mr. FRENZEL) will be recognized for 20 minutes.

The Chair recognizes the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this bill, H.R. 6936, would authorize the sum of $8,123,000 for the operations of the Federal Election Commission for the fiscal year ending September 30, 1978.

This is the amount requested by the Federal Election Commission and represents an increase of $2,123,000 of the FEC's 1977 fiscal year budget of $6 million.

Nearly one-third of the increase over fiscal year 1977, will go to the FEC's information office, which is gearing up for the 1978 elections. The primary function of this office is to provide information to candidates and the public—in the form of bookkeeping manuals, newsletters, information packets, clearinghouse contracts, and answers to individual inquiries.

Other major areas of increase are in the office of general counsel for additional compliance personnel, and data systems office, to further computerize FEC operations.

The proposed fiscal year 1978 budget contains an estimated increase in personnel of 58: from 197 in fiscal year 1977 to 255 for fiscal year 1978.

I should advise my colleagues that the Senate Rules Committee reported a fiscal year 1978 authorization of $7,500,000.

Further, Mr. Speaker, the House and Senate Appropriations Committees have met in conference and agreed on a fiscal year 1978 appropriation of $7,300,000.

H.R. 6936 represents a generally reasonable budget request given the serious responsibilities of the Federal Election Commission. And I intend, Mr. Speaker, to fine tune that request in conference.

H.R. 6936 was reported by the Committee on House Administration by unanimous voice vote on May 10, 1977. It has the support of both the majority and minority leadership as well as my Republican colleagues on the committee.

Mr. Speaker, I urge the adoption of H.R. 6936.

Mr. Speaker, I reserve the balance of my time.

Mr. FRENZEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I want to underscore the remarks of the distinguished gentleman from New Jersey (Mr. THOMPSON), the chairman of the Committee on House Administration, that this bill was unanimously reported from the Committee on House Administration.

It does call for an authorization of $8.1 million. The gentleman also has correctly stated that the conference report on the appropriations bill, which will soon be back before the House of Representatives, does call for a total appropriation of $7.3 million, about $800 million less than the authorization which we will pass today, I hope.

I urge a unanimous vote for this bill.

I have no requests for time, Mr. Speaker, and I, therefore, yield back the balance of my time.

Mr. THOMPSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I will yield back the balance of my time, but before doing so, I would like to express my appreciation to the gentleman from Minnesota (Mr. FRENZEL), to the gentleman from Alabama (Mr. DICKINSON), the ranking minority member of the committee, and to the other members of the committee who, after a careful examination and after testimony by the FEC Commissioners, arrived at this figure. I am virtually certain that in the final analysis the conferees

will come close to complying with the appropriations bills.

Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New Jersey (Mr. THOMPSON) that the House suspend the rules and pass the bill H.R. 6936.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

NATIONAL FAMILY WEEK

Mr. LEHMAN. Mr. Speaker, I move to suspend the rules and pass the joint resolution (H.J. Res. 372) to authorize the President to issue a proclamation designating the week in November which includes Thanksgiving Day in each year as National Family Week, as amended.

The Clerk read as follows:

H.J. RES. 372

Whereas the family is the basic strength of any free and orderly society; and

Whereas it is appropriate to honor the family as a unit essential to the continued well-being of the United States; and

Whereas it is fitting that official recognition be given to the importance of family loyalties and ties: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating the week beginning on November 20, 1977 as National Family Week and inviting the Governors of the several States, the chief officials of local governments, and the people of the United States to observe such day with appropriate ceremonies and activities.

The SPEAKER pro tempore (Mr. SISK). Is a second demanded?

Mr. ROUSSELOT. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Florida (Mr. LEHMAN) will be recognized for 20 minutes, and the gentleman from California (Mr. ROUSSELOT) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Florida (Mr. LEHMAN).

Mr. LEHMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Joint Resolution 372, as introduced by the Honorable DEL CLAWSON, provides for the observance of National Family Week during the week of November which includes Thanksgiving Day. Originally the resolution called for a recurring annual observance of this period. However, the policy adopted by the full committee earlier this session, does not permit commemorative legislation proposals to extend beyond a single year's observance.

Therefore, a committee amendment was adopted specifying National Family Week as November 20 through 26, 1977 only.

House Joint Resolution 372 has obtained 233 Members' signatures—15 more than is required by the full committee policy.

Mr. Speaker, I urge adoption of this joint resolution, and I reserve the balance of my time.

Mr. ROUSSELOT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Joint Resolution 372, which authorizes the proclamation by the President of the week of November 20, 1977, as National Family Week has my wholehearted support, and I hope, the support of my colleagues.

This legislation chooses the Thanksgiving week as a most appropriate time to reflect on the meaning and importance of family life in America.

As ranking minority member of the Subcommittee on Census and Population where this bill originated, I am pleased to speak out for its passage by this body, and feel that recognition of the week of November 20, 1977, by a Presidential proclamation will give added impetus to its observance by the people of this great country of ours.

And unlike so many pieces of legislation enacted by this body, here is one bill which carries no cost, which is a plus, and ties in nicely in its observance of Thanksgiving week as National Family Week.

Mr. Speaker, I urge prompt adoption of this legislation.

Mr. Speaker, I yield such time as he may consume to one of the prime authors and advocates of this bill, my distinguished colleague, the gentleman from California (Mr. DEL CLAWSON).

Mr. DEL CLAWSON. Mr. Speaker, the joint resolution before us today authorizes the President to proclaim the week including Thanksgiving as National Family Week. Although we were disappointed that the week will not be an annual observance as we had originally hoped, I urge its adoption.

The Thanksgiving season, traditionally a time of family gathering, is also appropriate because it brings to mind the Pilgrim families and the peace they made with the families who already had made this bountiful and beautiful continent their home—and later the families who made their determined way across the pioneer trails over mountains, prairies, desert, and wilderness. The family was their unit of survival. Techniques essential to self preservation were taught within the family circle along with traditional "book learning" when there were no schools. Family unity was reinforced more often than not with family prayer.

Today we are a people so mobile, so diverse, from urban sprawl to farmland, so far-flung in our interest and activities that, to take an example from the Clawson family, Jason, Courtney, and perhaps even young Brooke Clawson would understand the words if their grandfather tried to twist his tongue around a French quotation to make the point "Plus ça change, plus c'est le mème chose" for they, Jim, Jeanette, and the youngest Clawson, Brent, are on assignment in Belgium, one of many American families representing U.S. interests abroad in international organizations. It is a situation which could not have been envisioned in those times of simpler external stress on family security. But to translate the French, "the more it changes, the more it is the same." And a statement by a student of human behavior like famed anthropologist, Margaret Mead, "As the family goes, so goes the Nation" confirms what we already know in our bones. When the President stresses, as President Carter did, in his inaugural message, the importance of the family as "the basis of our society" there is an added glow of satisfaction.

Threats to our security—unemployment, inflation, divorce, the drug culture, crime, subtle and not-so-subtle attacks on moral and ethical standards—do exist and dramatize the essentiality of the family to our personal well-being. There is also the parental temptation to permit the educational system, the Government, or peer groups to exercise the strongest influence on young people, rather than within the family and home where the greatest influence should be paramount. The importance of this influence is underscored in an editorial column which I will include with these remarks and which describes a study of children who achieve markedly in spite of adversity and another study of those who turn to violence. The conclusion drawn—the family is the key. The achievers are found to have close family ties which support positive values and where love is in abundance. The other young people fend for themselves and prey on society in an atmosphere of materialism and permissiveness.

It follows then, that the laws we make here in the halls of Congress, no less than the entire structure of our law-abiding society, are founded on that unit of strength, the American family. The family remains our refuge, our security, the confirmation of who we are and what we stand for and what will be nourished in our children. As the young plant instinctively seeks light, not darkness, our young people, when the "twig is bent" will choose "the paths of righteousness." It is within the family that the toddler's feet are firmly planted on those paths. And they will choose love instead of hate. Because it is the family which teaches the most important of all lessons—how to love. Love between husband and wife, father, mother, children—extending through the generations, grandmother, grandfather, and widening to aunts, uncles, cousins and even wider, to include all mankind.

The resolution before us today offers an opportunity to place in sharp focus the positive forces in American life. I urge its adoption and would like to list the following names of colleagues who have lent their names in cosponsorship: Special mention should be made of the fact that one of our cosponsors, our colleague from Utah, DAN MARRIOTT, will not be present today because he is in Utah where he and his wife Marilyn are awaiting an addition to the Marriott family circle.

Mr. Speaker, the editorial and the list of cosponsors to which I referred are as follows:

[From the Los Angeles Times, July 13, 1977]

KIDS: WILL THEY BE ACHIEVERS OR KILLERS?

(By William Raspberry)

Howard University's Dr. Samuel L. Woodard has been studying children who, in spite of almost overwhelming adversity, manage to achieve, academically and otherwise. Time magazine has been looking at children from the same sort of background who fail utterly—who become vicious criminals, and even killers.

Their common conclusion: The family is the key.

The Time report, in the July 11 issue, is the more traditional, in that it seeks to discover what goes wrong with the failures. But its conclusions represent a break with the usual explanations.

The subject is the shocking viciousness of much youthful crime: the brutish assaults on small children or lame, sick or blind old people; the needless, for-the-hell-of-it-murders; the butchering of many of the victims, and, perhaps most shocking of all, the near-total absence of remorse on the part of the young criminals.

Time devotes much of its concern to the system of juvenile justice, which turns many of these savage youngsters loose either immediately or after only the briefest of incarcerations, or after they reach their 18th birthdays. The fact that the youngsters know that they won't get much time—even if they are caught and "convicted"—may, Time suggests, be one reason for the casualness with which they wreak their havoc.

But it doesn't explain why they turn to lawlessness in the first place. What does explain it? Poverty and deprivation? Materialism? Permissiveness?

"How," Time demands, "can such sadistic acts—expressions of what moral philosophers would call sheer evil—be explained satisfactorily by poverty and deprivation? . . . The persistent offenders may come from a ghetto, but they often have more money than the people they rob.

"Some of the usual explanation seem pretty limp. Yes, America is a materialistic society where everyone is encouraged to accumulate as much as possible . . . Yes, television glorifies violence and, yes, America is 'permissive.'" But:

"Most important is the breakdown in the family."

Woodward takes the opposite route—looking at children who do not succumb to deprivation and poverty or broken homes—but he arrives at the same place: the family.

He spent a year studying 23 Washington, D.C., junior-high students who met his four criteria: at least one parent missing, income at poverty levels, housing below standard, solid academic achievement.

He is still writing his report, but his preliminary findings show that children who do well under adverse conditions tend to score well above the median in self-acceptance tests. They have a sense of their families as worthwhile and valuable, even in the face of deprivation.

Their families, though one parent is absent; operate as teams, being careful to give the children "positive stroking" for achievement. They tend to believe that they are in charge of their lives, that they are personally responsible for their choices and decisions.

The key, says Woodard, a transactional analyst, is the child's "script matrix." He defines that as "a mold out of which one's life plan evolves; it consists of the message you get as a child which either drives you or stops you."

Children who succeed against the odds, he says, are those whose families have made them understand from the beginning that poverty is a circumstance, like the weather, not a definition of who they are and what they may become.

They may be as much victimized by poverty and racism as their neighbors, he found, but they don't dwell on their victimization. They are required from their earliest years to meet high standards, and, as a result, come to set high standards for themselves.

And they are loved.

Unfortunately, neither the magazine nor the professor is able to tell us how to go about producing the sort of families whose children turn out well, or to avoid producing those whose children turn out disastrously. They describe, but they cannot prescribe.

Even the descriptions are not immutable. Time quotes a Miami judge as noting that, while Cubans make up a third of the Dade County (Miami) population, they account for only 12% of its crime. The reason: "Like the Chinese, the Cubans have close-knit families with more supervision. There are more three-generation families, and, customarily, middle- and upper-middle-class women do not work."

But, Time adds, "The stress of exile, as will as modern influences, is beginning to weaken Cuban families; gangs are forming and committing crimes."

Mr. DERWINSKI. Mr. Speaker, I rise in support of House Joint Resolution 372, which authorizes the proclamation by the President of the week of November 20, 1977, as "National Family Week."

This legislation, which was favorably reported by the Committee on Post Office and Civil Service by unanimous consent on June 22, 1977, with an amendment to the title which strikes out "In November which includes Thanksgiving Day in each year" and inserts in lieu thereof the following: "Beginning on November 20, 1977." This amendment changes the legislation from a continuing yearly event to the week of November 20, 1977 only.

The committee chose the Thanksgiving week as a most appropriate time to reflect on the meaning and importance of family life in America, and hopes that enactment of this legislation will encourage the further recognition of the fundamental role of the family in the development and continued vitality of our Nation.

There will be no cost incurred by the enactment of this legislation and therefore there will be no inflationary impact on prices and costs in the operation of the national economy.

Mr. CONTE. Mr. Speaker, I rise in support of this joint resolution (H.J. Res. 372) which would authorize and request the President to issue annually a proclamation designating the week including Thanksgiving as National Family Week.

The importance of the family to our society cannot be understated. It has been the backbone of this Nation since its inception. In troubled times, it is the family which gives us sustenance and a hope for a better tomorrow.

It is the family, not the local school or church, which truly educates our youth. It instills in them the values and attitudes that we cherish in a democratic society.

When a country becomes dominated by a totalitarian regime, the last bastion of resistance is the family. Where rights and freedoms are nonexistent, it is the family that keeps alive the spirit of liberalism.

Through its expressions of love, loyalty, and self-sacrifice, the family gives strength and fortitude to its members, who, in turn, bring these values into the mainstream.

The family is thus a microcosm of the Nation. If it flourishes, so will America. As a cosponsor of this resolution, I urge its adoption today. Thank you.

Mr. JOHN T. MYERS. Mr. Speaker, I rise in support of House Joint Resolution 372, which authorizes the President to issue a proclamation designating the week beginning November 20, 1977 as National Family Week.

It has been nearly 7 years since I first proposed this resolution which pays homage to the one institution which has given so much meaning to human life and provided a stable structure to our society.

One measure of the support for National Family Week is the number of cosponsors of the resolution. Well over one half of our colleagues in the House have cosponsored this proposal.

Another measure of its support is the number of national organizations which have formed the National Committee for National Family Week. More than three dozen civic and Government organizations have pledged their support in the effort to promote National Family Week throughout this country.

In addition, the Governors of 41 States and territories have individually proclaimed a Family Week observance in their States.

I urge approval of House Joint Resolution 372 as a significant step in the organization and promotion of National Family Week and I ask each of my colleagues to help us spread the word to those in your district. With the cooperation of our colleagues and that of the many interested individuals and organizations we will be able to remind America of the significant role the family has played in the development of this Nation.

Mr. LEHMAN. Mr. Speaker, I have no further requests for time and I yield back the balance of my time.

Mr. ROUSSELOT. Mr. Speaker, I have no requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. LEHMAN) that the House suspend the rules and pass the joint resolution (H.J. Res. 372) as amended.

Mr. ROUSSELOT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

AGRICULTURAL CENSUS AMENDMENTS ACT OF 1977

Mr. LEHMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 7012) to provide for a 40-percent reduction of the burden on respondents in the censuses of agriculture, drainage, and irrigation taken in 1979 and thereafter, and for other purposes, as amended.

The Clerk read as follows:

H.R. 7012

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Agricultural Census Amendments Act of 1977".

STATEMENT OF FINDINGS

SEC. 2. The Congress hereby finds—

(1) that the census of agriculture, drainage, and irrigation has increased in complexity and detail to the extent that the reporting burden now imposed on farmers is unreasonable and possibly counterproductive;

(2) that the respondent burden of such census can be substantially reduced by the increased use of sampling and survey techniques without any loss of necessary data;

(3) that in order to develop a comprehensive policy for the rural areas of the United States, and to recognize the continued existence of small farming enterprises and their contributions to our Nation, it is necessary to continue to collect and publish information on such farming enterprises; and

(4) that significant changes in the ownership structure of farms in the United States have developed in recent years which need to be better understood and documented.

REDUCTION OF RESPONDENTS' BURDEN BY 1978 AGRICULTURAL CENSUS; REPORTS

SEC. 3. (a) The Secretary of Commerce shall—

(1) determine the overall burden on re-

spondents in the 1974 census taken under section 142 of title 13, United States Code,

(2) take steps which he considers to be consistent with the purposes of such section (including the use of sampling to the maximum extent feasible) and which will assure that the overall burden on respondents in the census taken in 1979 under such section will be equal to or less than 60 per centum of the overall burden determined by him under paragraph (1), and

(3) not later than the ninetieth day after the date of the enactment of this Act, prepare and transmit to the Congress a report which—

(A) sets forth his determination under paragraph (1) of the overall respondent buren in the 1974 census, and

(B) states what steps have been or will be taken under paragraph (2) to reduce the overall respondent burden in the census taken in 1979 and his evaluation of such steps.

(b) Section 142 of title 13, United States Code, is amended by adding at the end thereof the following new subsection:

"(d) With respect to each census taken after 1979 under this section, the Secretary shall submit to the committees of Congress having legislative jurisdiction over the census—

"(1) not later than three years before the beginning of the year in which such census is taken, a report containing the Secretary's determination of the subjects proposed to be included, and the types of information to be compiled, in such census;

"(2) not later than two years before the beginning of the year in which such census is taken, a report containing the Secretary's determination of the questions proposed to be included in such census; and

"(3) after submission of a report under paragraph (1) or (2) of this subsection and before the beginning of the year in which such census is taken, if the Secretary finds new circumstances exist which necessitate that the subjects, types of information, or questions contained in reports so submitted be modified, a report containing the Secretary's determination of the subjects, types of information, or questions as proposed to be modified.

In any case in which the implementation of any determination of the Secretary contained in any report required by this subsection will result in a respondent burden in the census involved which is greater than the respondent burden in the most recent census taken under this section, the Secretary shall include in such report an explanation of the circumstances which necessitate an increase in such burden.".

DEFINITION OF FARMS TO BE USED IN FUTURE AGRICULTURAL CENSUSES

SEC. 4. Section 142 of title 13, United States Code, as amended by this Act, is amended by adding at the end thereof the following new subsection:

"(e) The statistical definition of farms effective with respect to censuses taken in 1979 and thereafter under this section shall be prescribed in such a manner as not to exclude any establishment which, for the calendar year to which the data collected relates, has sold or would normally sell more than a minimum value of agricultural products. For purposes of the preceding sentence, the term 'minimum value' means—

"(1) with respect to the census taken in 1979, $600; and

"(2) with respect to any census taken after 1979, $600 adjusted by a percentage equal to the percentage change in the index of prices received by farmers (maintained by the Department of Agriculture) from January 1, 1979, through January 1 of the year to which the data collected in such census relate.".

OWNERSHIP STRUCTURE OF UNITED STATES FARMS

SEC. 5. The Department of Commerce, in cooperation with the Department of Agriculture, shall develop methods of improving the collection, analysis, and publication of data relating to the ownership structure of farms within the United States, and the Department of Commerce shall collect, analyze, and publish such data in accordance with such improved methods.

PUBLICATION OF INFORMATION OBTAINED IN AGRICULTURAL CENSUS

SEC. 6. Subsection (c) of section 142 of title 13, United States Code, is amended by adding at the end thereof the following new sentence: "Information obtained in each such census shall be initially published as soon as is practicable, but in no event later than March 1 of the year following the year in which such census is taken.".

The SPEAKER pro tempore. Is a second demanded?

Mr. SMITH of Iowa. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. LEHMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the measure we take up this afternoon is an act to accomplish several objectives. It will require a reduction in the respondent burden connected with the agricultural census by 40 percent, it will expand the participation in such censuses by redefining a "farm," it will provide for the development and implementation of new methods for collecting data on farm ownership, and it will establish a date for the publication of agricultural census data.

Mr. Speaker, this bill was unanimously approved by the full committee.

No authorization of funds is required for the enactment of this legislation.

In summary, this bill provides an opportunity to reduce the Federal paperwork burden on one sector of our society and insures that the small rural farmer of America is receiving the recognition and assistance they deserve from the Federal Government.

Mr. Speaker, I urge the adoption of H.R. 7012 and reserve the balance of my time.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. LEHMAN. I yield such time as he may consume to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Speaker, one of the most common complaints against our Federal Government is the unnecessary amount of paperwork required of our citizens to comply with Federal laws and regulations.

H.R. 7012 attempts to ease this situation at least for the farmers by mandating the reduction by 40 percent of the number of questions to be asked on the agricultural census form.

The most recent census of agriculture required American farmers to fill out long, complex and sometimes irrelevant questionnaires, on which the number of questions had grown from 480 in 1964 to 911 in 1974. While we realize that it is important that reliable agricultural information be collected and published regularly, it is neither necessary nor desirable for farmers to be forced to fill out incredibly detailed forms. It is estimated that at least 1.4 million hours of time required to fill out the agricultural census forms would be saved if this bill becomes a law. In order to reduce the paperwork so dramatically the Bureau of Census would be required to cut the size of its questionnaires and to make greater use of sampling techniques.

H.R. 7012 would also require the Bureau to collect certain limited information on very small farms—not as detailed as collected on larger units—but some information on small farming enterprises is necessary to develop a comprehensive rural policy for this Nation.

The bill redefines a farm, for census purposes, as having a minimum sales of $600 a year, subject to changes equal to changes in the Consumer Price Index.

It is felt that if the Bureau of Census stops counting very small establishments such as farms, the executive branch may decide that small farms are no longer viable in America.

Proof of this is shown in the most recent Bureau of Census statistics showing a precipitous decline in the number of farms in the United States which was caused, in effect, by redefining a farm as having a minumum of sales of $1,000 annually.

Mr. Speaker, this is a good bill, and worthy of the support of my colleagues, and I urge its passage.

Mr. SMITH of Iowa. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I am very, very disappointed in this bill. This bill should not be under suspension. It needs some major amendments. It will probably pass because Members will flock in here at the last minute and will not know what they are voting on, and most of them will not care, but I want the RECORD to show I oppose this bill and that I will vote "no."

As the gentleman from California said, the farm census has been unbelievably bungled. If Members do not believe it, I would encourage them to get a copy of the Appropriations Committee hearings this year when we conducted the Appropriations Committee hearings into the amount of money needed for the farm census. In 1969, they missed 8.5 million cattle in one census. They gave the farmers a false signal. They told the farmers to produce more at a time when they needed to produce less. Not only that, but it also hurt the agribusiness sector, too, because they were given a false signal.

We do not know within 1 million how many horses there are in the United States today, because the lists they used are not those lists that coincide with the owners of horses. They have a list from the Department of Agriculture of who raises grain and who raises certain price-supported crops, and, intend to use tax return information, which will not provide the information needed. In 1974, they sent 13.5 million pieces of mail to try to reach less than 4 million farmers. On one of the mailings they missed several hundred thousand, and they do not know yet who the people were they missed.

They do not know who did not respond and so what they did was to assume that the cross-section of those that responded represented a cross-section of those that did not, and that is not valid, because the people that went out of business in that 10-year period, or 5-year period, are not representative of the ones that stayed in business.

So the statistics we will secure are not valid. Not only that, but they are at least 2½ years late.

When they could not get the answers to some of these mailings that they made, they called up farmers on the country line, threatened them with jail and with penalties of law, as they put it, if they did not respond. Some of these people had not been farming for 2 years. Some were elderly people. It was the worst kind of case of harassment and handling in a bad way that you can imagine.

Now, this bill does not address that problem. That is the problem with the bill. It merely says, "reduce your paperwork by 40 percent." They say themselves they will not be able to comply with the requirements of the bill. The bill says they can publish results by March of the following year in which they take the census for the year before. That census is going to be so late that it will not be of any value, anyway. This one will probably cost $80 million, because postage is twice or more as high and they are sending out 12 to 14 million pieces of mail to try to accomplish something that cannot be accomplished by the mail.

The Department of Agriculture takes a scientific sampling of a limited number of farmers on a county basis. They have found it to be accurate. They did not go down to every township, but they can. They have done so in Texas where they have been requested to do so. They can take a scientific sample by interview. It can be more accurate. It can be more timely. It would cost a lot less money. That is the way we ought to do it, instead of letting the incompetents over at the Census Bureau continue with the procedure they used twice which proved to be both invalid and untimely. It could be done much more accurately and timely and with less threats, and without using tax returns and I think that is important, too. Passing this will make some people think temporarily we are doing something when the bill, in fact, just endorses sending out 12 million pieces of mail and using tax returns and threats again, also it will again come in so late that it is not going to be of any value.

A "yes" vote on this bill will just endorse the same kind of bungling we had before.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I appreciate my colleague yielding.

Is it not true that many of the individuals from the farm community that testified before our committee stated that one of the reasons that many farmers did not respond to the questionnaires, is because the large number of questions discourages many farmers from answering; is that not true?

Mr. SMITH of Iowa. That was one of the reasons; but also——

Mr. ROUSSELOT. Mr. Speaker, if the gentleman will yield further, therefore, is not this bill a step in the right direction? The Census Bureau assured us that they would abide by this law, when passed, that is to reduce the burden of questioning from 911 questions by 40 percent, many of the farmers have stated they would be much more inclined to answer the questions. So that is a step in the right direction; is it not?

Mr. SMITH of Iowa. It is a meager step that encourages people to think we did what needs to be done, instead of going ahead and doing what needs to be done.

I will explain this to the gentleman. Up in the Appropriations Committee, I asked what list they are using. They are already use an obsolete list.

Mr. ROUSSELOT. Is the gentleman sure of that?

Mr. SMITH of Iowa. We spent $1.5 million in the Agriculture Department to develop their list; but instead of that, they are getting an old raw list from the Agriculture Department. They are unable to tell the origin of the names on that list.

Mr. ROUSSELOT. Does the gentleman mean that the Agriculture Department could not explain the list they themselves had developed?

Mr. SMITH of Iowa. No; the Census Bureau, the Census Bureau did not know that farmers appeared on that list in as many different counties as they farm in and that many are not on the list.

Mr. ROUSSELOT. These lists are obtained from the local communities; if they are getting it from the Agriculture Department, that is a good list.

Mr. SMITH of Iowa. They are getting a raw list.

Mr. ROUSSELOT. Mr. Speaker, if the gentleman will yield further, would it not be better to get the Agriculture Department to get a correct listing?

Mr. SMITH of Iowa. The Agriculture Department does not have a refined list that is for mailing but they have one for interviewing because it cannot be done adequately by mail.

Mr. ROUSSELOT. How can the Agriculture Department do it anymore scientifically than the Census Bureau?

Mr. SMITH of Iowa. Because they know how to use a scientific sampling. The Census Bureau says they will not use a full scientific sampling procedure.

Mr. ROUSSELOT. If the gentleman does not want the Census Bureau to use these Agriculture prepared lists, what does the gentleman want them to use?

Mr. SMITH of Iowa. I want them to use scientific sampling.

Mr. ROUSSELOT. I never heard the Census Bureau make that statement; as a matter of fact the very opposite is true. We have them up here all the time. I never heard them say they did not want to use scientific sampling techniques.

Mr. SMITH of Iowa. They not only said it before the Appropriations Committee, I have it in writing that they do not want to.

Mr. ROUSSELOT. Mr. Speaker, if the gentleman will yield further, I just think my colleague is misguided. I really believe the Census Bureau will make every real attempt not only to make the listings more accurate and scientific, but also to reduce the burden of questions.

I am glad the gentleman from Iowa also agrees that we should reduce the burden of questioning.

Mr. SMITH of Iowa. The fact is that they do not want to use scientific sampling. They do not intend to use scientific sampling. They are going to start out on a very extensive and costly procedure of trying to refine and work from a raw list that should not be used anyway. They are again going to end up mailing 12 or 13 million pieces of mail. What they ought to be doing is doing scientific sampling, as the Department of Agriculture does. The Census Department could do the demographic sampling of people and business with the regular census, but let Agriculture count animals and compile farm statistics.

Mr. ROUSSELOT. They can do that for agriculture?

Mr. SMITH of Iowa. For all people in the United States.

Mr. ROUSSELOT. Then the Census Bureau does have a basis for scientific sampling.

Mr. SMITH of Iowa. They are going to do a demographic census anyway in the 10-year house to house census. They can do that there, and we can get that kind of information there. But, when it comes to counting horses, sheep, cattle, acres of corn, they had better let the Agriculture Department do it on a scientific sampling basis.

Mr. LEHMAN. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Florida.

Mr. LEHMAN. I respect the remarks of the gentleman from Iowa, but the main thrust of this bill is not, I think, to deal with the problem of which agency is supposed to be best to collect this data. It just happened that the Bureau of the Census is authorized to collect this data. The thrust of this bill is to remove the effort by the respondents in the amount of time it has taken them to respond to this data. That is the number one basis of the whole bill. The second basis is to redesign the form.

Mr. SMITH of Iowa. I am not quarreling with that part of the bill.

Mr. LEHMAN. The other feature of the bill itself is only, I think, basically to make it easier under the circumstances with which we are dealing—to make it easier and more efficient for the farmer to respond in a manner that will give us reliable data without undue effort on his part to perform his duty. I do not know whether the gentleman from Iowa was referring to the last farm census, but in 1974 the census cost $20 million instead of $40 million. The estimated cost of the 1979 census happens to be $40 million.

As the gentleman from California said, both the bill itself and the Bureau of the Census is encouraging additional and more scientific sampling. For the first time, the 1979 census is doing sampling. We have two different forms. We have the 20-percent form for the full sampling, and the rest of it is 80 percent, which is just a short form.

So, we are getting into more sampling techniques. As far as the actual data itself, the information from the farmers is going to be before March of the following year. It just mandates that the data in the report be published by the Bureau March 1, of the following year.

Mr. SMITH of Iowa. The preliminary report, I remind the gentleman. That is not the final report. That means that it is going to come in a year and a half or 2 years late, and it is of no value except for historical interest when it is that late.

Mr. LEHMAN. Under present circumstances, it is nearly 4 years after the 1974 census, and we have not got that data completed. What we are trying to do is shorten the form so that they can combine and publish the data a lot easier.

Mr. SMITH of Iowa. I agree completely with the need for more speed, but the point is that using a mail approach assures untimely results while with scientific sampling it could be 3 months rather than 2 years or more.

Mr. LEHMAN. I can assure the gentleman from Iowa that this committee will continue to do its oversight duty in order to see that the Bureau does the kind of sampling that will make this operation much more efficient.

Mr. SMITH of Iowa. Mr. Speaker, I just want to say again that I am terribly disappointed in the inadequate response of the committee to this problem. It is a serious problem. All this bill means is that it will be another 10 years and there will be some more history behind us before we get an adequate farm census in this country. I urge a "no" vote on this bill.

Mr. LEHMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. CORCORAN).

Mr. CORCORAN of Illinois. Mr. Speaker, I rise in support of H.R. 7012, the Agricultural Census Amendments Act of 1977.

Mr. Speaker, I agree with the members of the Census and Population Subcommittee and with the gentleman from Iowa (Mr. SMITH), who have already addressed themselves to this bill. There is an urgent need for action in this Congress to deal with the census which is currently in preparation for 1979. I think the testimony before the committee and the observations of the gentleman from Iowa demonstrate that we have a serious problem on our hands and that we should be doing something now in order to deal with that problem. I think the legislation before us does two things. First of all, it indicates that this Congress is prepared to take action which would bring about a reduction in the paperwork, which was one of the difficulties that affected the farmers in their compliance with the last agricultural census. Second, it demonstrates that this subcommittee, as well as the Congress as a whole, is determined to provide some long overdue legislative oversight concerning the agricultural census and to make sure that the requirements of this legislation are indeed followed.

Mr. Speaker, although I am not a member of the Census and Population Subcommittee, I am a member of the full Post Office and Civil Service Committee, and I have a strong interest in the passage of this bill. On April 1, my colleague from Iowa (Mr. LEACH) and I attended a field hearing in DeKalb, Ill., which is part of my district. Eighteen leaders of the north central Illinois farming community testified at that hearing. I feel this bill addresses several of the grievances those witnesses brought before the subcommittee that day, and I support it for several reasons.

This bill will relieve some of the burden the agriculture census places on our farmers. Can the results of each of 911 questions be all that vital when the information from the 1974 census has yet to be released? I am sure that any information that is needed could be obtained in a much shorter and simpler form through the use of sampling techniques. The information obtained could also be made public much faster. This bill would accomplish that.

In 1964, 480 questions were asked; in 1969, 754 were asked; in 1974, 911 questions were asked and the census was 20 pages long. Considering these facts, you must agree the time has come to enact legislation to control this explosion before the 1979 census is issued.

The greatest and most common complaint made at the DeKalb hearings concerned the lengh of the census, and the amount of time required for its completion. Many farmers felt obliged to consult accountants for help with some of the more detailed portions of the forms. Many farmers failed to return their census forms, because the forms were too long and because the farmers feared their replies would not remain confidential.

The 40-percent reduction in length mandated by H.R. 7012 is necessary to insure that the 1979 census will be answered by as many people as possible. In addition to reducing the size of its questionnaires, the Bureau of the Census will be required to make greater use of sampling techniques. I do not believe American agriculture, or agriculture-related businesses will be damaged by this reduction in paperwork.

Another complaint made at the hearings concerned the length of time which elapsed before the collected information was made public. I feel that a publishing deadline of March 1 in the year following the issuance of the census would give the Bureau of the Census sufficient time to publish the results, while satisfying those who are waiting for the information.

Finally, this bill will not increase the cost of the census. For these reasons, I urge my colleagues to join me in support of H.R. 7012.

Mr. LEHMAN. Mr. Speaker, I yield 3 minutes to the gentleman from Iowa (Mr. LEACH).

Mr. LEACH. Mr. Speaker, I rise in support of H.R. 7012, the Agricultural Census Amendments Act of 1977. Along with the gentleman from Illinois (Mr. CORCORAN), who participated in field hearings in the State of Iowa and the State of Illinois, I am convinced this is proper and appropriate legislation.

Mr. Speaker, this timely legislation mandates several significant changes in the conduct of the agricultural census before the 1979 Census of Agriculture is initiated.

Earlier this spring, a field hearing was held in my congressional district in Marengo, Iowa. The concerns expressed by farmers at that time centered on a number of issues—the length and complexity of the census forms, the tardy release of the 1974 census data, the confidentiality of the census returns, and the penalties for failure to comply with the census requirements. H.R. 7012 addresses several of these problems.

First, the bill requires the reduction of paperwork by 40 percent. I examined the forms used in the latest 1974 census, and it was not difficult to understand the concerns of our farmers, faced with the burden of completing a lengthy, complicated form. There is no question that the census of agriculture is, and can continue to be, an important tool for monitoring and planning in the agricultural sector. However, the extensive paperwork involved hampers our legitimate efforts at collecting accurate and timely data. Cases have been cited where farmers provided sketchy estimates in response to certain questions or else failed to complete and return the form altogether. Reducing the paperwork involved in the census will not only relieve the farmers' burden but will encourage and facilitate the collection of more accurate and complete data.

H.R. 7012 also includes a new provision requiring the timely release of data collected by the census. To date, the final publication of the 1974 census data has not yet been accomplished. This undue delay severely limits the usefulness of the data for those who should benefit most from it—including farmers and related agricultural industries. This legislation seeks to resolve that problem by directing the Census Bureau to publish the data collected no later than March 1, of the year following the year in which the census was taken. This will assure farmers the receipt of timely and valuable information in planning their agricultural activities.

I feel this bill, H.R. 7012, is a step in the right direction for rural America. Yet I am troubled over the lack of information and census data on certain trends which seem to be developing within the agricultural sector and which are of momentous interest and concern to the average American farmer. There is very definite change evolving in the ownership of U.S. farmland and I feel that it is in the best interests of this Nation to monitor those changes so that if policy decisions have to be made, the data is at hand on which to base a sound and reasonable judgment. H.R. 7012 contains a provision directing the Departments of Commerce and Agriculture to work together in improving the data collection of farm ownership information.

I trust this directive will be carried out, as soon as the legislation has been enacted, and that the Census Bureau will work with the Congress in establishing the scope and nature of ownership data which is needed. I trust, too, that this effort will be complemented by other undertakings apart from the agricultural census itself.

Mr. Speaker, this legislation is important to our Nation's farmers. I urge my colleagues to support the passage of H.R. 7012.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. LEACH. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I know that the gentleman from Iowa (Mr. LEACH) comes from a farm State, and that one of the reasons he is supporting this bill is that he became convinced in committee that it was important to take this step toward a reduction of the burden placed on farmers.

Is it the gentleman's judgment that more farmers are more likely to answer the questionnaires if in fact we reduce the burden of the questions by 40 percent?

Mr. LEACH. Mr. Speaker, I think without question one of the difficult problems farmers have had is the fact that in the last census the questionnaire was very lengthy and very complicated. Therefore, I feel that a short and simplified census would be met with far more appeal, and I am sure it would be far more readily filled out.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the comment of my colleague, the gentleman from Iowa (Mr. LEACH), and I thank him for yielding.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. LEACH. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, with this 40-percent reduction, where does that leave the farmer in 1979 and after 1979? How many pages? Would it just mean 500 pages instead of 900 pages?

Mr. LEACH. It would be substantially less.

Mr. ROUSSELOT. Mr. Speaker, if the gentleman will yield, the reduction is 40 percent.

Mr. VOLKMER. Mr. Speaker, a 40-percent reduction is not an overwhelming one actually. Maybe we need a 75-percent reduction.

Mr. LEACH. Some of us were in favor of a 50-percent reduction, and a compromise was reached at 40 percent.

Mr. VOLKMER. I might point out that it is not only the number of questions and the number of pages, but it is also the type of questions that are asked.

Mr. LEACH. Mr. Speaker, the gentleman is correct, but I believe this is a step in the right direction.

Mr. VOLKMER. Yes, but the tendency would be to think this is going to be the sole answer. Everybody is going to say that now we have the problem solved and everything is taken care of, that we do not have anything to worry about, and that we can go home and tell our farmers, "You don't have to worry about it anymore. This bill takes care of it." This would not be a true statement.

Mr. Speaker, I am not going to do that, because I know this bill does not do that.

Mr. LEACH. Mr. Speaker, I think it would be improper to think that any legislation in this Congress is the right answer for all time and for all purposes, but I believe this is a good approach for the next census. It is something that is reasonable and proper, and I believe it is something that can be lived with.

Mr. Speaker, I yield back the balance of my time.

Mr. LEHMAN. Mr. Speaker, I yield 2 minutes to be gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Speaker, I thank my colleague for yielding this time to me.

I would like to address a couple of questions to my colleague, the gentleman from Iowa (Mr. GRASSLEY), who I know has been an active farmer and has on several occasions answered these types of questionnaires.

Is it the gentleman's opinion that this legislation which requires the Census Bureau to reduce the burden of questionnaires by some 40 percent is a step in the right direction?

Mr. GRASSLEY. Mr. Speaker, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Iowa.

Mr. GRASSLEY. I thank the gentleman for yielding. The answer is yes, but I would have to qualify that it is just a small step in the right direction. Admittedly any improvement over this document that is here at the table and serves as a reminder of what we farmers had to fill out in December of 1974 and early in 1975 is a real improvement. That was a very frustrating document, and any improvement on that is certainly a step in the right direction.

Mr. ROUSSELOT. Mr. Speaker, I say to my colleague, the gentleman from Iowa (Mr. GRASSLEY), as the other gentleman from Iowa (Mr. LEACH) already stated—and I will say this for the benefit of my colleague, the gentleman from Missouri (Mr. VOLKMER)—that we favored the concept of a 50-percent reduction.

The problem was that we had to get an agreement with the Census Bureau that would stick, and I say to my colleague that the Census Bureau did agree that a 40-percent reduction was one that they could accomplish before the 1979 Agricultural Census. We felt that anything in that direction would be productive and would encourage more of the farmers to answer the questions.

Now I say to my colleague, the gentleman from Iowa (Mr. GRASSLEY), because I know he will be very interested in this, that we would like the input from Members from farm States. We would like to have them look at this questionnaire to make sure that these are meaningful questions contained in that questionnaire.

I know that my colleague, the gentleman from Florida (Mr. LEHMAN), who is the chairman of the subcommittee, is absolutely sincere and committed to making sure that we make this a meaningful questionnaire.

Mr. LEHMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, to sum up, I think we must keep in mind the main thrust of this bill is an effort by this committee to reduce the amount of paperwork burden on a segment of the citizens of this country.

I hope that this legislation will set an example for shortening and simplifying the decennial census that will soon be upon us.

Mr. Speaker, I think this can, in a sense, mark the beginning of a concern by this Congress that this body is desirous of doing something about the heavy Federal paperwork that is now such a burden on a varying and wide-scale section of our society.

This is a beginning, I hope, of a new wave of taking into consideration what is happening at the other end of the pipeline of information, not of what is happending at the administrative end or at the bureaucratic end, but the kind of heavy burden that this places on the businesses and the private citizens of our country.

Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. SMITH of Iowa. Mr. Speaker, I just want to very briefly state again that this bill misses the point. Even if it reduced the paperwork by 80 percent, it still misses the point.

The point is that in two censuses we have found out that the farm census cannot adequately be taken by mail. Some people do not answer. They will not answer. They do not know who it is who does not answer; and they end up with invalid statistics about a year or two late; or, as in the case of the last time, four years late.

The point is that we should not take farm statistics by mail as the Census Bureau wants to take them.

This bill endorses a new questionnaire 60 percent as long as the last one. If we do not want to endorse a new questionnaire, then I say we should vote "no" on this bill.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, if we vote "no" on this bill, we will be endorsing 100 percent of the type paperwork we had last time; is that not correct?

Mr. SMITH of Iowa. No, we are not. We are endorsing coming back to the bill I had before your committee. It should have passed and it would have set a proper procedure.

Mr. ROUSSELOT. If the gentleman will yield further, the law will remain the same, and the farmers will have 100 percent of the paper burden, exactly what they had last time; is that not correct?

Mr. SMITH of Iowa. The gentleman is assuming that his committee will not act.

Mr. ROUSSELOT. I did not say that. The committee has acted and reduced the paperwork and questions by 40 percent.

Mr. SMITH of Iowa. I asume that somebody someday will be willing to take the census in the right way.

Mr. ROUSSELOT. We have acted and have reduced the paper burden just as the gentleman wants. The gentleman from Florida has promised along with the entire committee that there will be positive oversight of the manner in which the census is conducted.

Mr. HORTON. Mr. Speaker, I rise in support of H.R. 7012, the Agricultural

Census Amendments Act of 1977. This is a bill that provides for a 40-percent reduction of the burden on respondents in the censuses of agriculture, drainage, and irrigation taken in 1979 and thereafter.

The Commission on Federal Paperwork, of which I am privileged to be chairman, at its meeting in June 1976, outlined the problems associated with the past agricultural censuses and recommended to the Bureau of the Census that they adopt procedures very similar to those ordered by H.R. 7012. Those procedures will reduce the amount of detailed information requested and require greater use of modern sampling techniques in the 1979 census.

It is my understanding that plans to implement our recommendation are well underway by the Bureau of Census.

Accurate and timely information regarding agricultural statistics is vital to the well-being of America. This information is possible by the adoption of this legislation. The Commission on Federal Paperwork is happy to have been in the forefront with this effort.

I strongly urge my colleagues to support this bill.

Mr. ALEXANDER. Mr. Speaker, as a sponsor of legislation similar to H.R. 7012, I rise in support of this bill to reform the method used for collecting agricultural census data and to block any future efforts of the Bureau of the Census and the Department of Agriculture to redefine "farm."

The need for this reform was made clear by the argricultural community's reaction to the unnecessarily complex and detailed census questionnaire used by the Bureau of the Census in collecting information for the 1974 census. The need to prevent the Bureau and USDA from summarily wiping out thousands of small farms through word manipulation exercised in redefining "farm" was also made clear by the results of the 1974 census.

Such a surge of farmer resistance resulted from the time-consuming complexity of the agrecultural census form—between 1964 and 1974, the number of questions on the census grew from 480 to 911—and from the coercive methods used by the Bureau of the Census datagatherers resulting in serious distortions in the data. Further distortion came out of the redefinition of the term "farm." Hundreds of thousands of small farms and millions of cattle were not counted in the census.

Good-faith use of the inaccurate data has been blamed in part for spurring unwise production decisions in the cattle industry which helped to set off a long-running, over-supply-induced price depression in the cattle market.

I mention this because it is just one example of the kind of problems inaccurate agricultural census information can help to generate.

It is pointless for us to spend the dollars of American taxpayers to collect data if that information cannot be relied on as accurate and cannot be put to practical use for our people.

It is estimated that this legislation will eliminate at least 1.4 million hours or 40 percent of the time required for the filling out of forms associated with the 1974 agricultural census. In order to reduce this paperwork burden, the Bureau of the Census will necessarily have to cut down the size of its questionnaires and use time-tested sampling techniques—something the Bureau should have been doing all along.

This bill will effectively allow us to strike a blow for reduction in Federal paperwork in general without adversely impacting informational needs. I urge its adoption.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. LEHMAN) that the House suspend the rules and pass the bill H.R. 7012, as amended.

The question was taken.

Mr. VOLKMER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

SALARY ADJUSTMENTS FOR OMB DIRECTOR AND DEPUTY

Mrs. SCHROEDER. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2387) to amend chapter 53 of title 5, United States Code, to increase the salaries of the Chairman and members of the Federal Reserve Board and of the Director and Deputy Director of the Office of Management and Budget, as amended.

The Clerk read as follows:

H.R. 2387

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 5312 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(14) Director of the Office of Management and Budget.".

(b) Paragraph (11) of section 5313 of such title is amended to read as follows:

"(11) Deputy Director of the Office of Management and Budget.".

(c) Paragraph (34) of section 5314 of such title is repealed.

SEC. 2. The amendments made by this Act shall take effect on October 1, 1977, or on the date of the enactment of this Act, whichever is later.

The SPEAKER pro tempore. Is a second demanded?

Mr. DERWINSKI. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentlewoman from Colorado (Mrs. SCHROEDER) and the gentleman from Illinois (Mr. DERWINSKI) are recognized for 20 minutes each.

The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Speaker, H.R. 2387 as reported by the Committee on Post Office and Civil Service, amends title 5, United States Code, to increase the salaries of the Director and Deputy Director of the Office of Management and Budget.

The Director would be moved up from executive level II ($57,500 per year) to executive level I ($66,000 per year)—the level of pay of Cabinet secretaries.

The Deputy Director would be moved up from executive level III ($52,500 per year) to executive level II—the level of pay of a deputy secretary of a department.

Mr. Speaker, these increases are made primarily in recognition that the positions the Director and Deputy Director of OMB involve duties and responsibilities which are equivalent to those of Cabinet heads and their deputies; and Congress has already recognized the status and importance of these jobs by requiring Senate confirmation of nominees to them.

The bill is a result of a request from former President Ford which has been ratified by President Carter.

The cost of the legislation will be about $14,500 per year, assuming the jobs are continuously occupied.

By an amendment added at the request of the Committee on the Budget, the effective date of the bill will be October 1, 1977, or fiscal year 1978.

Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Speaker, I thank the gentlewoman from Colorado (Mrs. SCHROEDER) for yielding.

Mr. Speaker, in supporting this legislation I want to make it clear that we are not just granting a pay raise to the individuals involved. Although it will raise their salaries, its main purpose is to establish a proper relationship between officials at the top level of government.

We, in effect, raised the Director of OMB to Cabinet level in 1974 when Congress passed my bill requiring Senate confirmation of the OMB Director. This legislation is consistent with that action.

There is no question but that the Director of OMB should be regarded as of equal rank with a Cabinet officer. He is the chief representative of the President in dealing with Cabinet officers on critical budget matters, and his status should be commensurate with theirs.

It then follows that the Deputy Director should be upgraded from level 3 to level 2, which is the grade of deputies to level 1 Cabinet officials.

It should also be pointed out that this legislation is nonpartisan. It was recommended by President Ford, as one of his last official acts.

It is an essential rule of good management that people performing comparable duties and carrying similar loads of responsibility should be at the same level and receive the same pay. I urge support for this bill.

Mr. DERWINSKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, in some quarters it may be fashionable to view this bill as a subtle attempt to keep Bert Lance solvent. I want to quickly divorce myself from that point of view. The estimable Georgia gentleman who heads the Office of Management and Budbet is perfectly capable of putting his own financial house in order.

Long before his personal financial dilemma made headlines, it was apparent to me Mr. Lance was a victim of circum-

stances. He was first among equals in terms of influence in the administration, but he has second-class status when it comes to pay. Based on recent events in this Chamber, second-class status in the Federal sector, whether real or imagined, is cause for genuine concern requiring drastic legislative response.

Fortunately, in Mr. Lance's case, it is not necessary to rely on tortured arguments or pressure tactics to influence votes. The facts speak for themselves. The office of Director of OMB meets every practical test of a cabinet level position and should be paid accordingly. That is why, as a longtime advocate of equal pay for equal work, I am happy to support H.R. 2387.

In mid-1975, I introduced legislation to promote the Director of OMB to cabinet level status, but between introduction and enactment something funny happened. Somehow, personalities and partisan politics became overriding issues, and my objective legislation was killed.

Since I was unwilling to believe either the Post Office and Civil Service Committee or the House would play "politics" with worthy legislation, I introduced the same bill early this session. My faith in the committee already has been vindicated by its action on May 11 when it voted to send this bill to the Floor.

The OMB director's political affiliation has no bearing on the heavy responsibilities and frequently unpopular decisions associated with that office. While Mr. Lance's predecessor, James Lynn, also was underpaid, it did not lessen his effectiveness. I am sure the same can be said of Mr. Lance.

Since its creation in 1964, the duties, functions and complexities of the office of Director of OMB have increased significantly. It clearly is a cabinet level job, and the officer who holds it deserves a salary commensurate with the duties of the office.

At the same time, fair play dictates that the salary of the Deputy Director of OMB also be increased.

An overwhelming vote of approval for this bill will effectively repair an error in judgment made in 1975.

I would like to point out the obvious and that is that the Director of OMB has responsibilities which I believe are second only to those of the President in terms of the expense of his office. I believe this step we are taking is long overdue. I commend the members of the subcommittee and the full committee for taking this objective and practical move, and, in the spirit of bipartisanship I am pleased to support this measure which will increase the salary of the Director of OMB.

Mrs. SCHROEDER. Mr. Speaker, I have no further requests for time.

Mr. DERWINSKI. I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentlewoman from Colorado (Mrs. SCHROEDER) that the House suspend the rules and pass the bill H.R. 2387, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII. and the Chair's prior announcement, further proceedings on this motion will be postponed.

INCREASE IN SUPERGRADES FOR FEDERAL COURT ADMINISTRATION

Mrs. SCHROEDER. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6974) to amend title 5, United States Code, to provide for an increase in the number of positions which may be placed in grades 16, 17, and 18 of the General Schedule by the Director of the Administrative Office of the United States Courts, as amended.

The Clerk read as follows:

H.R. 6974

Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That section 5108(c)(3) of title 5, United States Code, is amended to read as follows:

"(3) the Director of the Administrative Office of the United States Courts, subject to the standards and procedures prescribed by this chapter, may place a total of 15 positions in GS–16, 17, and 18;".

SEC. 2. The amendment made by this Act shall take effect on October 1, 1977, or on the date of the enactment of this Act, whichever is later.

The SPEAKER pro tempore. Is a second demanded?

Mr. GILMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentlewoman from Colorado (Mrs. SCHROEDER) and the gentleman from New York (Mr. GILMAN) will be recognized for 20 minutes each.

The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Speaker, H.R. 6974 as reported by the Committee on Post Office and Civil Service, amends title 5 of the United States Code, to provide for a total of 15 supergrade positions at the Administrative Office of U.S. Courts. Being an agency in the judicial branch, the Administrative Office proposed this increase without clearance by the administration, however, the administration has through testimony of the Civil Service Commission expressed its view that the legislation will be beneficial.

Right now, section 5108(c)(3) of title 5 authorized the Administrative Office to have four positions at grade GS–17. This authorization was enacted in 1958 by Public Law 85–462.

Since 1958, the duties of the Administrative Office have greatly increased, primarily because of congressional enactments such as the Speedy Trial Act of 1974, as amended, the Federal Magistrates Act of 1968 and the 1975 Judiciary Appropriations Act which transferred the functions of examining court officer from the Department of Justice to the Administrative Office. These congressional enactments which have specifically impacted the Administrative Office, have been supplemented in effect by the increased use of the Federal courts created by nearly every other law Congress has passed. The increased use of the Federal courts has meant requirements for more courtrooms, and staffs, and greatly increased management responsibilities for the Administrative Office. It has caused the divisions of the office to grow from the four present in 1958 to 12, and the supply for supergrade managers to lag behind the demand.

The Administrative Office has attempted to obtain more supergrade managers by requesting them from the Civil Service Commission pool. It was successful in obtaining two GS–17's in 1959, and one GS–18 in 1963, which was later traded for a GS–16. However, the Civil Service Commission, facing its own supergrade shortages in the executive branch, has since 1970 told the Administrative Office that it cannot allocate more supergrades to a judicial branch agency.

The committee stresses that in most instances it would be strongly opposed to establishing a separate supergrade pool for an individual agency. The committee is very concerned with the special supergrade authorities—that is, statutory authority to appoint supergrades outside of those authorized by the Government-wide pool—which Congress has provided to various executive branch agencies in recent years. Such a piecemeal approach to executive manpower needs has created a hodge-podge system and has effectively precluded any meaningful coordination or control of the Government-wide executive manpower program. In the case of the Administrative Office, however, where an agency in the judicial branch is forced to compete with agencies of the executive branch for a limited number of supergrade positions which are controlled and allocated by an executive branch agency, the Civil Service Commission, the committee believes that a separate pool is justified.

The committee points out that if this bill is enacted, the Administrative Office will be required to return to the Government-wide pool those three positions which it is presently allocated. This, together with the fact that the authorization for 15 positions supersedes the Administrative Office's existing statutory authority for four GS–17 positions, means that enactment of this legislation will result in a net gain of only eight supergrade positions for the Administrative Office.

The committee also points out that while it believes the Administrative Office's unique situation justifies the establishment of a separate supergrade pool, the bill does not give the Administrative Office unfettered control with respect to those positions. The bill retains in the Civil Service Commission the responsibility and authority to insure that supergrade positions established by the Administrative Office are properly classified with respect to the level of duties and responsibilities of such positions, and to insure that individuals appointed to such positions are properly qualified. The committee believes that sound personnel management practices dictate retaining in one central body the final responsibility for insuring proper classi-

fication and qualifications with respect to supergrade positions.

The cost of this legislation will be $34,000 in fiscal year 1978, and $36,000 in fiscal year 1979, $38,000 in fiscal year 1980, and $40,000 in fiscal year 1981.

By an amendment added at the request of the Committee on the Budget, the effective date of the bill will be October 1, 1977, or fiscal year 1978.

Mr. GILMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 6974, which authorizes the Director of the Administration Office of the U.S. Courts to place a total of 15 positions in grades GS–16, –17, and –18 of the General Schedule, is a reasonable and responsible approach to the current executive manpower dilemma at the Administrative Office of the U.S. Courts.

Since 1958, when supergrade positions were first authorized for the Administrative Office, the complement of judges and supporting personnel in the Federal judiciary has grown threefold. Concurrently, in the 19 succeeding years since Public Law 85–462, major new legislation—the Criminal Justice Act of 1964, the Federal Magistrates Act of 1968, the 1975 Appropriations Act, by virtue of which the function of examining court offices was transferred from the Department of Justice to the Administrative Office, and the Speedy Trial Act of 1974—has imposed significant additional duties on the Director of the Administrative Office. The result is today that from the original four divisions of the Administrative Office has grown an Office with 3 assistant directors and 12 separate divisions operating along functional lines.

At the present time, Mr. Speaker, the Administrative Office of the U.S. Courts has four statutory positions at grade GS–17 and one GS–18 and two GS–16 positions allocated by the Civil Service Commission, for a total of seven supergrade positions. The 15 positions provided for by H.R. 6974 would supersede this authority—so, the net increase to the Administrative Office is just 8 positions.

Accordingly, Mr. Speaker, both because of the reluctance of the Civil Service Commission to allot additional supergrade positions to the Administrative Office from the Government-wide pool—as previously discussed by Congresswoman Schroeder—and, because with the exception of one GS–16 position allocated to the Administrative Office by the Commission several months ago, it has been nearly 19 years since any additional supergrade positions have been authorized for the Administrative Office of the U.S. Courts, I urge my colleagues to vote to provide the personnel requested by suspending the rules and passing H.R. 6974.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Colorado (Mrs. SCHROEDER) that the House suspend the rules and pass the bill H.R. 6974, as amended.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVIII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

INCREASE IN NUMBER OF HEARING EXAMINERS

Mrs. SCHROEDER. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6975) to amend title 5, United States Code, to increase the number of hearing examiner positions which the Civil Service Commission may established and place at GS–16 of the General Schedule, as amended.

The Clerk read as follows:

H.R. 6975

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5108(a) of title 5, United States Code, is amended by striking out "240 hearing examiner positions" and inserting in lieu thereof "340 administrative law judge positions".

Sec. 2. (a) The provisions described in paragraphs (1) through (12) of this subsection are each amended by striking out "hearing examiner" or "hearing examiners", as appropriate, each place it appears, and inserting in lieu thereof "administrative law judge" or "administrative law judges", as appropriate—

(1) sections 554(a)(2), 556(b)(3), 559, 1305, 3105, 3344, 4301, 5335, 5362, and 7521, of title 5, United States Code;

(2) section 6(c)(2) of the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136d(c)(2));

(3) section 11(k) of the Federal Reserve Act (12 U.S.C. 248(k));

(4) subsections (b) and (c) of the first section of the Act entitled "An Act to authorize the Securities and Exchange Commission to delegate certain functions", approved August 20, 1962 (15 U.S.C. 78d-1(b) and (c));

(5) section 1416(a) of the Interstate Land Sales Full Disclosure Act (15 U.S.C. 1715(a));

(6) section 509(i) of title 28, United States Code;

(7) sections 12(e), 12(j), and 12(k) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 661(d), 661(i), 661(j));

(8) section 502(e) of the Rehabilitation Act of 1973 (29 U.S.C. 792(e));

(9) sections 5(e) and 428(b) of the Federal Coal Mine Health and Safety Act of 1969 (30 U.S.C. 804(e), 938(b));

(10) sections 19(d) and 21(b) of the Longshoremen's and Harbor Workers' Compensation Act (33 U.S.C. 919(d), 921(b));

(11) section 705(a) of the Civil Rights Act of 1964 (42 U.S.C. 2000e–4(a)); and

(12) sections 6(h) and 9(a) of the Department of Transportation Act (49 U.S.C. 1655(h), 1657(a)).

(b)(1) Sections 1305 and 5362 of title 5, United States Code, are each amended in the catchline, by striking out "Hearing Examiners" and inserting "Administrative law judges" in lieu thereof.

(2) Sections 3105 and 3344 of title 5, United States Code, are each amended in the catchline by striking out "hearing examiners" and inserting "administrative law judges" in lieu thereof.

(c)(1) The table of sections for chapter 13 of title 5, United States Code, is amended so that the item relating to section 1305 reads as follows:

"1305. Administrative law judges.".

(2) The table of sections for chapter 31 of title 5, United States Code, is amended so that the item relating to section 3105 reads as follows:

"3105. Appointment of administrative law judges.".

(3) The table of sections for chapter 33 of title 5, United States Code, is amended so that the item relating to section 3344 reads as follows:

"3344. Details; administrative law judges."

(4) The table of sections for chapter 53 of title 5, United States Code, is amended so that the item relating to section 5362 reads as follows:

"5362. Administrative law judges."

(d)(1) The second sentence of section 3105 of title 5, United States Code, is amended by striking out "Hearing examiners" and inserting "Administrative law judges" in lieu thereof.

(2) Section 1416(a) of the Interstate Land Sales Full Disclosure Act (15 U.S.C. 1715(a)) is amended in the catchline by striking out "hearing officers" and inserting "administrative law judges" in lieu thereof.

SEC. 3. Any reference in any law, regulation, or order to a hearing examiner appointed under section 3105 of title 5, United States Code, shall be deemed to be a reference to an administrative law judge.

The SPEAKER pro tempore. Is a second demanded?

Mr. GILMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentlewoman from Colorado (Mrs. SCHROEDER) and the gentleman from New York (Mr. GILMAN) will be recognized for 20 minutes each.

The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Speaker, H.R. 6975, as reported by the Committee on Post Office and Civil Service, amends title 5 of the United States Code to increase the number of hearing examiner positions which the Civil Service Commission may establish and place at GS–16 of the General Schedule. Numerous technical amendments contained in an amendment added to the bill change the designation "hearing examiner" in the United States Code to that of "Administrative Law Judge" the name by which these Federal employees are most known.

The Civil Service Commission, under authority of 5 United States Code 5108(A), now maintains a pool of 240 GS–16 hearing examiners and nine GS–17 hearing examiners. H.R. 6975 would increase by 100 to 340 the maximum civil service pool of GS–16 examiners.

The need for the greater flexibility which the increased number of slots for hearing examiners will permit the Civil Service Commission is evidenced by the increase in the number of agencies which are requested to hold the hearings under the Administrative Procedures Act—APA—which has occurred since the 240 slots were authorized in 1964. Under the APA, only hearing examiners, or an agency or commission itself, may preside over APA hearings. The creation of numerous new agencies utilizing the APA—from the Postal Rate Commission to the International Trade Commission to the Consumer Product Safety Commission to the Environmental Protection Agency—a net increase of 9 agencies over the 14 in existence in 1964—plus new program responsibilities given old departments and agencies, plus increasing caselogs within existing responsibili-

ties, have placed great strains on the Civil Service Commission's ability to manage its pool. Moreover, because of the demand for APA hearing officers, the Civil Service Commission has had to borrow 40 supergrade positions from its Government-wide "supergrade pool" of management positions to the detriment of the general bureaucracy's efficiency.

Mr. Speaker, the committee's intentions for this bill are that the tight fistedness of the Civil Service Commission with regard to review and placement positions continue. We do not intend this bill as a carte blanche for the Commission to immediately create 100 new GS–16 hearing examiners, nor give grade increases to 100 hearing examiners, or anything of the kind. Rather, we believe these positions will give the Civil Service Commission the flexibility to manage its pool better, and, as from time to time new agencies or agencies suffering from severe case backlogs or new responsibilities, can have the people to eliminate the problems at hand. We expect that all the proper criteria—from the number and complexity of cases assigned hearing examiners are handling, to the use of nonquota GS–15 hearing examiners, to the sharing of hearing examiners by agencies, to the elimination of nonproductive members of the hearing examiners corps, be examined before any of these positions are allocated. In this relation, I assure my colleagues my subcommittee will hold oversight hearings on the implementation of H.R. 6975 soon after it becomes law.

The cost of the legislation, as estimated by the Congressional Budget Office is $4.1 million in fiscal year 1978 with small incremental increases in succeeding years.

Mr. Speaker, at this point I yield such time as he may consume to the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Speaker, I rise in support of this legislation. This is an issue we are currently dealing with in the conference between the House and Senate on the bill creating a Department of Energy.

As the bill passed the House, it provided that hearing examiners for the new department would be drawn from the Civil Service Commission pool. The Senate bill provided that the department could hire its own examiners without regard to the Government-wide pool.

We have prevailed upon the Senate to accept the House position, and one of the reasons they were willing to make that concession is the prospect of the passage of this bill. There is a definite need for more hearing examiners than the 240 now in the Civil Service Commission pool.

I hope we will suspend the rules and pass H.R. 6975.

Mr. GILMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 6975, which would increase the statutory limit on GS–16 hearing examiner positions from 240 to 340 slots.

The original 240 hearing examiner positions (now, pursuant to Civil Service Commission regulation, designated as Administrative Law Judges) were distributed back in 1963 to meet the needs of the 14 agencies and departments that had such positions allocable, classifiable, at that GS–16 level. During the succeeding 14 years, there has been no additional supergrade slots authorized for Administrative Law Judges in spite of the fact that the number of agencies conducting formal hearings has expanded by 64 percent and the number of Administrative Law Judge positions has also increased. To meet this requirement, the Commission has had to resort to borrowing supergrade slots which had been earmarked for other classes of employees from the Government-wide supergrade pool. The net result of this activity has been that the Commission has had to borrow to date 40 positions from the overall Government-wide pool to meet the absolute minimum needs for Administrative Law Judges at GS–16.

The Executive Director of the Civil Service Commission has testified before the Subcommittee on Employee Ethics and Utilization that the Commission has about reached their limit in being able to borrow slots from the Government-wide pool; but the agencies' needs are continuing to increase as a result of new laws requiring the application of the Administrative Procedure Act that further require administrative law judges to serve as presiding officers. It has also been brought to the attention of our subcommittee that a number of agencies have informed the Commission that their present contingent of administrative law judges are insufficient to meet the expanding work, and are desperately in need of additional administrative law judges to keep their caseload within manageable proportions.

I would also point out to my colleagues that, while H.R. 6975 authorizes 100 additional positions, the actual net increase in GS–16 administrative law judge positions will be only 60, since the Commission has already borrowed 40 GS–16 positions from the Government-wide pool, and these 40 slots will now be returned by the Commission to the supergrade pool.

Accordingly, in order to meet the personnel needs arising from expanded workloads, I urge my colleagues to suspend the rules and to pass H.R. 6975.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. GILMAN. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, with these additional GS–16 administrative hearing examiners, will this mean that in the future we can go ahead then and pass more programs that will demand more of their services so that in a few years we can come back and add more hearing examiners, so that we can pass more programs? Is that what we are doing, or hoping to do?

Mr. GILMAN. In response to the gentleman's inquiry, we are providing in this measure for the additional needs we have at this time. Perhaps, in the future, there may be some further needs as we expand governmental services requiring hearing procedures.

Mr. VOLKMER. Perhaps some day we can stop and cut down on some of the governmental services that some of us feel are perhaps not necessary; and perhaps we will not need the hearing examiners. Does the gentleman think we can ever cut back on the number?

Mr. GILMAN. I think the gentleman's point is well taken, and I hope he is not overly optimistic about the need to reduce unnecessary governmental services.

Mr. VOLKMER. From what I am seeing here today, I am not optimistic at all.

Mr. GILMAN. I thank the gentleman for expressing his concern and for his remarks.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Colorado (Ms. SCHROEDER) that the House suspend the rules and pass the bill H.R. 6975, as amended.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this vote will be postponed.

GENERAL LEAVE

Ms. SCHROEDER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter on the bills H.R. 2387, H.R. 6974, and H. R.6975.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

RETENTION OF LIFE AND HEALTH INSURANCE BENEFITS DURING RETIREMENT AFTER 5 YEARS OF SERVICE

Mrs. SPELLMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4319) to amend subchapter III of chapter 83 of title 5, United States Code, to provide that employees who retire afer 5 years of service, in certain instances, may be eligible to retain their life and health insurance benefits, and for other purposes, as amended.

The Clerk read as follows:

H.R. 4319

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 8335(b) of title 5, United States Code, is amended by striking out "until 60 days after he is so notified" and inserting in lieu thereof "until the last day of the month in which the 60-day notice expires".

SEC. 2. Section 8706(b) of title 5, United States Code, is amended—

(1) by deleting the word "or" after paragraph (1);

(2) by inserting the word "or" after paragraph (2); and

(3) by inserting the following new paragraph after paragraph (2):

"(3) after December 31, 1982, he has completed 5 years of creditable civilian service as determined by the Commission;".

SEC. 3. Section 8901(3)(A) of title 5, United States Code, is amended by striking out "Government, after 12 or more years of service or

for disability;" and inserting in lieu thereof the following: "Government—

"(i) after 12 years of creditable service;

"(ii) for disability; or

"(iii) after December 31, 1982, after 5 years of creditable service;".

The SPEAKER pro tempore. Is a second demanded?

Mr. LEACH. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentlewoman from Maryland (Mrs. SPELLMAN) will be recognized for 20 minutes, and the gentleman from Iowa (Mr. LEACH) will be recognized for 20 minutes.

The Chair recognizes the gentlewoman from Maryland (Mrs. SPELLMAN).

Mrs. SPELLMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this bill, H.R. 4319, with accompanying amendment, provides that employees who retire after 5 years of service, may be eligible to retain their life and health insurance benefits.

The accompanying amendment, to strike section 1 of the bill, is offered because requiring retirement at age 70 is no longer the committee's position.

Since the full committee acted on this bill, my subcommittee has moved to repeal the mandatory retirement provision. Chairman Alan K. Campbell, new Chairman of the Civil Service Commission, dramatically reversed previous Commission policy and testified that "the Commission fully supports repeal of this provision."

Just last Thursday, the House Education and Labor Committee agreed to a bill which would not only eliminate immediately mandatory retirement at age 70 for Federal workers, but would also extend to 70 the age at which all workers are covered by the Age Discrimination Act. The present law protects workers to 65.

Our position is shared by the Select Committee on Aging and many Members of the House and the administration.

We are saying, Mr. Speaker, that it would be inconsistent to reaffirm the present mandatory retirement law, as section 1 does, when in fact we are moving in precisely the opposite direction. Therefore we ask for the amendment.

Skill, intelligence, energy, will—these are the determining factors in the job market, not the hands of the clock or an arbitrary date on the calendar. Very simply the bill provides that Federal employees who retire after 5 years of service may be eligible to retain their life and health insurance benefits.

The committee finds that it is the general policy of business within the private sector to grant an employee the retention of his benefits, particularly life and health insurance, once he has vested in the company retirement system. This is not the case for the Federal employee.

Presently, the Federal Employees' Group Life Insurance Law—section 8706 (b) of title 5, United States Code—and the Federal Employees' Health Benefits Law—section 8901(2)(A) of title 5, United States Code—provide for the retention of life and health insurance coverage after an employee's retirement on an immediate annuity, only either on disability or after having completed at least 12 years of creditable service. The committee believes that, in light of the fact that an employee has vested rights under the civil service retirement system after 5 years of creditable civilian service, that the 12-year service requirement for retention of health and life insurance benefits during retirement no longer can be justified and that it unduly discriminates against many employees.

Mr. Speaker, the committee urges passage of this most important legislation which it believes eliminates discrimination and furthers the policy of the 1970 Comparability Act.

I strongly urge the passage of H.R. 4319 as amended.

Mr. LEACH. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 4319 with an amendment.

This legislation reduces from 12 to 5 years the length of service required by a retiring employee to retain his group life and health benefits coverage during retirement.

The amendment offered by Mrs. SPELLMAN, who chairs our Subcommittee on Retirement and Employee Benefits, to strike the mandatory retirement language from the bill is a good one.

It removes the one objectionable feature of the bill which many Members expressed concern over.

As previously explained this bill merely brings the service requirements for retention of health and life insurance coverage into retirement in conformity with the 5-year service requirement for vesting under the civil service retirement system.

Mr. Speaker, the Congressional Budget Office estimates enactment will result in minor increases in Federal employees' health and life insurance premiums. However, the bill does not become effective until after December 31, 1982.

I urge adoption of this legislation.

Mr. DERWINSKI. Mr. Speaker, I wholeheartedly support the amendment offered by the chairwoman from Maryland (Mrs. SPELLMAN) to strike the mandatory retirement provision from H.R. 4319.

As presently drafted, the bill deserves the approval of my colleagues.

The remaining provisions of H.R. 4319 have already been fully explained, therefore, I will limit my brief remarks to the subject of mandatory retirement.

I have long had philosophic reservations about compulsory retirement. As a result, I have consistently supported and sponsored legislation to ban the mandatory retirement of elderly workers.

Chronological age is not and never has been a reliable index of job performance. I think that a mandatory retirement system based on age tends to diminish the effectiveness of a true civil service merit system.

Compulsory retirement flies in the face of justice and commonsense. I strongly believe persons willing and able to keep working should have that right.

Mr. Speaker, I applaud the action of the chairwoman from Maryland to strike all references to mandatory retirement from this otherwise general housekeeping bill. It is a small but important step in the right direction.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Maryland (Mrs. SPELLMAN) that the House suspend the rules and pass the bill H.R. 4319, as amended.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

RESTORATION OF CERTAIN ANNUITIES

Mrs. SPELLMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3755) to provide for the reinstatement of civil service retirement survivor annuities for certain widows and widowers whose remarriages occurred before July 18, 1966, and for other purposes.

The Clerk read as follows:

H.R. 3755

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) upon application to the Civil Service Commission, the annuity of—

(1) a surviving spouse of an employee which was terminated under the provisions of section 8341(b) or (d) of title 5, United States Code, or of any prior applicable law, because of the remarriage of such spouse before July 18, 1966, and

(2) a surviving spouse of a Member who died before January 8, 1971, which was terminated under any such provision, because of the remarriage of such spouse,

shall be restored in accordance with the provisions of subsection (b) of this section.

(b)(1) In the case of a remarriage occurring after the surviving spouse became sixty years of age, the annuity shall be restored to such spouse under subsection (a) of this section only if any lump sum paid on termination of the annuity is returned to the Civil Service Retirement and Disability Fund. If such amount is paid, the annuity shall be so restored commencing on the effective date of this section at the rate which would have been in effect if the annuity had not been terminated.

(2) In the case of a remarriage occurring before the surviving spouse became sixty years of age, the annuity shall be restored to such spouse under subsection (a) of this section only if—

(A) such spouse elects to receive this annuity instead of a survivor benefit to which the spouse may be entitled under subchapter III of chapter 83 of such title 5 or under another retirement system for Government employees by reason of the marriage; and

(B) any lump sum paid on termination of the annuity is returned to such fund.

If the requirements of the preceding sentence are satisfied, such annuity shall be so restored commencing on the effective date of this section or on the first day of the month following the date the remarriage is dissolved by death, annulment, or divorce, whichever date is later, at the rate which was in effect when the annuity was terminated.

SEC. 2. Section 8341(g) of title 5, United States Code, is amended by striking out "after July 18, 1966,".

SEC. 3. The foregoing provisions of this Act shall take effect on—

(1) the first day of the month following the date of the enactment of this Act, or

(2) October 1, 1977,

whichever date is later.

The SPEAKER pro tempore. Is a second demanded?

Mr. LEACH. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentlewoman from Maryland (Mrs. SPELLMAN) will be recognized for 20 minutes, and the gentleman from Iowa (Mr. LEACH) will be recognized for 20 minutes.

The Chair recognizes the gentlewoman from Maryland (Mrs. SPELLMAN).

Mrs. SPELLMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 3755 is a simple bill, one which will correct an inequity in existing law. It provides for the reinstatement of civil service retirement survivor annuities for certain widows and widowers whose remarriages occurred before July 18, 1966. All others have already been taken care of in legislation already passed by this Congress. Let me briefly outline the history.

Public Law 89–504 allowed widows or widowers aged 60 or over to remarry without losing title to their survivor annuities. It also allowed widows or widowers, who lost benefits because they remarried before age 60, to have their annuities restored if the remarriage was terminated.

These provisions were not retroactive, however, and applied only to widows and widowers of employees of the Federal Government who had retired or died on or after July 18, 1966, the enactment date of the law.

In 1969, Congress expanded the provisions to apply to widows and widowers of Federal employees regardless of when the employees retired or died, but the expansion applied only to those whose remarriage took place on or after July 19, 1966.

H.R. 3755 would extend restoration rights to widows and widowers who were remarried before that date. Our best estimate is that we are talking about 3,200 people. They are quite old now and rapidly diminishing in number.

The committee urges passage of H.R. 3755 to close a loophole in the law and to assure that these people are provided with the same treatment as all other survivors in their position—just a simple matter of equity.

I urge the passage of the bill.

Mr. LEACH. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 3755, which reinstates civil service retirement annuities for certain widows and widowers who remarried prior to July 18, 1966.

I am fully aware of the general policy of the committee to refrain from approving liberalizations in retirement benefits, but I believe, as does the committee by its unanimous vote, that an exception to the rule is merited in this case.

This bill merely extends the same provisions of law to survivor annuitants who remarried prior to July 18, 1966, as to annuitants who remarried after this date. That is, annuities continue to be paid to survivor annuitants who remarried after age 60, and annuities are restored for survivor annuitants who remarried before age 60 and their marriage was later dissolved.

This legislation addresses a serious economic problem shared by silghtly over 3,000 elderly widows and widowers. The average annuity is no more than $123 per month. Also, to be borne in mind in considering this issue is that because of the advancing age of these people, fewer and fewer will continue receiving annuities in the future.

Mr. Speaker, it is only fair to conclude that the same considerations the Congress felt justified enactment of Public Law 89–504 for survivor annuitants who remarried after July 16, 1966, should apply equally to those who remarried before this date.

This is a long overdue correction of an inequity in the civil service retirement law.

I strongly support enactment of H.R. 3755.

Mr. LEHMAN. Mr. Speaker, 3 years ago a woman came into my office seeking my help in getting this bill passed. She explained, rather simply but eloquently, the consequences this cutoff date had imposed on her and several thousand others. Her cause, she felt, was hopeless because no one seemed to care about a group of elderly people especially since the size of the group was decreasing rapidly. The costs she explained, were munimal then, as they are now, to effectuate equal treatment for survivor annuitants.

Mr. Speaker, as the principal sponsor of this legislation I am grateful to say that at last this legislation is belatedly receiving the consideration it deserves. My only regret is that that woman, Mrs. Alice Miles, who visited me that day and convinced me of the merits of this bill died recently and thus will not benefit from the passage of this legislation.

Mr. GIAIMO. Mr. Speaker, I rise in support of H.R. 3755, a bill which would restore annuities for surviving spouses of civil service annuitants when the remarriage of the surviving spouse took place prior to July 18, 1966.

This bill is consistent with the estimates in the first budget resolution for fiscal year 1978. It would cost $3 million in budget authority and $5 million in outlays. The first budget resolution assumed enactment of benefit liberalizations with a total fiscal year 1978 cost of $10 million in budget authority and $7 million in outlays.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Maryland (Mr. SPELLMAN) that the House suspend the rules and pass the bill H.R. 3755.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mrs. SPELLMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include extraneous matter, on H.R. 4319, as amended, and H.R. 3755.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Maryland?

There was no objection.

REDUCE TARIFFS ON SPARK PLUG INSULATORS

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 1550) to reduce the rate of duty on ceramic insulators used in spark plugs, as amended.

The Clerk read as follows:

H.R. 1550

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 909.01 the following new item:

"909.10	Ceramic insulators having an alumina oxide content of not less than 96%, if used in spark plugs (provided for in item 535.14, part 2D, schedule 5).....	4% ad val.	No change.	On or before 6/30/80".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. STEIGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from Wisconsin (Mr. STEIGER) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 1550 is to temporarily reduce the duty on imports of certain ceramic insulators used in the production of highly specialized sparks plugs to June 30, 1980. These spark plugs are used in stationary gas, natural gas, propane, or LPG engines.

H.R. 1550 was introduced by our colleague, Mr. CHARLES WILSON of Texas.

When compared with total U.S. spark plug production, production of these specialized spark plugs is very limited, apparently less than 0.1 percent of total U.S. spark plug consumption. Domestic production is apparently limited to two firms, one large firm which produces its own ceramic insulators only for internal

use, and which also produces auto and aircraft spark plugs, and a small firm which allegedly cannot economically produce its own ceramic insulators. That small firm presently imports ceramic insulators which bear a 15 percent duty and assembles the completed spark plug which then competes against imports of completed spark plugs which presently are dutiable at a rate of 4 percent ad valorem. The firm seeks to eliminate this advantage of foreign producers by reducing the duty on certain specialized ceramic insulators to 4 percent, the same duty paid by spark plug imports.

Reports in opposition to this bill as introduced were received from the Departments of Commerce, the Treasury, State, Labor, and the Office of the Special Representative for Trade Negotiations. They opposed the permanent unilateral reduction of this duty on the grounds that any such reduction should be negotiated in the context of the multilateral trade negotiations so that the United States would receive some benefit from its trading partners in return and that domestic industry sources have advised that there is no shortage of domestic production. The agencies were unable to independently determine domestic production or imports of ceramic insulators.

After consideration of these objections, the bill was amended to make the duty reduction temporary to June 30, 1980, rather than a permanent unilateral reduction, thus preserving whatever negotiating value exists for multilateral trade negotiations. Since reduced duty rate of 4 percent ad valorem for ceramic insulators is the same rate of duty presently assessed on imported completed spark plugs, it is not believed that the bill will have a significant effect on the domestic ceramic insulator industry. The bill was also amended to restrict the ceramic insulators covered by the new TSUS item to insulators having an alumina oxide content of not less than 96 percent and for use in spark plugs. While spark plugs for stationary engines used in gas fields do require high alumina content ceramic insulators, spark plugs for auto and airplane engines, the overwhelming domestic production and market, do not demand ceramic insulators with such high alumina content.

The committee was unanimous in reporting H.R. 1550 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from Ohio (Mr. VANIK) has done an excellent job in describing the bill. I urge its adoption.

Mr. Speaker, I support H.R. 1550, a bill to reduce until June 30, 1980, the rate of duty on certain ceramic insulators used in spark plugs.

The ceramic insulators effected are ones of high alumina content, not less than 96 percent, and are currently listed under item 535.14 of the Tariff Schedules of the United States. The duty in this instance would be reduced from 15 percent ad valorem to 4 percent ad valorem. The reduction applies only to the column 1 rate, with the 60 percent ad valorem column 2 rate remaining unchanged.

High alumina ceramic insulators are a component of specialized spark plugs used in natural gas, gas, propane or LPG engines that are stationary. These unique spark plugs represent less than 0.1 percent of the total domestic consumption of all types of spark plugs. At the present time, two U.S. firms manufacture the ceramic insulator component described above, but one is a major spark plug manufacturer that uses most of its insulators for production of its own spark plugs and sells the remainder at a much higher price than the imported product.

The duty reduction is sought by a small independent firm located in Texas that produces spark plugs for the special stationary engines operating in gas fields. The 4-percent duty on insulators called for under this bill would be equal to the duty on imported complete spark plugs. Such a reduction will assist the Texas firm, and others like it, in competing both with major domestic manufacturers of insulators and spark plugs and with imported spark plugs that have been completely assembled abroad.

Since there is little demand for high alumina ceramic insulators, the effect of the duty reduction on the domestic spark plug industry as a whole will be negligible, as will be the loss in customs revenue each year. The temporary nature of the reduction will allow a periodic review by Congress of its effect on domestic industry; also, the temporary aspect will preserve a future permanent reduction as a negotiating item in the multilateral trade negotiations—MTN.

Mr. Speaker, the committee has resolved all prior objections to H.R. 1550 raised during public hearings and reported the bill unanimously. I recommend passage by the House at this time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. VANIK) that the House suspend the rules and pass the bill H.R. 1550, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to reduce temporarily the rate of duty on certain ceramic insulators used in spark plugs.".

A motion to reconsider was laid on the table.

SUSPEND TARIFFS ON RUBBER MATTRESS BLANKS

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2849) to suspend for a 3-year period the rate of duty on mattress blanks of rubber latex, as amended.

The Clerk read as follows:

H.R. 2849

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 912.07 the following new item:

'912.08	Mattress blanks of rubber latex (provided for in item 727.86, part 4A, schedule 7)	Free	No change.	On or before 6/30/78".

SEC. 2. (a) The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the ninetieth day after the date of the enactment of this Act, the entry or withdrawal of any article—

(1) which was made after May 9, 1977, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if the amendment made by the first section of this Act applied to such entry or withdrawal,

shall notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry or withdrawal had been made on the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. STEIGER. Mr. Speaker, I demand a second.

The SPEAKER por tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from Wisconsin (Mr. STEIGER) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 2849 is to suspend until July 1, 1978, the rate of duty on rubber latex mattress blanks.

H.R. 2849 was introduced by our colleague, Mr. OTTINGER of New York.

Rubber latex mattress blanks are used to produce latex foam mattresses. It was alleged that the sole domestic plant producing natural latex foam rubber was destroyed and that domestic mattress producers must now pay a duty designed to protect a product no longer domestically produced.

Reports with no objections were received from the Departments of Commerce, State, the Treasury, Agriculture, Labor, and the Office of the Special Representative for Trade Negotiations.

Objection to a 3-year duty suspension was received from a domestic firm which recently started latex foam production after a fire had destroyed its predecessor's plant. The firm, which intends to produce latex mattress blanks but not within a 1-year period, indicated no objection to a 1-year suspension. Objections were also received from a domestic polyurethane producer who alleged polyurethane foam domestically produced competes with latex foam. It does appear from exports received by the subcommittee that latex foam mattresses are a higher priced premium product

and do not compete directly with polyurethane foam mattresses.

The bill was amended to provide a 1-year duty suspension rather than a 3-year suspension in order to encourage the resumption of domestic latex mattress blank production. The bill was also amended to remove the retroactivity feature since domestic firms importing latex mattress blanks have passed on to consumers a substantial portion of the duty and any refund of the entire duty would be a windfall to such firms since it would be impossible for them to pass on to the ultimate consumer that portion of the duty originally borne by such consumer.

The committee was unanimous in reporting H.R. 2849 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from Ohio (Mr. VANIK) has more than adequately explained the bill. It is a good one, and I urge its adoption.

Mr. Speaker, I support H.R. 2849 suspending for 1 year, until June 30, 1978, the rate of duty on mattress blanks of rubber latex.

Prior to March 1975, only one plant produced the article involved. This plant, located in Shelton, Conn., was completely destroyed by fire in that year. The current temporary suspension was designed to help preserve the domestic market for mattress blanks of rubber latex, as well as the competitive position of manufacturers of foam rubber mattresses and box spring sets, until the plant could be rebuilt and return to full production.

The former employees of the destroyed plant formed a new company, Latex Foam, and have resumed production on a limited scale. Although the company does not now produce mattress blanks, they plan to begin such production within 6 to 12 months. Therefore, this company has advocated removing the duty suspension after a relatively short period of time so that they again will have tariff protection for their latex products.

The column 1 rate of duty on mattress blanks of rubber latex is 15 percent ad valorem and column 2 rate is 40 percent ad valorem. Although some domestically produced polyurethane mattresses have characteristics similar to the latex ones, it appears that consumers are willing to pay a slightly higher price to assure themselves the quality of latex. A 1-year suspension of duty on this article and the subsequent reapplication of the duty should not adversely affect any domestic industry associated with mattress production.

Mr. Speaker, a similar bill to H.R. 2849 was passed by the House in the 94th Congress. The 1-year loss in customs revenues, should H.R. 2849 be enacted, is estimated to be $7,500.

The committee reported the bill without objection, and I recommend passage by the House at this time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. VANIK) that the House suspend the rules and pass the bill H.R. 2849, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to suspend until July 1, 1978, the rate of duty on mattress blanks of rubber latex.".

A motion to reconsider was laid on the table.

SUSPEND TARIFFS ON LATEX SHEETS

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2850) to suspend for a 3-year period the rate of duty on certain latex sheets, as amended.

The Clerk read as follows:

H.R. 2850

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 912.10 the following new item:

"912.12...	Sheets, over 0.90 inch but not over 1.50 inches in thickness, of molded pin core latex foam rubber (provided for in item 770.70, part 12A, schedule 7).	Free...	No change.	On or before 6/30/78".

SEC. 2. (a) The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the ninetieth day after the date of the enactment of this Act, the entry or withdrawal of any article—

(1) which was made after May 9, 1977, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if the amendment made by the first section of this Act applied to such entry or withdrawal,

shall, notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry or withdrawal had been made on the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. STEIGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from Wisconsin (Mr. STEIGER) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 2850 is to suspend until July 1, 1978, the rate of duty on certain latex sheets.

H.R. 2850 was introduced by our colleague, Mr. OTTINGER of New York.

Latex sheets are used with a polyurethane mattress blank core to produce a latex-polyurethane mattress. Latex sheets are not now produced in the United States. The only domestic plant that produced latex foam was destroyed by fire and while a new firm has domestically resumed limited latex foam production, it does not now produce latex foam sheets. The domestic mattress industry seeks this duty suspension.

A favorable report was received from the Department of the Treasury. Reports with no objections were received from the Departments of State, Commerce, and Labor.

The bill was amended to provide a 1-year duty suspension rather than a 3-year suspension in order to encourage latex sheet production by a domestic firm which recently started latex foam, but not latex foam sheet, production after a fire had destroyed its predecessor's plant. The bill was also amended to remove the retroactivity feature since domestic firms importing latex sheets have passed on to consumers a substantial portion of the duty and any refund of the entire duty would be a windfall to such firms since it would be impossible for them to pass on to the ultimate consumers that portion of the duty originally borne by such consumer.

The committee was unanimous in reporting H.R. 2850 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I support H.R. 2850 suspending for 1 year, until June 30, 1978, the rate of duty on latex sheets.

Molded latex foam rubber sheets are used in the manufacture of combination latex-polyurethane foam mattresses. Such mattresses make up only a very small part of total mattress sales. Currently, such sheets are dutiable at a column 1 rate of 6 percent ad valorem and at a column 2 rate of 25 percent ad valorem. Suspending the duty would result in a loss of customs revenue amounting to no more than about $3,000 annually.

Only one domestic firm, located in Shelton, Conn., manufactures latex foam rubber. Although they are expanding their production, there are no plans to begin making latex sheets covered by this bill. Removing the duty in this instance would improve the competitive position of combination polyurethane-latex mattresses in relation to other types of foam mattresses manufactured and sold in this country. The temporary nature of the bill, however, may encourage the Shelton plant to begin manufacturing these latex sheets along with their other latex products.

Mr. Speaker, the committee received no unfavorable comment on a suspension of duty in this case, and reported the bill unanimously. I recommend passage by the House at this time.

Mr. OTTINGER. Mr. Speaker, today, we are considering two bills—H.R. 2849 and H.R. 2850—that I introduced earlier this year. These bills suspend the tariff on mattress blanks of foam rubber latex and on latex sheets. I urge their passage and thank the committee, and particu-

larly the gentleman from Illinois (Mr. VANIK), the able chairman of the Subcommittee on Trades.

Unfortunately, the Ways and Means Committee amended H.R. 2849 and eliminated the provision which would have returned the duties that had been unjustly collected over the past 2 years. While I am pleased that the House is considering these bills today, I am hopeful that the Senate will reverse this decision to eliminate all retroactive relief.

The need for this legislation results from a nationally publicized case of arson that occurred in 1975. At that time, fire destroyed a rubber plant in Shelton, Conn., which served as the only domestic supplier of natural foam rubber latex. That ended the rationale for a tariff since there was no longer any domestic industry to protect—but the tariff remained.

Today, although the United States still lacks a domestic producer of these goods, duties on foam rubber latex still remain in effect. This situation has imposed a severe hardship on the manufacturers of foam rubber mattresses, since they have no alternative now but to import all of their raw foam rubber blanks at artificially high prices.

This unfortunate situation was first brought to my attention by Mr. Jack Freilicher of Yonkers, N.Y., president of the Rite Foam Sleep Products Corp., a mattress manufacturer severely affected and a constituent. I first introduced H.R. 2849 in the 94th Congress. It was unopposed in hearings in both the House and Senate and received favorable consideration in all departmental reports. While the House ultimately passed the bill, the Senate failed to act on it in the hectic days preceding the adjournment of Congress at the beginning of last October. Since Congress took no final action, Mr. Freilicher was forced to alter his production techniques and began to import latex sheets—in addition to the mattress blanks—since the duty on these materials is substantially lower. As a result, he asked that I also introduce a bill suspending the duty on latex sheets, H.R. 2850. Had the bill passed last year there would be no need now for retroactive provisions.

The function of my original legislation was to suspend the tariff, since the purpose of imposing a duty on imported merchandise is to protect a domestic industry and there was none. My bill this year also called for the return of duties that have been collected over the past 2 years. This was rejected by the committee.

Some of the members of the subcommittee were opposed to retroactivity because they assumed all of the costs of import were passed on to consumers and, therefore, that to return these duties would be a windfall to Mr. Freilicher and the Rite Foam Corp.

During the hearings, Rite Foam Corp. submitted substantial material documenting the fact that the corporation did not pass on the full 15-percent tariff to consumers.

However, this is not the case. Because of the tariff, the proportion of Rite Foam's selling price consumed by the cost of the mattress blank rose from a range of 27 percent to 34 percent in February 1975, before the fire, to a range of 33 percent to 42 percent in June, 1975, when blanks were imported. In other words, the firm demonstrated that it absorbed a loss ranging from 3 percent to 10 percent as a result of the increased cost of the mattress blanks.

In sum, the firm passed on only a portion of the 15-percent tariff to consumers—a small portion. However, the rise in prices caused by the tariff forced sales down. The firm thus lost revenue from both reduced profit per unit and reduced volume. The firm chose to absorb these losses, rather than lose further market position, while it waited for Congress to act and remove the tariff. In the absence of congressional relief, however, Rite Foam could no longer continue to accept such losses. In March 1977, the firm sold out to a larger corporation, G.M.C. Sleeper Products.

I feel very badly about this course of events. I believe that the consumer loses when the demise of another small business increases the concentration in a given market. On a personal level, I empathize with my constituent who suffered huge losses and was forced to sell out and become an employee in a large company. This has not been an easy adjustment for him, and I am very sorry to say that if Congress had acted last year this unhappy outcome might have been avoided.

I would like to point out that Mr. Freilicher and his former partner are still responsible for the debts of the Rite Foam Corp. The retroactive payments are absolutely necessary to compensate Rite Foam for the losses caused by the Federal Government's tariff and to thus protect the firm's creditors.

Economic conditions as they are today make it extremely difficult for many small businesses to operate successfully. It seems inexcusable to me that the Government would allow an obsolete duty to remain in effect and eventually force a small business like Rite Foam out of business. At this point, I only hope the Senate will give more sympathetic consideration to reinstating the retroactive provision of H.R. 2849.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Ohio (Mr. VANIK), that the House suspend the rules and pass the bill H.R. 2850, as amended.

The question was taken; and (two-thirds having voted in favor thereof), the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to suspend until after the close of June 30, 1978, the duty on certain latex sheets."

A motion to reconsider was laid on the table.

CONTINUE TARIFF SUSPENSION ON SYNTHETIC RUTILE

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3387) to continue until the close of June 30, 1980, the existing suspension of duties on synthetic rutile, as amended.

The Clerk read as follows:

H.R. 3387

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) item 911.25 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out "6/30/77" and inserting in lieu thereof "6/30/79".

(b) The amendment made by subsection (a) shall apply with respect to articles entered, or withdrawn from warehouse,, for consumption, after June 30, 1977.

The SPEAKER pro tempore. Is a second demanded?

Mr. STEIGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from Wisconsin (Mr. STEIGER) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 3387 is to suspend until June 30, 1979 the duty on synthetic rutile.

H.R. 3387 was introduced by our colleague, Mr. WAGGONNER of Louisiana.

Synthetic rutile is derived from ilmenite through a process of chemical upgrading. Since natural rutile is much more costly than ilmenite, increasing quantities of synthetic rutile are being produced. Titantium dioxide pigments comprise by far the largest single use of natural and synthetic rutile. At the present time, there is one domestic producer of synthetic rutile but all its present production is consumed internally.

A favorable report was received from the Department of Interior. Reports with no objections were received from the Departments of State, the Treasury, Commerce, and Labor and from the Office of the Special Representatives for Trade Negotiations.

Objection to the continuation of this duty suspension was received from one domestic firm which in January 1977 started domestic production of synthetic rutile. While theoretically that plant has the capacity of increasing production to supply third parties, the plant today only supplies the internal needs of this firm for synthetic rutile. Furthermore, this firm is studying the possibility of constructing another plant which would consume all of the theoretical surplus synthetic rutile production of this plant, thereby rendering all domestic synthetic rutile production captive.

The bill was amended to provide for a termination date of June 30, 1979 rather than June 30, 1980 in order that the domestic synthetic rutile supply available to independent firms can be reviewed at that time to see if the duty suspension is still warranted.

The committee was unanimous in reporting H.R. 3387 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I support H.R. 3387 continuing the temporary suspension of the column 1 duty on synthetic rutile until June 30, 1979.

The manufacture of synthetic rutile involves a complicated chemical process that, while costly, produces a quality substitute that is considerably less expensive than natural rutile. Synthetic rutile currently is used solely in the manufacture of titanium dioxide pigments. However, its use probably will be expanded in the near future to the production of titanium metal, welding rod coatings and other articles where natural rutile is now used.

Imports of synthetic rutile have increased steadily since 1973; and, for the past several years, the column 1 duty has been suspended. Under the Tariff Schedules of the United States, synthetic rutile is subject to a column 1 duty of 7.5 percent ad valorem and a column 2 rate of 30 percent ad valorem. The suspension has served to make domestic importers more competitive in obtaining the scarce resources of both natural and synthetic rutile.

Early this year, a single U.S. company began production of synthetic rutile and expects to make available 110,000 short tons annually. The temporary nature of the suspension will permit a review by Congress in 2 years so that its effect on this company can be evaluated. Continuation of the suspension at this time will result in no additional loss in customs revenues.

Mr. Speaker, the committee heard no objection to enactment of H.R. 3387 from any source and reported the bill unanimously. I urge the House to pass this needed legislation at this time.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman from Wisconsin for yielding to me. I would like to ask a question. I have been watching these bills from the Committee on Ways and Means whisk through, and then I hear that we are also going to get some unanimous-consent requests later. These matters always appear to be brought up under a closed rule and I am somewhat constrained to object to unanimous-consent requests, myself, emanating from the Committee on Ways and Means.

Let me ask, is there really an earth-shaking need for these, or is this merely a ritual that we are required to engage in from time to time?

Mr. STEIGER. Mr. Speaker, if I may respond to my colleague, the gentleman from Ohio (Mr. ASHBROOK), let me say that the answer to the gentleman's question is yes, I believe they are needed. I might add that I am going to talk a little bit on the next bill which is on bicycle parts because it made its way to the front page of the Washington Post this morning. But, let me further add that this is not a ritual. All we are dealing with here are a series of admittedly small, modest problems that arise in the Tariff Code where there are matters that involve say a manufacturing process, or where a waiver is requested because it was in the code in 1962. And as I am sure the gentleman from Ohio knows, that does not get changed very often because we really do not go back and try to redo it. Further, we have not had an adverse statement on this.

Mr. ASHBROOK. I am guessing that that is probably why.

Mr. STEIGER. We did have the Smoot-Hawley Tariff Act the House worked on for a long period in 1934, I believe that took some 4 weeks, or whatever time it was for the Committee on Ways and Means and the House to enact the bill.

What we have here is a suspension. These are not closed rules. If more than one-third are against it, they can force us to go to the Rules Committee and then come back.

We have changed our procedure, this is not the old way it was done. We have hearings on all of them and we have markup sessions on all of them. These meetings are open to the public. Anyone can come in and say a bill may be a good or a bad idea. So this is handled in a very different fashion admittedly than it used to be handled.

Mr. ASHBROOK. Mr. Speaker, if the gentleman will yield further, I thank my friend. This goes a far way in settling the trepidation I have. I see these things go through here and then they go to the Senate and then they come back with nongermane amendments. I am concerned with the process and I am inclined sometimes to object.

Mr. CONABLE. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from New York.

Mr. CONABLE. Mr. Speaker, I share with the gentleman from Ohio concern about the overuse of the suspension procedure which does result, in effect, in a closed rule. However, if ever we should have a suspension procedure it is on some of these bills. We have sometimes a need to reduce the tariff but not to eliminate it completely because to continue to charge the full tariff or prevent the reduction of a tariff would be simply to add to the price the American people are going to have to pay for a finished product involving this substance. If there is no production of this substance in this country that does not make much sense. However if we were to eliminate the tariff completely in some cases—we will find a factory has been burned and is being rebuilt or something of that sort—we would have to go through a very elaborate procedure to reinstate the tariff. That makes for a great deal of difficulty later on. Also these tariffs become part of a bargaining procedure in the international arena and if we eliminate the tariff completely, those bargaining advantages are lost for that purpose.

The bills that have come up this far are bills that involve suspension on the part of the Ways and Means Committee after hearings. It would be silly to waste a great deal of time on them and to raise the potential for a great deal of amendment.

As to the Senate using these vehicles, that is another matter. There is no way we can control that, and if the other body wishes to they will use these vehicles or they will use something else. That is one of the problems we have and I share the gentleman's concern on this aspect.

It seems to me this procedure is well designed to provide adequate safeguard against abuse. With the types of bills we have today I want to reassure the gentleman there is not any real reason for concern.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield further?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman from Wisconsin.

I think once in a while it is appropriate for a non-Ways and Means Committee member to ask questions on these bills. I do not ask those questions because of any lack of credibility or any lack of confidence in the committee members. I come from a committee in which the House has virtually no confidence. The House rewrites virtually everything we do. I realize that my mentality may have developed along that line. However, with Ways and Means it seems we underwrite everything that is done and maybe there is a good reason.

However, I think the gentlemen have given me the answer.

Mr. VANIK. Mr. Speaker, we have worked hard in the Trade Subcommittee and in the Ways and Means Committee to weed out of these small bills anything that is not in the national interest. While these bills affect only one small segment of this or that particular industry, they have a cumulative positive impact on the whole economy.

In general, the various bills will benefit the consumer and will also enable American companies to make products here in the United States or compete with foreign products or in some other way maintain employment or provide a service.

We have spent some 5 days in public hearings and markup on these bills. We considered 43 bills but only ordered reported 22 bills, and 19 of those were amended. We have tried to be very selective and careful in handling our work.

Mr. STEIGER. Mr. Speaker, I thank both my colleagues from Ohio and my colleague from New York.

The question asked by the gentleman from Ohio (Mr. ASHBROOK) is a good one and it is worth considering and noting before we complete these bills.

Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. VANIK) that the House suspend the rules and pass the bill (H.R. 3387), as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to continue until the close of June 30, 1979, the existing suspension of duty on synthetic rutile."

A motion to reconsider was laid on the table.

SUSPEND TARIFFS ON CERTAIN BICYCLE PARTS

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5263) to suspend until the close of June 30, 1979, the duty on certain bicycle parts, as amended.

The clerk read as follows:

H.R. 5263

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) item 912.05 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended—

(1) by inserting ", and parts thereof" immediately after "Generator lighting sets for bicycles"; and

(2) by striking out "12/31/76" and inserting in lieu thereof "6/30/80".

(b) Item 912.10 of the Appendix to such Schedules is amended to read as follows:

"912.10	Caliper brakes, drum brakes, coaster brakes, three-speed hubs incorporating coaster brakes, three-speed hubs not incorporating coaster brakes, click twist grips, click stick levers, multiple free wheel sprockets, cotterless type crank sets, rims, parts of all the foregoing, and parts of bicycles consisting of sets of steel tubing cut to exact length and each set having the number of tubes needed for the assembly (with other parts) into the frame and fork of one bicycle (provided for in item 732.36, part 5C, schedule 7)	Free	No change	On or before 6/30/80".

SEC. 2. (a) The amendments made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption after the date of the enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the 90th day after the date of the enactment of this Act, the entry or withdrawal of any article (other than any derailleur) to which item 912.05 or 912.10 of the Tariff Schedules of the United States (as in effect on December 31, 1976) applied and—

(1) which was made after December 31, 1976, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if any of the amendments made by the first section of this Act applied to such entry or withdrawal,

shall notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry or withdrawal had been made on the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. STEIGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from Wisconsin (Mr. STEIGER) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 5263 is to continue from December 31, 1976, to June 30, 1980, the duty suspension on certain bicycle parts.

H.R. 5263 was introduced by our colleague, Mr. ROSTENKOWSKI, of Illinois.

The basic purpose of the duty suspension is to improve the ability of domestic producers to compete with foreign bicycle manufacturers by reducing the landed cost of certain imported bicycle parts and accessories which are not available from domestic sources. The great bulk of imported bicycles are subject to rates of duty substantially lower than the parts covered by the duty suspension.

Favorable reports were received from the Departments of Commerce, Labor, and the Treasury. A report with no objection was received from the Department of State.

Technical amendments were made to make the bill effective from the date of enactment with a provision for liquidation or reliquidation of entries prior to enactment but after December 31, 1976, the date the prior suspension expired. The duty suspension termination date was amended to June 30, 1980, from June 30, 1979, in order to provide a common expiration date for most of the duty suspension bills acted upon by the committee.

The committee was unanimous in reporting H.R. 5263 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, in this morning's Washington Post there is a George Lardner story on what the Post headline writer has called "The Summertime Santas." They are these trade bills that the House is now dealing with. Thus, I would like to take a couple minutes just to talk a little about this problem, because I think the Post story, frankly, is very wrong and mischievous in terms of what has happened in the House and, I think, also in the Senate in how we handle these bills.

The bill now before us, H.R. 5263, extends the suspension of the column 1 duties on certain bicycle parts and accessories from December 31, 1976, until June 30, 1980.

Although a temporary suspension on bicycle parts has been passed over the last couple years, it was allowed to expire in December 1976. H.R. 5263 reinstates the suspension and makes certain additions to the definition of bicycle parts to which the suspension applied. Further, it removes the suspension on derailleurs. Column 2 duties, as in the past, would remain unchanged.

The suspension previously covered derailleurs, caliper brakes, drum brakes, certain hubs, grips, click stick levers, and multiple freewheel sprockets. News items to be included under the suspension would be generator lighting sets for bicycles, coaster brakes, alloy-butted frame tubing, frame logs, alloyed cotterless wrench sets and alloyed rims. None of these items currently are produced in the United States.

I might inject at this point, I will take time to read the speech, because I do not want our Post friends to say we did not adequately discuss this bill.

The whole point is that we changed the procedures in the Committee on Ways and Means as a result of some pressure from our colleagues; if I remember correctly, the gentleman from Texas (Mr. PATMAN) and the gentleman from Wisconsin (Mr. ASPIN) who objected to the way we used to do business.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. Of course.

Mr. VANIK. I just note that there is not a newsman in the gallery.

Mr. STEIGER. Well, I cannot refer to other sections of the House Chamber, so I will not, but perhaps George Lardner will run down at some point and read the RECORD.

But, as a result of the pressures of Ralph Nader and Members of the House, we changed our procedures. We now set the bills for hearings. We have a public hearing and we allow anybody who wants to do so to come in and testify. We come in and mark the bill up in public and report it out. In this case, it was a unanimous vote in spite of the fact that there is opposition to the bill from, for example, the imported bicycle people. They would like to continue to have an advantage over domestic bicycle manufacturers. That is the whole issue that is involved in this bill.

Current tariff schedules reflect a duty of between 5.5 and 11 percent ad valorem on finished bicycles and a 15 to 19 percent ad valorem duty on bicycle parts. As a consequence, imported bicycles have increased their share of the market in this country by between 18 and 28 percent. Until this discrepancy in duty rates can be rectified, the suspension is necessary to secure the competitive position of domestic bicycle manufacturers who must import certain parts and accessories.

Therefore, Mr. Speaker, I think the bill is a good bill, and corrects what would otherwise be a disadvantageous position for the domestic bicycle industry. I urge its adoption.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank my colleague for yielding to me. The gentleman makes a very excellent case for the bill.

He said something about Ralph Nader. I only want the record to show that the concerns I have expressed on these bills, the Ways and Means Committee and on procedure, are in no way reflected by any degree of appreciation support, concern or feelings I might have toward Ralph Nader or any response to any thought he might have. They are entirely my own.

Mr. STEIGER. I recognize the gentleman's feelings. I just thought it would be interesting if we had the Ashbrook-

Nader coalition. I did not know whether that did a disservice to both or either of them.

Mr. CONTE. Mr. Speaker, I rise in support of H.R. 5263, which would suspend until June 30, 1979, the duty on certain bicycle parts.

As you know, this is the centennial year of the American bicycle industry. However, the celebration has not been a very joyous one. From 1965 to 1974 imports of foreign-manufactured bicycles have increased their share of the domestic market from 18 percent to 28 percent. The American manufacturers are finding it increasingly hard to compete with lower priced imports.

The purpose of this duty suspension is to improve the ability of domestic producers to compete with foreign bicycle manufacturers by reducing the cost of certain imported bicycle parts and accessories which are not available from American suppliers.

Columbia Manufacturing Co., which is in my district, is one of the oldest bicycle manufacturers in the country. It has been severely hurt by the high import duties on bicycle parts. What is happening at Columbia is simply representative of what is happening in the bicycle manufacturing industry in general. This trend must be abated before we see more unemployment in the bicycle industry.

This bill provides no special preference for the bicycle industry. It simply tries to give them a fair chance to compete with foreign imports which are presently subjected to a very low duty.

This bill was unanimously reported favorably by the Ways and Means Committee. It received favorable reports from the Departments of Commerce, Labor, and Treasury. I urge its adoption today.

Thank you.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. VANIK) that the House suspend the rules and pass the bill H.R. 5263, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to suspend until the close of June 30, 1980, the duty on certain bicycle parts."

A motion to reconsider was laid on the table.

TARIFF TREATMENT OF FILM, STRIPS, SHEETS, AND PLATES OF CERTAIN PLASTICS OR RUBBER

Mr. VANIK. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5285) to amend the Tariff Schedules of the United States with respect to the tariff treatment accorded to sheets manufactured from acrylic resin materials, as amended.

The Clerk read as follows:

That subpart B of part 12 of schedule 7 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out "otherwise processed" in headnote 2(iv)(D) and inserting in lieu thereof "otherwise usefully processed".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this act.

The SPEAKER pro tempore. Is a second demanded?

Mr. CONABLE. Mr. Speaker, I demand a second?

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

The Speaker pro tempore. The gentleman from Ohio (Mr. VANIK) and the gentleman from New York (Mr. CONABLE) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 5285 is to clarify a headnote of the Tariff Schedules of the United States to insure that acrylic sheet shall be classified as "processed" only if the processing is related to a commercial purpose.

H.R. 5285 was introduced by our colleague, Mr. LEDERER of Pennsylvania.

Some importers have developed a practice of drilling superfluous holes in the excess border of nonflexible acrylic sheet. This practice results in such sheet being classified as "processed" and enjoying a lower rate of duty. This practice was initially disapproved by the Customs Service but that decision was reversed by the Treasury Department. The committee agreed that the "processed" classification should apply only to useful processing which is related to a commercial purpose rather than superfluous processing done only to enjoy a lower rate of duty.

Reports with objections to H.R. 5285 were received from the Departments of Commerce, State, and the Treasury. They characterized the original bill as an attempt to unilaterallly raise duty on the articles which would be in violation of our GATT obligations.

In view of those objections, the bill was amended to delete the proposed new TSUS item which would have made all imports of unprocessed film, strips, sheets, and plates of acrylic resin, regardless of whether flexible or nonflexible, dutiable at the higher duty rate now applicable only to nonflexible unprocessed sheets.

The bill, as amended, is, therefore, solely directed at reversing the Treasury practice of permitting imports of acrylic resin sheets to be classified at the lower rate of duty by reason of processing unrelated to a useful purpose. Such a legislated change in Customs practice is consistent with U.S. obligations under the articles of the GATT since, in the view of the committee, approval of H.R. 5285, as amended, carries out the original intent of the Congress in enacting the Tariff Classification Act of 1962 under which the Tariff Schedules of the United States was established.

The committee was unanimous in reporting H.R. 5285 as amended, and I urge its passage.

Mr. CONABLE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I support H.R. 5285 which amends the Tariff Schedules of the United States with respect to the treatment of sheets manufactured from acrylic resin.

Currently, perfunctory improvements, such as holes drilled along the sides, will allow imported sheets made from acrylic resin more favorable treatment than those without such improvements. It has been alleged that improvements are made with no functional purpose in order to enjoy a lower duty.

Plain acrylic sheets are now classified in a manner that subject them to a column 1 duty of 8.5-percent per pound and a column 2 duty of 50-cents per pound. Improved sheets are classified differently and have a lower column 1 duty of 8.5-percent ad valorem and a column 2 duty of 80-percent ad valorem.

H.R. 5285 would amend the tariff schedules so that acrylic resin sheets, in order to receive a lower rate of duty as an improved product, must have been improved "for a useful commercial purpose." This would prevent superfluous modification of these sheets for the sole purpose of gaining more favorable tariff treatment.

Mr. Speaker, H.R. 5285 was reported unanimously by the committee. It is estimated to generate a revenue gain of approximately $200,000. I recommend passage by the House at this time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. VANIK) that the House suspend the rules and pass the bill H.R. 5285, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to amend the Tariff Schedules of the United States with respect to the tariff treatment accorded to film, strips, sheets, and plates of certain plastics or rubber.".

A motion to reconsider was laid on the table.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion, on which further proceedings were postponed, in the order in which that motion was entertained.

Votes will be taken in the following order:

H.R. 6936, by the yeas and nays;

House Joint Resolution 372, by the yeas and nays;

H.R. 7012, by the yeas and nays;

H.R. 2387, by the yeas and nays;

H.R. 6974, by the yeas and nays;

H.R. 6975, by the yeas and nays; and

H.R. 4319, by the yeas and nays.

The Chair will reduce to 5 minutes the time for any electronic votes after the first such vote in this series.

FEDERAL ELECTION COMMISSION

The SPEAKER pro tempore. The unfinished business is the question of sus-

pending the rules and passing the bill H.R. 6936.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New Jersey (Mr. THOMPSON) that the House suspend the rules and pass the bill H.R. 6936, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 383, nays 22, not voting 28, as follows:

The Clerk announced the following pairs:

Mr. Burke of Massachusetts with Ms. Fenwick.

Mr. Dent with Mr. Marriott.

Mr. Brademas with Mr. Wiggins.

Mr. Biaggi with Mr. Flippo.

Mr. Murphy of New York with Mr. McKinney.

Mr. Howard with Mr. Skubitz.

Mr. Badillo with Mr. Crane.

Mr. Koch with Mr. Dickinson.

Mr. Foley with Mr. Harsha.

Mr. Charles Wilson of Texas with Mr. Horton.

Mr. Teague with Mr. Diggs.

Mr. Roncalio with Mr. Patterson of California.

Mr. Seiberling with Mr. Gudger.

Mr. BADHAM changed his vote from "yea" to "nay."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 1435) to authorize appropriations for the Federal Election Commission for fiscal year 1978.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 1435

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 319 of the Federal Election Campaign Act of 1971 is amended—

(1) by striking out "and" after "September 30, 1976,", and

(2) by inserting after "September 30, 1977" a comma and the following: "and $7,500,000 for the fiscal year ending September 30, 1978".

MOTION OFFERED BY MR. THOMPSON

Mr. THOMPSON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. THOMPSON moves to strike out all after the enacting clause of the Senate bill S. 1435 and to insert in lieu thereof the provisions of H.R. 6936, as passed by the House.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "To amend the Federal Election Campaign Act of 1971 to extend the authorization of appropriations contained in such Act."

A motion to reconsider was laid on the table.

A similar House bill (H.R. 6936) was laid on the table.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b)(3), rule XXVII, the Chair announces he will reduce to a minimum of 5 minutes the period of time within which a vote by electronic device may be taken on all the additional motions to suspend the rule on which the Chair has postponed further proceedings.

NATIONAL FAMILY WEEK

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the joint resolution (H.J. Res. 372), as amended.

The Clerk read the title of the joint resolution.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. LEHMAN) that the House suspend the rules and pass the joint resolution (H.J. Res. 372), as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 400, nays 3,

answered "present" 1, not voting 29, as follows:

[Roll No. 425]

NOT VOTING—22

Badillo	Flippo	Roncalio
Biaggi	Holland	Seiberling
Brademas	Howard	Skubitz
Burke, Mass.	Koch	Teague
Crane	McKinney	Wiggins
Dent	Marriott	Wilson, Tex.
Derrick	Murphy, N.Y.	
Dickinson	Patterson	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts and Mr. Brademas for, with Mr. Teague against.

Mr. Howard and Mr. Biaggi for, with Mr. Crane against.

Until further notice:

Mr. Dent with Mr. Dickinson.

Mr. Roncalio with Mr. Wiggins.

Mr. Seiberling with Mr. McKinney.

Mr. Derrick with Mr. Flippo.

Mr. Charles Wilson of Texas with Mr. Holland.

Mr. Badillo with Mr. Marriott.

Mr. Murphy of New York with Mr. Patterson.

Mr. Koch with Mr. Skubitz.

Mr. WALSH changed his vote from "yea" to "nay."

Mr. YATES and Mr. JONES of Oklahoma changed their votes from "nay" to "yea."

So (two-thirds not having voted in favor thereof) the motion was rejected.

The result of the vote was announced as above recorded.

INCREASE IN SUPERGRADES FOR FEDERAL COURT ADMINISTRATION

The SPEAKER (Mr. AMMERMAN). The unfinished business is the question of suspending the rules and passing the bill H.R. 6974, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Colorado (Mrs. SCHROEDER) that the House suspend the rules and pass the bill H.R. 6974, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 189, nays 224, not voting 20, as follows:

Messrs. CAVANAUGH, GAMMAGE, MAHON, GONZALEZ, LEDERER, and DAN DANIEL changed their vote from "nay" to "yea."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, as passed.

The result of the vote was announced as above recorded.

The title was amended so as to read: "A bill to amend title 5, United States Code, to provide that hearing examiners shall be known as administrative law judges, and to increase the number of such positions which the Civil Service Commission may establish and place at GS–16 of the General Schedule."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. LEHMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter on House Joint Resolution 372 and on the bill H.R. 7012.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

RETENTION OF FEDERAL LIFE AND HEALTH INSURANCE BENEFITS DURING RETIREMENT

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 4319, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Maryland (Mrs. SPELLMAN) that the House suspend the rules and pass the bill H.R. 4319, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 373, nays 37, not voting 23, as follows:

Mr. Roncalio with Mr. Mr. McKinney.
Mr. Teague with Mr. Charles Wilson of Texas.
Mr. Koch with Mr. Seiberling.
Mr. Neal with Mr. Holland.
Mr. Brooks with Mr. Derrick.

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. NEAL. Mr. Speaker, I was detained on official business and missed the last vote, the vote on H.R. 4319. I wish the RECORD to show that had I been present. I would have voted "yea."

REREFERRAL OF H.R. 8223 FROM COMMITTEE ON JUDICIARY TO THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. RODINO. Mr. Speaker, I ask unanimous consent that the bill H.R. 8223 be rereferred from the Committee on the Judiciary to the Committee on Interior and Insular Affairs.

The SPEAKER pro tempore (Mr. ZABLOCKI). Is there objection to the request of the gentleman from New Jersey?

There was no objection.

TEMPORARY SUSPENSION OF DUTY ON INTRAVENOUS FAT EMULSION

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 1904) to provide duty-free treatment for intravenous fat emulsions, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Reserving the right to object, Mr. Speaker, I do so for the purpose of giving the gentleman from Ohio (Mr. VANIK), the chairman of the subcommittee, an opportunity to explain the bill.

Mr. VANIK. If the gentleman will yield, Mr. Speaker, the purpose of H.R. 1904 is to suspend until June 30, 1980, the duty on intravenous fat emulsion.

H.R. 1904 was introduced by our colleague, Mr. STARK of California.

Intravenous fat emulsion is used as a source of calories and essential fatty acids for patients requiring intravenous nutrition. It provides the missing nutritional ingredient essential for successful long-term intravenous feeding and is especially valuable in treating infants and patients under cancer therapy or extensive burn treatment. There is currently no production of any intravenous fat emulsion in the United States.

Reports which opposed the permanent reduction but which did not object to a 3-year suspension of the duty were received from the Departments of Commerce, State, the Treasury, Agriculture, and Labor, and from the Office of the Special Representative for Trade Negotiations.

The bill was amended to suspend the duty until June 30, 1980, rather than permanently reduce the duty. A temporary suspension preserves the negotiating value of a permanent reduction for the multilateral trade negotiations where the United States will be able to obtain something in return for a permanent duty reduction.

The committee was unanimous in reporting H.R. 1904, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I withdraw my reservation of objection.

Mr. VANIK. Mr. Speaker, I thank the gentleman.

Mr. STEIGER. Mr. Speaker, I support H.R. 1904 providing a temporary suspension of duty for intravenous fat emulsion until June 30, 1980.

Currently, only one type of intravenous fat emulsion is imported for use in the United States. The product, Intralipid, is imported from Sweden and contains a heretofore missing nutritional ingredient essential for successful long-term intravenous feeding. It is used most importantly in treating infants, burn patients, and cancer therapy patients. There is no domestic production of any type of intravenous fat emulsion, and the special Intralipid product has been imported to this country since 1975.

Under the Tariff Schedules of the United States, intravenous fat emulsion products are subject to a column 1 duty of 5 percent ad valorem and a column 2 duty of 25 percent ad valorem. The annual loss of custom revenue, should H.R. 1904 be enacted, is estimated to be approximately $126,000.

Mr. Speaker, insuring that intravenous fat emulsion is available at the lowest possible cost is of great importance to the seriously ill or injured whose medical expenses likely will be very high anyway. Duty-free treatment of this product is certainly one way of reaching this goal. The temporary nature of the suspension will enable Congress to review its action should domestic production in this area develop. Furthermore, it will preserve the duty as a negotiating item in the multilateral trade negotiations—MTN.

Mr. Speaker, the committee received no objection to H.R. 1904 from any source, and reported the bill unanimously. I recommend passage by the House at this time.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. ASHBROOK. Yes, Mr. Speaker, reserving he right to object, I have several questions to direct to my friend and colleague, the gentleman from Ohio (Mr. VANIK).

It is my understanding that these bills were not even announced last Friday when we adjourned; is that correct?

Mr. VANIK. If the gentleman will yield, Mr. Speaker, I understand that they were on the unanimous consent calendar. They were reported out of committee over 2 weeks ago.

Mr. ASHBROOK. I imagine they were not printed in the Record. Are these private bills?

Mr. VANIK. No. These bills are minor bills which passed the Committee on Ways and Means unanimously. We had hearings on all of them. We very carefully considered them, and we took these from the list of about 43, so that we have these bills on the Suspension Calendar today.

Mr. ASHBROOK. Further reserving the right to object, Mr. Speaker, may I ask the gentleman how many bills of this type are in your committee at the present time?

Mr. VANIK. I do not know how many bills we have left. I think we have about 18 more which are left.

I might point out that the hearings were open. The markup was open. There was full discussion of the entire problem which related to each piece of legislation by the administration and by all interested parties. There was no objection to this bill. This bill is vital in order to provide for a very essential matter of health affecting a very important segment of the American population.

Mr. ASHBROOK. Further reserving the right to object, Mr. Speaker, as I read the bills, two of them must be private bills because they are for aid to individuals. The gentleman indicated that they were not private bills.

Mr. VANIK. If the gentleman will yield further, there are two private bills on the list. I will be very glad to discuss those when we reach them on the Suspension Calendar.

Mr. ASHBROOK. Further reserving the right to object, Mr. Speaker, the gentleman from Wisconsin (Mr. STEIGER) indicated that there was some change with respect to the way the unanimous consent and suspension bills are now handled.

I would say that many Members, including myself, sometimes wonder about how these bills come out of the Committee on Ways and Means. Frankly, we do not know whether they draw them out of a hat or take them up on the basis of seniority or on the basis of one per Member each year or two per Member or on contributions.

Mr. STEIGER. Mr. Speaker, will the gentleman yield?

Mr. ASHBROOK. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Speaker, the answer is that these are not Members' bills brought up in the way in which we used to handle them, as I understand it, on the Committee on Ways and Means. Therefore, what we are going to have as we go through this list is bills that come from across the country, from members and nonmembers of the Committee on Ways and Means. They are not done

by seniority or on behalf of individual Members. They are not done on any basis except that the chairman of the subcommittee calls them up for a hearing.

We went through 5 days, I think, on every one of the little tariff bills that had been introduced, without regard to who introduced them and without regard to the position of anybody. We had all of the administration representatives present; that is, the Special Trade representative, the International Trade Commission, the Labor Department, the Commerce Department, and the State Department, all of whose representatives came and gave their views.

We then also had the views of those Members who were in favor of the legislation, who could come and testify and also those who were opposed to the legislation.

May I say to my colleague, the gentleman from Ohio (Mr. ASHBROOK) that the decision that was made on the bills that are on the floor today are on those bills that were unanimously adopted by the subcommittee and unanimously adopted by the full committee. We did not bring to the floor some bills, including one in which our colleague, the gentleman from Maryland was interested, because there were some objections. We will go back to those bills. I hope we can report some of those, and those bills will come up with the full knowledge of the Members that there was objection or that there was a problem in the domestic market or some small operation, so that all of the Members will be aware of that. All of these measures were considered as to whether they were appropriate, did they solve a problem, did they cost much money, and so forth.

Mr. ASHBROOK. Mr. Speaker, further reserving the right to object, let me say that I appreciate the response of the gentleman from Wisconsin (Mr. STEIGER) and, with the very fine assurance that a nonmember of the Committee on Ways and Means does have a chance to get a bill out of that committee on occasion, I will withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection, to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part 3 of schedule 4 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 437.60 the following new item:

"437.62 Intravenous fat emulsion..... Free... Free".

(b) The amendment made by subsection (a) shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of enactment of this Act.

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 907.80 the following new item:

"907.75	Intravenous fat emulsion (provided for in item 440.00, part 3C, schedule 4).	Free...	Free...	On or before 6/30/80".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to suspend until July 1, 1980, the duty on intravenous fat emulsion.".

A motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON WOOD EXCELSIOR

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 2692) to suspend for 2 years the duty on wood excelsior imported from Canada, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not object, I take this time so as to give the gentleman from Ohio (Mr. VANIK) a chance to explain the bill.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 2692 is to suspend until June 30, 1980, the duty on wood excelsior.

H.R. 2692 was introduced by our colleague, Mr. DRINAN of Massachusetts.

Wood excelsior, which is produced by shredding wood blocks, consists of thin, narrow, flexible strands of wood which tend to curl and form a loosely joined mass. Its uses include packing material for fragile goods, a filling material for low-priced mattresses and furniture, a filter and vapor-dispensing agent for evaporative coolers, and in the filtration of crude oil and petroleum products. Due to the very high volume/weight ratio, and its low-unit value, long distance shipping is expensive and uneconomical. This bill would reduce the cost of wood excelsior to firms in New England that presently import excelsior from Canada.

Reports which opposed the permanent reduction but which did not object to a 3-year suspension of the duty were received from the Departments of Commerce, State, the Treasury, Agriculture, and Labor and from the Office of the Special Representative for Trade Negotiations.

The bill was amended to remove the specific reference to imports from Canada in order to remove the objection that a duty suspension limited to imports from Canada violates our GATT obligations. In addition, a technical amendment was made to specify a certain calendar date, June 30, 1980, for expiration rather than 2 years after enactment. It is believed that a temporary duty suspension will not adversely affect the U.S. ability to negotiate in the context of the multilateral trade negotiations a permanent duty reduction and receive in return some permanent trade benefits.

The committee was unanimous in reporting H.R. 2692 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I also wish to lend my support to H.R. 2692, suspending until June 30, 1980 the duty on imported wood excelsior.

Currently, under section 904 of the Tariff Schedules of the United States—TSUS—column 1 entries of wood excelsior are subject to an 8-percent ad valorem duty. This bill, on the date of enactment, would temporarily suspend the duty until June 30, 1980.

Wood excelsior is a light-weight porous material composed of flexible strands of wood. Because of its resilience, wood excelsior is used most notably as protective packaging material, an acoustical component filling, or padding, a filtering, or padding, a filtering agent, and soil covering.

Although there are 12 known domestic plants now producing wood excelsior, increased demand requires this country to import additional quantities of the product. These imports come almost exclusively from Canada, because high shipping costs associated with weight/volume/unit cost relationships tend to preclude shipment over long distances.

Imports of wood excelsior have decreased by about 90 percent over the past 10 years, and the import consumption ratio in 1976 was less than 0.05 percent. A temporary suspension of duty would encourage imports of this important product from Canada with negligible impact on domestic industry.

Objections were raised by the administration over the original language of the bill, which limited the suspension of duty to imports from Canada. Such a discriminatory clause would be in violation of our commitments under the General Agreement on Tariffs and Trade—GATT. However, specific reference to Canada has now been removed from the bill, and I can see no objection to the bill as it now reads. Revenue loss is expected to be minimal.

Mr. Speaker, the committee reported H.R. 2692 unanimously, with no further objections to the temporary suspension of duty in this instance. I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 2692

Be it enacted by the Senate and House of Representatives of the United States of America in Congerss assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by adding immediately after item 903.90 the following new item:

"904.00	Wood excelsior, including excelsior pads and wrappings (provided for in item 200.25, part 1A, schedule 2), if Canadian article..	Free.	No change.	On or before the close of the 2-year period beginning on the effective date of this item.....".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendments:

Page 1, line 5, strike out "905.90" and insert "903.80".

Page 1, strike out the matter appearing immediately after line 6 and insert the following:

"904.00	Wood excelsior, including excelsior pads and wrappings (provided for in item 200.25, part 1A, schedule 2).....	Free.	No change	On or before 6/30/80"

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to suspend until the close of June 30, 1980, the duty on wood excelsior."

A motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON SYNTHETIC TANTALUM/COLUMBIUM CONCENTRATE

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 2982) to suspend for a 2-year period the duty on synthetic tantalum-columbium concentrate, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I am delighted to yield to the gentleman from Ohio (Mr. VANIK) so he may offer an explanation of the bill.

Mr. VANIK. Mr. Speaker, I thank my colleague, the gentleman from Wisconsin, who is the ranking minority member of the Subcommittee on Trade.

Mr. Speaker, the purpose of H.R. 2982 is to suspend until June 30, 1980, the duty on synthetic tantalum/columbium concentrate.

H.R. 2982 was introduced by our colleague, Mr. DRINAN of Massachusetts.

Tantalum/columbium concentrate is used in the production of steels used in heavy equipment, oil and gas pipelines and structural steel. Tantalum metal is a basic material in the production of tantalum capacitors, a vital component in most electronic circuitry, as well as a corrosion resistant material for chemical processing equipment handling acids and other corrosive chemicals. Columbium oxide is an alloying ingredient in superalloys used in jet engine parts and other high-strength specialty steels.

There is no known domestic production of natural or synthetic tantalum/columbium concentrate which are used interchangeably. Natural tantalum/columbium concentrate is presently duty free but increased demand has created shortages and has driven up the price of the natural concentrate and domestic consumers are turning to synthetic concentrate. Domestic consumers seek the temporary duty suspension.

Favorable reports were received from the Departments of Commerce, State, and Treasury. Reports with no objections were received from the Department of Labor and from the Office of the Special Representative for Trade Negotiations.

A technical amendment was made to the bill to make the duty suspension expiration date a calendar date, June 30, 1980, rather than 2 years after date of enactment and also in order to provide a common expiration date for most of the duty suspension bills acted upon by the committee.

The committee was unanimous in reporting H.R. 2982 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 2982 suspending until June 30, 1980, the rate of duty on synthetic tantalum/columbium concentrate.

Currently, there is no domestic mining of natural columbium or any domestic production of synthetic tantalum/columbium concentrate. Since 1969, market prices have made it impossible to mine the limited deposits of natural columbium located in the United States. Therefore, all raw materials of this type needed for domestic industry are imported.

Natural columbium concentrate already can enter the United States duty free. Worldwide shortages and rising costs of this substance, however, have caused manufacturers to turn to synthetic concentrates. These synthetic concentrates carry a column-1 duty of 7.5 percent ad valorem and a column-2 duty of 30 percent ad valorem. Duty-free treatment is sought in this case so that prices of articles containing tantalum/columbium concentrate can be kept at the lowest possible level.

Mr. Speaker, the committee heard no objections to enactment of H.R. 2982 and reported the bill unanimously. Loss in customs revenue is expected to be less than $238,457 annually. I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 2982

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 911.25 the following:

"911.27	Synthetic tantalum/columbium concentrate (provided for in item 603.70, pt. 1, schedule 6).....	Free.	No change.	On or before the close of the 2 year period beginning on the effective date of this item".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendment:

Page 1, in the matter appearing after line 5, strike out "On or before the close of the 2-year period beginning on the effective date of this item." and insert "On or before 6/30/80".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to suspend until the close of June 30, 1980, the duty on synthetic tantalum/columbium concentrate."

A motion to reconsider was laid on the table.

PERMANENT DUTY-FREE TREATMENT FOR COPYING LATHES USED FOR MAKING ROUGH OR FINISHED SHOE LASTS AND FOR PARTS OF SUCH LATHES

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3093) to extend until July 1, 1979, the duty-free treatment on copying lathes used for making rough or finished shoe lasts, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I will be delighted to yield to the chairman of the subcommittee to explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 3093 is to permanently admit duty-free copying lathes used for making rough or finished shoe lasts and parts of such lathes.

H.R. 3093 was introduced by our colleague, Mr. BURKE of Massachusetts.

The duty suspension on copying lathes capable of producing more than one size shoe last was initially enacted in 1956 and continued thereafter to reduce the cost of highly specialized and expensive copying lathes for domestic shoe last manufacturers. A last is a form which is shaped like the human foot and over which a shoe is formed during the manufacture of shoes. Domestic production of copy lathes for shoe last manufacture ceased in the mid-1950's.

Favorable reports were received from the Department of the Treasury and the Office of the Special Representative for Trade Negotiations. Reports with no objections were received from the Departments of Commerce, State, and Labor.

Since the temporary suspension of the duty has been in existence for approximately 20 years as a result of numerous bills during that period, there is no foreseeable resumption of domestic production and the administration recommended the suspension be made permanent, this bill has been amended to make the duty supension permanent and to make the duty-free entry applicable, upon proper request, to articles entered prior to enactment but after June 30, 1976, the date the last duty suspension expired.

The committee was unanimous in reporting H.R. 3093 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 3093, making permanent the duty-free treatment of copying lathes used for making shoe lasts, effective June 30, 1976.

Since the mid-1950s, there has been no domestic production of copying lathes, and duty on such lathes had been suspended for successive 2- and 3-year periods since 1956. In 1965, the duty suspension was extended to parts for these lathes. However, the suspension expired on June 30, 1976 and the current column 1 duty again became 5 percent ad valorem on the copying lathes and 7 percent ad valorem on most of the parts. Column 2 duties also had been suspended, and were reinstated last June as well.

Copying lathes are highly specialized and very expensive equipment. There is no indication that any domestic firm would take up production or be created for that purpose. A permanent duty suspension would serve to lower the cost of this important piece of equipment to the already hard-pressed shoe industry. Loss in customs revenue would be approximately $3,300 annually.

Mr. Speaker, the committee heard no objection at all to H.R. 3093 during public hearings on the matter, and reported the bill unanimously. I urge passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 3093

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That item 911.70 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out "6/30/76" and inserting in lieu thereof "6/30/79".

SEC. 2. (a) The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the ninetieth day after the date of the enactment of this Act, the entry of any article—

(1) which was made after June 30, 1976, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if the amendment made by the first section of this Act applied to such entry,

shall, notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry had been made on the date of the enactment of this Act.

With the following committee amendments:

Page 1, strike out lines 3 through 5, inclusive, and insert the following:

That subpart F of part 4 of Schedule 6 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended—

(1) by inserting immediately after item 674.40 the following new item:

"674.41	Copying lathes used for making rough or finished shoe lasts from models of shoe lasts and, in addition, capable of producing more than one size shoe last from a single size model of a shoe last	Free	Free";

(2) by inserting immediately after item 674.42 the following new item:

"674.48	Work and tool holders and other parts of, and accessories used principally with, copying lathes provided for in item 674.41	Free	Free "; and

(3) by striking out "machine tools;" in the superior heading to items 674.50 through 574.56, inclusive, and inserting in lieu thereof "machine tools (other than copying lathes provided for in item 674.41);".

SEC. 2. Item 911.70 of the Appendix to such Schedules is repealed.

Page 1, line 6, strike out "Sec. 2. (a) The amendment" and insert "Sec. 3. (a) The amendments".

Page 2, line 6, strike out "the amendment" and insert "any of the amendments".

Page 2, after line 11, insert the following:

(c) The amendment made by section 2 of this Act shall take effect on the date of the enactment of this Act.

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendments be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read:

"A bill to provide duty-free treatment for certain copying lathes used for making rough or finished shoe lasts and for parts of such lathes."

A motion to reconsider was laid on the table.

EXTENSION OF EXISTING SUSPENSION OF DUTIES ON CERTAIN CLASSIFICATIONS OF YARNS OF SILK

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3373) to extend for additional temporary period the existing suspension of duties on certain classifications of yarns of silk, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not do so; but I am delighted to yield to the chairman of the subcommittee under my reservation to explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 3373 is to continue until June 30, 1980, the suspension of duties on certain classifications of yarns of silk.

H.R. 3373 was introduced by our colleague, Mr. SIKES of Florida.

There is no domestic production of these silk yarns. The duty was originally suspended in 1959 and has continued to be suspended by various bills in order to permit domestic producers of fine yarn fabrics to import fine silk yarns duty free and remain competitive with imported fine yarn fabrics.

Favorable reports were received from the Departments of Commerce and Agriculture. Reports with no objections were received from the Departments of State and the Treasury and from the Office of the Special Representative for Trade Negotiations.

Technical amendments were made to the bill to make the bill effective from the date of enactment with the right of liquidation or reliquidation of entries prior to enactments but after November 7, 1975. The bill, as originally drafted, was automatically retroactive to November 7, 1975, the date the prior duty suspension expired, and would have presented administrative problems. The duty suspension expiration date was changed to June 30, 1980, in order to provide a common expiration date for most of the duty suspension bills acted upon by the committee.

The committee was unanimous in reporting H.R. 3373 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support the bill.

Mr. Speaker, I support H.R. 3373 that would continue the suspension of duty on certain classifications of silk yarns until June 30, 1980.

Silk yarns covered by the suspension are imported under two items of the Tariff Schedules of the United States. Imports of silk yarn singles are dutiable at 8.5 percent ad valorem from countries accorded most favored nation treatment (MFN) and at 40 percent ad

valorem from nations not accorded this treatment. Imports of plied silk yarns are dutiable at 12.5 percent ad valorem from countries accorded MFN treatment and at 50 percent from other nations.

The tariffs on spun silk yarns were suspended originally in September 1959 to enable domestic producers of fine yarn fabrics to import necessary raw materials duty free, thus improving their competitive position in relation to imports of similar completed fabrics. There is no domestic production of these silk yarn items, and there has been no imports of silk yarn singles since 1966. However, the duty suspension was allowed to expire in November 1975, and reapplication of the duty has posed undue hardship on domestic fabric manufacturers who must import the silk yarns once covered by the suspension.

The major manufacturers of silk goods who import the silk yarns in question employ between 3,000 and 4,000 workers in New York, New Jersey, Pennsylvania, and Virginia. They understandably view this duty as a nuisance tariff since domestic industry is hindered rather than protected by its application. It is estimated that reinstating the suspension would result in a loss in customs revenue of about $17,000 annually.

Mr. Speaker, the committee reviewed H.R. 3373 extensively and heard no unfavorable comments from the executive departments or from any other source. The bill was reported unanimously, and I recomend passage by the House at this time.

Mr. STEIGER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 3373

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) items 905.30 and 905.31 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) are each amended by striking out "11/7/75" and inserting in lieu thereof "6/30/78".

(b) The amendments made by subsection (a) shall apply with respect to articles entered, or withdrawn from warehouse, for consumption after November 7, 1975.

With the following committee amendments:

Page 1, line 3, strike out "(a)".

Page 1, line 6, strike out "6/30/78" and insert "6/30/80."

Page 1, strike out lines 7, 8, and 9 and insert the following:

SEC. 2. (a) The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the 90th day after the date of the enactment of this Act, the entry or withdrawal of any article—

(1) which was made after November 7, 1975, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if the amendment made by the first section of this Act applied to such entry or withdrawal,

shall, notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry or withdrawal had been made on the date of the enactment of this Act.

Mr. VANIK (during the reading). Mr Speaker, I ask unanimous consent that the committee amendments be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read the third time, was read the third time and passed, and a motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON POPPY STRAW CONCENTRATE USED IN PRODUCING CODEINE OR MORPHINE

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3790) to suspend until the close of June 30, 1980, the duty on concentrate of poppy straw used in producing codeine or morphine, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not do so, but I yield under my reservation to the chairman of the subcommittee to explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 3790 is to suspend until June 30, 1980, the duty on concentrate of poppy straw used in producing codeine or morphine.

H.R. 3790 was introduced by our colleague, Mr. SCHULZE of Pennsylvania.

The Department of Justice, under the Controlled Substances Act, authorized the importation into the United States of the previously prohibited poppy straw and poppy straw concentrate as substitute raw materials, to relieve the shortage of available raw materials for the production of medicinal morphine and codeine in the United States. Three U.S. companies process imported poppy straw to produce most of its own morphine and codeine. U.S. producers were forced to turn to poppy straw after a significant world shortage of opium developed. There is no domestic production of poppy straw.

It is believed the passage of H.R. 3790 would have no adverse effects on any U.S. interests and would not change the competitive positions of the three domestic processors. The enactment of H.R. 3790 could eventually lower prices to the ultimate consumers of prescriptions containing morphine and codeine derivatives.

Reports with no objections were received from the Departments of Commerce, State, and the Treasury. The Department of Agriculture and the Office of the Special Representative for Trade Negotiations deferred to other agencies.

Technical amendments were made to the bill to make the bill effective until June 30, 1980 as the title correctly states; to place the new TSUS item in proper numerical sequence within the TSUS and to conform the article description to the TSUS form.

The committee was unanimous in reporting H.R. 3790 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, this is a case where I suppose, if we could have a different title to the bill, we might all be better off.

Mr. Speaker, I also wish to lend my support to H.R. 3790, providing for a temporary suspension of duty until June 30, 1980 on imported concentrate of poppy straw to be used in the production of codeine and morphine.

Under the Controlled Substances Act, the Justice Department has authorized the importation of poppy straw and poppy straw concentrate in order to relieve shortages of available raw materials—such as opium—used in the production of medicinal codeine and morphine. Currently, such substances have a column 1 duty of 1.5 percent ad valorem and a column 2 duty of 10 percent ad valorem.

Because of a world-wide shortage of opium, drug companies have had to import increasing quantities of poppy straw and poppy straw concentrate for the production of medicines. There is no domestic source of this substance. Removing the duty would lower production costs, aid employment, and eventually make prescription drugs containing codeine and morphine less expensive for consumers. Enactment of H.R. 3790 is expected to result in a revenue loss of approximately $450,000 annually.

A bill similar to H.R. 3790 was introduced in the 94th Congress. It received extensive study by several governmental departments and agencies involved and no objection was found to removing the duty in this case. The suspension was made temporary so that Congress may review its effect after an appropriate period of time.

Mr. Speaker, the committee reported the bill unanimously, and I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 3790

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 912.10 the following new item:

"912.25	Concentrate of poppy straw (however provided for in Schedule 4, part 3) when imported for use in producing codeine or morphine	Free.	Free.	On or before 6/30/79".

SEC. 2. The amendment made by the first section of this Act shall apply with respect

to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendments:

Page 1, line 5, strike out "after item 912.10" and insert "before item 907.80".

Page 1, strike out all the matter appearing immediately after line 6 and insert the following:

"907.70	Concentrate of poppy straw (however provided for in part 3 of schedule 4) when imported for use in producing codeine or morphine	Free	Free	On or before 6/30/80".

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendments be considered as read and printed in the RECORD.

The SPEAKER per tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON WOOL NOT FINER THAN 46S

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3946) to suspend for a temporary period the rate of duty on wool not finer than 46s, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not do so, I will yield to the gentleman from Ohio to explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 3946 is to suspend until June 30, 1980 the duty on imports on wool not finer than 46s.

H.R. 3946 was introduced by our colleague, Mr. QUIE of Minnesota.

Wool classified not finer than 46s is only nominally produced domestically. Improved wool, the overwhelming domestic production, is due to its characteristics of strength and color uniformity, well suited for clothing manufacture. Unimproved wool, the duty on the import of which would be suspended by this bill, is characterized by coarseness, toughness and scratchiness and, while unsuited for clothing, is when blended with improved wool used in the production of carpets, blankets and furniture upholstery. The bill would aid domestic firms using wool to meet the competition from both synthetic fibers and imports of woolen products.

Favorable reports were received from the Departments of Commerce and the Treasury and reports with no objections were received from the Departments of State and Labor.

Technical amendments to the bill were made to eliminate certain definitional and administrative problems raised by some administration agencies.

The committee was unanimous in reporting H.R. 3946 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 3946 to temporarily suspend the duty on wool not finer in grade than 46s. The suspension would continue until June 30, 1980.

Very little coarse wool not finer than 46s, and no unimproved wool, is produced domestically. U.S. firms almost exclusively manufacture finer wools used in making clothing and other wearing apparel. However, the coarse and unimproved wool, especially if blended with better grades, is very desirable for use in the manufacture of carpets, blankets, and upholstery fabrics.

Currently, imports of wool not finer than 46s have imposed on them a wide range of duties, depending on factors other than coarseness. Also, the duty on wool affects price supports under the National Wool Act of 1954, because the supports are based on a percentage of the cumulative gross receipts of import duties collected on all wool and wool and wool products. Enactment of H.R. 3946 is expected to result in a loss of customs revenue amounting to $389,000 annually.

Domestic firms using coarse wool in their manufacturing face substantial competition both from imports of similar products and from manmade fibers. A suspension of duty in this case would improve the competitive position of such firms as well as improve the quality and lower the price of blankets and floor coverings to consumers. Also, elimination of these duties would limit price support payments which have varied widely from year to year.

Mr. Speaker, the committee heard no objection to H.R. 3946 and reported the bill unanimously. I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. VOLKMER. Mr. Speaker, I reserve the right to object.

I would like to ask the gentleman from Ohio a question concerning the statement on page 2 of the report. There is a little bit in here which bothers me a little bit as being from a district that has domestic wool produced, and tomorrow we start on the agricultural programs and the wool act and our subsidies to our own wool growers—my question is this language in the report:

> By reducing gross duty receipts this bill could limit price support payments which have varied considerably from year to year.

Assuming that we do not have any income from this wool, which I know is not direct competition itself with our domestic wool, will we have any price support payments at all for our domestic wool producers?

Mr. VANIK. Well, I might point out that this bill only involves a $389,000 annual figure.

Mr. VOLKMER. I notice that.

Mr. VANIK. I might also point out that the bill was supported by the president of the National Wool Growers Association and the American Textile Manufacturers.

Mr. STEIGER. Mr. Speaker, will the gentleman yield?

Mr. VOLKMER. I yield.

Mr. STEIGER. I think the answer to the gentleman's question is no, it will not have any effect. However one answers that question, the answer is it has no effect on that issue because the domestic producers basically do not provide that kind of wool.

Mr. VOLKMER. I know. There is no competition. I am not worried about the competition. I am worried about the subsidy, because of the language in the report—and I do not know that much about either act—on page 2, which says it could limit the price support payments. I am asking how much it is going to limit the price support payments.

Mr. VANIK. If the gentleman will yield, I think this is only a minimal amount, and that can be adjusted in the price-support bill.

Mr. VOLKMER. Mr. Speaker, further reserving the right to object, then I will have to work on it and ask the gentleman if he will help me support any provisions I might need tomorrow or the next day in the agriculture program so that we will not by this bill reduce what we are attempting to do in the agricultural bill.

Mr. VANIK. If the gentleman will yield, I cannot say that I will support a whole bill over this one item. I will be happy to support what is involved here, $389,000, but I do not pledge myself to support the whole bill the gentleman is speaking of.

PARLIAMENTARY INQUIRY

Mr. VOLKMER. Mr. Speaker, if there is an objection made to this bill, may the bill be brought back at a later time, still under the Consent Calendar?

The SPEAKER pro tempore. It still remains on the Union Calendar and can be brought up for consideration at a future date.

Mr. VOLKMER. So there is really no major harm done.

Mr. KETCHUM. Mr. Speaker, will the gentleman yield?

Mr. VOLKMER. Mr. Speaker, under my reservation of objection I will yield to the gentleman from California.

Mr. KETCHUM. I thank the gentleman for yielding.

Mr. Speaker, as a former wool grower myself, I can tell the gentleman that this bill has absolutely no effect on the wool support program. What occurs in the Committee on Agriculture has no effect on this bill, and vice versa.

Mr. VOLKMER. Mr. Speaker, further reserving the right to object, I will ask the gentleman this question: In other words, the amount that comes in under the tariff will have no effect, the fact that it is not going to come in any more, as to the subsidy?

Mr. KETCHUM. Absolutely not.

Mr. VOLKMER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 3946

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 905.30 the following new item:

"905.10	Wool: Not finer than 46s	Free	Free	On or before 9/30/81".

(b)(1) The rates of duty in rate column numbered 1 of the Tariff Schedules of the United States are provided for in subsection (a) shall be treated—

(A) as not having the status of statutory provisions enacted by the Congress, but

(B) as having been proclaimed by the President as being required or appropriate to carry out foreign trade agreements to which the United States is a party.

(2) The amendments made by this section shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended—

(1) by adding immediately after headnote 3 the following new headnote: "4. For so long as items 905.10 and 905.11 are in effect, headnotes 3, 4, and 5 of subpart C of part 1 of schedule 3 shall be suspended (except insofar as they relate to hair of the camel) and in lieu thereof—

"(a) for purposes of item 307.40—

"(i) the classification provisions for wool not finer than 46s shall apply to any package of wool containing not over 10 percent by weight of wool finer than 46s but not containing wool finer than 48s; and

"(ii) the citation for imports classifiable under item 307.40 shall be such item number followed by the item number for the part of the contents of the package which determines the rate of duty; and

"(b) for purposes of item 905.11, a tolerance of not more than 10 percent of wools not finer than 48s may be allowed in each bale or package of wools imported as not finer than 46s."; and

(2) by adding immediately before item 905.30 the following new items:

	"Wool (provided for in part 1C, schedule 3):			
905.10	All wool provided for in items 306.00 through 306.24	Free	Free	On or before 6/30/80
905.11	Other wool not finer than 46s provided for in items 306.30 through 306.34	Free	Free	On or before 6/30/80"

SEC. 2. The amendments made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON CERTAIN DOXORUBICIN HYDROCHLORIDE ANTIBIOTICS

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 4018) to suspend until the close of June 30, 1979, the duty on certain doxorubicin hydrochloride antibiotics, and for other purposes, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not do so, I will ask the gentleman from Ohio (Mr. VANIK) if he will explain the bill.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, the purpose of H.R. 4018 is to suspend until June 30, 1980 the duty on imports of doxorubicin hydrochloride.

H.R. 4018 was introduced by our colleague, Mr. EVANS of Delaware.

Doxorubicin hydrochloride, not domestically produced, is a drug used in cancer chemotherapy. The National Institutes of Health, which annually purchases several million dollars of the drug, supports the bill. It is anticipated that savings due to duty suspension will be passed on to consumers.

Favorable reports were received from the Departments of Commerce, Labor, and the Treasury. A report with no objections was received from the Department of State.

Technical amendments were made to the bill to make the new item number follow in proper sequence in the Tariff Schedules of the United States and to provide for an expiration date of June 30, 1980, a common expiration date with most of the other duty suspension bills acted upon by the committee. In addition, the reference to a proclaimed rate rather than a statutory rate was deleted as unnecessary in a temporary duty suspension bill.

The committee was unanimous in reporting H.R. 4018 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I thank my colleague, the gentleman from Ohio (Mr. VANIK) for his excellent explanation.

Mr. Speaker, I support H.R. 4018 that would suspend until June 30, 1980 the column 1 rate of duty on certain doxorubicin hydrochloride antibiotics.

Doxorubicin hydrochloride is a drug used by physicians in cancer chemotherapy. Imports of the drug have increased significantly until they now are valued at several million dollars per year. The drug is produced only in Italy and is imported and distributed by a single domestic firm, Adria Laboratories. The current column 1 rate of duty is 5 percent ad valorem.

A suspension of duty is favored by the administration and supported by Adria Laboratories. The resultant lower costs of this drug will have a mitigating effect on the significant medical cost for cancer patients. Lost customs revenue is estimated to be $500,000 annually.

Besides reducing medical costs, enactment of H.R. 4018 will serve to improve the trade posture of this country. Subsection (b) of the bill states that a suspension of duty in this case, is proclaimed by the President as being required or appropriate to carry out trade agreements to which the United States is a party.

Mr. Speaker, the committee heard no objection to H.R. 4018 and reported the bill unanimously. I urge passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 4018

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part 1 of subpart B of the appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 907.80 the following new item:

"Doxorubicin hydrochloride (provided for in item 407.85, part 1, or in item 437.32 or 438.02, part 3, schedule 4, depending on source)	Free	No change.	On or before June 30, 1979.".

(b) The rate of duty prescribed in rate column numbered 1 under item 907.40 of the Tariff Schedules of the United States (as added by subsection (a)) shall be considered to have been proclaimed by the President as being required or appropriate to carry out trade agreements to which the United States is a party, not as a statutory provision enacted by Congress.

(c) The amendment made by subsection (a) applies to articles entered, or withdrawn from warehouse, for consumption after the date of enactment of this Act.

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 907.80 the following new item:

"907.20	Doxorubicin hydrochloride (provided for in item 407.85, part 1, or in item 437.32 or 438.02, part 3, schedule 4, depending on source)----------	Free.	No change.	On or before 6/30/80".

SEC. 2. The amendment made by the first section of this act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption after the date of enactment of this act.

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to suspend until the close of June 30, 1980, the duty on certain doxorubicin hydrochloride antibiotics.".

A motion to reconsider was laid on the table.

REQUEST FOR CONSIDERATION OF H.R. 4654, TEMPORARY REDUCTION OF DUTY ON UNMOUNTED UNDERWATER LENSES

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 4654) to reduce the rate of duty on unmounted underwater lenses, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I shall not do so, but under my reservation I will yield to the gentleman from Ohio (Mr. VANIK) so that he may explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 4654 is to reduce until June 30, 1980, the duty on imports of unmounted underwater lenses.

H.R. 4654 was introduced by our colleague, Mr. WILSON of California.

The underwater lenses covered by the bill are used in combination with other lenses to manufacture underwater viewers for underwater photography. The lens is a high quality product produced in Japan, with special features that remove refraction caused by water. Domestically produced lenses similar to the imported product sell at about three times the cost.

There is only one domestic producer of the complete underwater unit and the firm feels that the duty reduction for unmounted underwater lenses would be an important factor in increasing their production. The only other manufacturer is reported to be a Japanese firm. The domestic firm claims the high duty on this lens has impaired its ability to compete with the Japanese imports.

Reports in opposition to the bill were received from the Departments of Commerce, State, and Labor and from the Office of the Special Representative for Trade Negotiations. They opposed the temporary duty suspension on the grounds that these lenses are imported primarily from Japan, a major trading partner, and any duty reduction should be negotiated in the context of the multilateral trade negotiations context so that the United States receives some trade benefit for such a reduction.

The objections were considered in the light of total U.S. imports in 1975 of unmounted underwater lenses valued at approximately $78,000 with a customs duty of approximately $11,000 and the fact that the bill is a temporary duty reduction rather than a permanent unilateral reduction of the duty. It is believed that whatever negotiating value exists in reducing the duty on unmounted underwater lenses is not taken away since this duty reduction is a temporary measure.

Technical amendments were made to place the temporary duty reduction in a new TSUS item in the Appendix to the TSUS rather than amending the permanent TSUS item for a temporary period.

The committee was unanimous in reporting H.R. 4654 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I support H.R. 4654, a bill that would reduce until June 30, 1980, the duty on unmounted underwater lenses.

The lenses covered by the bill are used with other types of lenses to make viewers for underwater photography. They are of high quality and have special features to reduce refraction. Although produced domestically, the cost of the lenses is about three times higher when purchased from U.S. firms than when imported from Japan. Even so, the cost is considerable and tends to limit domestic production of completed underwater viewers.

The complete unit is manufactured by only one domestic firm, Seacor of California. At this time, they are interested in doubling their production of these viewers and in improving their competitive position in relation to the imported completed unit. The duty reduction on unmounted underwater lenses would serve to keep the price of the domestic product down and thus make it more attractive than those manufactured and assembled in Japan.

Currently, the column 1 rate of duty for this article is 14 percent ad valorem and the column 2 rate is 45 percent ad valorem. H.R. 4654 would temporarily reduce the column 1 rate to 7 percent, while leaving the column 2 rate unchanged. The loss in customs revenue for the first full year after enactment is expected to be approximately $5,460.

Mr. Speaker, although the administration has opposed enactment of H.R. 4654, they have done so because they prefer duty reductions to be negotiated in the context of the multilateral trade negotiations, MTN. The temporary nature of the reduction, however, would preserve this option. The committee reported the measure unanimously, and I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. ALLEN. Mr. Speaker, reserving the right to object, because the Departments of Commerce, State, and Labor do object to the passage of this bill and feel that this is a matter that should be negotiated under the Trade Act where the United States might get some benefit from it, I do object.

The SPEAKER pro tempore. Objection is heard.

FOR THE RELIEF OF JACK R. MISNER WITH RESPECT TO THE VESSEL "PANDA"

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5037) for the relief of Jack R. Misner, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object—and I shall not do so—under my reservation I will be happy to yield to the gentleman from Ohio (Mr. VANIK) so he may give the House his explanation of this bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 5037, a private bill, is to extend until September 18, 1977, a temporary importation bond covering the schooner *Panda*.

H.R. 5037 was introduced by our colleague, Mr. KEMP of New York.

The schooner entered the United States under a bond filed by Captain Misner in September 1972, under provisions of the TSUS which provide that articles imported for repair, alteration, or processing, but not sale in the United States may enter without payment of duty under bond for their exportation within 1 year. The TSUS limits renewal of the bond upon application to a maximum of an additional 2 years.

The bond on the schooner *Panda* was granted for the 3-year maximum total period. However, due to material shortages and continual delay in delivery dates, the renovation schedule had to be considerably extended. All equipment and materials for reconstruction of the yacht are of U.S. origin.

Unless the statutory 3-year time limit on this bond is extended, Captain Misner is liable for payment of penalty duty or can be forced to remove the vessel from the United States prior to completetion of the repairs.

Reports with no objections were received from the Departments of Commerce and the Treasury.

The committee was unanimous in reporting H.R. 5037 and I urge its passage.

Mr. STEIGER. Mr. Speaker, I support H.R. 5037, a private bill extending until September 18, 1977, the expiration date of a temporary importation bond concerning the schooner *Panda* so that Jack R. Misner, of North Tonawanda, N.Y., can complete extensive renovation of the vessel.

Originally, it was anticipated that renovation of the vessel involved could be completed within the 3 years allowed under the bond when first issued. However, material shortages and postponements in delivery dates have made the 3-year statutory time limit impossible to meet. All equipment and materials involved in the reconstruction are of U.S. origin.

The extension of the bond will allow Mr. Misner to complete work on the vessel without the hardship of leaving port or without becoming liable for payment of a penalty duty. H.R. 5037 applies only to the schooner *Panda*, and would not affect present law with respect to temporary importation bond cases in general.

Favorable reports with respect to extending the temporary importation bond in this instance were received from both the Department of Commerce and the Department of the Treasury. No additional revenue loss or administrative costs would be incurred by enactment of this bill. A similar bill was introduced in the 94th Congress and passed the House but was not taken up in the Senate.

Mr. Speaker, the committee received no opposition to H.R. 4047 from any source and reported the bill unanimously. I recommend passage by the House at this time.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, I would like to ask the gentleman this question: If the owner of the boat were to part with it, how much money would we actually be talking about?

Mr. STEIGER. Mr. Speaker, let me yield, if I may, under my reservation of objection, to the gentleman from New York (Mr. KEMP), the author of the bill.

Mr. KEMP. Mr. Speaker, I appreciate the gentleman's yielding.

The Customs Service has advised Captain Misner that he would have to pay something like $7,000 in liquidated damages for failure to act within the bond period or if the bill should not be passed.

As the gentleman from Wisconsin (Mr. STEIGER) and the gentleman from Ohio (Mr. VANIK) point out, it is for a very limited period so that the captain may finish the renovation.

Mr. VOLKMER. If the gentleman will yield further, is it not ready to sail? If we pass this bill and the work proceeds, will it not be ready to sail?

Mr. KEMP. It will be sailing out, yes. It is almost completed. As the gentleman from Ohio (Mr. VANIK) pointed out, it is only because there has been such a tremendous shortage of materials involving the renovating of the schooner that there has been this delay.

Mr. VOLKMER. What is the value of this schooner?

Mr. STEIGER. The value of the schooner?

I must say, further reserving the right to object, that I do not know that we have that figure. We do not deal with the value of the schooner. What we are dealing with in this bill is the repairs that are required.

Maybe we should have asked what the value was, but I do not know what it is.

Mr. VOLKMER. Has it been laid up in drydock for all 5 years?

Mr. STEIGER. Yes; it has been laid up a substantial amount of time.

Mr. VOLKMER. Mr. Speaker, I thank the gentleman.

Mr. STEIGER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5037

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to permit Jack R. Misner, of North Tonawanda, New York, to complete the renovation of the schooner Panda (entry numbered 902261, September 25, 1972) within the United States (which renovation has been delayed because of material shortages), the Secretary of the Treasury, notwithstanding the provisions of subpart 5C of schedule 8 of the Tariff Schedules of the United States (19 U.S.C. 1202), shall extend the expiration date of the temporary importation bond covering the schooner Panda until the close of September 18, 1977.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TEMPORARY REDUCTION OF DUTY ON UNMOUNTED UNDERWATER LENSES

Mr. VANIK. Mr. Speaker. I ask unanimous consent again for the immediate consideration of the bill H.R. 4654, to reduce the rate of duty on unmounted underwater lenses, which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. ALLEN. Reserving the right to object, Mr. Speaker, since this bill was considered a few minutes ago, I have been advised that the amount of money involved is something like $5,460 a year and that since it is such a small amount, it is not likely that the Departments of Commerce, State, and Labor, notwithing their objections, would ever get around to negotiating this matter under our multilateral trade negotiations.

For that reason, Mr. Speaker, I ask leave to withdraw my objection so that the bill may be passed by unanimous consent.

The SPEAKER pro tempore. The gentleman's objection is withdrawn.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 4654

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart A of part 2 of schedule 7 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 708.01 the following new item:

"708.02 Underwater..... 7% ad val. 45% ad val.".

SEC. 2. The amendment made by the first section of this Act shall for a period of two years apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

Mr. BOB WILSON. Mr. Speaker, I rise in support of my bill, H.R. 4654, to reduce the rate of duty on unmounted underwater lenses.

This legislation was introduced as a result of a price competition problem encountered by a firm located in my district, Seacor Inc. Seacor produces the Sea-Eye, a corrected 21-mm. underwater lens. Descriptive brochures on the Sea-Eye and its uses in underwater photography are attached. This lens has been utilized by a variety of publications, as well as Government, educational, and private organizations engaged in oceanographic endeavors, including the Jacques Cousteau team.

There are only two producers of this underwater lense for the retail market: Seacor, located in San Diego, and the Japanese firm, Nikon. One clarification is needed at this point in my testimony. In its recent report to the committee, the International Trade Commission states that "underwater lenses are produced in the United States by a number of companies, almost entirely on a custom basis." The report then enumerates five major producers of underwater lenses. It is important to emphasize, however, that all the firms listed, except Seacor, produce these underwater lenses solely on a custom or special order basis. Seacor is the only American firm producing such a lens for the retail market, a point which my office confirmed earlier this week with the analyst who prepared the ITC's report on H.R. 4654.

Because of the tariff on one component, however, an unmounted underwater lens, Seacor has encountered difficulty in keeping its price competitive with Nikon. A diagram of the Sea-Eye components is attached for the subcommittee's information. Seacor advises that it makes all the parts for the Sea-Eye with two exceptions: The dome, which is manufactured in Connecticut, and the unmounted underwater lens, for which they have an exclusive contract from the Yashika Co. in Japan. There is no domestic source for this unmounted lens. Imported from Japan, it is subject to a tariff rate of 14 percent.

I want to reemphasize that Seacor competes with no American firm in the sale of the Sea-Eye, but solely with Nikon. The tariff on the one imported component, however, increases the cost of each completed Sea-Eye by $20, mak-

ing it more difficult for the Sea-Eye to be competitive with the Nikon product on the world market. Since one of the basic purposes of our tariff laws is the protection of American business, I feel a revision of the 14 percent tariff rate on this unmounted underwater lens is warranted.

H.R. 4654 provides for a temporary reduction in the tariff to 7 percent. This is a revised version of legislation I submitted during the 94th Congress, H.R. 11050, which called for a permanent reduction in the tariff from 14 to 7 percent. This permanent reduction was opposed by the several agencies queried by the committee, because it was felt that such a permanent unilateral reduction should instead be negotiated in multilateral trade negotiations in exchange for reciprocal benefits for U.S. exports.

In his September 9, 1976, letter to Chairman ULLMAN, the Acting General Counsel of the Treasury Department outlined the Department's opposition to a permanent reduction, but advised that Treasury would support a temporary duty reduction on these lenses "in view of the fact that there is no domestic supplier for these underwater lenses, and thus no adverse economic consequences which would result to American manufacturers." Additionally, the Department acknowledged that a temporary reduction in the tariff could prove to be a boon to consumers through lower prices. According to the Department of Commerce, other U.S. lens manufacturers do not object to the proposed duty reduction. They would, understandably, prefer that such a reduction be accomplished in the multilateral trade negotiations in exchange for salutary tariff concessions for U.S. optical exports. Such a position is certainly not surprising and I would hope that a permanent arrangement of this sort can be achieved through the MTN.

In the interim, I urge the House to favorably consider a temporary reduction in the duty on this one item. I know that the members of the subcommittee feel as I do about the importance of assisting American businessmen to be more competitive in the world market. H.R. 4654 would do exactly that, without any adverse impact on other U.S. firms or the American taxpayer.

In closing, I want to reiterate that H.R. 4654 would make an American-made underwater lens, the Sea-Eye, more competitive with its Japanese rival by removal of the tariff on the one component which is unobtainable in the United States. I urge favorable consideration of this bill.

With the following committee amendments:

Strike out all after the enacting clause and insert the following:

That subpart B of part 1 of the appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 912.07 the following new item:

"912.06	Underwater lenses, not mounted (provided for in item 708.03, part 2A, schedule 7).....	7% ad val.	No change.	On or before 6/30/80"

SEC. 2. The amendment made by the first section of this act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this act.

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendments be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to reduce until the close of June 30, 1980, the duty on unmounted underwater lenses."

A motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF DUTY ON PHOTOGRAPHIC COLOR COUPLERS AND COUPLER INTERMEDIATES

Mr. VANIK. Mr. Speaker, I ask unanimous consent for immediate consideration of the bill, H.R. 5052, to provide for the temporary suspension of duty on the importation of color couplers and coupler intermediates used in the manufacture of photographic sensitized material—provided for in items 405.20 and 403.60, respectively—which was unanimously reported favorably to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not do so, I will yield to the gentleman from Ohio (Mr. VANIK) so that he may give us an explanation of the bill.

Mr. VANIK. Mr. Speaker, I thank the gentleman from Wisconsin for yielding to me.

Mr. Speaker, the purpose of H.R. 5052 is to suspend until June 30, 1980, the duty on imports of color couplers and coupler intermediates.

H.R. 5052 was introduced by our colleague, Mr. FRENZEL of Minnesota.

Coupler intermediates are used to produce color couplers and color couplers are finished dyes used in the manufacture of photographic paper used in printing photographs. Domestic producers produce for their own internal consumption only.

The bill would enable another domestic firm to import the articles duty free from a subsidiary's foreign plant for a temporary period in order to supply their domestic photographic paper production. They anticipate building a plant to produce these chemicals domestically.

A favorable report was received from the Department of the Treasury. A report with no objections was received from the Department of Commerce.

Technical amendments were made to the bill to describe with greater specificity the articles covered by the duty suspension, to place the new TSUS items in proper order within the TSUS and to specify an expiration date.

The committee was unanimous in reporting H.R. 5052 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object.

Mr. Speaker, I support H.R. 5052 a bill suspending, until June 30, 1980, the duty on color couplers and on coupler intermediates.

Color couplers are finished dyes used in making photographic paper. Coupler intermediates are used in the production of color couplers. These items currently carry a column 1 duty of 1.7 cents per pound plus 12.5 percent ad valorem and 3 cents per pound plus 19 percent ad valorem respectively. The column 2 rate for both articles would not be affected by this bill.

Although two U.S. firms currently produce color couplers and coupler intermediates, they do so only for internal consumption. The 3M Co. on the other hand, must import these products from a foreign subsidiary in order to supply their photographic paper plant located in Rochester, N.Y. The temporary suspension contained in H.R. 5052 would help keep 3M's costs competitive with other similar U.S. firms until they themselves can begin domestic production of these chemicals for their own use. Annual loss in customs revenue for the 3-year period is estimated to be $550,000.

Mr. Speaker, the committee heard no objection to passage of H.R. 5052 during public hearings on miscellaneous tariff measures, and reported the bill unanimously. I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5052

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the appendix to the Tariff Schedules of the United States (19 U.S.C. 1202), is amended by inserting immediately after item 405.20, the following new items:

"913.00	Color couplers used in the manufacture of photographic sensitized material.....	Free.	No change.	Two years after enactment.
913.10	Color intermediates used in the manufacture of photographic sensitized material.....	Free.	No change.	Two years after enactment.".

SEC. 2. The amendments made by the first section of this Act shall apply with respect to articles entered or withdrawn from warehouse, within the two years period beginning on the date of enactment of this Act.

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately before item 907.80 the following new items:

"907.10	Cyclic organic chemical products in any physical form having a benzenoid, quinoid, or modified benzenoid structure (provided for in item 403.60, part 1B, schedule 4) to be used in the manufacture of photographic color couplers	Free	No change.	On or before 6/30/80.
907.12	Photographic color couplers (provided for in item 405.20, part 1C, schedule 4)	Free	No change.	On or before 6/30/80."

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this act.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, and was read the third time, and passed.

The title was amended so as to read: "A bill providing for the temporary suspension of duty on photographic color couplers and coupler intermediates."

A motion to reconsider was laid on the table.

DUTY-FREE ENTRY OF COMPETITION BOBSLEDS AND LUGES

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5146) to amend the Tariff Schedules of the United States to provide for the duty-free entry of competition bobsleds and luges, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not object, I do so merely for the purpose of yielding to the gentleman from Ohio (Mr. VANIK) so that he may explain the bill.

Mr. VANIK. Mr. Speaker, I thank the gentleman from Wisconsin for yielding to me.

Mr. Speaker, the purpose of H.R. 5146 is to provide for the duty-free entry of bobsleds and luges of a kind used in international competition.

H.R. 5146 was introduced by our colleague, Mr. MCEWEN of New York. I might just add that he is not a member of the Committee on Ways and Means.

Legislation to remove the duty on sleds is one of the recommendations of the recently concluded study of amateur sports by the President's Commission on Olympic Sports. The Commission agrees that a major impediment to participation in these sports is the high cost of equipment. There are no American bobsled or luge manufacturers and this legislation would not adversely affect any U.S. industry.

A favorable report was received from the Department of Commerce. Reports with no objections were received from the Department of the Treasury and Labor.

A technical amendment was made to the proposed Tariff Schedules of the United States (TSUS) items 734.97 and 734.98 in order that the indentation of the article description follow the form used in the TSUS.

The committee was unanimous in reporting H.R. 5146 as amended, as I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 5146, providing for duty-free treatment of competition bobsleds and luges.

Participation in Olympic sports is a very expensive activity, partly because of the high cost of equipment. The President's Commission on Olympic Sports recently completed a study of amateur sports, and among its recommendations was that legislation be enacted to remove the duty on competition sleds.

The current column 1 rate of duty on bobsleds and luges is 9 percent ad valorem and the column 2 rate is 45 percent ad valorem. It is estimated that only from four to six new sleds are imported each year, so the impact of such duty-free treatment on customs revenues would be minimal. There are no American manufacturers of competition bobsleds and luges.

Mr. Speaker, legislation such as H.R. 5146 is important to this country's Olympic and other amateur athletes who face high costs and yet are restricted in the type of monetary support they can accept while competing as amateurs. The committee reported the bill unanimously and received no objection from any source. I recommend passage by the House at this time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5146

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart D of part 5 of schedule 7 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out item 734.97 and inserting in lieu thereof the following:

"734.97	Bobsleds and luges of a kind used in international competition	Free	Free.
734.98	Other	9% ad val.	45% ad val.".

SEC. 2. The amendments made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of enactment of this Act.

With the following committee amendment:

Page 1, strike out the matter appearing immediately after line 6 and insert the following:

"734.98	Bobsleds and luges of a kind used in international competition	Free	Free.
734.99	Other	9% ad val.	45% ad val.".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REDUCED DUTY ON LEVULOSE UNTIL JULY 1, 1980

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5176) to lower the duty on levulose until the close of December 31, 1980, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, and I shall not object, but I do so for the purpose of yielding to the gentleman from Ohio so that he may explain the bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 5176 is to reduce until June 30, 1980, the duty on imports of levulose.

H.R. 5176 was introduced by our colleague, Mr. CORMAN of California.

Levulose, a pure or relatively pure product, is a monosaccharide which, together with dextrose, represents a basic component of ordinary sugar. There is no natural source of pure levulose, which is the result of expensive manufacturing processes. Although levulose is known to be sweeter than sucrose, its price is substantially higher than sugar and it does not compete with sugar. The primary use of levulose is in special dietary preparations where the use of sugar must be avoided.

The lowering of duties on levulose is considered not likely to represent a threat to products of the U.S. natural sweetener industry, that is, sugar, dextrose, corn syrup, high levulose corn syrup, or honey, nor is the product likely to have much impact on noncaloric sweeteners such as saccharin or cyclamates.

There is currently no domestic production of pure levulose but a domestic company intends to construct a plant in California to manufacture this product. Until construction is completed in the early 1980's, the company will import its supply of levulose.

A report with no objections was received from the Food and Drug Administration of the Department of Health, Education, and Welfare.

The committee was unanimous in reporting H.R. 5176 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 5176, a bill that would temporarily lower, until June 30, 1980, the rate of duty on levulose.

Levulose is a relatively pure substance used in the production of certain artificial sweeteners of special value to diabetics. It appears most commonly in nature as a component of honey, and its separation requires an expensive manufacturing process. There are no domestic commercial producers of pure levulose,

and imports of the substance into this country come mainly from Finland but also from West Germany and France.

Currently, a west coast corporation now producing an artificial sweetener is interested in constructing a plant to manufacture levulose. The temporary reduction contained in H.R. 5176 will provide relief from the rather high duty on levulose until construction of the plant can be completed. The bill would affect only column 1 rates, lowering them from 20 percent ad valouem to 1.9875 cents per pound. This is the same rate as is applied to refined sugar. The annual customs revenue loss is estimated to be approximately $195,000.

As a rare and costly polysaccharide, levulose does not compete with the domestic natural sweetener industry, such as sugar, corn syrup, dextrose, or honey. Neither does it offer any significant competition to the more common noncaloric sweeteners such as saccharin. Lowering the duty in this instance, therefore, would have no adverse effect on any domestic manufacturer, and yet would serve to lower the cost of sweeteners containing levulose to consumers who must avoid sucrose, or ordinary sugar, in their diets.

Mr. Speaker, the committee heard no opposition to enactment of H.R. 5176 from any source and reported the bill without dissent. A similar bill was introduced in the 94th Congress and was passed by the House but later died in the Senate. I again urge the House to pass this important legislation.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5176

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting after item 907.80 the following new item:

"907.90	Levulose (provided for in item 493.66, part 13B, schedule 4)------	1.9875¢ per lb.	1.9875¢ per lb.	On or before 12/31/-80".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

With the following committee amendment:

Page 1, strike out the matter appearing between lines 5 and 6 and insert the following:

"907.90	Levulose (provided for in item 493.66, part 13B, schedule 4)...	1.9875¢ per lb.	1.9875¢ per lb.	On or before 6/30/80".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to lower the duty on levulose until the close of June 30, 1980."

A motion to reconsider was laid on the table.

FOR THE RELIEF OF JOE CORTINA OF TAMPA, FLA.

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5289) for the relief of Joe Cortina of Tampa, Fla., which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I shall not of course do so, but I yield to the gentleman from Ohio (Mr. VANIK) to explain this fascinating bill.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 5289, a private bill, is to specify the manner of liquidation or reliquidation of 29 specific customs entries of certain musical instruments.

H.R. 5289 was introduced by our colleague, Mr. GIBBONS of Florida.

Mr. Cortina, a Tampa, Fla., customs broker, was the importer of record on a series of musical instrument import entries from 1971 through 1973. Because a selling commission was paid by a domestic firm to a West German firm and because, it was alleged, the instruments were of East German origin, supplemental duties in excess of $150,000 were assessed against Mr. Cortina. However, after a second investigation, Customs limited the number of instruments it alleged were of East German origin and reduced Mr. Cortina's supplemental duties liability to $37,000. It is alleged that this liability would financially ruin Mr. Cortina since he has no effective recourse against either the domestic firm he represented which has been dissolved, or against its principal owner who is deceased. The bill is intended to relieve Mr. Cortina of all liability for the supplemental duties.

The committee was unanimous in reporting H.R. 5289 and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 5289, a private relief bill that would liquidate or reliquidate the customs entries of certain musical instruments that came into the port of Tampa, Fla.

Between October 1971 and October 1973, Joe Cortina, a Tampa customs broker, imported a series of musical instruments from a West German firm named Hans Herman Kuhl (HHK). Mr. Cortina had posted a customs entry bond based on the entered or declared value of the items. Later, the Customs Service discovered that a 10-percent selling commission had been paid by the domestic firm receiving the instruments; it subsequently was determined that HHK's instruments originated in East Germany. Therefore, Mr. Cortina became liable for additional duties equal to the 10-percent selling commission plus the difference in the column 1 and column 2 rate of duty on these articles.

Through circumstances that could not have been foreseen by Mr. Cortina, he has incurred a liability of approximately $37,000 in excess of the bond he posted. H.R. 5289 would relieve Mr. Cortina of this liability for the unpaid duties and would refund any supplemental duties already paid to date. The one-time loss in customs revenue would be approximately $46,000.

Mr. Speaker, the committee heard no objections to providing the relief desired by Mr. Cortina in this instance, and reported H.R. 5289 unanimously. I recommend passage by the House at this time.

Mr. STEIGER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5289

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 514 of the Tariff Act of 1930 (19 U.S.C. 1514) or any other provision of law, the entries listed in section 2 of this Act, covering certain musical instruments, shall be liquidated or reliquidated and, if appropriate, refund of duties made. Notwithstanding the provisions of General Headnote 3(e) of the Tariff Schedules of the United States (19 U.S.C. 1202) or any other provision of law, for purposes of the liquidations or reliquidations authorized by this Act, such entries shall be appraised at invoice unit prices net, packed, and shall be subject to duty at the applicable rates set forth in column 1 of such schedules.

SEC. 2. The entries referred to in the first section of this Act are as follows:

Entry number:	Date of entry
100284	July 14, 1972.
100607	July 27, 1973.
101233	August 18, 1972.
101426	September 1, 1972.
101756	September 14, 1972.
102217	October 15, 1973.
102394	October 7, 1971.
102483	October 15, 1971.
102687	November 15, 1971.
102708	July 8, 1973.
102711	November 17, 1971.
102781	October 20, 1972.
103117	December 16, 1971.
103252	November 8, 1972.
103275	December 28, 1971.
103576	November 22, 1972.
103638	November 27, 1972.
104335	December 21, 1972.
104601	March 8, 1972.
104920	January 16, 1973.
105205	April 10, 1972.
105998	May 15, 1972.
105998	March 2, 1973.
106002	May 15, 1972.
106730	June 21, 1972.
106731	June 21, 1972.
106888	June 29, 1972.
103114	December 16, 1971.
108444	June 11, 1973.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DUTY-FREE TREATMENT FOR ISTLE

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate

consideration of the bill (H.R. 5322) to continue for a temporary period the existing suspension of duty on certain istle, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I shall not of course do so, but I yield to the gentleman from Ohio (Mr. VANIK) for an explanation of the legislation.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 5322 is to admit duty-free imports of istle, whether crude or processed.

H.R. 5322 was introduced by our colleague, Mr. FRENZEL of Minnesota.

Istle fiber is a vegetable fiber. There is no domestic production of either crude istle or processed istle fibers, which are used primarily in the manufacture of a wide range of high-quality industrial brushes. Istle fibers do not compete directly with domestically produced synthetic fibers because of their relatively high cost and absorbent quality.

Favorable reports were received from the Departments of Commerce, the Treasury, and Agriculture. Reports with no objections were received from the Department of State and from the Office of the Special Representative for Trade Negotiations.

The bill was amended to permit the duty-free entry of processed istle rather than continue the temporary suspension of the duty. This duty has been temporarily suspended by a number of bills for approximately 20 years without any foreseeable domestic production of processed istle and the administration favors the permanent duty-free entry treatment.

The committee was unanimous in reporting H.R. 5322 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I support H.R. 5322, a bill to permanently suspend the duty on processed istle fiber.

Istle is a vegetable fiber, native to Mexico, that is processed for use in the manufacture of industrial brushes. There is no domestic production of either crude istle or processed istle fiber, and virtually all U.S. imports of this product come from Mexico. Before importation, the crude fiber is generally cleaned, combed, and graded so that it can be manufactured into brushes in the United States without further processing.

Under the Tariff Schedules of the United States, processed istle fiber is subject to a duty of 20 percent ad valorem (both column 1 and column 2). However, this duty has been suspended by various public laws since September 4, 1957. Making the temporary suspension permanent would result in no additional loss of custom revenue. Crude istle fiber already has duty-free treatment.

Because of its special absorbent characteristics and relatively high cost, imported processed istle fiber does not compete with any domestically produced synthetic fibers. However, the competitive position of istle brushes manufactured in the United States is affected by the importation of completed istle brushes. Such completed brushes are dutiable at a lower 14 percent ad valorem; and, without the existing suspension of duty on processed istle fiber, could be sold at a considerably lower price than such brushes manufactured domestically.

It appears clear that development of domestic plants for the processing of crude istle is not contemplated in the foreseeable future. A permanent suspension of the duty on istle fiber, therefore, will preserve the competitive position of istle brushes manufactured in this country without adversely affecting any domestic processors.

Mr. Speaker, it would be possible to remove administratively rather than legislatively the duty on processed istle fiber entering from Mexico, since Mexico is eligible for such treatment under this country's generalized system of preferences (GSP). However, applying for GSP treatment is complicated and time consuming. The desired result can be accomplished much more quickly and efficiently through enactment of H.R. 5322.

The committee heard no objection to H.R. 5322 during its hearings on miscellaneous tariff measures, and subsequently reported the bill unanimously. I recommend passage by the House at this time.

Mr. Speaker, this is the last of the bills by unanimous consent from the Committee on Ways and Means. The House has been very patient with us. I urge support for the bill.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 5322

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) item 903.90 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out "6/30/78" and inserting in lieu thereof "6/30/81".

(b) The amendment made by subsection (a) shall apply with respect to articles entered, or withdrawn from warehouse, for consumption, after June 30, 1978.

With the following committee amendments:

Strike out all after the enacting clause and insert the following:

That (a) subpart G of part 15 of schedule 1 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by striking out—

"Istle:				
192.65	Crude	Free	Free.
192-70	Processed	20% ad val	20% ad val."

and inserting in lieu thereof the following:

"192.66	Istle	Free	Free".

(b) Item 903.90 of the Appendix to such Schedules is repealed.

SEC. 2. The amendments made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

Mr. VANIK (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendments be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read the third time, was read the third time, and passed.

The title was amended so as to read: "A bill to provide duty-free treatment for istle."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. VANIK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks with regard to the bills reported out by the Committee on Ways and Means and approved by the House today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

CONFERENCE REPORT ON H.R. 7557, DEPARTMENT OF TRANSPORTATION AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1978

Mr. McFALL. Mr. Speaker, I call up the conference report on the bill (H.R. 7557) making appropriations for the Department of Transportation and Related Agencies for the fiscal year ending September 30, 1978, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of June 29, 1977.)

Mr. McFALL (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The SPEAKER pro tempore. The gentleman from California is recognized for 30 minutes.

Mr. McFALL. Mr. Speaker, the conference agreement would provide for total new budget authority of $6,196,609,023 for fiscal year 1978 and $12,243,000 for fiscal year 1977. This is about $86 million below the President's budget. In several instances we have provided funding in excess of the budget estimates. But these increases are more than offset by reductions which reflect changing congressional attitudes about transportation priorities.

In addition, the conference agreement includes $8,143,290,000 in appropriations

to liquidate contract authorizations. This is the same as the House-passed bill and is $437.9 million less than the budget request.

Mr. Speaker, I believe that this conference agreement is a good one and one that the House can support. Of course, we have had and continue to have an amiable relationship with our friends in the other body, particularly the Senator from Indiana (Mr. BAYH) and the Senator from New Jersey (Mr. CASE).

HIGHLIGHTS OF THE CONFERENCE REPORT

Mr. Speaker, my good friends on the Merchant Marine and Fisheries Committee, as well as other Members, will be pleased that $1,347,510,023 in new budget authority will be available to the Coast Guard. This includes $236,000,000 for acquisition, construction and improvements and $20,000,000 for research, development, test and evaluation.

The Supplemental Appropriations Act, 1977—Public Law 95–26—contains an appropriation of $10 million for the pollution fund. That act also contains a provision making these funds available only upon the enactment of authorizing legislation. I have received a copy of a letter from Congressman JOHNSON, chairman of the Committee on Public Works and Transportation, indicating that the intent of his committee was to establish a $35 million limit on the amount in the revolving fund at any one time, and not to limit aggregate appropriations into the revolving fund. In view of this, we believe that the $10 million appropriated in fiscal year 1977 for this fund is currently available to perform the Coast Guard's clean up work.

For the activities of the Federal Aviation Administration, over $1.8 billion will be provided for operations and $14,000,000 for airport planning grants.

In the highway area, $20,000,000 will be provided for traffic control signalization demonstration projects. This is in addition to the $10 million provided for this program in the Economic Stimulus Appropriations Act.

In the rail transportation area, the conferees were faced with some very important problems regarding the National Railroad Passenger Corporation—Amtrak. The conference agreement includes the funding level for operating grants proposed by the House—$488,500,000. The conference report, page 8, on amendment No. 24, reads as follows:

The conferees believe this amount will be sufficient for the entire fiscal year and direct Amtrak to make effective use of the criteria and procedures for making route and service decisions developed pursuant to section 8 of the Amtrak Improvement Act of 1975.

I believe that "effective" use of the criteria would include a recognition of the state of Amtrak service discussed in the House report and the application of the criteria discussed in the report.

Mr. Speaker, the conference agreement includes appropriations and limitations on contract authority for our mass transportation assistance programs. This area proved to be the most troublesome for the conferees. The conference agreement will provide $70,000,000 for research, $45,000,000 for rail service operating payments, and $789,000,000 for transit and highway projects substituted for interstate system segments. For the local Washington Metropolitan Area Transit Authority, the conference agreement includes funds for fiscal year 1977 interest costs and a provision which will require WMATA to move forward with the rail transit system in a responsible manner consistent with existing Federal mass transportation policy.

Finally, Mr. Speaker, the bill includes funding for the Urban Mass Transportation Administration's downtown people mover program. The Department of Transportation originally selected four cities for this program which seeks to test the feasibility and consumer response to recently developed automated mass transportation technology. The demonstrations are to be financed with section 3 capital grants on an 80-percent Federal, 20-percent local matching basis. The Senate committee directed that four additional cities be included in the program. Such a directive was disturbing to all of the House conferees because of the large costs projected for these people mover systems. The House and Senate conferees argued over this program for some time and finally we were able to come to an agreement that a majority of the House conferees and our Senate counterparts could accept. Our agreement is spelled out on pages 11 and 12 of the report. The conferees agreed that the four candidate cities mentioned in the Senate report—Jacksonville, St. Louis, Baltimore, and Indianapolis—should be considered, along with the four cities previously selected by the administration, for capital grant funding. These cities have all undertaken some initial planning efforts.

The House conferees were very concerned about the potential costs of these projects and the uncertainty surrounding the use of automated technology in a real world environment. It was feared by some conferees that some of the costly mistakes which plagued the Department's people mover project at Morgantown, W. Va., might be repeated under this program. The conference report language beginning on page 12 is designed to address some of these concerns:

The conferees believe that UMTA should impose strict limits on the Federal commitment for each project and should insist on contractual procedures, including fixed-price contracts, which will ensure that project costs are kept within current estimates.

The current estimates for the eight projects are as follows:

[In millions]

	Total cost	Federal share
Los Angeles	$125.0	$100.0
Houston	42.5	34.0
Minneapolis-St. Paul	56.3	45.0
Cleveland	51.3	41.0
Jacksonville	41.0	32.8
St. Louis	43.5	34.8
Baltimore	25.0	20.0
Indianapolis	50.0	40.0

The conference report language is clear—we expect that the cost of each project will stay within these levels. The Department should come back to the Appropriations Committees if this does not appear to be possible.

The conferees also agreed to the following language:

Further, the conferees believe that UMTA should undertake to fully inform the local communities of the potential capital and operating costs of DPM systems prior to the final project approval by UMTA.

The purpose of this language is to insure that the local communities go into this program with their eyes open and that design decisions can be made with the best estimate of present and future costs of those decisions. Too often in the past, local communities have been oversold on new, exotic technological equipment only to find out later that they are liable for significant operating and system maintenance costs. UMTA's section 5 formula grant program will cover only a portion of future operating deficits. It must be remembered that this technology has not previously been deployed in a central city area. We do not know if people will actually ride on these systems. The conference report language makes it clear that when UMTA officials sit down with the local officials to discuss the advantages and benefits of the downtown people mover program, the local officials will also be made aware of the risks associated with this kind of transportation system and also be presented with the best estimate of capital and operating costs to be assumed by the local community. If this is done, I believe the ultimate success of the demonstrations will be considerably enhanced and costly mistakes and misjudgments can be minimized.

Mr. Speaker, in addition to the new budget authority provided in the bill, this legislation includes several limitations on contract authority and loan authority programs. These provisions have been carried in one or more prior appropriations acts and are an important part of our effort to achieve greater congressional control over Federal spending. A list of the limitations for fiscal year 1978 follows:

Federal Aviation Administration:	
Grants-in-aid for airports	$540,000,000
Federal Highway Administration:	
Highway-related safety grants	28,000,000
Federal-aid highways	7,445,000,000
National Highway Traffic Safety Administration:	
State and community highway safety	172,000,000
Federal Railroad Administration:	
Loan guarantee program	600,000,000
Urban Mass Transportation Administration:	
Urban mass transportation fund	2,365,000,000
Interstate transfers	350,000,000

Mr. Speaker, I urge the adoption of the conference report. I insert at this point in the RECORD a table giving the conference figures in detail:

DEPARTMENT OF TRANSPORTATION AND RELATED AGENCIES APPROPRIATION ACT, 1978 (H.R. 7557)

Grand total	(14,727,903,779)	(14,864,180,000)	(14,047,570,000)	(14,420,485,000)	(14,340,105,000)	(−387,798,779)	(−524,075,000)	(+292,535,000)	(−80,380,000)

Mr. McFALL. Mr. Speaker, I also want to express my sincere thanks to my good friend and colleague, the ranking minority member of the subcommittee, the gentleman from Massachusetts (Mr. CONTE). I have enjoyed working with Mr. CONTE as well as the other members on the majority and minority sides of the subcommittee. I think we have produced a good conference report. We have worked hard over the last several months to develop this legislation and I want to thank my good friend from Massachusetts and commend him for the diligence and intelligence with which he has approached all the important issues facing our subcommittee.

Mr. CONTE. Mr. Speaker, I yield myself such time as I may desire.

Mr. Speaker, I want to thank the gentleman from California first of all. As I said in general debate, it has been my pleasure to work with him. We have worked as a team and we have brought out, I think, some good bills which most of the time, including this year, have been below the budget.

Mr. Speaker, I rise in support of this conference report on the transportation appropriations bill for fiscal year 1978, but I do so with some reservations. As my colleagues are aware, I refrained from signing the conference report, as did the remainder of the minority House conferees. This was primarily because of our opposition to the expansion of the number of sites for what was supposed to be a downtown people mover demonstration program.

Mr. Speaker, I will have more to say about that program at the conclusion of my remarks. But first, I would like to outline the major points of the conference agreement.

For the Coast Guard, we held to the House funding level for operation expenses, providing $878.9 million and an additional 150 positions for the new tanker inspection program.

For Coast Guard acquisitions, construction, and improvements, we compromised on $236 million, $20.3 million below the Senate figure. Among others, this amount will provide the full budget request for the medium range surveillance aircraft procurement program.

For the Federal Aviation Administration, we ended up providing $14 million for airport planning grants and $1 million for State standards grants.

Under the Federal Highway Administration, the conference committee provided $20 million for the traffic control signalization project, $10 million less than was provided in the House bill. The Senate had not included any funding for this program in its bill and I was sorry that the Senate conferees caved in so easily. I will be giving this program especially close scrutiny in next year's hearings.

Under the Federal Railroad Administration we were able to hold to the House figure of $488.5 million for operating expenses. For capital expenses of Amtrak we provided $108 million, $13 million above the House figure, but $22 million below the Senate.

This amount includes $4.1 million for right-of-way improvements between Post Road and Rensselaer, N.Y., which will shorten the time required for the Boston-Chicago run by as much as an hour.

Finally, the conference report provides capital grant funds for UMTA's "downtown people mover" program.

In April 1976 UMTA announced a competitive capital grant demonstration program to deploy simple downtown automated people mover systems in selected cities by 1980. The 38 applicants were narrowed to 11 finalists, then last December, UMTA announced the selection of four cities for the program—Cleveland, Houston, Los Angeles, and St. Paul. Two additional cities, Detroit and Miami, were to be funded through the regular capital grant program.

The House bill provided funds for these projects, as requested in the UMTA budget.

The Senate attempted to negate the demonstration aspect of the program and the sites selected in the competition, by adding four more cities to the program—Jacksonville, St. Louis, Baltimore, and Indianapolis.

The conference agreement provides for the consideration of these four cities under the regular grant program and exempts them from the need to perform an alternatives analysis.

Mr. Speaker, there are a number of reasons that the minority House conferees could not in good conscience support this provision.

Some of us remember all too clearly the $133.6 million boondoggle we built in the Morgantown, W. Va., people mover. That was supposed to demonstrate the people mover technology.

Supposedly that technology is on the shelf, ready to go. At Morgantown, however, they are still having trouble with wheels freezing up in the winter. There are still other problems with the technology.

And even if there were not, the technology has still never been tried in an urban, downtown setting. No one knows if a downtown people mover will work, whether anyone will ride it, how much it would eventually cost to build and to operate.

As the bill stands now, we are providing funds for six people movers and giving a major advantage to four more. Frankly, Mr. Chairman, there is no way you can call building 10 people movers a demonstration project. If the Congress wants to build a people mover in every city, or at least in those cities that are represented by a Senator on the Appropriations Committee, then it can go ahead. But I would think that on the basis of the $133.6 million fiasco in Morgantown, we should be more cautious about rushing into a program of this sort.

Mr. Speaker, next year all 10 of these projects will be back with their hands out for money. At that time, we are going to have to decide how much this Nation can afford to spend for the construction of unproven transit toys. I think we are making a real mistake by short circuiting the regular application process and exempting four additional projects from alternatives analysis.

And finally, Mr. Speaker, in all fairness I should mention that this bill only provides for 10 of the 11 finalists in the competition. The city of Norfolk, apparently because it does not have a Senator on the Appropriations Committee, was left out of this bill entirely. As far as I can see, that is the only difference between Norfolk and the other 10 competition finalists.

All 11 cities undertook significant and substantial planning efforts. As far as I know, Norfolk did the same studies as the other cities, and if the cities added by the Senate are to be exempt from alternative analysis, it seems unfair that Norfolk should be left out.

Mr. Speaker, I do not want to beat these people movers into the ground—at least not this year. But I do want to declare now that I will not let this turn into another Morgantown. The August issue of Readers Digest magazine contains an article about the Morgantown project, entitled "Anatomy of a Boondoggle." It is an excellent article which I commend to my colleagues. It expresses the hope that we have learned from the Morgantown experience. I hope so too, and enclose the article at this point in my remarks.

ANATOMY OF A BOONDOGGLE

(By Trevor Armbrister)

It sounded like such a fine idea: a new system of urban transportation called Personal Rapid Transit, or PRT. At a cost of only $18 million, the "people-mover"—a sort of horizontal elevator—would alleviate downtown traffic jams and revitalize the central business district. It would also whisk students around the Morgantown campus of West Virginia University without noise, in pollution-free comfort, at energy-conserving speed. That, at any rate, was the scenario presented to federal planners in 1970.

It hasn't worked out that way. Costs soared to $128 million; the system did not begin operating until nearly three years after its official dedication; and when it did start running, it broke down continually. "This has got to be one of the worst boondoggles ever perpetrated on the American taxpayer," says U.S. Rep. Silvio O. Conte (R., Mass.).

Government programs, of course, founder frequently, and the tragicomic experiences of a college town (pop. 30,000) might not seem all that significant on a national scale. Yet PRT *is* important because federal officials cite it to justify a program for spending at least an additional $220 million for "people-movers" in Cleveland, Los Angeles, Houston, St. Paul, Minn., and Detroit. Federal programs, as this one so clearly shows, take on a mad momentum of their own and—once begun—are virtually impossible to stop. If the Carter Administration ever hopes to balance the budget, here is a case study of how *not* to do it.

The man who conceived PRT is Samy E. G. Elias, an affable Egyptian-born professor. Arriving in Morgantown in 1965 to join the faculty of the university's department of industrial engineering, he found traffic congestion so bad that the school's 11,256 students were having trouble moving among their three campuses, even with 17 university shuttle buses in operation. The solution, Elias decided, should be a new form of public transportation—computer-controlled driverless vehicles that would roll along an elevated guideway at speeds of up to 30 m.p.h. A strip of land along the winding Monongahela River linked the campuses and seemed a natural PRT corridor.

In June 1967, Elias sought a grant from the federal government, but nothing happened. In 1969, after a change of administrations, university President James G. Harlow and Elias tried again, enlisting the aid of Rep. Harley O. Staggers (D., W. Va.), powerful chairman of the House Interstate and Foreign Commerce Committee. He arranged a meeting with Transportation Secretary John A. Volpe. The Department of Transportation was spending millions to solve transportation problems in large cities, the West Virginians maintained. Why not federal help for small cities, too? Morgantown could become a "national transportation-research laboratory."

Impressed, the Urban Mass Transportation Administration (UMTA)—an agency within the Department of Transportation—agreed to pay $101,000 toward a feasibility study, if the university supplied an additional $33,000. The people conducting the study at the university were the same ones who had conceived the project. Their conclusion: PRT would work.

In March 1970 UMTA gave the university another $20,000 to complete the feasibility study. Elias and his aides discovered that Alden Self-Transit Systems Corp. of Bedford, Mass., had already designed a prototype system which would satisfy their requirements and could go into production quickly. The cost of a 3.6-mile, six-station, 90-vehicle system—able to move 1100 students every 20 minutes—they concluded, would be $18 million. The university was prepared to pay $4.5 million if UMTA would grant them $13.5 million.

But UMTA had different views. Almost overnight the people-mover progressed to the agency's major research-and-development effort. To achieve "national relevance," UMTA elbowed aside the university and Alden Corp. and insisted on running the project itself. UMTA selected the Jet Propulsion Laboratory in Pasadena, Calif., as systems manager and announced that PRT would start rolling in October 1972.

By March 1971, however, JPL's accountants had a new cost estimate: $37.4 million, or more than twice the original figure. Faced with explaining this to Congress, UMTA cut back the six stations to three, the 90 cars to 15 and the 3.6-mile system to 2.2. It said that would hold the cost to $28.3 million. A dubious Congress agreed.

In July 1971, unable to reach agreement with UMTA on a contract, JPL withdrew from the project. UMTA selected the Boeing Aerospace Company as the new systems manager. But soon Boeing concluded that even the reduced system would cost $40.6 million.

By this time, UMTA Administrator Carlos Villarreal had decided to build the system in two phases. The first phase—to be paid for out of UMTA's R&D budget—would consist of the 2.2-mile system, three stations and 45 cars. Phase II—charged to the agency's capital-grants-assistance program—would extend the system and add at least two more stations with 33 more cars. UMTA wouldn't begin Phase II until it had completed Phase I satisfactorily.

Unfortunately, Villarreal and his fellow bureaucrats violated a cardinal rule of construction: the simplest system is the most reliable. Because it wanted PRT to be a national model, UMTA insisted on a high degree of sophistication. That drove costs up.

Another time-honored rule—haste makes waste—was ignored. Anxious to demonstrate its commitment to urban areas in an election year, the Nixon Administration set the PRT dedication for October 1972. This hopelessly unrealistic deadline meant that Frederic R. Harris Inc., in designing the system, had to do so without knowing the exact specifications of the vehicles to ride on it. And Boeing had to build the cars without knowing precise details about the track. "We tried to build the system before we had fully designed it," one former UMTA official explains. "It's called 'concurrency planning,' and it means you design all the pieces and hope they fit together later."

They didn't. At the PRT dedication in Morgantown on October 24, 1972, television cameras rolled, and Transportation Secretary Volpe announced grandly that he was "looking through an opening into the future." UMTA's new administrator, Frank C. Herringer, boasted that the demonstration had been "an unquestioned success."

Yet only three of the rubber-tired vehicles rolled along only one mile of the system—achieving a top speed of 17 m.p.h. The car that was carrying Professor Elias and members of the press broke down and had to be towed off the track. As soon as the politicians had left Morgantown, Boeing went back to testing in an effort to remove the many bugs from the system.

In July 1973, UMTA released a report which said that PRT tests demonstrated "satisfaction with the concept." But those results also indicated deficiencies in vehicle steering, brakes, propulsion, control and communications. Nine sub-systems and components would need redesigning at a cost of up to $15 million. Because the project was spiraling out of control, UMTA decided it could not begin Phase II.

Finally, in May 1975, UMTA agreed to complete a five-station system and provide 33 more cars, at an additional cost of $63.6 million. Not until October 1975—three years after the official dedication of the system—did it begin to move students.

Now new problems arose. Originally, Boeing had planned to heat the system's power-rail to prevent snow and ice accumulation. UMTA vetoed that because the design was unsatisfactory and it was too expensive. So, when the weather turned foul, the cars couldn't move. Elias and his associates also asked that each car have the capability to push another car. UMTA refused. This meant that every time a single vehicle broke down, that part of the system had to be shut down until the car was towed away. UMTA also rejected requests for sidings where disabled cars could be placed.

Last winter, automobiles traveling an adjacent street kicked salt, deposited by snow-removal crews, onto the people-mover's power-rail. A fire broke out, shutting the system down for two weeks.

"We are being ripped off," one frustrated student complained in a letter to the university newspaper. "The PRT is not personal, and it certainly is not rapid." In the "old days," when buses ferried them to classes, students paid a transportation fee of $4.25 per semester. That went to $10 in 1976, and may soon go to $12.

Testifying before the West Virginia legislature, Elias noted recently that there was only a 65-percent chance that Boeing could complete Phase II for the contract price. Overruns, he warned, could cost millions more.

Part of the system *is* operating, after a fashion—but at a cost vastly beyond the original estimate. Downtown congestion hasn't improved greatly. Annual operating and maintenance costs for buses were $200,000; for the PRT cars they are $1.3 million.

The Morgantown experience ought to make government think twice before funding people-movers elsewhere. Is UMTA hesitating? Not at all. Recently, it approved proposals for people-movers in five other cities, to cost at least $220 million.

"We learned a lot from Morgantown," one UMTA official says. "We won't make the same mistakes twice." One can only hope so.

Mr. Speaker, the conference report provides for $6.2 billion in new obligational authority for fiscal year 1978, $86.1 million below the budget request. Apart from the reservations I have mentioned, this is a good conference report, and I recommend its adoption.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I thank my colleague for yielding.

I have listened with interest, as I always do to the statements of the gentleman from Massachusetts (Mr. CONTE), and I commend him for his strong statements. I think they are farsighted. The gentleman's position may not be accepted right now, but I think many of these actions will, just like the Morgantown projects, come back to haunt the Members later. I think the gentleman from Massachusetts (Mr. CONTE) might well remind some of us in this body of his statements when that happens.

Mr. Speaker, I thank the gentleman for giving this information to those of us who were not privy to that particular situation.

Mr. CONTE. Mr. Speaker, I want to thank my good friend, the gentleman from Ohio (Mr. ASHBROOK), for his kind remarks, and I yield back the balance of my time.

Mr. GIAIMO. Mr. Speaker, the Department of Transportation and related agencies appropriations bill for 1978, as reported from conference, is generally within the suballocations of budget authority and outlays made to the subcommittee by the full Appropriations Committee pursuant to section 302 of the Budget Act, and is generally consistent with the amount included in the first budget resolution for 1978.

The bill would provide budget authority of $6,543 million, $7 million more than the section 302 allocation, and outlays of $15,191 million, $120 million more than the allocation.

The major increase over the House bill is $256 million for capital improvement and research programs of the U.S. Coast Guard. Funding for these programs was deleted by a point of order during House debate.

The conference report provides the necessary funds for the various modal programs, including necessary funds for program initiatives and research and development. It leaves no further room for supplemental appropriations.

This bill represents dedicated work by the Members of the Appropriations Committee, their cognizance of the requirements of the congressional budget process, and their support in the attainment of enhanced budget control.

I urge adoption of the bill as reported by the committee.

Mr. McFALL. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that

the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 397, nays 14, not voting 22, as follows:

[Roll No. 431]

NAYS—14

Armstrong	Glickman	Mottl
Collins, Tex.	Hansen	Neal
Conable	Kelly	Steiger
Crane	McDonald	Symms
Fountain	Miller, Ohio	

NOT VOTING—22

Brademas	Flippo	Marriott
Burke, Mass.	Gudger	Murphy, Ill.
Chisholm	Hammer-schmidt	Murphy, N.Y.
Collins, Ill.		Pursell
Dent	Holland	Teague
Derrick	Howard	Wiggins
Dickinson	Koch	Wilson, Tex.
Dodd	McKinney	

The Clerk announced the following pairs:

Mr. Burke of Massachusetts with Mr. Dickinson.

Mr. Brademas with Mr. Hammerschmidt.

Ms. Chisholm with Mr. Marriott.

Mr. Murphy of Illinois with Mr. McKinney.

Mr. Dodd with Mr. Wiggins.

Mr. Howard with Mr. Koch.

Mr. Murphy of New York with Mr. Charles Wilson of Texas.

Mr. Teague with Ms. Collins of Illinois.

Mr. Gudger with Mr. Flippo.

Mr. Derrick with Mr. Holland.

Mr. EDWARDS of Oklahoma changed his vote from "nay" to "yea."

Mr. NEAL changed his vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 12: Page 13, line 8, insert:

HIGHLAND SCENIC HIGHWAY STUDY

For necessary expenses to perform a study on the "Highland Scenic Highway", to remain available until expended, $1,700,000, to be derived from the "Highway Trust Fund", to be transferred to the Forest Service, Department of Agriculture.

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 12 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment insert: "$1,500,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 15: Page 15, line 14, strike out: "Fund." and insert: "Fund, together with $8,000,000 to be allocated from amounts available for obligation as authorized by section 105(c)(2) of the Federal-Aid Highway Act of 1976.".

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 15 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 27: Page 22, line 10, strike out: "$67,000,000" and insert: "$70,000,000:".

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 27 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 26: Page 20, line 13, insert:

PAYMENTS TO THE ALASKA RAILROAD REVOLVING FUND

For payment to the Alaska Railroad Revolving Fund for capital replacements, improvements, and maintenance, $3,000,000, to remain available until expended.

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 26 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 28: Page 22, line 11, strike out: "$64,500,000" and insert: "$67,500,000".

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 28 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 34: Page 30, line 6, strike out: "expended," and insert: "expended: *Provided*, That $12,243,000 of such amount shall become available upon the date of enactment of this Act.".

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 34 and concur therein with an amendment, as follows:

In lieu of the matter stricken and inserted by said amendment, insert the following: "expended: *Provided*, That $12,243,000 of such amount shall become available upon the date of enactment of this Act: *Provided further*, That the Secretary of Transportation shall execute an agreement with the Authority whereby the Authority agrees to (1) issue no additional bonds under title I of Public Law 92–349, (2) provide a minimum of 20 percent of the Authority's unreimbursed debt service costs under title I of Public Law 92–349, and (3) develop and execute a plan, with the participating local governments, that will provide for the Authority to be financially responsible for the remaining capital and operating costs of the rail transit system in a manner consistent with the Urban Mass Transportation Act of 1964, as amended, the Federal-Aid Highway Act of 1973, as amended, and the terms and conditions the Secretary may require.".

Mr. McFALL (during the reading). Mr. Speaker, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 38: Page 35, line 20, insert:

SEC. 317. Obligations for the Great River Road shall include preliminary engineering and the planning or execution of projects for the acquisition of areas of archeological, scientific, or historical importance and of necessary easements for scenic purposes, the construction or reconstruction of roadside rest areas, bicycle trails, and scenic viewing areas, the reconstruction and rehabilitation of existing road segments, and the construction of new route segments. No such funds, however, shall be used for constructing new segments until 60 per centum of the Great River Road in each State is completed: *Provided*, That such completion may be waived if the Administrator determines that circumstances in such State prevent such completion.

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 38 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the last amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 39: Page 36, line 8, insert:

SEC. 318. Such funds as may be necessary shall be utilized from the appropriations above made available to the Federal Aviation Administration and to the Civil Aeronautics Board for the preparation of a plan to coordinate as promptly as possible the use of Midway Airport with O'Hare Airport in Chicago, Illinois, for service by regularly scheduled airline carriers in order to relieve air traffic congestion and to promote air safety in that area.

MOTION OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McFALL moves that the House recede from its disagreement to the amendment of the Senate numbered 39 and concur therein with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following:

SEC. 318. Such funds as may be necessary shall be utilized from the appropriations above made available to the Federal Aviation Administration and to the Civil Aeronautics Board for the preparation of a plan to coordinate as promptly as possible the use of Midway Airport with O'Hare Airport in Chicago, Illinois, for service by regularly scheduled airline carriers in order to relieve air traffic congestion and to promote air safety in that area.

SEC. 319. Funds appropriated for grants to the National Railroad Passenger Corporation under Public Law 95–26 and for the fiscal year 1978 purchase payments for the Northeast Corridor shall be used for the payment of any principal and interest costs due or payable to the Consolidated Rail Corporation after March 11, 1977.

Mr. McFALL (during the reading). Mr. Speaker, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

GENERAL LEAVE

Mr. McFALL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter on the conference report on the bill H.R. 7557.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

PERSONAL EXPLANATION

Mr. RONCALIO. Mr. Speaker, earlier today I was absent on the vote of 7 of the 14 bills on suspension, votes having been postponed until the end of all suspensions. If present, I would have voted against H.R. 2387 and H.R. 6974 and for the balance.

Ironically, I was delayed by transportation, but returned in time to vote on the transportation conference report.

WELCOME BACK TO CONGRESSMAN FLIPPO

(Mr. BEVILL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BEVILL. Mr. Speaker, as many of you have already noticed, our friend and colleague from the Fifth District of Alabama, Congressman RONNIE FLIPPO, is back in the House Chamber following successful recovery from heart surgery last month.

I wanted to take this opportunity to recognize Congressman FLIPPO and inform those Members who may not be aware of his return to Washington.

I am sure all of the Members of this House join me in enthusiastically welcoming back Congressman FLIPPO. He is doing an outstanding job in representing the people of Alabama's Fifth District, and again it is very good to see RONNIE back on the House floor.

PERMISSION FOR COMMITTEE ON VETERANS' AFFAIRS TO SIT DURING 5-MINUTE RULE TUESDAY AND WEDNESDAY, JULY 19 AND 20

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that the Committee on Veterans' Affairs may sit during the 5-minute rule tomorrow and the next day.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will there be a markup of a bill?

Mr. ROBERTS. Mr. Speaker, if the gentleman will yield; no, we are having hearings on the upgrading of discharges.

Mr. ROUSSELOT. So the gentleman can assure us there will be no markup?

Mr. ROBERTS. The gentleman is correct.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

MAKING APPROPRIATIONS FOR THE DEPARTMENT OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY, AND RELATED AGENCIES FOR FISCAL YEAR 1978

Mr. SLACK. Mr. Speaker, I call up the conference report on the bill (H.R. 7556) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of June 30, 1977.)

Mr. SLACK (during the reading). Mr. Speaker, I ask unanimous consent that the further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The SPEAKER pro tempore. The Chair recognizes the gentleman from West Virginia (Mr. SLACK).

Mr. SLACK. Mr. Speaker, the bill (H.R. 7556) making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, as agreed by the conferees, contains a total of $7,709,432,000 in new budget authority for fiscal year 1978. It also contains $352 million for liquidation of contract authority, as well as $211,515,000 in new budget authority for fiscal year 1977.

Mr. Speaker, the total amount included in the bill for fiscal year 1978 is $5,605,598,802 less than the appropriations to date for fiscal year 1977. It is, however, $103,312,500 more than the total amount originally approved by the House for fiscal year 1978, and is $3,017,000 more than the total approved by the Senate for fiscal year 1978.

I would like to mention the major differences in the conference agreement and the bill as it passed the House. For the Law Enforcement Assistance Administration, the conferees agreed on $647,250,000, an increase of $47,250,000 over the House amount. The total amount provided for the Economic Development Administration is $409,325,000, an increase of $22,600,000 over the House total. For the National Oceanic and Atmospheric Administration, the total amount agreed to in conference is $788,828,000, an increase of $33,028,000 over the House total. The amount provided for the Legal Services Corporation is $205 million, which is $12 million less than the amount the House approved.

The conferees also approved a total of $211,515,000 in new budget authority for fiscal year 1977. No funds were provided by the House for fiscal year 1977, but the Senate had included $213,132,000. The major item in the conference agreement for fiscal year 1977 is $200 million for the disaster loan program of the Small Business Administration.

Mr. Speaker, I insert at this point in the record a summary table showing the conference action, by department or agency, with comparisons with fiscal year 1977, the budget estimates, the House bill, and the Senate bill.

(The table referred to follows:)

COMPARATIVE STATEMENT OF NEW BUDGET AUTHORITY—DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY, AND RELATED AGENCIES (FISCAL YEARS)

	New budget authority					Conference compared with—			
	Enacted 1977	Estimates, 1977–79	House, 1977–78	Senate, 1977–78	Conference, 1977–78	1977 enacted	1977–78 estimate	House bill	Senate bill
Department of State	1,148,036,202	1,253,211,000	1,228,694,000	1,215,120,000	1,234,970,000	+86,933,798	−18,241,000	+6,276,000	+19,850,000
Department of Justice	2,338,544,000	2,376,575,000	2,248,721,000	2,348,961,000	2,300,619,000	−37,925,000	−75,956,000	+51,898,000	−48,342,000
Department of Commerce	7,891,909,000	1,809,099,000	1,864,915,000	1,985,749,000	1,923,275,000	−5,968,634,000	+33,176,000	+58,360,000	−62,474,000
The Judiciary	419,945,600	453,597,500	444,440,500	444,318,000	444,318,000	+24,372,400	−9,279,500	−122,500	
Related agencies:									
Arms Control and Disarmament Agency	12,200,000	13,600,000	13,255,000	13,600,000	13,600,000	+1,400,000		+345,000

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman for yielding.

Mr. Speaker, I was reading the conference report, and I would like to ask the gentleman if there is any significance we can attach to the fact that the Senate receded in only 8 cases and the House receded in 37 cases. Is it because the Senate had more amendments?

Mr. SLACK. Mr. Speaker, there were 90 amendments in disagreement, and many of them were amendments for executive level pay increases and amendments making technical and conforming changes.

Mr. ASHBROOK. If the gentleman will yield further, I see in section 707, Amendment 89, which is one in which this body has expressed a considerable amount of interest, prohibits the obligation or expenditure of funds made available in the act for making a commitment to provide any reparations, aid, or credits to Vietnam, Cambodia, or Laos.

Mr. CEDERBERG. Mr. Speaker, if the gentleman will yield, this amendment was added by the Senate and agreed to by the conferees.

Mr. ASHBROOK. I thank the gentleman for his explanation.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Illinois, Mr. McCLORY.

Mr. McCLORY. Mr. Speaker, I am pleased to note the conference report increased the appropriation for the Law Enforcement Assistance Administration by $47 million and, nevertheless, I want to express disappointment. This is still about $150 million less than the committee authorized when we debated the authorization bill. I would like to add that I think we are in a very, very serious situation with regard to law enforcement, in providing support for law enforcement in this Nation, because the Attorney General has authorized a task force to somehow revise or restructure LEAA, but nothing is going to be done this year.

Meanwhile we are cutting the appropriation, and we are going to have nothing as a substitute for it. I think we are reaching a hiatus from which we are going to suffer very seriously.

I merely want to call the attention of the Members of the House to the fact that we are downgrading LEAA, we are providing nothing in place of it, and I think law enforcement in this country is going to suffer as a result of our inaction, our lack of leadership, our lack of direction, and our lack of providing resources to enable the local and State officials to take care of this situation.

Mr. Speaker, the objective of the administration should be to improve and

strengthen the Law Enforcement Assistance Administration—not to dismantle it—or to curtail LEAA's resources.

A few of the accomplishments of LEAA—and its need for more, not less money, is made clear on page 29 of the Attorney General's task force report.

The following paragraphs outline a small part of the role of LEAA:

There have been some significant accomplishments in the LEAA program. Substantive reforms in criminal codes have been enacted in over half the States with support from LEAA funds. LEAA funds have also supported the unification of court systems in over half the States. LEAA funds, in many jurisdictions, have been the single most important support for providing effective counsel to indigent offenders. Many jurisdictions have been better serviced by police agencies through the development with LEAA funds of more effective patrol techniques, police community relations programs, team policing and minority recruitment efforts. LEAA funds have been an important resource for fighting organized crime at the State and local government level. LEAA's funds have supported the development of more humane and rational approaches for dealing with incarcerated offenders and have supported the implementation of diversion, probation, and community-based programs that provide needed alternatives to incarceration. LEAA support of the development of model procurement codes and procedures shows the promise of saving State and local taxpayers millions of dollars in revenues that would otherwise be lost through waste, inefficiency, and corruption. There are other examples of achievements in the LEAA program including the development and implementation of the Prosecutor's Management Information System (PROMIS), the Treatment Alternatives to Street Crime (TASC) program, and the career criminal program.

The LEAA experience clearly supports the proposition that a limited program of Federal research and demonstration is not enough. All the good ideas in the world are not going to help the State and local governments if they do not have the funds to implement these ideas. The fiscal crisis of the American cities and States is such that funds to implement improvements in the criminal justice system are not available. In many jurisdictions, there barely are enough funds to maintain the current level of services. A substantial amount of Federal financial assistance must be provided.

Mr. Speaker, as these views of Thomas J. Madden and Patricia Walden emphasize "funds to implement improvements in the criminal justice system are not available to American cities and States." Additional funds for that purpose are needed now, not at some future uncertain date when a restructured LEAA, or new program is developed. Law enforcement and reduction of crime in America depend on prompt and decisive action by the administration and the Congress.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Texas.

Mr. WHITE. Mr. Speaker, I thank the gentleman for yielding.

I notice on page 23 of the report there appears language of this nature:

The committee expects the Bureau of Prisons to study further the use of existing detention facilities at military installations and endeavor to utilize such facilities to the maximum extent possible.

Now, does this language contemplate the moving of civilian inmates or prisoners into military facilities to mix with military prisoners?

Mr. SLACK. No. This would apply only to military installations that may not be needed by the military. There will not be a mixing of prisoners.

Mr. WHITE. This provides strictly for the use of those excess facilities that are no longer to be utilized by the military?

Mr. SLACK. The gentleman is correct.

Mr. WHITE. Mr. Speaker, I thank the gentleman very much.

Mr. CEDERBERG. Mr. Speaker, the chairman of the subcommittee has adequately explained the conference report, and I have no requests for time.

Mr. HAMMERSCHMIDT. Mr. Speaker, I rise in support of the conference report on H.R. 7556 making funds available for fiscal year 1978 for the Departments of State, Justice, and Commerce, as well as several related agencies. I am especially pleased that this bill includes $382.5 million for the Economic Development Administration and an additional $64.6 million for the regional planning commissions which serve all or portions of 32 States. These funds provide a slight increase in moneys for public works facilities grants and begin funding for a new program providing interest-free loans to redevelopment areas for economic development purposes.

I am an enthusiastic supporter of the programs of the Economic Development Administration because I have seen the positive results these funds have provided. It is basically a job-creating program, and it provides funds to local communities that are vital for economic stimulus. The public works grant program has provided communities with funds to construct water and sewer systems, vocational schools, industrial parks, and other public facilities. These types of public facilities have enabled communities which had been economically deprived to attract new businesses and thus create new jobs that revitalize the entire area. These funds also provide planning money and technical assistance money to States and local communities which are helpful in evaluating their economic deficiencies and developing pragmatic solutions to their economic problems.

One of the most successful Federal programs I have been acquainted with is the economic development district program which received funds under title IV, as well as title I of the Public Works and Economic Development Act of 1965, as amended. The district program has provided grantsmanship expertise to many smaller communities which had previously been sorely lacking this type of service. Through the district program, EDA funds and other Federal funds have been targeted to areas experiencing particular economic problems. These moneys coupled with local initiative have made a difference in many communities.

For the first time, funds are provided to initiate an interest-free loan program for redevelopment areas, which was authorized by the Public Works and Economic Development Act Amendments of 1976. This program was designed to give EDA another tool which could be used for a variety of activities to accelerate the recycling of land and facilities for the creation of job opportunities.

While maintaining funding at pretty much the current level for most of the EDA programs, this legislation provides a slight increase in funds for the construction of public works facilities. I am pleased to see this upward movement. However, in the future I am hopeful that we can see even a more marked increase in this program. This and other programs of the Economic Development Administration have a proven track record. It is these types of programs which I feel must be bolstered in times of economic depression or hardship. I believe these programs are more effective than some of the past new Federal programs which are often dreamed up in haste to deal with an immediate economic problem.

I am encouraged that there have been signs that the administration through Secreary Kreps wants to give EDA a bigger role. This is welcome news, and I am hopeful that we can see more actions to back up these signs. The past level of success of the programs of the Economic Development Administration would seem to warrant a level of funding comparable to authorized levels of funding for these programs. I believe this would be a positive step toward creating economic stability and providing additional job opportunities.

Mr. JENRETTE. Mr. Speaker, as we today vote on funds for our Department of Justice I feel there is an unfulfilled promise that we must consider.

I am proud to be able to speak today in behalf of one of the many victims of Helsinki's unfulfilled promise, Zakhar Lvovich Tesker. Knowing of the problems experienced by Mr. Tesker and his family in their simple request to obtain an exit visa only serves to reinforce my deep gratitude for America's freedoms and basic belief that the rights of the individual are paramount. It is obvious that the Soviet Union does not share this basic commitment to upholding the rights of its citizens, even after the Soviets loudly acclaimed their own action in signing the Helsinki accord. As evidence of what is really happening in the Soviet Union I would like to share with my colleagues the story of Zakhar Lvovich Tesker.

ZAKHAR LVOVICH TESKER

Circumstances have changed young Zakhar Tesker from an ordinary "blue-collar" worker into one of Moscow's bravest activists. Once a soccer coach, he was dismissed from his job as a driver after applying for an exit visa.

His marriage to Rimma, a cosmetician, has been charged with dramatic events. By the time their son Benjamin was born in 1975, Zakhar was already deeply involved in the struggle for basic rights for Jews in the Soviet Union. He was placed under house arrest when he tried to leave his apartment to join demonstrating comrades. With Vladimir Slepak he undertook an exhausting journey to Siberia to visit imprisoned refusniks Nashpitz and Tsitlionok, to bring them warm clothing and moral support. Upon his return, Tesker was visited by the KGB and threatened with charges of being a parasite, although he is refused all work.

In October 1976, during a most daring demonstration, Zakhar Tesker was among the Jews who sat in at the Supreme Soviet insisting on written reasons for their refusals; they were taken by bus to a woods outside Moscow where Zakhar was dragged from the vehicle and beaten so severely his nose was broken. While Zakhar was serving fifteen days in prison following the beating, his wife Rimma, gave birth to a daughter.

After the birth of their first child, Zakhar wrote to a friend:

"We are all right, and I am very glad to tell you that my wife bore a child. That was a great event in my life. His name is Benjamin. That was really a happy day in our lives and I hope that very soon another happy day will come, and we shall go to Israel."

After 4 long years waiting, I hope that my words here in Congress will help bring that day closer when the Tesker family can go to Israel. Even greater is my hope that, by virtue of the steadfast resolve of Congress and the administration on this issue, the Soviet Union will see fit to regard its citizens as free people rather than as prisoners.

Mr. SLACK. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. RUSSO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 326, nays 85, not voting 22, as follows:

[Roll No. 432]

NOT VOTING—22

Brademas	Brown, Calif.	Dent
Broomfield	Burke, Mass.	Derrick
Dickinson	Howard	Pursell
Duncan, Tenn.	Koch	Teague
Flippo	McKinney	Wiggins
Gibbons	Markey	Wilson, Tex.
Gudger	Marriott	
Holland	Murphy, N.Y.	

The Clerk announced the following pairs:

Mr. Burke of Massachusetts with Mr. Broomfield.

Mr. Brademas with Mr. Wiggins.

Mr. Dent with Mr. Pursell.

Mr. Murphy of New York with Mr. Dickinson.

Mr. Teague with Mr. McKinney.

Mr. Koch with Mr. Marriott.

Mr. Charles Wilson of Texas with Mr. Duncan of Tennessee.

Mr. Flippo with Mr. Brown of California.

Mr. Howard with Mr. Gibbons.

Mr. Derrick with Mr. Gudger.

Mr. Holland with Mr. Markey.

Messrs. WHITLEY and KEMP changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 32: Page 32, line 15, strike out "and design," and insert: "design and construction of facilities,".

MOTION OFFERED BY MR. SLACK

Mr. SLACK. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SLACK moves that the House recede from its disagreement to the amendment of the Senate numbered 32 and concur therein.

The SPEAKER pro tempore. The gentleman from West Virginia is recognized for 1 hour.

Mr. ASHBROOK. Mr. Speaker, will the gentleman from West Virginia yield?

Mr. SLACK. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman for yielding. I am generally speaking somewhat out of order, if someone on the floor can give us some indication of what the plans are for the remainder of the day; but pending that, I am interested in amendments 32 and 33. It seems like a rather substantial sum.

Mr. SLACK. Mr. Speaker, will the gentleman please repeat his statement?

Mr. ASHBROOK. Mr. Speaker, reserving the right to object, as I was saying when I guess no one heard, first, I think there is some particular interest in what the schedule for today is, inasmuch as it is about 20 minutes after 5; but if there is no one on the floor that can respond to that, I am interested in amendments 32 and 33, particularly as it seems to jump from design and construction, $1 million to almost $31 million. Could my friend and colleague, the gentleman from West Virginia, give me some light on that particular pair of amendments that will be together?

Mr. SLACK. Mr. Speaker, if the gentleman will yield, the House did place $1 million in the bill for planning and design, however, the Senate, the other body,

doubled the budget request for a total of $30,800,000. We agreed on a compromise of the budget figure for design and construction of the project.

Mr. ASHBROOK. Did the gentleman say double?

Mr. SLACK. The other body had doubled the budget request and we compromised at the budget figure.

Mr. ASHBROOK. Our figure was $1 million?

Mr. SLACK. That is right. The budget request was $15,500,000 and the other body doubled the figure and made it $30,800,000.

Mr. ASHBROOK. Mr. Speaker, this is another instance, if the gentleman will permit, of an individual Member of the other body making his demands on us as we go along and we have to withdraw.

Mr. SLACK. Well, of course, we all know this is a very controversial project; but when we go into conference with the other body, we have to compromise to get a bill, and we thought this was a fair compromise.

Mr. ASHBROOK. Mr. Speaker, I withdraw my reservation to amendment No. 32.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from West Virginia (Mr. SLACK).

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 33: Page 32, line 17, strike out: "$1,000,000" and insert: "$30,800,000,".

MOTION OFFERED BY MR. SLACK

Mr. SLACK. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SLACK moves that the House recede from its disagreement to the amendment of the Senate numbered 33 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert: "$15,500,000".

The SPEAKER pro tempore. The gentleman from West Virginia is recognized for 1 hour.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Washington.

Mr. CUNNINGHAM. Mr. Speaker, I wanted to ask a couple questions on amendment No. 33.

Could the gentleman tell me specifically what those capital funds are to be used for?

Mr. SLACK. Mr. Speaker, I am sorry. I did not hear the gentleman.

The SPEAKER pro tempore. Will the gentleman restate his question.

Mr. CUNNINGHAM. Mr. Speaker, could the gentleman tell me what the capital funds in that amendment will be used for?

Mr. SLACK. They will be used to begin construction of the Sand Point facility.

Mr. CUNNINGHAM. Mr. Speaker, having just come back from that area, I would like to know, who wants that?

Mr. SLACK. A budget request was sent up by the administration in the amount of $15.5 million for design and construction of the Sand Point facility.

Mr. CUNNINGHAM. Well, I do not think I have understood the answer. I would like to specifically ask who there is asking for that facility to be built there?

Mr. SLACK. Where?

Mr. CUNNINGHAM. The gentleman said at Sand Point. That is in the State of Washington.

Mr. SLACK. It is a Federal facility and the budget estimate was sent up by the President of the United States. It is a budgeted item. We held hearings on it.

Mr. CUNNINGHAM. Mr. Speaker, with all due respect, and appreciating my newness, I was not really advised that this was going to be before us today. In trying to ask some of my associates, I was being given some rather vague answers. I am trying to find out who wants us to spend $15 million in the State of Washington building a facility that I cannot find the people saying that they want.

Mr. SLACK. The only thing I can say is that it was a budget estimate sent up by the President of the United States. There were hearings held on the request. It is a budgeted item, and it comes under the National Oceanographic and Atmospheric Administration in the Department of Commerce.

Mr. CUNNINGHAM. Could I ask one more question?

Mr. SLACK. Certainly.

Mr. CUNNINGHAM. I do not mean to be difficult. As I would assume the gentleman knows, the specific lake that this is built on is virtually a recreational and residential lake. This facility will allow them to bring into that lake boats up to 350 feet. A lot of people are slightly upset about it. I am trying to find out why. This has not been voted on in the State of Washington and not voted on in the city of Seattle. I am trying to find out why someone feels that this has to be built where I do not think the people want it.

Mr. SLACK. It will be built on the former site of the naval air station.

Mr. CUNNINGHAM. Which I am sure the gentleman is aware has been given to the city, very generously, and will be used as a multiuse facility.

Mr. DICKS. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Washington.

Mr. DICKS. I think the gentleman will recall—and I am sure he does, since he is an astute student of politics in the city of Seattle—that there was a vote by the people of the city of Seattle 2 years ago in which they fairly overwhelmingly voted for a park, NOAA at Sand Point, and voted against aviation. Part of the plan at that time was to include NOAA, with NOAA's ships being home posted at the facility.

So, I do not think it comes as a surprise to anyone that this is going forward as a budget request. The National Oceanographic and Atmospheric Administration has been part of the administration's budget request. So, I think there has been no mystery about who is for it. President Ford requested funds in the fiscal year 1977 budget; his Office of Management and Budget sent it up, and now President Carter sent it up in his fiscal year 1978 budget request, so that it is part of the regular budget process.

Mr. CUNNINGHAM. If the gentleman will yield further, I will say that I am aware of what the gentleman from Washington said. The people did vote on the park facility, but I am unaware—I am from Seattle, and the gentleman is from Tacoma—I am unaware that the people in Seattle voted to have the NOAA facilities consolidated on Lake Washington and take some of the most beautiful, private waterfront in the State of Washington.

Could the gentleman answer that for me?

Mr. DICKS. Well, the point is that I think the people of Seattle knew what they were voting on, and that was the use of the facilities there for park and for a NOAA facility. This project has been in the planning stages for almost 4 years. It has been no mystery to the people of Seattle as to what was going to go on. If the gentleman looks at the history, I think he will find that there are 4 years of history behind it. Two Presidents and two Offices of Management and Budget, two Secretaries of Commerce, have favored it. I think it is a little late in the process on the floor today, in the conference committee setting, to raise this issue.

Mr. CUNNINGHAM. If the gentleman from West Virginia will yield further, I would apologize to the body for taking this time at this late hour. It has been a busy day.

Frankly, I would hope that there would have been notice, and I probably did not get that notice because of my newness. I sincerely would have attempted to get my personal questions concerning this answered prior to this time.

Mr. SLACK. I would like for the record to show that the conference report was filed and printed in the RECORD of June 30, 1977. It was printed House Report 95-476.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from West Virginia (Mr. SLACK).

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 52: Page 46, line 12, insert:

INTERNATIONAL TRADE COMMISSION

SALARIES AND EXPENSES

For necessary expenses of the International Trade Commission, including hire of passenger motor vehicles and services as authorized by 5 U.S.C. 3109, $12,187,000: *Provided*, That no part of this appropriation shall be used to pay the salary of any member of the International Trade Commission who shall hereafter participate in any proceedings under sections 336, 337, and 338 of the Tariff Act of 1930, wherein he or any member of his family has any special, direct, and pecuniary interest, or in which he has acted as attorney or special representative: *Provided further*, That no part of the foregoing appropriation shall be used for making any special study, investigation, or report at the request of any other agency of the executive branch of the Government unless reimbursement is made for the cost thereof.

MOTION OFFERED BY MR. SLACK

Mr. SLACK. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SLACK moves that the House recede from its disagreement to the amendment of the Senate numbered 52 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert:

INTERNATIONAL TRADE COMMISSION

SALARIES AND EXPENSES

For necessary expenses of the International Trade Commission, including hire of passenger motor vehicles and services as authorized by 5 U.S.C. 3109, $11,500,000: *Provided*, That no part of this appropriation shall be used to pay the salary of any member of the International Trade Commission who shall hereafter participate in any proceedings under sections 336, 337, and 338 of the Tariff Act of 1930, wherein he or any member of his family has any special, direct, and pecuniary interest, or in which he has acted as attorney or special representative: *Provided further*, That no part of the foregoing appropriation shall be used for making any special study, investigation, or report at the request of any other agency of the executive branch of the Government unless reimbursement is made for the cost thereof.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 61: Page 54, line 9, insert:

TITLE VI—SUPPLEMENTAL APPROPRIATIONS, 1977

For additional amounts for the fiscal year 1977 for increased pay costs authorized or pursuant to law, and other purposes to be immediately available, as follows:

Mr. SLACK. Mr. Speaker, inasmuch as amendments Nos. 61 through 67 and 69 through 81 all deal with appropriations for fiscal year 1977, and are brought back in disagreement solely for technical reasons, I ask unanimous consent that they be considered as read, printed in the RECORD, and that they be considered en bloc.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Senate amendments considered en bloc are as follows:

Senate amendment No. 62: Page 54, line 14, insert:

DEPARTMENT OF STATE

Senate amendment No. 63: Page 54, line 15, insert:

INTERNATIONAL ORGANIZATIONS AND CONFERENCES

"Missions to international organizations," $145,000;

Senate amendment No. 64: Page 54, line 17, insert:

INTERNATIONAL COMMISSION

"American sections, international commissions," $20,000;

Senate amendment No. 65: Page 54, line 20, insert:

DEPARTMENT OF JUSTICE

Senate amendment No. 66: Page 54, line 21, insert:

GENERAL ADMINISTRATION

SALARIES AND EXPENSES, GENERAL ADMINISTRATION

For an additional amount for "Salaries and expenses, general administration," $147,000, to be derived by transfer from "Salaries and expenses, Community Relations Service".

Senate amendment No. 67: Page 55, line 1, insert:

LEGAL ACTIVITIES

ANTITRUST DIVISION

For salaries and expenses to provide antitrust enforcement grants to the States authorized by section 309 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, $1,000,000.

Senate amendment No. 69: Page 55, line 9, insert:

THE JUDICIARY

Senate amendment No. 70: Page 55, line 10, insert:

COURT OF CUSTOMS AND PATENT APPEALS

"Salaries and expenses," $41,000.

Senate amendment No. 71: Page 55, line 12, insert:

CUSTOMS COURT

"Salaries and expenses," $73,000;

Senate amendment No. 72: Page 55, line 14, insert:

COURT OF CLAIMS

"Salaries and expenses," $159,000;

Senate amendment No. 73: Page 55, line 16, insert:

COURTS OF APPEALS, DISTRICT COURTS, AND OTHER JUDICIAL SERVICES

"Salaries of judges," $4,300,000;

"Salaries of supporting personnel," $249,000;

"Salaries and expenses of United States Magistrates," $450,000;

"Salaries and expenses of referees," $1,435,000;

Senate amendment No. 73: Page 55, line 23, insert:

ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS

"Salaries and expenses," $53,000;

Senate amendment No. 75: Page 56, line 1, insert:

FEDERAL JUDICIAL CENTER

"Salaries and expenses," $20,000;

Senate amendment No. 76: Page 56, line 3, insert:

RELATED AGENCIES

Senate amendment No. 77: Page 56, line 4, insert:

ARMS CONTROL AND DISARMAMENT AGENCY

"Arms control and disarmament activities," $220,000.

Senate amendment No. 78: Page 56, line 6, insert:

BOARD FOR INTERNATIONAL BROADCASTING

"Grants and Expenses", $3,350,000, to remain available until expended, which shall be available only for fluctuations in foreign currency exchange rates in accordance with the provisions of section 8 of the Board for International Broadcasting Act of 1973, as amended.

Senate amendment No. 79: Page 56, line 12, insert:

SMALL BUSINESS ADMINISTRATION

Senate amendment No. 80: Page 56, line 13, insert:

SALARIES AND EXPENSES

For an additional amount for "Salaries and Expenses" $500,000 to be transferred from the Disaster Loan Fund.

Senate amendment No. 81: Page 56, line 16, insert:

DISASTER LOAN FUND

For additional capital for the "Disaster Loan Fund", authorized by the Small Business Act, as amended, $200,000,000 to remain available without fiscal year limitation.

MOTION OFFERED BY MR. SLACK

Mr. SLACK. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SLACK moves that the House recede from its disagreement to the amendments of the Senate numbered 61 through 67 and 69 through 81 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the last amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 90: Page 58, line 21, insert:

SEC. 708. No part of any appropriation contained in this Act shall be used for the purpose of negotiating a settlement of United States claims against private property confiscated by the Cuban Government at less than the principal value, giving full consideration to the amounts certified by the United States Foreign Claims Settlement Commission on July 6, 1972.

MOTION OFFERED BY MR. SLACK

Mr. SLACK. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SLACK moves that the House recede from its disagreement to the amendment of the Senate numbered 90 and concur therein.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and the several motions was laid on the table.

GENERAL LEAVE

Mr. SLACK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report and the motions just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

PERSONAL EXPLANATION

Mr. SKUBITZ. Mr. Speaker, I was unavoidably absent earlier today when there was a succession of rollcalls on matters called under suspension of the rules. For the record, had I been present, I would have voted "aye" on roll No. 424, amending the Federal Election Campaign Act; "aye" on roll No. 425, to establish National Family Week; "aye" on roll No. 426, to reduce paperwork in the agricultural census; I would have voted "no" on roll No. 427, to increase the salary of the Director of OMB and his deputy; "no" on roll No. 428, to increase the number of supergrade employees in the Federal Court Administration; "no" on roll No. 429, to add 100 hearing examiners in the Court Administration; and "aye" on roll No. 430 to adopt H.R. 4319.

REQUEST FOR CONSIDERATION OF CONFERENCE REPORT ON H.R. 6138, YOUTH EMPLOYMENT AND DEMONSTRATION PROJECTS

Mr. PERKINS. Mr. Speaker, I call up the conference report on the bill (H.R. 6138) to provide employment and training opportunities for youth, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

Mr. BAUMAN. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The Clerk will read the conference report.

The Clerk proceeded to read the conference report.

Mr. PERKINS (during the reading). Mr. Speaker, I again ask unanimous consent that the statement of the managers be read in lieu of the report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, it is after 5:30.

Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The Clerk will read.

The Clerk continued to read the conference report.

Mr. PERKINS (during the reading). Mr. Speaker, I withdraw the conference report at this time.

HELSINKI'S UNFULFILLED PROMISE

Mr. WAXMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WAXMAN. Mr. Speaker, I am pleased to join my colleagues in marking "Helsinki's Unfulfilled Promise," a campaign of recognition and tribute to the thousands of political, social, and religious activists in the Soviet Union who have been systematically denied enjoyment of basic human rights. By signing the Helsinki Final Act in 1975, the Soviet Union for the first time allowed itself to become publicly accountable for its commitment to the protection of freedom and dignity of the Soviet people.

The Soviet Government has reacted to the increased scrutiny of its compliance with the Helsinki accords by repudiating all such efforts to ascertain the status of dissidents and by questioning the motives of those who express concern. Using the activists' ties with outside organizations against them, the Soviet Government has recently contemplated bringing treason charges against some of those who question the regime, express a desire to leave, or monitor compliance with the Helsinki accords.

In the end, the debate over human rights and its effect on détente devolves on the Soviet citizens themselves: The quality of their lives and the frustrations and horrors they have to live with because they have chosen to speak out.

In the past several months, it has become clear that the Soviet Government intends to tolerate no opposition to its human rights policies from either its citizens or the outside world. A decision has been made in the Kremlin, in anticipation of the 60th Congress of the Communist Party in October, to utterly destroy organized protest against the government.

What is being tested, therefore, is not only the courage and resourcefulness of those whose rights have been removed, but the dedication of those outside the Soviet Union to work for human dignity inside that country. It is for this reason that our daily evocation of Helsinki's unfulfilled promise is so important.

On July 11, another Soviet citizen, Viniamin Levich, one of the most brilliant and respected physical chemists in the world, decided to speak out. He applied to emigrate to Israel in 1972. In 1975, his two sons, Yevgeny, a physicist, and Alexander, an engineer, were permitted to leave. At that time, he was informally advised that he, too, would emigrate within a few months.

The Soviet authorities have repeatedly broken their promise to Dr. Levich. Instead, he has been systematically isolated and harassed. He was dismissed from his post as professor at Moscow University, and his chair was abolished. He was refused permission to lecture, and denied access to his laboratory. His colleagues shunned him.

In utter despair, he has appealed to his peers outside the Soviet Union. In a message to a conference in his honor in Oxford, he said:

> Apart from the right of separated families to be reunited, the right to emigrate is the most modest of all universally accepted human freedoms. Nevertheless, my wife and I have been indefinitely separated from our children despite assurances given us three years ago . . .
>
> I appeal to you. Do not lessen your noble efforts. While contacting Soviet representatives, you Western intellectuals can and ought to openly raise a question of Soviet scientist-refuseniks and their fate, to clearly show their profound concern with this humanitarian problem. Again and again with insistence and persistence.

It is the least that we can do to call attention to peoples everywhere of the fate of all the Leviches in the Soviet Union. Let no one be allowed to plead ignorance of what is occurring inside that country.

SPECIAL PROSECUTOR NEEDED TO CLEAR THE AIR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maine (Mr. COHEN) is recognized for 5 minutes.

Mr. COHEN. Mr. Speaker, the sudden resignation Friday of the Ethics Committee's special counsel has rekindled public doubt about the effectiveness of the House probe of alleged South Korean influence peddling on Capitol Hill.

The integrity of Congress as an institution has been badly compromised by reports in the press that the Government of South Korea and its agents in this country have, during the past 7 years, systematically attempted to influence Members of Congress. If Watergate has taught us anything, it is that charges of corruption within our Government must be answered promptly and truthfully. Anything less than a complete airing of the Korean activities can only add to public distrust of Congress, and distract the House from its pressing legislative duties.

I do not wish to prejudge the facts of the alleged Korean efforts to curry favor on Capitol Hill. Nor do I wish to suggest that the Justice Department and the House Ethics Committee are incapable of conducting fair and complete investigations of the matter.

But I do feel that the charges that have been lodged are extremely serious. And unless action is taken soon to resolve the matter, I fear that "Korea-gate," as it has been dubbed in Washington, could become a major national crisis. Those who dismiss calls for a special prosecutor out of hand ignore the strong desire of the public for assurances that partisan political decisions will not interfere with the search for the truth.

To try to speed resolution of this problem, Congressman JOHN B. ANDERSON of Illinois and I have jointly introduced legislation to establish an orderly, nonpartisan procedure for appointment of a special prosecutor to investigate the relationship of Members of Congress and other high-ranking government officials to the South Korean government.

The Anderson-Cohen bill amends title 28 of the United States code. It calls upon the Attorney General to conduct a preliminary investigation, not to exceed 90 days, of any improper or illegal activity by Members of Congress or top-ranking executive branch employees, in connection with efforts by foreign governments to influence legislation or other Government activities.

If, after conducting such an investigation, the Attorney General finds evidence of any wrongdoing, he is required to present his findings to a special court-appointed panel and apply to the panel for appointment of a special prosecutor to pursue the case.

Our bill provides that the Judiciary Committee of either the House or Senate may request the Attorney General to apply for appointment of a special prosecutor. The prosecutor can be appointed only by the special court-appointed panel which is also the only body with authority to remove him from office.

The bill provides that, after completing his duties, the special prosecutor must make a complete report to the special court panel. The panel would be empowered to make public whatever findings it deems to be appropriate.

The bill also instructs the special prosecutor to provide the chairman and ranking minority member of the House Judiciary Committee with any substantial information which may constitute grounds for impeachment or explusion. The special prosecutor's office would expire upon completion of its assigned duties or 5 years, whichever comes first.

I believe that the Anderson-Cohen bill provides a nonpartisan framework for effective action in the Korea problem, and I hope the House leadership will give this proposal the serious consideration it deserves.

THIRTY-FOUR CONGRESSMEN CALL FOR LOCAL NIGHTTIME RADIO SERVICE ACROSS THE NATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 5 minutes.

Mr. FINDLEY. Mr. Speaker, I am today introducing a resolution with 33 of my colleagues as cosponsors calling upon the Federal Communications Commission to maximize local meaningful primary nighttime radio broadcast service in the small towns and rural areas of our country. The resolution also urges the FCC not to permit existing radio stations to increase their power beyond the 50,000 watts presently permitted by the Commission.

This resolution has broad bipartisan support, Mr. Speaker, because this is an issue that affects all areas of the country and all kinds of people. Millions of Americans located in thousands of communities across the Nation have no local radio service after the Sun goes down each evening. That is when their local station must leave the air in order to comply with FCC regulations that were written a half century ago to deal with an entirely different situation. These regulations desperately need revision. Until they are changed, over 40 million Americans will continue to be adversely affected. If a snowstorm or a flood strikes a small town after the Sun sets, if schools close or other community activities are rescheduled, these Americans may have no way to know of the extent of the danger or whether they should change their plans. Distant stations will not cover such localized occurrences.

In fact, Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD at this point a chart showing the enormous number of people adversely affected by the present FCC regulations which unduly restrict nighttime radio broadcasting.

NUMBER AND POPULATION OF SMALL MARKETS IN EACH STATE WITH NO LOCAL NIGHT-TIME "AM" BROADCAST SERVICE

State	Small markets served by daytime stations		State's total population (1970 Census)	Rural and small town population	Population of city of license of daytime stations
	Total	AM only (no FM)			
Alabama	54	29	3,373,006	1,043,914	270,587
Arizona	9	5	1,752,122	444,086	92,206
Arkansas	44	22	1,886,210	1,186,210	318,270
California	43	23	19,715,490	3,189,983	886,879
Colorado	14	10	2,178,176	1,443,883	154,666
Connecticut	15	10	2,987,950	660,255	482,941
Delaware	4	1	542,979	128,600	33,940
Florida	47	29	6,671,162	1,776,648	661,878
Georgia	74	59	4,492,038	2,317,742	450,832
Idaho	5	4	712,567	393,792	23,274
Illinois	62	8	10,977,908	3,528,039	1,057,608
Indiana	34	5	5,143,422	1,720,534	377,134
Iowa	32	2	2,789,893	1,412,757	399,778
Kansas	24	8	2,222,173	1,055,049	277,157
Kentucky	65	22	3,160,555	1,662,167	315,014
Louisiana	39	18	3,564,310	783,140	278,633
Maine	9	1	992,048	446,025	97,581
Maryland	15	6	3,874,642	679,328	126,677
Massachusetts	21	10	5,630,224	1,069,228	871,670
Michigan	40	16	8,778,187	3,447,500	485,818
Minnesota	32	12	3,767,975	1,589,660	210,820
Mississippi	38	17	2,158,872	1,178,830	154,211
Missouri	51	24	4,636,247	1,461,528	401,426
Montana	5	2	694,409	353,029	16,291
Nebraska	18	10	1,468,101	646,142	103,615
Nevada	2	1	481,893	91,883	26,845
New Hampshire	7	2	722,753	112,167	38,417
New Jersey	17	11	7,092,597	455,056	340,758
New Mexico	10	5	1,014,979	565,660	60,978
New York	54	29	18,018,615	679,100	523,743
North Carolina	80	47	4,961,832	795,734	402,743
North Dakota	5	4	617,761	339,872	10,636
Ohio	44	8	10,542,030	1,291,253	831,106
Oklahoma	24	14	2,498,378	448,739	188,891
Oregon	12	11	2,056,171	148,591	86,672
Pennsylvania	68	38	11,669,565	1,551,245	672,099
Rhode Island	3	3	922,461	205,596	151,360
South Carolina	49	26	2,522,881	827,944	294,771
South Dakota	9	3	661,406	425,557	53,666
Tennessee	62	30	3,838,777	527,294	315,790
Texas	104	62	10,989,123	1,522,809	942,525
Utah	8	4	1,060,631	142,137	48,878
Vermont	5	1	444,330	60,128	26,358
Virginia	57	28	4,543,249	617,178	299,102
Washington	18	12	3,352,892	454,505	159,388
West Virginia	21	15	1,707,913	278,863	108,868
Wisconsin	44	7	4,366,766	579,961	463,249
Wyoming	1	1	332,416	198,361	2,292
Total	1,498	713	203,702,602	46,138,702	14,597,958

Note: The data and statistics in this table excludes the States of Alaska and Hawaii.

As the chart clearly shows, over 46 million people in almost 1,500 separate listening areas of the country lose a major source of public information and entertainment each evening when the Sun goes down. Worse yet, more than 700 of these listening areas comprising thousands of towns have no other source of local FM stations, no television stations, nothing. The millions of people who live in these small communities are literally cut off from the rest of the world each evening. They have no way to know what is happening around them, although ironically they can usually tune into a distant station and learn about a snowstorm in Chicago or a traffic jam on the George Washington Bridge in New York City. Their own local weather nad traffic conditions will remain a mystery to them until the next morning when their radio station is permitted to return to the air.

The Nation's airwaves belong to all Americans, but a significant minority of us are not permitted fair use of them. Instead, for millions of Americans local airwaves lie silent each night, unused by anyone. That is an unconscionable waste of a precious national resource.

Mr. Speaker, I am most assuredly not an engineer. But I am convinced that a nation that can bounce radio signals off distant stars and send messages millions of light-years to galaxies where other life forms might be listening ought to be able to find some way to let the local radio station in Highland, Ill. send its signal a few miles out into the Montgomery County countryside each evening. Those who are cosponsoring this resolution are convinced it can be done. I for one cannot understand why it has taken so long to do it, but I am hopeful that there will be no more delay and hesitation on the part of the Federal Communications Commission. Now is the time for them to act forthrightly to assure all Americans equal access to local meaningful nighttime radio service.

Text of House Resolution 637 follows:

H. Res. 637

Resolved, That it is the sense of the House of Representatives that the Federal Communications Commission—

(1) in any proceeding respecting the provision of class I–A and I–B radio service, should maximize local meaningful primary nighttime radio broadcast service, particularly in this Nation's vast rural areas, and

(2) notwithstanding H. Res. 714, Eighty-seventh Congress, second session, adopted on July 2, 1962, should not permit operation of a standard broadcast station with power in excess of fifty thousand watts.

CONFERENCE ON TAX POLICY AND ECONOMIC GROWTH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CONABLE) is recognized for 5 minutes.

Mr. CONABLE. Mr. Speaker, on last Friday I announced that I would cosponsor with the weekly magazine, National Journal, a national leadership conference on tax policy and economic growth to be held on November 14 and 15. I believe this conference, which will take place after the President has submitted his tax reform proposals this fall, will be an important event in the development of a rational tax policy to deal with the issues of capital formation and economic growth that face our society. Anyone who has studied the problems of our economic system cannot help but be aware of our needs to forge new directions in tax policy if our society is to be productive, our people are to have jobs and our competitiveness in world markets is to be sustained.

The President has announced that he will send to the Congress early in the fall major new proposals dealing not only with the individual tax areas but with capital formation and investment incentives that are needed to spur the economy of America and insure expanded productivity and job creation. The concepts that are being discussed for this proposal as well as others which are being considered in the Congress will require a broad scale national debate. While hearings in the Committee on Ways and Means and the Senate Finance Committee will provide an extended opportunity for individuals, organizations and corporations to present their views on the President's proposals as well as others submitted, it seemed to me that it was important to bring

together in one place informed experts from various segments of our society who could discuss the directions that should be taken and the initiatives that might be considered on the vital issues that will be highlighted by the President's program. Thus I am pleased that National Journal, a respected and thoughtful publication, was willing to join with me in the sponsorship of a conference on tax policy and economic growth which will call together the national leaders in the public as well as the private sectors to discuss the vital concerns which Congress will ultimately have to legislate on. I take this time to announce to my colleagues that this conference will take place and to urge them to encourage the people in their communities—business and labor, consumer interests and academicians—to participate in this conference.

I insert the press release announcing this conference in the RECORD at this point:

PRESS RELEASE

WASHINGTON, July 15.—Congressman Barber Conable announced today he will cosponsor "Tax Policy and Economic Growth—A National Leadership Conference" with the weekly magazine *National Journal*.

The Conference, which will take place November 14 and 15, 1977, at the Mayflower Hotel in Washington, D.C., will focus on issues associated with the formulation of a new national tax policy. Scheduled to take place two months after the Carter Administration proposes its new tax package to Congress, the conference will address not only the specifics of the Carter program but also the fundamental issues of tax policy such as economic growth, employment, capital formation, inflation, equity and income distribution.

Speakers in addition to Mr. Conable will include Senator Russell Long (D–La.), Chairman of the Senate Finance Committee; Congressman Al Ullman (D–Ore.), Chairman of the House Ways and Means Committee; Assistant Secretary of the Treasury Laurence N. Woodworth; and Bernard Shapiro, Staff Director of the Joint Committee on Taxation.

Additional speakers and panelists will be drawn from the business and financial communities, consumerists, labor and academia. The two-day conference will consist of general sessions as well as individual workshops.

Conable, ranking minority member of the House Ways and Means Committee, stated: "Our tax policy must not only make sense in current terms, but must also meet the future challenges of our economic system, providing for orderly and balanced growth and contributing to the meeting of our system's capital needs. This conference will provide a broadbased opportunity to discuss these issues, hopefully providing new initiatives in addition to its review of Administration proposals."

John Fox Sullivan, Publisher of *National Journal*, said: "Sponsoring a national conference fits well with our continuing coverage of economic and tax policy issues, an area that *National Journal* has concentrated on as part of its weekly coverage and analysis of federal policy making."

For additional information, please call or write: Tax Policy and Economic Growth, 1730 M Street, NW., Washington, D.C. 20036, (202) 857–1400.

In the coming weeks I will be presenting a series of speeches and documents dealing with some of the subjects which will be discussed at the November conference. I will do this not in a spirit of partisanship but with the notion that the national debate that must take place on tax policy and economic growth here in the Congress should be as informed and enlightened as possible. I hope others of my colleagues will join in this effort for it is important to the future stability of our economic system that we make the right choices in this area:

CONGRESSIONAL INACTION ON KOREAN BRIBERY SCANDAL SUBJECT OF RADIO PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. EDWARDS) is recognized for 15 minutes.

Mr. EDWARDS of Oklahoma. Mr. Speaker, I have recently returned from a weekend in my district. One of the main concerns of my constituents was the Korean bribery scandal and the apparent inaction on the part of the Congress in seriously pursuing this incident.

My freshman colleagues, both Republican and Democrat, have told me their constituents are also cynical about our motives in this matter and doubt congressional leaders will attempt to get to the bottom of the case.

Recently two of my colleagues, Congressmen BOB WALKER and PETER KOSTMAYER, discussed this problem on a radio program. The following transcript of that show reflects the mood of many of the freshman class, including myself:

TRANSCRIPTS

JEFFREY ST. JOHN. On Wednesday, June 22, the former head of the Korean Central Intelligence Agency testified before a Congressional committee that members of the U.S. House of Representatives were the targets of alleged bribery schemes of the Korean government. It was further alleged that such bribery attempts were for the specific purpose of influencing U.S. policy toward Korea.

With us on this edition of Reporters' Roundup are two Congressmen to discuss the implications of what has been termed a Democratic Watergate scandal, since attempts by Koreans to influence members of Congress allegedly involve many Democrats; but also some Republicans.

With us is Congressman Robert S. Walker, Republican from Pennsylvania and Congressman Peter H. Kostmayer, a Democrat also from Pennsylvania.

Let me begin, Gentlemen, with this question:

Does this alleged scandal really deserve to be compared with Watergate?

Congressman ROBERT WALKER. I don't think we know at this point. I think what we have are a lot of indications that it could be a very big scandal. And, therefore, the comparisons with Watergate naturally come to mind, because Watergate is so close. But what we do know if all of the allegations are true is there has been a massive subversion of the governmental processes by outside interests, primarily foreign interests.

ST. JOHN. Congressman Kostmayer.

KOSTMAYER. I think that Bob is right that we don't know yet whether it is as extensive as that; it may have gone back to 1970, it may have started as early as then. But I think the tragedy of Watergate was the coverup and I think this if what we have to avoid in this situation is another coverup.

MAYER. Congressman Walker, do you fear a stonewall job involving the alleged Korean bribes? And if so, who is doing the stonewalling?

WALKER. Well, I think there have been some indications that a stonewalling effort could be made and that's one reason why I reacted, and I know Congressman Kostmayer organized some people on his side of the aisle to react. Here several weeks ago, when we felt the House Ethics Committee was not moving, the action I took, I put together a group of freshmen Republicans and we introduced a resolution telling the Ethics Committee to get to work fast. Now that resolution was primarily a talking piece. But what we were able to do with that, I think, was to get a little on track. And I am encouraged that the Ethics Committee is beginning to move. The stonewalling is not as obvious as it was a few weeks ago. But I still think there are some indications that some of the leadership around here is less than enthusiastic about having a full exposure of everything with regard to the Korean scandal exposed.

MAYER. Mr. Kostmayer, how do you feel about the possibility of a stonewall job already done, or in the making, on the Korean situation?

KOSTMAYER. Well, I think it is a possibility and I also feel that the leadership has not been as enthusiastic as it should be about getting to the source of the problem. About two weeks before Congressman Walker and his colleagues on the Republican side got together, fifty-one of my colleagues, including some Republicans in fact, got together and wrote to Congressman Flynt of Georgia, who is chairman of the Ethics Committee, urging him to speed up his investigation. As a result of our letter we got back a status report earlier this month.

We have also written the Attorney General, as a result of his remarks, in which he said the investigation should be winding up. We don't think it should be winding up. We think it should just be beginning and really picking up some steam.

ST. JOHN. I would like to ask both of you this question: It seems to me that there is a kind of generational thing going on here. Congressman Kostmayer, you are basically a young Congressman; it seems that the older Democratic Congressmen are, if they are stonewalling, are in engaging in all kinds of delaying tactics. Is it a generational thing?

KOSTMAYER. Well, I suppose it may be a simple thing of whether you were here when these things were going on—they did begin apparently, the bribes, in 1970. Both Bob and I came here just last January. So I think there is a distinction between those who were here when this was going on and those who came here since then.

ST. JOHN. So, Congressman Walker, it's really the freshmen of both the Democratic and Republican Parties who are pushing the older leadership. You on the Republican side, Kostmayer on the Democratic side.

WALKER. I would say freshmen, and some second termers; in other words, I think it's the young group, not just exclusively just freshmen, but certainly the last two classes of Congressmen around here seem to be in the forefront.

MAYER. Why would the leadership want to do some footdragging on this, Congressman?

WALKER. Well, the indications are, of course we're in a position of talking about this strictly from the outside. So any comments I make are as an outsider who has been interested in the investigation and, therefore, has had information come my way. And I don't have information, or proof where I can make allegations, based on any evidence. But I can simply say the kinds of things that have disturbed me, and has led me to have some intense interest in seeing that this whole thing gets public attention.

One of the reasons why I feel there may be some foot dragging is because we keep hearing leadership people mentioned as possible sources of the problem. There has been talk . . . well, we know for instance, that the

Democratic Whip in the House, John Brademas, is one who admitted taking some money from the Koreans. Now the basis on which he took the money is said to be that he didn't know it came from a foreign government.

But the thing that General Kim had to say here, recently, that Tongsun Park is an agent, or that Tongsun Park was an agent of the Korean government, you see makes that a very serious kind of allegation that has been made against the Whip. We've also heard stories of very close relationship between Tongsun Park and the Speaker of the House. And so, when you begin to get names like this, you begin to realize that, perhaps, the leadership doesn't want all of that kind of thing focussed in the public eye.

ST. JOHN. Congressman Kostmayer, you remember, although you were not here in Congress—everybody remembers that nobody really understood why Watergate took place, what was the purpose of the breakin? So, very early on, if this does develop into another Watergate, let me ask both of you, and perhaps you might answer first, Congressman Kostmayer: What, if all this took place, what was the purpose? What did the Koreans want from U.S. Congressmen?

KOSTMAYER. Well, back in 1970 there was a meeting held in Seoul, South Korea, at the so-called Blue House, which is the government palace. And at that meeting, it was decided that one of the basic policies of the South Korean government, would be bribery—that they would attempt to influence American policy by paying hard cold cash, not only to members of Congress, but also to other important policy-makers in the administration.

About two weeks ago, Donald Renard (sp?)—who during the Nixon and Ford administrations headed the Department of Korean Affairs, in the Department of State, said this, and let me quote:

"It seems to me that we know enough to move this administration" (and he is talking about the Republican administration), "seems to me we know enough to have moved this administration toward an investigation far earlier than it began. We knew this, beginning in 1970, we knew it in 1971, we knew it in 1972—I was talking to the Justice Department in '73, I was discussing the matter with the FBI in '74 as well. But for reasons which I still have some difficulty in grasping, it was an administrative decision" (and we're talking about the Ford and Nixon administrations here), "I believe, not to move ahead with it."

He said a short time later, quote "Because the money was being passed, being passed on both sides, I think, of the aisle—I think the administration was in no position to open an investigation against the Korean CIA."

These bribes began passing hands in 1970! I think an investigation is long overdue, I think that one should have began as soon as these sort of things came to light. If this high official in the State Department knew about these sort of things in 1971, I wonder why we are only beginning an investigation in 1977!

MAYER. Jeffrey, I'll use a Watergate analogy also in my next question to Congressman Walker. Would you like to see a special prosecutor office like the one that handled the Watergate case start looking into this Koreangate, as it's been called, affair?

WALKER. I think it would be valuable. I think it would be valuable, for instance, that we form a Select Committee on Capitol Hill. The first resolution I put in, a few days after I arrived on Capitol Hill, was for a Select Committee to be formed and a Special Prosecutor. The reason being, that focuses the attention properly. I attended the hearings held by the International Relations Committee with General Kim. Now there you had a committee looking into one aspect of it, but you could tell that they weren't following through on some of the problems that involve House members; that's not their jurisdiction. And, yet, General Kim had some very interesting things to say about Tongsun Park's relationship with these House members that were involved.

If you had a Select Committee focussing on all aspects of the Korean problem, you would get it more in focus, so the public attention would be directed toward the right things. The same thing is true of a Special Prosecutor; if you have a Special Prosecutor, who is concentrating on all of the various aspects of this thing and prosecuting based not just on what took place in the House of Representatives, but also if there were administrative officials involved . . . And I happen to believe that there is a very good chance that there were some high officials in the administrations who could have been bribed. I think that those kinds of things should be looked into and maybe a Special Prosecutor is needed to do that.

ST. JOHN. Congressman Kostmayer, what do you think of the President, who is literally the head of your party, rejecting a Special Prosecutor for this alleged scandal?

KOSTMAYER. Well, I differ with the President, strongly on that. I don't think that Congress is able to investigate itself. I think we should have a Special Prosecutor—I think it's essential. I don't favor setting up another committee. I think the last thing we need in Congress is another committee, more staff, more personnel. I think we need special prosecutors who are entirely objective to look into this situation.

MAYER. Congressman Kostmayer, how do you feel the whole episode has affected our national security, especially in that part of the world in the Far East?

KOSTMAYER. I'm not sure that it's had any influence on our national security. As a result of all this money which has been spent in 1970, it's possible that the President is now about to do exactly what the South Koreans did not want him to do: and that is to initiate a phased withdrawal of American forces from South Korea.

ST. JOHN. Congressman Walker, it seems to me that you have four on-going investigations, or at least three. You've got the Justice Department, you've got two committees here on the Hill. Isn't that basically going to diffuse the problem? Everyone is going to be falling over everybody else, looking for headlines?

WALKER. I guess that's what I see as part of the problem on all of this, unless you focus the attention properly, and get all aspects into one focussed kind of spectrum, you will really not get the kind of information on the record that we need to get there.

If you have the International Relations Committee looking at one aspect of it, and the Ethics Committee looking at another aspect of it, I think there are a couple of other committees around the Hill that are now beginning to look into the peripheries of it—and then you get a Justice Department investigation and maybe, down the pike, we will get to a Special Prosecutor. You get all of these kinds of things happening and I think the thrust of it is being lost.

And what's very important right now if this thing is going to be exposed for what it is, is to get public attention in a way that the public begins to bring pressure on the House of Representatives and on the Justice Department. Because I don't think we are going to get the kind of action we want unless the public gets aroused, unless the public demands the kind of action that needs to be taken.

MAYER. Congressman Walker, you mentioned the Special Prosecutor as part of that measure, I believe, you have introduced. How independent would he be of Congress?

WALKER. Well, I think that you would have to make him very independent of Congress. Because if you don't make the Special Prosecutor independent of the Congress, he is going to lose the impact that he has to have to prosecute people here who may have problems. Evidently, the bulk of the problems, that we now know, as we turn over the rocks, the bulk of the problem seems to rest here on Capitol Hill.

ST. JOHN. Congressman Kostmayer, what did you think of the testimony of the former Korean intelligence agency chief up here on Capitol Hill on June 22?

KOSTMAYER. Well, I thought it was worthwhile and it brought some things to light. I was sorry he was not able to recall the names apparently that he had seen on a number of lists, members of Congress and even administration officials beginning back in 1970 who had been involved in the bribes. But I think it's a beginning and he is, really, the first king pin to begin talking.

ST. JOHN. How, Congressman Walker, would the Democratic leadership be able to stonewall? What would be the procedures that they could use?

WALKER. Well, there have been a couple of things that have been talked about. One of the things that I have heard mentioned is that along the line somewhere there will be a grandstand play by the leadership to, say, that the Ethics Committee is not moving fast enough. And so, therefore, we're going to take it out of the hands of the Ethics Committee and throw it over to the Select Ethics Committee that has been formed. That way you delay the investigation considerably, at least you move down toward the next political year and that way you have the leadership appearing to want to move the investigation ahead, while really taking an action that will delay the investigation.

That's one of the rumors . . . that's one of the things that I was hearing at the time that we took the stand on the resolution to ask for action, to begin being taken, because I felt if that happened—mid-summer—this could be a disaster to the whole investigation.

KOSTMAYER. I don't think the Democrats in the House will tolerate that if it's suggested.

MAYER. Mr. Walker, what does it say for the international image of our Congress that a nation like Korea, little ol' Korea, thought it could buy influence on the Hill?

WALKER. You know I really am disturbed by the implications of that. That was one of the most disturbing things as I listened to General Kim that struck me—was that here were people who thought they could really buy off the United States Congress. And that says something, perhaps, more disturbing than all those polls that show Congress rating low in the opinion of the people.

KOSTMAYER. The amount of money and the size of the country have nothing to do with each other. So it's a small country spending a lot of money. But in a sense they have been successful, I am sorry to say.

ST. JOHN. Briefly, a response from each of you. If all that has been said, thus far not just in this program but in terms of the media, that this potentially involves a wide-ranging scandal—Watergate, basically, delusioned an enormous segment of the society, with respect to our political institutions. What do you both think if all of this comes true? What's going to be the impact on public opinion? What, for example, has been the reaction of constituencies?

WALKER. There is a grave risk, as far as I am concerned. But I think my constituents, and I think Americans as a whole, feel strongly that we are in the process of making some changes in the society, we are becoming a more open society. Certainly we have a new breed of Congressmen arriving on Capitol Hill; they're far more open in their relationships with people.

ST. JOHN. Congressman Kostmayer, Congress rates lower than the Presidency, doesn't it?

KOSTMAYER. I think it's a kinda of one-two punch. I can understand people who wouldn't want to become involved in politics. . . . I think it's difficult to be optimistic, frankly.

ST. JOHN. Can Congress investigate itself? It hasn't in the past, has it?

WALKER. Congress has the capability of doing it; whether it has the willingness to do it is another question.

KOSTMAYER. I think Congress can do it, and I think there are people here who want to do it. But I am not sure we can rely on that, frankly.

CASE FOR SUPERIORITY IN MILITARY STRENGTH ELOQUENTLY STATED BY CONSTITUENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Hampshire (Mr. CLEVELAND) is recognized for 5 minutes.

Mr. CLEVELAND. Mr. Speaker, a great deal of discussion is in the air these days about whether we can be satisfied with our current military preparedness, and indeed whether it is necessary for our country to remain strong in order to remain free.

President Carter's decision to terminate production of the B–1 bomber can only intensify attention to this issue.

Recently I received a letter from a constituent that eloquently states the case for superiority in military strength in order to assure our freedom.

This letter is especially striking, because its author was born in the Netherlands and literally had World War I fought at his doorstep. But the more telling lesson for him occurred when his homeland was invaded in World War II, and regained its freedom only because the United States and our allies were willing to fight the battle of freedom.

My constituent, Henk Bartelink, shared with me a copy of a letter he has written to President Carter stating these concerns. I wish to insert in the RECORD the text of that letter, stating so well the concerns of millions of Americans that as a nation we cannot be satisfied to be second best, or even equal to the Soviet Union. We must remember that it is governed by a communist dictatorship.

As Henk Bartelink says so well, the price of remaining strong is the price we must be willing to pay to remain free.

His letter to the President follows:

MAY 2, 1977.

The PRESIDENT,
White House,
Washington, D.C.

DEAR MR. PRESIDENT: It appears that during the past Administrations every international encounter and every diplomatic negotiation has resulted in the U.S. giving more ground to the communists, as has been the case in the SALT talks. In spite of the fact that the Russian missiles are claimed to have far more lift-off power and can thus carry more MIRV warheads, the U.S. has agreed to be limited to about a thousand ICBM against Russia's 1590. Besides this we have agreed not to install any significant amount of ABM systems and we are neglecting civil defense while Russia is building hers.

It seems that the previous Presidents have permitted the U.S. to slip to the position of a second rate power. On that basis, you must know that our freedom and our independence are not going to last long. Neither will our hard won social gains if we should lose our freedom. Furthermore, our Executive Branch is not briefing the people on the seriousness of our military situation, and by doing so it is not instilling the will to defend our independence in our population. This military inferiority must be serious or Russia would not have dared start the action in Angola.

It seems that our technology may currently give us a chance to recapture superiority or at least parity in military strength, particularly through the Cruise Missile, the B1 Bomber and the Trident submarine. However, I am thoroughly afraid that in its present frame of mind the U.S. Government may negotiate the U.S. into a position where we promise either to refrain from building any of these or promise to restrict them to performance specifications which render them ineffective. Once the U.S. has made such promises and agreements it will stick to them, both because this country is basically honest and because we have an "open" society. History shows, however, that Russia will break or circumvent any agreement as soon as this becomes advantageous to them.

If you should at any time permit the U.S. to conclude such a pact or agreement, you would, in effect, sell the people of the U.S. into bondage. The Government might then proceed to represent this as a great achievement and many people, particularly those who are not thoroughly informed, might believe this. However, even those people will eventually—maybe years later—find out what has really happened and they will be justly furious. Many of us are gravely concerned about this whole situation. These concerns have been increased by the fact that you appointed Mr. Paul Warnke as your Chief negotiator and these fears are reinforced by his recent actions in Moscow as described in the attached Boston Globe article.

Mr. President, I would like to know what valid and convincing reassurances you can give us to the effect that you can and will put the U.S. in a position where it will have the military power and the popular will to defend itself and to maintain its independence. I think that your popular appeal and your skill in communicating with people are such that you could put these principles across if you really believe in them. I realize that the U.S. has other serious international problems, but if we lose this encounter with Russia you don't have to worry about solving them because their solutions will ultimately be dictated in Moscow.

By way of personal background, I was born in the Netherlands, (Holland) and hold degrees in both engineering and physics. After I emigrated to the U.S. I saw my former home country conquered by the Germans during World War II. Holland was resurrected because the U.S. rescued freedom and democracy in Europe as in Asia. I would hate to see the U.S.A., our present home country, and the birthplace of our children and grandchildren, go down the same way as Holland did. If that happens there won't be a U.S. left to come and rescue freedom and democracy, in fact there won't be anyone left who is powerful enough to reestablish these principles.

Yours Very truly,

E. H. B. BARTELINK.

LEGISLATION TO AID THE DEAF

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. GOLDWATER) is recognized for 10 minutes.

Mr. GOLDWATER. Mr. Speaker, I have a longstanding association with the Center on Deafness program at California State University at Northridge, CSNU, and I have come to appreciate the uniqueness of their program. CSNU, to the maximum extent possible, integrates hearing, speech, and visually impaired students with the rest of the student body and they receive their education and training in real life situations. I believe that the CSUN approach will become standard for the Nation.

As a result of this involvement, I have become convinced that in order to help the deaf and hearing impaired succeed, we must help them communicate more effectively with society as a whole. Consequently, today I have introduced a bill to provide a tax deduction for the purchase of telecommunication devices for the deaf and hearing-impaired.

The device is called a TTD, and although they are a recent development, their use has opened new perspectives for the deaf. Using a converted teletypewriter and a special coupler, these machines allow the deaf and hearing impaired to converse over the telephone.

Specifically, my bill allows a tax deduction, not to exceed $200, of an amount equal to 50 percent of the qualified teletypewriter expenses incurred by the purchaser during the taxable year.

I am introducing this legislation for several reasons. It has always been one of my objectives to help the deaf and hearing impaired lead full and productives lives and TTD's would provide opportunities for these individuals to become routinely involved in the daily life of their communities. Importantly, they would also help the hearing impaired and the deaf more effectively communicate in emergency situations.

Let me again emphasize to my colleagues that I believe it is essential to help the deaf and hearing impaired function in society as routinely as possible. The use of the telephone via TTD's would be an important step forward.

PROTECTION FROM DEBT COLLECTION ABUSE IN FLORIDA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, a recent article in the Fort Lauderdale News, Fort Lauderdale, Fla., recounts debt collection complaints raised in a State suit and by citizen complaints that a Florida debt collection agency has engaged in a variety of unethical practices.

This article makes clear the need for protection from debt collection harassment and that citizens when armed with a law banning unethical practices and providing civil liability can and will take steps to stop debt collection abuse.

Acting after an investigation which followed a "raft" of citizen complaints, the State of Florida has gone into court to revoke this collection agency's operating license. The State suit alone cites six times when the collection agency has violated the State statutes that apply to its debt collection activity.

Among the charges are that the collection agency contacted two consumers for months on end with such frequency

as to harass them. Another had his employer contacted—prior to final judgment on the debt in question. This practice is prohibited by the Florida law. The collection agency was also charged with attempting to collect a debt it knew as not legitimate.

Independent of the State action, three consumers have brought successful private actions in the last 3 years against the collection agency as a result of harassment. In one case, the consumer claimed the collection agency had falsely threatend that a warrant would be issued for his arrest.

Florida has adopted a strong debt collection law that prohibits specified unethical practices and provides for civil liability and revocation of licenses. Florida officials and citizens are to be highly praised for utilizing Florida's law to stop the apparent abusive practices of this in-State debt collection agency.

Unfortunately, in Florida, neither public officials nor citizens can today protect themselves from an unscrupulous interstate debt collector. This is because there is no Federal debt collection law and State law has no effect on a debt collector harassing a consumer by phone or mail from out of State.

Some consumers are worse off than those in Florida. Consumers in 13 States with a combined population of over 40 million, have no protection at all, since their States lack a debt collection law.

Yet, interstate debt collection is a thriving business. Much debt collection is done across State lines.

Congress is now moving to bring to the citizens of Florida and other States protection from the interstate debt collectors whose practices are unscrupulous.

The House has passed and the Senate is now considering a Federal debt collection law. Like the Florida statute, the Federal legislation specifies prohibited practices and provides for civil liability.

Florida officials have been quite cooperative in supplying me with information for the debt collection investigation conducted by the House Banking Subcommittee on Consumer Affairs, which I chair. A letter from the Florida Attorney General's office indicated the office receives each year hundreds of telephone calls from consumers about debt collection harassment. While strong State debt collection laws, like Florida's provide protection from in-State debt collection harassment, the pending Federal debt collection legislation is urgently needed to provide consumers from Florida and other States with the means to protect themselves from abusive interstate debt collectors.

Following is the text of this news article.

[From the Fort Lauderdale News, June 23, 1977]

STATE CLAIMS COLLECTION COMPANY IS UNETHICAL, TAKES ACTION

(By Dan Hatfield)

For the first time in Broward County, the state has taken a Fort Lauderdale collection agency to court in an effort to revoke the agency's operating license for what the state claims are unethical practices.

American Collection Agency Inc. has been in civil court at least four times in the past three years facing various charges of harassing people in an effort to collect alleged debts. The collection agency has lost three of the suits, according to official court records.

One case was dismissed without any settlement and another was settled out of court for a payment by the firm of $1,000. A third case was a default judgment against the firm in the amount of $829.50 and the last was an $11,852 jury award against the firm.

A raft of citizen complaints against American Collection and its president, Homer L. "Glen" Wade, prompted an intensive investigation by the state Division of General Regulation, the licensing agency for collection firms.

That investigation caused the collection firm's latest court battle when the state filed civil charges in Broward County Circuit Court in February against the firm in an effort to revoke its state operating license.

State investigators said the suit was filed because of citizen complaints and because Wade reportedly lied to the state when he applied for the license in September, 1972.

In the suit, the state cites six occasions in the past three years in which the company has allegedly violated the specific statutes that govern it. The cited violations are different from the four cases in which the firm has gone to court.

The suit also claims Wade failed to completely answer questions required in his application for his certificate of qualification. According to the suit, Wade "misrrepresented that he had received a full pardon for the felony conviction against him in the state of Alabama."

Sources in Tallahassee and Montgomery, Ala., said Wade was convicted of obtaining money under false pretenses in 1961. Records indicate that he was released from Kilby Prison in Montgomery on June 15, 1962, after serving 13 months on the charge. The records indicate his conviction centered on his writing of a $25 bogus check.

Wade's rights were restored, according to the records, in April, 1968. Neither Alabama nor Florida records indicate that any pardon was issued to Wade.

Police records indicate that Wade was arrested three times in Jacksonville in 1965 for failing to register as a felon. He was never convicted. The state charges in its suit that Wade had an obligation to inform them of the three Jacksonville arrests when he applied for the license.

The suit maintains that Wade's felony in Alabama is of the nature "so as to demonstrate his unfitness to direct business activities of a collection agency and is therefore disqualified from holding any license under . . . Florida Statutes."

"Basically the charges are general harassment in violation of the statute that governs collection agencies," said William Hatch, the attorney handling the case for the State. "Things like calling people at their place of employment before a final judgment in a case is entered and threatening to take someone to court or simulating the legal process."

The suit charges that American Collection Services has:

From Jan. 21, 1976, to the present communicated with debtor David Gottlieb or his family with such frequency as to harrass him.

From July 14, 1976, to the present willfully communicated with debtor Jack Lippman "with such frequency as could reasonably be expected to harrass him."

From July 26, 1976, to the present communicated or threatened to communicate with debtor Donald Terry's employer prior to obtaining final judgment against Terry.

From fall of 1974 to the present refused to pay creditor Rolando Jorge all proceeds collected by American Collection on his behalf and have refused to return valuable papers to him.

From May 10, 1976, to the present threatened to communicate with debtor James T. Redington's employer prior to otbaining final judgment against him.

From Aug. 24, 1976, to present attempted or threatened to enforce a consumer claim against debtor Patricia M. Tracy, when American Collections know the claim was not legitimate.

Circuit Court records indicate that in December, 1975, Roberta Rubin filed harassment charges aaginst the firm claiming that agents of the company wrote a letter to her employer. On Feb. 2, 1976, American Collection filed a counter claim against Mrs. Rubin. But on Sept. 20, 1976, both sides stipulated to a dismissal of the case after American Collection paid Mrs. Rubin $1,000 for "full and complete settlement of the claims."

Records also indicated a suit was filed against the collection firm Feb. 24, 1975, charging that the firm threatened Donald M. White with jail after he stopped payment on a check for an automobile repair bill.

White claimed an agent of American Collection called his roofing firm and told one of his employees White had five minutes to call him back or a warrant would be issued for his arrest. Judge George Richardson entered a default judgment against the collection firm April 21, 1975, in the amount of $829.50.

In January, 1975, Mr. and Mrs. David E. Eberwein filed a damage suit against American Collection claiming they had been harassed by incessant phone calls over the collection of a $5 check, which had been returned because of an improper endorsement. The case went to trial July 16, 1976, and the jury awarded the Eberweins a judgment of $7,500. The judge added on an award of $4,352 for court costs and attorneys' fees. That case is currently on appeal to the Fourth District Court of Appeals.

On Oct. 8, 1975, Geraldine Bunch filed a suit claiming she had been harassed about a $55 debt to a doctor. That case was dismissed by the court in August, 1976.

Asst. State Atty. H. Dohn Williams, who is in charge of the special investigations division, said he could not comment on whether his office is currently investigating Wade or American Collection.

COMPLIMENTING THE ADMINISTRATION FOR NOMINATING HONORABLE ALLARD K. LOWENSTEIN AS AMBASSADOR FOR SPECIAL POLITICAL AFFAIRS AT THE UNITED NATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. JACOBS) is recognized for 60 minutes.

Mr. JACOBS. Mr. Speaker, I take a special order on this occasion to compliment the administration on its nomination of an immense and tireless talent to be an Ambassador to the United Nations. He is a former Member of this body, the Honorable Allard K. Lowenstein, who has lately represented this country at the Human Rights Conference where he distinguished himself and his country through outstanding accomplishment in terms of the image of the United States of America on the question of human rights.

Mr. Speaker, Mr. Lowenstein has been nominated by the President to be Ambassador for Special Political Affairs at the United Nations. Some Members of the House may recall Mr. Lowenstein's

particular talent for cooling controversy. It was first noted before he was a Member of this body in the early days of controversies surrounding the participation of the United States in the war in Vietnam.

That controversy was a flaming controversy particularly on the campuses across the country. Mr. Lowenstein was known in those days as a person who was resolutely opposed to our unfortunate and unhappy intervention in that war, but who, nevertheless, had a capacity to cool the crowds meeting in protest and to speak in terms of reason to them.

I remember well when Mr. Lowenstein took his seat in the Congress. I do not think it was a week later that he made his maiden speech to this body. He did it at a time in the day that portrayed little knowledge of the procedures of the House of Representatives. He did it at the end of the day when a final vote had not yet been taken on the Defense appropriations bill. Those of us who respected Mr. Lowenstein were concerned and embarrassed that he did not understand the intention of the House was probably not one of reception for any speaker at that time, let alone a freshman Congressman. So he began to speak and somebody in the House began to listen and then somebody else and you could hear the Chamber quiet down. An unusual phenomen, not unprecedented, but unusual.

In the 2 years that Mr. Lowenstein served as a Member of the House of Representatives, he made warm personal friends, and some of the most unlikely ones considering his political position on the issues, as I say, they were some of the most unlikely Members one could imagine. One of his closest friends, who proved to be a very close friend of his, was the Honorable Mendel Rivers, chairman of the Committee on Armed Services. Mr. Rivers, I believe his memory would not be served badly to say, was a hawk and I think it is reasonable to say that Mr. Lowenstein was not. But Mr. Lowenstein's faculty for sweetening over differences, disagreeing agreeably, played a large part, I think, in engendering this friendship. And I believe that Members on both sides of the aisle and in various political persuasions who served with Mr. Lowenstein, recognized his capacity to do that. He exhibited the same capacity in the recent Conference on Human Rights when people of entirely different ideological views, people who see the world entirely differently from the way we as Americans see the world, were brought together at the same table and the United States was treated with respect largely I am told because of the performance and because of the ability of Mr. Lowenstein.

So I believe it is fitting, Mr. Speaker, that on the occasion of his nomination to be an Ambassador to the United Nations that we in the House of Representatives who respect and admire Mr. Lowenstein say so for the record.

Mr. Speaker, I now yield to the gentleman from Illinois (Mr. MIKVA).

Mr. MIKVA. Mr. Speaker, I want to commend the gentleman from Indiana (Mr. JACOBS), upon his leadership in heading up this special order.

I too had the privilege of serving with Allard Lowenstein when he entered the House. It is hard to believe that he was here only for one term because the impact of the imprimatur that he put on this institution is something that will benefit this institution as long as it lasts. He had the qualification that the gentleman from Indiana has suggested, the capacity to call forth some of the best portions of the legislative process, to bring out in the debates the difference in ideals, the difference in approaches and yet that commonality that holds us together as one country.

I, too, was impressed and amazed at the way Al Lowenstein could quiet the House when he had something to say. I, too, was amazed with the odd-couplings that Al Lowenstein developed while he was in the House. All those qualities are the kinds of qualities that we want in our United Nations representation. I think that the President deserves high praise for recognizing the talent for Al and using him as a spokesman for the United States throughout the world. I am certain that the efforts of Al Lowenstein as a member of that delegation will bear the same kind of fruit that his efforts in the House of Representatives bore and that is good for the country.

Mr. JACOBS. Mr. Speaker, I thank the gentleman from Illinois (Mr. MIKVA) for his comments.

Mr. Speaker, I yield to the gentleman from Wisconsin (Mr. ASPIN).

Mr. ASPIN. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I wish to associate myself with the comments made by the gentleman from Indiana and the gentleman from Illinois.

Al Lowenstein has enormous talent and he should be an asset to this organization. He will be in a position where his talents can be put to very good use for the country.

Mr. JACOBS. Mr. Speaker, I thank the gentleman from Wisconsin for his comments.

Mr. Speaker, I yield to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. Mr. Speaker, I thank the gentleman from Indiana for yielding.

I, too, join my friends in commending the President for his appointment of Al Lowenstein as our United Nations representative.

I was one of those who kind of got my feet wet in one of the many Al Lowenstein campaigns. I always found Al Lowenstein to be one of the most thoughtful and considerate human beings I have ever known. His intellectual grasp of the problems of our society in this country and indeed of the world problems has no equal. He has always been able to kind of cut through the haze and maze of arguments surrounding issues that tend to fog them and tend to lessen their importance and to always see right to the nub of the problem.

I think it is that kind of quality that he has and that he exemplifies so well that will enable him to be one of our most eloquent spokesmen and eloquent representatives at the United Nations.

Allard Lowenstein has never been a parochial individual. His view has always been that of the broad view, taking into account the different philosophies and the different aspects of our involvement in the world community.

There is one little anecdote I remember. When Allard Lowenstein represented a very urban district here in the House of Representatives he was placed on the Agriculture Committee. As a result of his service in the committee and because I represent one of the most rural districts in the United States I have had numerous occasions to talk with him about agricultural problems, and even though he represented an urban district he came to see the problems that farmers had and he continually supported those programs that would help the small and average-sized family farmers in this country.

I think that is an indication of the type of person Allard Lowenstein is. He is not narrow, he is not parochial, but certainly he has the broad view of the world community.

Again I commend the President for nominating Al Lowenstein. I am not only hopeful but I am also confident that Allard Lowenstein will be confirmed and will go on to serve his country well in the United Nations just as he served his country well in this House of Representatives.

Mr. HARKIN. Mr. Speaker, will the gentleman yield further?

Mr. JACOBS. Mr. Speaker, I yield to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. Mr. Speaker, let me add one thing to what I said previously; that is, to the issue of human rights. In all the years I have known Al Lowenstein his commitment to human rights has been unequaled. I think at this time when President Carter, this Congress and, indeed, this whole Nation, is beginning to re-impact itself, ourselves, to our philosophic heritage and that kind of commitment to basic human rights, not only in this country, but in our dealings with other countries, I think it is fitting at this point in time that Al Lowenstein does assume this position and responsibility.

I can think of no finer individual to carry forward in the United Nations our concepts of human rights than Al Lowenstein. This, if for no other reason, would commend him to our colleagues for his confirmation in this position.

Mr. JACOBS. Mr. Speaker, I thank the gentleman from Iowa for his contribution.

I yield to the gentleman from Pennsylvania (Mr. WALGREN).

Mr. WALGREN. Mr. Speaker, I would like to add my thoughts to the complimenting of the administration on the nomination of Al Lowenstein as an Ambassador at the United Nations. These are the first words I have ever spoken on the floor of the House. They have great meaning for me and, therefore, I could not be more proud than to say I am in support of Al Lowenstein. He has the recognized almost superhuman breadth of mind that gives him the ability to bring together the people whose representatives have spoken here and have seen him bring them together with almost great astonishment.

In his last campaign for Congress, one of the people you would never expect to be supporting someone definitely known as a liberal, William F. Buckley, said it was a national disgrace that Al Lowenstein was not a Member of the U.S. Congress.

I think that is an example of the respect that the political spectrum across the board has for this man's mind. He couples that breadth of mind with a moral fiber that goes deeper in him than in anyone I have ever known.

He first came to Washington as an aide to Senator Frank Graham, who was one of the first, as I understand history, to recognize the importance of desegregation and of equality in our movement in this country toward civil rights.

He was, of course, extremely close to Robert Kennedy.

There is not a better nominee who could represent the young people who have become active and involved in the legitimate politics of our country.

I first heard of Al Lowenstein when I went to Stanford in 1966 about a year after he left that school. There was even in his absence a tremendous wake, like a wake of a ship that was no longer there; but the student body was literally inspired by the moral commitment of this man. He has a history for doing the undoable politically.

I can think of no greater opportunity that is necessary to bring to the United Nations than the task the United Nations has to play in our world than a person who has done the undoable politically, who has spanned the attitudes totally unreconcilable in our political life and who has inspired new generations to bring what they have to contribute to the political process.

I am so, so pleased, that the administration has nominated that kind of a person to represent us at the United Nations in the role of an Ambassador.

Mr. JACOBS. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. BONIOR).

Mr. BONIOR. Mr. Speaker, I thank the gentleman for yielding. I would like to associate myself with the gentleman's remarks and ask a question of the gentleman. Is the appointment of Mr. Lowenstein made with the idea that he will be our Ambassador to the Human Rights Division of the United Nations?

Mr. JACOBS. The precise responsibility of his ambassadorship is Special Ambassador for Political Affairs. Mr. Lowenstein has represented the United States at the Human Rights Conference, the recent Human Rights Conference. He is now moving over to a more general responsibility, as I see it.

Mr. BONIOR. I see. I would just like to commend the gentleman again and express my sentiments concerning Mr. Lowenstein. They would be quite similar. I believe he has been an outstanding American. He has added values that I think are important and strengthened those values in the time that he has served his country in and out of public office. I commend the President also for appointing him.

I would hope while we are discussing the U.N. and we are discussing Mr. Lowenstein that at some point the administration, whether through Mr. Lowenstein or through Mr. Young, could reactivate that arm, that division of the United Nations, which is responsible for investigation, if you will, of violations of human rights in the nations throughout the world. That particular branch of the U.N. has floundered in recent years. I think it is time that a move forward, as Mr. Lowenstein being one of our ambassadors like Mr. Young and our other ambassadors, can help in that respect. I think it will go a long way toward implementing the work of the Conference.

Mr. BRADEMAS. Mr. Speaker, I am glad to have this opportunity to pay special tribute to our former colleague and my good friend—Allard K. Lowenstein.

Al Lowenstein has recently been appointed Alternate U.S. Representative for Special Political Affairs to the United Nations, a position which carries the rank of Ambassador. He will also continue to represent the United States on the United Nations Commission on Human Rights in Geneva.

Although most of us remember Al Lowenstein for his early and outspoken efforts in opposition to the war in Vietnam, he has been involved for many years, dating back to the 1950's, in a continuous struggle for human rights around the world.

Al Lowenstein has also had a very special relationship with an important group of my constituents: the students of the University of Notre Dame. In 1970, the university's senior class bestowed upon him its Senior Fellow award for his outstanding contributions to American society.

He annually visits the students at Notre Dame for whom he has high regard and, in return, Notre Dame students have since 1960 repeatedly made the trek from South Bend to Long Island to assist him in his election campaigns.

Allard Lowenstein's appointment will be applauded by the many Americans who know and love him.

I know that he will represent the United States at the United Nations with the same courage and integrity he has brought to every past endeavor.

Mrs. BOGGS. Mr. Speaker, I rise today to salute my friend and former member of this House, Al Lowenstein, who has been appointed U.N. Ambassador for Special Political Affairs.

Al is a longtime close personal friend of mine and my family. I have been associated with him personally in mutual interests at the Democratic National Committee during several national campaigns.

I especially admire Al's facility to span generations and relate to the needs and feelings of all kinds of people. He had the respect and affection of my own grandmother with whom he exchanged ideas, letters, and reading materials. At the same time, he inspired college students and youth into effective action.

Extensively traveled, Al Lowenstein is the author of the first definitive interpretation for Americans of the emerging nationalism of the continent of Africa. Al's genuine love of people and his particular knowledge of the peoples of the world suit him especially well for service at the UN.

I wish to publicly congratulate Al Lowenstein on this important appointment and express my best wishes for an effective and successful ambassadorship.

Mr. EDWARDS of California. Mr. Speaker, it was with particular pleasure that I learned of Mr. Allard Lowenstein's appointment as Ambassador to the United Nations by President Carter. I have known Mr. Lowenstein personally for a number of years and have always had the highest regard for the depth of his conviction to human rights, his courage and his forthrightness. Mr. Lowenstein has had a number of involvements in human rights issues that predate the current popularity of the issue now.

He has been active in United Nations affairs all of his adult life. He served as the first student field representative of the United Nations Association and worked closely with Mrs. Eleanor Roosevelt who, at that time, was the first U.S. delegate to the Human Rights Commission.

Al was one of the first outspoken critics of the Vietnam war and was responsible for rallying much of the student opposition to the war which eventually was so crucial to the cessation of the fighting.

Most recently, and earlier this year, he was U.S. Representative on Human Rights of the United States Mission to the United Nations, during which he was responsible for the precedent-setting discussion of human rights violations in the Soviet Union.

Al is a former colleague; he was a Member of Congress during the 91st Congress. He was a special assistant to former Senator Frank Graham of North Carolina, and a foreign policy assistant to HUBERT HUMPHREY in 1959.

I am confident that Allard Lowenstein will be a real asset to our United Nations delegation and applaud President Carter's choice.

The appointment is especially pleasing to me because Al is a close personal friend and a national and world leader I have always admired and had great respect for.

Mr. JACOBS. Finally, Mr. Speaker, I think the RECORD should show that in the opinion of quite a number of Members of this body, and also citizens of the United States generally, Mr. Lowenstein has represented in his political career what we choose generally to call the best in American political life; the fundamental belief that in the battle between force and reason, there is still hope that reason will triumph. It happens that Mr. Lowenstein is an outstanding athlete, a champion wrestler in his college days, but he is a person who understands the fundamental difference between strength and brutality.

He is in every sense a gentleman. I think we sometimes forget what the word "gentleman" really means. A gentleman is a man who is gentle, and that is what Al Lowenstein is. That is the image that I think all Americans would want carried before the world, that the United States does know the difference between strength and brutal-

ity, and that we shall always strive to better ourselves through national and self-discipline, to be the strongest nation in the world, while at the same time trying to distinguish ourselves as the least brutal nation on the face of the Earth.

In the words of Roosevelt, the value of love will always be greater than the value of hate, which in essence is what is meant when we say the forces which unite are greater than those which divide.

GENERAL LEAVE

Mr. JACOBS. Mr. Speaker, I ask unanimous consent that all Members might have 5 legislative days in which to revise and extend their remarks on the subject of this special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

ELECTRONIC FUND TRANSFER SYSTEMS, EFTS, BILL INTRODUCED

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Ohio (Ms. OAKAR) is recognized for 5 minutes.

Ms. OAKAR. Mr. Speaker, today I am introducing a bill which shall begin the process of congressional debate on the issue of electronic fund transfer systems, EFTS.

For nearly 20 years, the banking industry has become increasingly involved in computer use for the delivery of customer services as well as the internal operations of the depository institution. Today, we stand at the crossroads where currency and check will slowly give away to increased fund transfer by electronic impulse. The result, say some, is a checkless, cashless economic system. In any case, the electronic age has come to banking services, and the Congress must begin to devise law that will bring stability to this transition as well as protection to the consumer.

Presently, the National Commission on Electronic Fund Transfer, NCEFT, is preparing to issue a final report of its 2-year study into this complex issue. This bill is in no way a effort to preempt the work of this fine Commission. In fact, this bill incorporates the legislative recommendations of the Commission's interim report—February 1977—in its provisions.

This legislation addresses the basic questions that surround EFT use. Moreover, it provides for the regulation of EFTS by Federal regulatory agencies—for example, the Comptroller of the Currency will oversee EFTS for national banks, the Federal Home Loan Bank Board will oversee the savings and loans associations, and the Federal Deposit Insurance Corporation, the Federal Reserve, and the National Credit Union Administration will oversee their member institutions with regard to EFT operations.

Specifically, their are provisions for advance notice and approval by the regulatory agencies, before EFT operations could be initiated. The bill calls EFT availability to all depository institutions on a nondiscriminatory basis, thereby addressing some of the questions of monopoly that have arisen. There is a section that provides for EFT rate schedules that reflect the cost of service to the particular customer; that is, there will be no inequitable fee distribution.

The problems of confidentiality have been addressed, so that no records of the customer's account are to be made available to persons not authorized by law or by the customer to review such records. Another important point in the EFT debate has been liability, and this bill limits customer liability to a maximum of $50 where unauthorized access to the customer's account has been gained.

Other consumer protections devices in this bill include requirements for the depository institution to make periodic statements to the customer on the transaction, fees, and balance of the EFT account; a "chargeback" option that allows the customer to reverse a fund transfer of more than $50 within 3 business days; and, advertising restrictions on EFT promotion by the depository institution.

The bill, in sum, is intended as a proposal to my colleagues, and it is offered as a framework on which to build other measures of EFT legislation. I ask now that we begin dialog on this issue, so that soon we can provide our bankers with the stability that they will need to bring safeguarded and efficient electronic fund transfer to the American public. The advent of a cheaper and speedier system of fund transfer brings with it many advantages to the banker and the consumer alike. However, it also brings many pitfalls. Let us forge legislation that will provide the American consumer with this electronic banking system and all its advantages and, at the same time, protect the public from the inevitable machine failings and human error that accompany all technological advances.

ROMANIA CHARGED WITH DISCRIMINATION AGAINST HUNGARIAN MINORITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 5 minutes.

Mr. KOCH. Mr. Speaker, I have been concerned for some time about the charges that the Government of Romania is attempting to suppress the language and culture of ethnic minorities in Romania, in particular the Hungarian minority. I have testified on a number of occasions about these charges of discrimination, but I would like to bring to my colleagues' attention the superb summary of these charges that appeared in an advertisement in yesterday's New York Times. This advertisement was placed by the Committee for Human Rights in Romania, an organization with which I am personally familiar. I have discussed the situation of Hungarians in Romania with two outstanding leaders of the Committee for Human Rights in Romania with two outstanding leaders Veress. These two gentlemen are outstanding Americans of Hungarian descent, and their thoughtful and persuasive arguments for their cause will surely prove effective in the long run as they work for better treatment for the ethnic minorities in Romania.

I commend their advertisement to my colleagues as an excellent summary of their charges against the Government of Romania.

[From the New York Times, July 17, 1977]

RUMANIA: MAVERICK . . . OR MONSTER?

The Rumanian government wants you to believe that it is the maverick of the Soviet bloc. For years, it has conducted a clever public relations campaign to create the image of an independent-minded, liberal regime struggling against Soviet domination.

A Columbia University scholar, Vladimir Socor, recently described the Rumanian government's technique:

In lieu of substantiation by actual policies, the nationalistic rhetoric, along with leaks and "confidences" elaborately disseminated by Bucharest to the Western press, officials and ranking visitors, have been accepted as evidence of an independent foreign policy. . . . As a result the West has afforded Bucharest, through exchanges of official visits and favorable publicity, an international respectability unprecedented for a Communist government. ("The Limits of National Independence in the Soviet Bloc: Rumania's Foreign Policy Reconsidered", *Orbis*, Fall 1976, p. 729.)

Eager to find chinks in the Iron Curtain, the American media has embraced the myth of progressive Rumania. And Washington has given Rumania vital commercial credits and loans and "most-favored-nation" status.

IS THE UNITED STATES FAVORING A MAVERICK OR A MONSTER?

"The population of 'independent Rumania' enjoys the least degree of political liberalization or economic reform, and remains subject to the tightest controls, in the Soviet bloc." (Socor, p. 729.) Last October 23rd, Tad Szulc wrote in *The New Republic*, "Children between the ages of four and seven . . . are being organized as 'the Homeland's Falcons' as part of a sweeping nursery-to-grave program designed to regiment Rumania under the twin banners of harsh Communist ideology and extreme nationalism." In fact, the Bucharest regime is the only Eastern bloc government to have retained Stalinism in its pure form.

The pressure of Rumanian tyranny is most strongly felt by the country's 3.5 million minority citizens, who are subject not only to the Communist terror, but also to an increasingly brazen campaign of forced assimilation.

After World War I, as a reward for her timely switch to the side of the victors, Rumania was awarded the multinational region of Transylvania, previously under Hungarian sovereignty for one thousand years. As a resule, Rumania today is a multinational state: Its citizenry includes 2.5 million Hungarians (the largest national minority in Europe). 400,000 Germans, 80,000 Jews, and Ukrainians, Armenians, Serbs, Greeks, Bulgarians, Turks and others.

Instead of taking advantage of this rich cultural diversity, the Rumanian government looks upon it as a threat. According to a recent article in the *London Sunday Times* ("Rumania's Oppressed Minority", April 17, 1977), "Rumania's unstated but unmistakable aim is to become a state without any minorities. The evidence . . . is of a campaign to eliminate the Hungarian intelligentsia and skilled working class, which has a strong national consciousness and cultural traditions, and to break up the cohesion of Hungarian districts."

FAIR TREATMENT OF MINORITIES IS MORE THAN A MORAL OBLIGATION

Rumania has ratified the United Nations Covenant on Civil and Political Rights which,

in Section 27, provides for the rights of ethnic, religious and linguistic minorities. Rumania is also a signatory of the Helsinki Final Act, which recognizes the rights of national minorities.

Yet the Rumanian government consistently and systematically violates the rights of minority citizens:

1. Discrimination in the educational system. The Rumanian government has eliminated many Hungarian schools and has set discriminatory quotas to strictly limit the number of minority language classes (Decree-Law 278/May 11, 1973).

2. Elimination of Hungarian universities. In 1959, the 378 year-old Hungarian university at Kolozsvar was arbitrarily merged with the Rumanian Babes University, and 2.5 million Hungarians, heirs to a long traditions of scholarship, were denied the right to an independent university.

3. Dissolution of ethnic communities. Skillfully manipulating its monopoly on the labor and housing markets, Bucharest systematically disperses minority professionals and workers to jobs in disparate regions of the country.

4. Suppression of bilingualism. Although Rumania is clearly a multinational state, Rumanian is the only language used in the government bureaucracy and the courts—in open violations of Section 22 of Rumania's own constitution.

5. Curtailment of cultural opportunities. The Rumanian government has gradually curtailed or eliminated thriving Hungarian theaters, museums, libraries, cultural institutions and associations.

6. Falsification of census data. The Rumanian authorities manipulate census data so as to statistically annihilate at least 30% of the minority population.

7. Confiscation of minority archives. In an effort to eradicate the history of minority cultures, the historic archives of minority churches and institutions have been summarily confiscated and removed to state warehouses (Decree-Law 206/1974, amending Decree-Law 472/1971, and Act No. 63/November 2, 1974).

8. Harassment of minority churches. The Rumanian government deliberately interferes in ecclesiastical matters to undermine minority churches—the last bastions of ethnic heritage.

9. Obstruction of contacts with non-Rumanians. The Bucharest regime prohibits the accommodation in private homes of any non-Rumanian citizen, except members of the immediate family, so as to isolate minority citizens from their non-Rumanian friends and relatives (Decree-Laws 225/1975 and 372/1976).

10. Distortion of minority history. The Rumanian Communist Party produces and disseminates its own version of history, in order to suppress, distort or expropriate the heritage and indigenous culture of minorities.

IN EFFECT, THE COMMUNIST RUMANIAN GOVERNMENT IS ENGAGING IN CULTURAL GENOCIDE AGAINST ITS 3.5 MILLION MINORITY CITIZENS

The United States has granted trade benefits to Rumania. Those benefits are supposed to be subject to the Jackson-Vanik Amendment to the Trade Act of 1974. Jackson-Vanik assures "the continued dedication of the United States to fundamental human rights." But as evidenced by the yearly Congressional re-examination of Rumania's performance under the Act's provisions, the only human right that really interests Congress is the right of free emigration.

Most of Rumania's 3.5 million minority citizens do not want to emigrate. For Rumanian Jews, emigration means the right to return to their ancient homeland. But for the rest of the minorities, emigration would be tantamount to expulsion. They are in their ancient homeland. Their human rights have to be protected there.

The Carter Administration has now declared that the attitude of the United States toward another country is greatly influenced by that country's performance in the entire spectrum of fundamental human rights. This policy applies particularly to countries which benefit from American aid or commercial favors, and Congress has endorsed it on several occasions.

Under President Carter's human rights policy, the United States has acknowledged the problem of minorities in Rumania and has begun to take diplomatic initiatives in their interest. But the Rumanian government has intensified its effective lobbying efforts—trying to buttress the myth that it is a maverick in the Soviet bloc. And Rumania continues to depend on commercial credits and favors from the United States, while arrogantly ignoring our country's efforts to promote human rights.

WHAT YOU CAN DO TO HELP

Write your representatives in Congress and let them know that you support President Carter's human rights initiative. Tell them that you want it applied to Rumania.

Send a contribution—whatever you can—to help us continue the struggle for human rights in Rumania.

FOR EXAMPLE

I want to join the fight for human rights in Rumania. I am enclosing a check, made payable to Committee for Human Rights in Rumania, in the amount of $—.

I would also like to be kept informed of further developments and steps you take in support of national minorities in Rumania.

Name; Address; and City/State/Zip Code.

Please send your contribution to:

Eugene Brogyanyi, Coordinator, Committee for Human Rights in Rumania, Post Office Box "J", Gracie Station, New York, New York 10028.

Join the Committee for Human Rights in Rumania for a march and rally in Washington, D.C. on Monday, July 18th. The march begins at 12:30 PM at the Washington Monument, ending with a rally at the Capitol at 3:30 PM.

The Committee for Human Rights in Rumania is an organization supported by all of the major associations representing one million Hungarian-Americans. We will continue our struggle until the Rumanian government recognizes the rights of all its minority citizens.

MAKING THE FEDERAL RESERVE SYSTEM MORE ACCOUNTABLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, the House Committee on Banking, Finance and Urban Affairs is now engaged in hearings on H.R. 8094, a bill to promote the accountability of the Federal Reserve System. This is legislation which is long overdue.

Congress, under article I, section 8 of the Constitution, has the power "to coin Money, regulate the Value thereof".

After much experience with panic and depression, Congress under the Federal Reserve Act of 1913 delegated to the Federal Reserve System the day-to-day operations of its monetary power, with particular reference to the need for a "flexible currency."

When we speak of the independence of the Federal Reserve, we speak of its independence from the executive branch and not from the Congress. Congress could have delegated its monetary power to the Executive. It chose instead to delegate it to the Federal Reserve, whose Board members 14-year terms effectively insulate them from executive manipulation. Though the Executive gained the ascendancy over the Federal Reserve during World War II and for half a decade thereafter, the 1951 accord between the Treasury and the Fed, negotiated by the Congress, reaffirmed and reinforced the independence of the Federal Reserve from the Executive.

For the first half century or so of its existence, the Federal Reserve can hardly be said to have been successful in its monetary policy. Until the late 1920s, there was no monetary policy worthy of the name. Thereafter, it was mostly wrong-headed. Excessively restrictive monetary policy helped bring on the depression of 1929 and snuff out the beginnings of recovery in 1937.

During the war years, and right up until the accord of 1951, Federal Reserve monetary policy was excessively dominated by the Executive, and excessively loose. During most of the 1950s, monetary policy was too restrictive, and contributed to the slow growth of the decade.

In the last 15 years, monetary policy has been too frequently characterized by stops and starts. Too much new money was created in the Vietnam years of 1967 and 1968, helping to cause inflation. Then policy reversed and became too restrictive. Overease revived again in 1972 and 1973, to be followed by the excessive restrictiveness of late 1974 and early 1975.

Then, in March 1975, Congress enacted House Concurrent Resolution 133. This resolution set up quarterly dialogs between the Federal Reserve and the House and Senate Banking Committees, and resulted in the Federal Reserve's stating its targets for the following 12 months for the money supply, principally M_1—the public's holdings of cash and checking accounts. By and large, this policy has worked very well in the ensuing 2 years.

There have been at least two exceptions, due to unfortunate relapses into stop-start policies. In June 1975, unnecessarily upset by the increase in the money supply caused by the Federal income tax rebate, the Fed put on the monetary brakes, and contributed to the slowdown in recovery in the summer of 1975. Again, in April 1977, the Fed created an exorbitant amount of new money, at an annual rate of almost 20 percent. Then, on some two-wrongs-can-make-a-right basis, it lowered the creation of new money to zero in May 1977, causing a wholly unnecessary increase in the bank prime rate.

But I hope these were monetary aberrations from a sensible new trend. I hope the Federal Reserve will be able to resist the temptation to join what Business Week calls the new Metternichs—the European central bankers—some of whom want to go back to the discredited operation of fighting inflation by so squeezing the money supply as to cause increased unemployment.

So far I have been discussing the major activity of the Federal Reserve System—monetary policy. But the Fed has two other very important functions—as prin-

cipal regulatory agency for State member banks of the Federal Reserve System, and as servicer of the banking system through check clearing operations and coin and currency transfers.

As I have suggested, the Federal Reserve is a more serviceable agency today than at any time in its history. Its Chairman, Dr. Arthur Burns, is an able and respected leader.

All the more reason, then, that the accountability to the public of the Fed needs to be sharpened. The five major provisions of H.R. 8094, on which the House Banking Committee is now holding hearings, would attempt to sharpen that accountability.

There follow the five provisions of H.R. 8094, and the reasons for them:

First. Make permanent the congressional-Federal Reserve dialog on monetary policy. House Concurrent Resolution 133, which authorizes the quarterly dialog, expired by its own terms at the end of 1976. Chairman Burns continues to appear quarterly before the House and Senate Banking Committees. But these appearances should be regularized and made businesslike by statute. A successor chairman, for example, could refuse to engage in the dialog, and Congress could point to no law which was being flouted.

In the course of making the dialog an ongoing procedure, two improvements are needed. That Federal Reserve monetary policy is meant to serve the Nation's goals contained in the Employment Act of 1946—for maximum employment, production, and price stability—needs to be explicitly stated.

Second, the Federal Reserve should be required to testify not only concerning its proposed monetary aggregates for the ensuing year, as House Concurrent Resolution 133 requires, but on three related matters—anticipated velocity, estimated interest rates, and portfolio composition.

First, the velocity with which money changes hands has a profound effect on the amount of new money that will be needed. The bill, therefore, includes "anticipated monetary velocity," as a subject on which the Fed should testify.

Second, as part of the overall annual economic program of both the administration and the Federal Reserve, it is necessary at least to make an estimate of the levels of interest rates—particularly on business loans and on long-term mortgages. It is not suggested that a target for interest rates be stated, but merely an estimate of expected rates.

Coordination of fiscal and monetary policy would be greatly enhanced if Government economists outside the Fed understood what the Fed's interest rate anticipations were. As the people's representatives, the Congress is also entitled to know the Fed's view of the course of interest rates for the ensuing year.

What about the fear that public revelation of anticipated interest rates would cause disruption in financial markets? This is hard to see. Making such information available to all simply removes the advantage that insiders in financial markets now enjoy, and reduces speculation based on rumors and misinformation that do cause instability in the markets. It is worth noting that the Fed's often-stated view that prompt disclosure of Federal Open Market Committee directives would cause disruption in the market has not proved true. The reduction from 90 to 30 days in the time FOMC decisions are kept secret has had no destabilizing effect, and in fact appears to have been beneficial.

Finally, the Federal Reserve can affect the structure of interest rates by the composition of its portfolio of securities, currently valued at close to $100 billion, equal to one-fourth of the privately held national debt. For example, by increasing its holdings of longer term securities, the Fed can modestly bring down long-term interest rates relative to short-term interest rates. Proposed portfolio policy is, therefore, an important part of the Federal Reserve's quarterly presentation.

These broadened guidelines would avoid the present total concentration on the monetary aggregates alone.

Second. Broaden the economic interest of Federal Reserve bank directors. Under present law, the nine directors of each of the 12 Federal Reserve banks have unduly narrow backgrounds. Commercial banks elect six of the nine—three class A directors, always bankers, as their direct "representatives," and three class B directors from "commerce, agriculture, or some other industrial pursuit." The three class C directors are chosen by the Federal Reserve Board of Governors, with nothing said as to who they may be.

As the Banking Committee staff study—"Federal Reserve Directors: A Study of Corporate and Banking Influence," August 1976—disclosed, this has produced a representation grossly banker oriented at the expense of other groups. Furthermore, it has resulted in the virtual exclusion of women, blacks, and representatives of labor unions and consumer interest organizations.

H.R. 8094 would remedy the situation with respect to discrimination by requiring that all directors—A, B, and C—be chosen "without discrimination on the basis of race, creed, color, sex, or national origin."

As to economic representation, the three class A directors would be left as they are now—bankers.

Class B directors would be specifically designated "public" and broadened from the present "commerce, agriculture, or some other industrial pursuit" to "with due but not exclusive consideration to the interests of agriculture, commerce, industry, services, labor, and consumers." While class B directors are elected by the member banks, they should be chosen from a broader category than the ambiguous existing "commerce, agriculture, or some other industrial pursuit." It is archaic to concentrate, for example, on "industrial pursuit," when service industries are steadily becoming more prominent than the purely industrial pursuits which were in everyone's minds in 1913 when the Federal Reserve Act was written. "Services, labor, and consumers" are groups of our citizenry whose economic interests entitle them to consideration for seats on the Federal Reserve Bank Boards.

Class C directors would be chosen, as now, by the Federal Reserve Board of Governors. But instead of no language as to qualification, they would have the same qualifications as class B directors: they must represent the public, and "with due but not exclusive consideration to the interests of agriculture, commerce, industry, services, labor, and consumers."

These first two provisions of H.R. 8094—the permanent congressional Federal Reserve dialog, and the broadening of the Federal Reserve Bank directors—are substantially similar to H.R. 12934, which passed the House by a vote of 279–85 on May 10, 1976. Because of the adjournment of the Senate in September, 1976, the bill did not reach action there.

Third. Require Senate confirmation of the Chairman of the Board of Governors. Under existing law, members of the Federal Reserve Board of Governors, who serve 14-year terms, are subject to Senate confirmation at the time of their appointment; one of the Board members is designated by the President to serve as Chairman for a 4-year term, but without Senate confirmation. Thus, the President can designate as Chairman someone who was confirmed by the Senate some 13 years previously, yet the Senate be powerless to confirm the appointee to what was recently called the Nation's No. 2 position. The bill would make the President's choice of Chairman subject to the advice and consent of the Senate. The Federal Reserve recently told this Committee that it has no objection to this provision.

Fourth. Prevent the Fed's using banks as its lobbyists. The Federal Reserve System has been using bankers—who are deeply beholden to the Fed because of the Fed's ability to give or withhold a discount window loan, or to give or withhold such privileges as approval for a merger, holding company acquisition, or an Edge Act office—to lobby on the Fed's behalf with legislators and other Government officials.

For example, as revealed by the minutes of the board of directors of the Federal Reserve of Chicago for May 23, 1974, Vice Chairman George W. Mitchell of the Federal Reserve Board of Governors commented on the lobbying efforts of the Fed to kill the bill requiring a GAO audit:

> Governor Mitchell also noted that the GAO audit bill should come up for vote next week on the floor of the House, Reserve bank directors have been helpful in contacting Congressmen and hopefully the bill can be at least amended to restrict the type of audit if chances for outright elimination lessen.

Chicago Federal Reserve Bank President Robert P. Mayo at the same meeting called for continuing lobbying efforts:

> Mr. Mayo commented further on the GAO audit bill, noting that it is House Bill numbered 10265 and should be up for consideration on May 29. He then requested each director to make whatever calls seem natural to him in order to encourage support for the Federal Reserve position.

The Philadelphia Federal Reserve Bank, in its minutes for May 4 and May 18, 1972, described its use of private commercial banks and the New Jersey Bankers Association against a New Jersey bill which might have attracted independent banks away from the Fed:

President Eastburn said there was a Bill in the New Jersey Assembly to permit nonmembers to keep up to 50 percent of their reserves in government securities. He indicated that this Bank had been in touch with New Jersey bankers, the New Jersey Bankers Association and key legislators to express the feeling that the Bill would be divisive, inequitable, and disruptive, and would have an adverse effect on membership. He reported that the Bill had recently been sent back to Committee.

Again, the Richmond Federal Reserve Bank has also been adept at using bankers as official unregistered lobbyists for the Fed. In October, 1975, Richmond Federal Reserve Bank Chairman Robert W. Lawson, in a speech to the American Bankers Association at Hot Springs, Va., congratulated the bankers for their great lobbying assist to the Fed. Chairman Lawson's remarks were the subject of a colloquy between myself and Chairman Arthur Burns of the Federal Reserve Board of Governors at a hearing before the Subcommittee on Financial Institutions Supervision, Regulation, and Insurance of the Committee on Banking, Currency and Housing on January 21, 1976:

Chairman REUSS. Let me now get into the area of politics, which you brought up several times this morning in connection with the audit bill for the Fed. On October 1, 1975, the American Banker carried an interesting story on your Reserve Bank chairman in Richmond, Robert L. Lawson.

The headlines was, "Federal Reserve Board Official Hails Bank Role in Killing GAO Audit of the Fed." And then it went on to describe his speech to a bankers group, in which he said:

"Banks played a key role in blocking a Congressional audit of the Federal Reserve Board. The bankers in our district and elsewhere did a tremendous job in helping to defeat the GAO bill. It shows what can be done when the bankers of the country get together."

My question is: If you get the support of the banks on an issue which is of great concern to you, whether Congress has the right to audit your books or not, are they not likely to expect in return kind treatment, from you as a regulator? They would not get it, of course, but are they not likely to expect it?

Dr. BURNS. As for Mr. Lawson's statement, let me merely remind you that, as I indicated in my testimony, we have in the System 269 directors, and neither I nor the Board can be responsible for what individual directors may or may not say.

Chairman REUSS. Did not the Federal Reserve people, to your knowledge, communicate with the banks about bank lobbying against the audit bill?

Dr. BURNS. I played no part in this activity at all, not because I would consider it wrong, but because I did not have the time.

Chairman REUSS. My question was, with respect to people at the Fed, was there not a little communication there?

Dr. BURNS. Yes. That is to say, there was some communication between our various directors, not with bankers as such, but with bankers, journalists, business people. I do not know whom they contacted. And that, I think, is an entirely legitimate activity. After all, do not Members of Congress want to hear from their constituents?

It is just as improper for the Federal Reserve System to use a regulated industry as its lobbyist as it would be for, say, the Federal Power Commission to enlist executives of the oil and gas companies it regulates to lobby Congress on matters of concern to the FPC. Such activities by the Federal Power Commission, would, of course, be clearly illegal under the overall act forbidding lobbying by administrative agencies with money appropriated by the Congress (18 U.S.C. 1913). The Fed is technically exempt from this statute because its funds are not appropriated by Congress.

Such use of the banks for lobbying purposes should cease. Accordingly, section 4 of H.R. 8094 forbids directors or officers of the Federal Reserve from getting banks or other institutions regulated by the Fed to lobby for legislation at the Fed's behest.

Fifth. Prohibit Federal Reserve officers, employees, and director from acting where they have a conflict of interest.

Under existing law, employees and officers of the U.S. Government may not participate in any matter before the Government in which they or a member of their family or business have an interest, unless there is first a full disclosure of this interest and an official written determination by an official that this interest is not substantial. The Fed is not covered. H.R. 8094 extends this prohibition to Federal Reserve Bank officers, employees, and directors. The minutes of Federal Reserve Bank meetings previously referred to contain instances of Federal Reserve officials proceeding to exercise their authority despite a clear conflict of interest.

The proposal for an audit of the Federal Reserve System contained in an earlier version of the Federal Reserve Reform Act of 1977 has been dropped because the House Government Operations Committee on June 28 reported a bill providing for such an audit, H.R. 2176. That bill provides for an audit not only of the Fed but of the Comptroller of the Currency and the Federal Deposit Insurance Corporation.

Taken altogether, this legislation will make the Federal Reserve System more accountable. As Dean Jonathan Swift said:

Providence never intended to make the management of public affairs a mystery, to be comprehended only by a few persons of sublime genius.

A TRIBUTE TO AL LOWENSTEIN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. DOWNEY) is recognized for 10 minutes.

Mr. DOWNEY. Mr. Speaker, I understand that Mr. Al Lowenstein has been named one of the five U.S. Ambassadors to the United Nations.

Mr. Lowenstein previously served as the U.S. Representative to the United Nations with the Human Rights Commission. He is a dedicated, well-qualified public figure whose whole career has been marked by a commitment to human rights, civil liberties, and a fight against discrimination in all its ugly forms.

In addition, Al Lowenstein is known to his friends as a man whose high moral principles have not been compromised for the sake of political expediency. In view of the Carter administration's emphasis on these very same values, Mr. Lowenstein will be an able advocate of our new foreign policy initiatives.

Those of us who admire Mr. Lowenstein for his past work believe he will ably serve the interests of this country at the United Nations. We commend the President for his excellent nomination.

ORDER OF PROCEDURE ADOPTED BY MEMBERS OF AD HOC COMMITTEE ON ENERGY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. ASHLEY) is recognized for 10 minutes.

Mr. ASHLEY. Mr. Speaker, for the benefit of my colleagues who have been involved with the many complex problems attendant on dealing with the President's national energy plan, I would like to submit for the RECORD the order of procedure that was agreed to by the members of the Ad Hoc Committee on Energy, and the opening statements that were made at the procedural meeting of our committee.

I would like to pay tribute to the minority members of the Ad Hoc Energy Committee for their cooperative attitude in agreeing to consider this bill on a subject-by-subject basis, and for sharing the majority members' commitment to prompt action on this critical legislation.

In just 2 weeks, the House of Representatives will be voting on the recommendations made by this committee and the standing committees. It is expected that the House will also be able to vote on the major national and regional issues that are treated in this legislation, irrespective of the recommendations of the ad hoc committee and the standing committees. By this agreed-upon procedure, Mr. Speaker, I am confident that the House will fashion a national energy policy that has been developed in the fairest possible fashion and within the time constraints that you have given us.

OPENING STATEMENT OF HON. THOMAS LUDLOW ASHLEY, CHAIRMAN, AD HOC COMMITTEE ON ENERGY, JULY 15, 1977

We are meeting this morning to discuss a proposed Order of Procedure to be followed by the Ad Hoc Committee on Energy as it considers the legislative components referred to it by the standing committees of jurisdiction, pursuant to H. Res. 508.

In a broader sense, we are meeting this morning to determine when a National Energy Plan—which the President proposed, which the people support and which the country urgently needs—will be enacted by this Congress.

The standing committees of the House have responded to the task. In particular, the Commerce Committee and the Committee on Ways and Means have completed action in record time on dozens of the most intricate, complex and controversial portions of the voluminous set of legislative proposals—some 113 in all—contained in the energy package.

It now remains for this Ad Hoc Committee to play its essential role, and to do so with the same dispatch and commitment.

What is the role of our Committee? When the Majority Leader, Jim Wright, offered H. Res. 508, he explained that its purpose would be "to draw together an interdisciplinary group from various Committees of regular jurisdiction in order to provide one general comprehensive overview" and to "facilitate an opportunity, hitherto lacking, for the House to work its will in achieving a comprehensive energy policy . . . but to do so without robbing or emasculating the jurisdiction of the Standing Committees of the House."

Our ranking Minority member, Mr. Anderson, said on this same occasion that "if the Ad Hoc Committee is to serve a useful purpose at all, it must not only be a coordinating mechanism which will seek to put back together into a single resolution or bill or piece of legislation the various recommendations and proposals, but also have the authority to offer recommendations and proposals of its own as a substitute, if necessary."

The Speaker himself, in a letter to members on April 20th, affirmed that this Committee "will not have the authority to change the recommendations reported by the standing committees (but) will have authority to recommend amendments for consideration on the Floor."

Throughout the process, he went on to say, "it is my intention to protect the prerogatives of the standing committees, drawing on their experience and expertise. What the Ad Hoc Committee adds," he said, "is an opportunity for comprehensive consideration of our national energy policy. It can function as a conference committee of the House to facilitate resolution of competing claims (and thus) smooth matters on the floor."

Perhaps (and this is the view of the chair) it isn't wise to try to define too precisely the role of this Committee. I suggest this not only because I have an instinct for self-preservation but because ours is a new role and as such requires the ability to adjust and adapt.

I think it is most important, however, to be sensitive to the constraints and limitations that directly or by inference have been placed upon us. Our Committee is not a permanent committee nor does it have the responsibilities and prerogatives of a standing committee. We have legislative authority, as described, to be exercised with due regard for the lead role of the committees of jurisdiction which have sent us their recommendations.

Because the scope of the energy package is unusually broad, and because the focus of our standing committees by definition is limited, our Committee will be expected to review the major policy implications of the various components referred to us from the wider perspective of a comprehensive, integrated set of energy strategies and goals and to make recommendations accordingly.

If this is a fair and accurate assessment of this Committee's mandate, I submit that with the legislative competence here assembled, and with hard work, we can meet our responsibilities on a timetable that allows the National Energy Act to be voted upon by the House by the end of the first week in August, as prescribed by the Speaker. I should add that Senator Byrd, the Senate Majority Leader, has repeatedly emphasized the essentiality of the House meeting this timetable if the Senate is to be able to complete action prior to adjournment in October.

Our time is very limited. Because all of the reports from standing committees won't be available until next Tuesday, our Committee won't be able to begin its work until the following day, Wednesday, July 20. This means that there will be six working days—including Saturday and Sunday—to complete action by this Committee on Monday, July 25. With the three-day reporting requirement, the Rules Committee will be able to act on Friday, July 29, and the legislation will then be ready for Floor action during the week ending on August 5.

I acknowledge that in terms of schedule this is a full plate—but no more so than that which confronted Commerce and Ways and Means only a few weeks ago. It's manageable if we make it manageable.

The Order of Procedure which I'm recommending will allow us to consider the bill by seven major subject areas as set forth in the proposed Order which each of you has before you. This is of utmost importance because a number of strategies involve the interaction of both tax and regulatory treatment which must be considered in relation to each other in order to achieve a rational, integrated product.

I'm also recommending, on a necessary but limited basis, that certain provisions within the seven major subject areas be considered as read and open for amendment at any point. The membership can be assured that there will be a thorough explanation of these sections before the offering of amendments, as well as a thorough explanation of the major subject area in which the section is located.

The subject of hearings has been raised and I think it only proper that I respond. As indicated in my earlier comments, this is not a de novo proceeding. That was the role of the standing committees. Their recommendations—the product of lengthy hearings and voluminous testimony—are now before us. Respected members of those standing committees—Democrat and Republican alike—are members of this Committee. There will be no difficulty in framing the important policy issues in each of the seven major subject areas and there will be sufficient time for due deliberation of these policy issues and for such amendments as members may offer.

In conclusion, let me say that the Chair has no intention of being arbitrary or of presiding over a legislative stampede. The Order of Procedure which I am recommending will make more manageable the task before us. If the Order is not agreed to, then we will proceed under a more cumbersome and time-consuming procedure. But proceed we will, all day and into the evening if need be, Saturday and Sunday as well.

The members of this Commitee, let me say, have been given a responsibility and a challenge that come to few legislators. I have absolute confidence that we will respond in the best traditions of this House. Our country needs a sound energy policy and it needs it now. The House must act now, not after the August recess, because the Congress must finish the job this year, not next. This is the reality that must motivate and guide us in the days ahead.

I'd like now to call on Mr. Anderson for any comments he may wish to make.

Mr. ANDERSON. Thank you very much, Mr. Chairman. I share completely the feelings you have just expressed that the task before us is a very critical one, perhaps as critical and important as any task any of us on this committee have faced during our public service.

Mr. Chairman, the ad hoc committee is today beginning to exercise a legislative responsibility which I consider to be one of the most critical tasks that each of us will face during our tenure in this city doing the public's business. It is a proud day for me to be sitting on this highly select committee and I look forward to the work of the coming weeks.

The nation is at a critical juncture in its history. We have reached the end of a long era of cheap energy, energy which has fueled this rise of our nation to its present position in the world but energy as well which has spoiled us with its availability, its versatility and its cost.

The roots of the public reaction to our energy crisis are a result of the cheap energy we have enjoyed. A clear separation does not exist in the public mind between the availability of supply and what that supply will cost. Such a distinction has not been important in the past but it is the key to successful energy policy-making now. I completely understand the nature of public opinion. Our people want to continue using energy as they have in the past and they think that someone can make that possible.

Such an illusion cannot be allowed to persist. The fact is that we have run out of cheap energy—we have not run out of energy nor will we in the foreseeable future. Additional supplies will only come with more work and higher cost whether they be solar, coal, nuclear or new discoveries of oil and gas. To begin the transition to a more normal relationship with our energy supplies, a message of reality must be brought to the American people. The President has endeavored to bring such a message publicly and in terms of the bill he has sent to the Congress. That message has and must continue to be cognizant of the fact that certain classes of Americans will be severely hurt by the transition to this new era and every effort must be made to alleviate those hardships which are appropriately dealt with by the government.

The procedures which we adopt today to mark up and report this bill are going to be critical to how the bill will be received in the whole House and by the American people. To date the House has performed yeoman service in reporting the bill as it now stands. In less than two months from the date the President addressed this body in joint session, the bill has been marked up and reported. I want to commend my colleagues on the standing committees for the dispatch with which they have worked and for the many long hours that they have invested in writing the latest of many pieces of our national energy policy.

The role of the ad hoc committee is an equally if not more important role. It is our job to examine those separate submissions from the standing committees and make certain that two essential criteria are met:

(1) That the pieces are consistent internally and between each other. For cases where policy conflicts exist between various committees those conflicts must be resolved by the ad hoc committee.

(2) That the bill represents a significant step towards achieving critical national energy goals. If what the standing committees report is insufficient to meet those goals, then we here in this room must adopt alternatives or additional plans to achieve those goals.

On January 24, 1977, I sent to the leadership of the House, including the chairman and ranking minority members of all of the energy committees and subcommittees, a letter recommending that key leaders from the standing committees having energy jurisdiction be drawn together to form a high-level policy committee to establish national energy goals and to work for legislation which would achieve those goals.

I am pleased that the structure I outlined in that letter is remarkably similar to the committee that meets here today. And I find it equally heartening to hear repeated statements by the Speaker and the chairman of this committee that what this committee is about is just what I envisioned—to set and meet important national energy goals.

What we have before us today are the outlines of a workable national energy policy. I am more pleased by what the administration has done and the Congress so far basically ratified than what I realize could have been done. The signals sent to the American people tend to look more like marketplace signals than regulatory signals and that is a good start. Energy costs in this bill will generally be set, albeit artificially through excessive reliance on taxes, at a replacement costs level. Taxes and other tax incentives will attempt to move our energy use from heavy reliance on oil and gas to coal and other long-term resources.

But in spite of the magnitude and ambition reflected in this bill, the biggest problem the bill faces is its inability to meet its own goals. We will be far from six million barrels of oil imports in 1985. We will be far from a 10 percent reduction in gasoline consumption. We will be far from a two percent growth in energy. We will be far from 1.1 billion tons of coal being used and we will fall short of the goals of putting insulation and solar energy in American homes.

And this is backed up by literally everyone of the expert analytic arms of the Congress—Office of Technology Assessment, General Accounting Office, Congressional Budget Office and the Congressional Research Service.

In the light of this advice from our own experts, it appears as though the leadership is bent upon pushing this bill out of this body at breakneck speed. The resolution before us today demands we finish seven very complex, major pieces of legislation in less than 24 hours each. There is no way that members of this committee who have not had prior exposure to the legislation can weigh all of the issues and vote responsibly on that section of the bill. Our job is to make sure that the plan will work. All we will be able to say if we succumb to this resolution of procedures, is that we barely worked on the bill. The pace that is being set is not in the best interests of this body nor of the nation. I never envisioned this committee to be a rubber-stamp committee and I do not intend to sit idly by to permit it to become that.

The second problem we have here today is also driven by the pace and timing set by the leadership. There will be no hearings before this committee. No witnesses will appear to tell us whether they think this plan as a whole is good, bad or indifferent. The members of this committee will operate in the dark. There is only sketchy information coming from the administration on what effect the bill will have. And when the bill goes to the floor, we on this committee will have to face the criticism.

Yesterday, I delivered a letter to the chairman, signed by 16 members of this committee, requesting that prudence and responsible consideration of the bill dictates that the committee seek advice from the American people on what the bill will do. I reiterate that there are parts of the bill that make sense. There are parts of the bill that I have strong reservations about. It is clear to me that because of the nature of this resolution, it will not be possible to fill in those gaps either for majority members of this committee or for members on my side of the aisle.

What we will take to the floor then, is a bill which few members will even try to understand and which members of this committee will not be able to defend. If the ad hoc committee stands mute on the floor, then the bill is going to fail. I do not want that to happen. And if the bill fails, the Congress will have missed a significant opportunity to make an important step towards resolving our energy problem. It is my opinion that if we fail this time around, it is going to be extremely difficult to restart the process.

I do not want to leave the members of this body with the impression that what I am recommending is a delay for the sake of delay. That is not my recommendation at all.

What I am recommending is for this committee to seek the opinion of the American people on what they think is good or bad about this bill. It may be that the criticisms are completely unjustified and we change not a single word from what has been reported by the standing committees. But we would be informed and we could defend our actions on the floor. We could say that we had heard the criticisms and we felt that in spite of them, the national interest dictated that we take the action we have. I would personally feel much more comfortable in that position and I think most of us here would as well.

Thank you, Mr. Chairman.

ORDER OF BUSINESS PROCEDURE AGREED TO BY THE AD HOC COMMITTEE ON ENERGY, JULY 15, 1977

Ordered, that on July 20, 1977, the Ad Hoc Committee on Energy shall proceed to the consideration of a clean bill referred to the Committee incorporating the recommendations, which have been referred to the Ad Hoc Committee, of the committees to which was initially referred the bill, H.R. 6831, to establish a comprehensive national energy policy. In the consideration of said bill, the Committee shall proceed as follows:

(a) The bill shall be considered by seven major subject areas in the following order, and only those parts of the clean bill which correspond to the following provisions within each subject area of H.R. 6831 as reported by the various committees shall be considered as read and open for amendment at any point:

(1) Residential and Commercial Conservation—

Title I:

Part A—Energy Conservation Programs for Existing Residential Buildings (including the provisions of H.R. 7893 as reported).

Part C—Energy Conservation Program for Schools and Hospitals.

Part G, Subpart 3—Demonstration of Solar Heating and Cooling in Federal Buildings.

Title II: Part I—Residential Energy Tax Credit.

(2) Transportation—

Title I:

Part B, Subpart 2—Disclosure of Automobile Fuel Inefficiency Tax and Disclosure of Automobile Fuel Efficiency Rebate.

Part G—Federal Energy Initiatives.

Part G, Subpart 1—Federal Vanpooling Programs.

Title II: Part II—Transportation.

(3) Crude Oil Equalization Taxes—

Title II: Part III—Crude Oil Tax.

(4) Natural Gas—

Title I: Part D—Natural Gas.

(5) Increased Coal Use and Oil and Gas Conservation—

Title I: Part F—Amendments to Energy Supply and Environment Coordination Act.

Title II:

Part IV—Excise Tax on Business Use of Oil and Natural Gas.

Part V—Credit Against Tax on Business Use of Oil and Gas.

Part VI—Changes in Business Investment Credit to Encourage Conservation of, or Conversion From, Oil and Gas or To Encourage New Energy Technology.

(6) Public Utility Regulatory Policies—

Title I:

Part E, Subpart 1—General Provisions.

Subpart 2—National Electric Rate Design Policies.

Subpart 3—Bulk Power Supply.

Subpart 4—Natural Gas Rate Design Policies.

(7) Miscellaneous—Findings—Goals—

Title I: Part B, Subpart 1—Energy Efficiency Standards for Consumer Products.

Title II:

Part VII—Miscellaneous Provisions.

Part VIII—Congressional Procedures for Either House Veto.

(b) As soon as possible after the reference to the Ad Hoc Committee of the clean bill, the staff shall prepare a schedule showing the sections thereof which correspond to the order of business indicated above.

(c) No section shall be in order before the Committee unless 24 hours in advance of the consideration of the relevant subject areas, (not including weekends or holidays) the staff has provided a copy of the pending text of the bill to each Member, and also has provided concise explanation of its contents.

(d) To the extent consistent with the fair but expeditious consideration of each subject area, the Committee shall conclude consideration of each of the subject areas within a reasonable period to be determined by the Chairman in consultation with the minority and shall make every concerted effort consistent with its responsibilities to weigh the overall intent of the plan, to conclude consideration of all sections as soon as possible.

(e) Members shall insofar as possible provide at least 50 copies of each amendment to the clerk at the convening of proceedings on the day on which the amendment will be offered.

(f) At the conclusion of the consideration of the seventh subject area, the bill shall be considered as having been read for amendment, and it shall be in order to offer a motion to instruct the Chairman of the Ad Hoc Committee to report the bill to the House with such perfecting amendments as may have been adopted by the Committee, including technical and conforming amendments.

WATERWAY USERS TAXES AND LOCK AND DAM 26

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. ALEXANDER) is recognized for 30 minutes.

Mr. ALEXANDER. Mr. Speaker, I want to take this opportunity to congratulate the chairman of the Ways and Means Committee, Mr. ULLMAN, for his forthright and decisive action in upholding the prerogatives of the House of Representatives regarding Senate action on H.R. 5885, the river basins authorization bill.

As many of my colleagues know by now, the Senate, on June 22, made an ill-considered move in adopting an amendment which would have ordered the Department of Transportation to impose a system of taxation on the users of America's inland waterways. I consider the linkage of this issue to the question of reconstruction of facilities at lock and dam 26 on the Mississippi River to be wholly inappropriate.

By this action the other body clearly acted in violation of article I, section 7 of the Constitution which reserves to the House all powers to initiate revenue raising measures. By postponing action on the Senate's request for a conference on H.R. 5885, the Speaker and Mr. ULLMAN have preserved the constitutional privileges of the House while providing Members with an opportunity to reflect

on the merits of the controversies surrounding the waterway users issue.

I want to speak briefly to a few of those issues. However, I contend that neither I nor any of the proponents of waterway users taxes fully understand the full effects or total impact potentially to be felt from such taxes if they were to become law.

I consider the attempt to impose waterway taxes at this time to be particularly unfortunate for two primary reasons.

First, our Nation faces severe energy shortages now and in the foreseeable future. We should encourage and facilitate the use of the most energy efficient systems, particularly transportation systems.

Second, we again face a crisis in Americar agriculture that threatens to crush the farmer between rising costs and falling prices. To raise transportation costs through taxation of one of the farmer's primary sources for movement of the supplies he needs and the commodities he produces will worsen the farm crisis.

Let me elaborate on each of these points, beginning with the energy efficiency of water transport.

The greater energy efficiency of the waterway transportation mode is achieved largely by the natural buoyancy of water itself. A man who can move a river barge loaded with 1,000 tons of freight by pushing it or pulling it with a rope could never budge a railroad car by hand, whether loaded or empty. The average of Btu's required in both upstream and downstream transport by barge has been shown by numerous studies to be less than the Btu's used to move the same freight between the points of origin and destination by rail.

Most studies comparing water to rail transport in recent years have been in agreement that water transportation requires less fuel to do the job, though it takes longer than rail transport generally. As it is becoming increasingly clear that we must maximize our energy supplies while achieving the greatest economies of scale in our transportation infrastructure, it makes no sense to me to adopt measures such a user taxes on this highly efficient, environmentally sound, and energy-saving transportation system.

One effect of proposed taxes would be to divert between 10 and 20 percent of present and future barge freight to the highly subsidized, less energy-efficient rail lines. This can hardly help us solve our Nation's energy crisis. It can only add a further obstacle to achieving that goal.

Second, the beneficiaries of the waterways are not limited to the barge lines themselves. All Americans benefit through lower prices and costs for the multitude of products transported by the water-borne carriers. Of special significance is the important role played by the waterways in American agriculture.

As we are considering the 1977 farm bill this week, it is especially appropriate to consider how dependent agriculture is on water transport. Basic supplies such as fertilizer are moved at reasonable costs and in large amounts on the water. But farmers are even more dependent on barge transport for the movement of grain and other commodities from the agricultural heartland to the Nation's seaports for sale abroad.

The future of agriculture, the ability of our farmers to efficiently move their produce into world markets, and ultimately the soundness of the dollar are directly tied to the maintenance of a sound waterway transportation system.

To adopt taxes raising the costs of using America's waterways can only add to the inflation burdening the American farmer and consumer. The barge companies can pass the increased costs on but the farmer and consumer cannot.

Therefore, we undermine our efforts to aid and protect the farmer's income and the consumer's food supply when we act to unnecessarily inflate costs through taxation.

Finally, despite what I believe will clearly be harm done to our efforts to meet our energy needs and protect our agricultural system, there are certain to be other effects that would result from the adoption of a waterways taxation system that are presently unknown.

I urge that the appropriate committees in both the House and Senate give careful consideration to the costs and benefits from such proposals before recommending action. I certainly hope that we approach this complex and crucial issue with greater understanding, study, and preparation than was evidenced by the recent Senate action.

At the very least, we should maintain the separation of the broad question of user taxes on the inland waterways from narrow questions such as lock and dam 26. Each should be considered on its own merits.

NEUTRON WEAPONS STOCKPILE MODERNIZATION

(Mr. PRICE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE. Mr. Speaker, some years ago Lynn Montross, who was an historian for the Marine Corps, wrote a book titled, "War Through the Ages." The book does a remarkable job detailing man's inhumanity to man from about day 1 of recorded history through Korea. From it I learned that the Quislings, those who sold out to the enemy, were known in the days of Genghis Khan. Montross relates how the Pope in the 11th century outlawed a new terror weapon which was wreaking havoc on the armored cavalry. The new weapon, the crossbow, would knock the knight off his horse. Flat on his back on the ground, he was an easy victim for the infantry if, in fact, the blow from the bow's projectile did not kill him. The crossbow was ineffective against buildings. Compared to previous bows, however, it had enhanced blast against knights in armor.

The current fuss about the so-called neutron bomb is without merit. The warhead should have been called the "reduced blast/thermal" warhead instead of the "enhanced radiation" warhead. This would have brought forth kudos for the developers of this new humanitarian approach to saving the lives of innocent civilians, should nuclear war erupt in Europe.

George F. Will had an excellent article in the July 7, 1977, Washington Post. I recommend it to those who wish to understand why a weapon with high neutron output, but low blast and thermal output, was developed. Mr. Will very clearly points out why those who oppose this new weapon do so:

In other words, a weapon must be so indiscriminately destructive in blast and fire effects that we will be deterred from using it. Similarly, Hatfield objects to neutron weapons because, being precise, they "invite" use.

The article follows:

THOSE BLASTS AGAINST NEUTRON WEAPONS

(By George F. Will)

Sen. John Heinz (R-Pa.) says a neutron warhead for battlefield missiles or artillery is "dehumanizing" because it "singles out people for destruction, choosing to preserve buildings instead." Newspaper reports have said that neutron weapons destroy people "rather than" property, or "while sparing" property.

In fact, neutron weapons do not "preserve" or "spare" property. But this kind of rhetoric has stimulated intemperate and uninformed outcries against such weapons. So before the debate boils to an irrational climax, this should be noted:

The principal objection to neutron weapons is not that they destroy people. Rather, the objection, made in the name of moral sensitivity, is that they do not destroy people and property as indiscriminately as the less precise tactical nuclear weapons that neutron weapons would replace.

All nuclear explosions produce four lethal effects: blast, heat, radiation and fallout. Neutron weapons produce only about one-tenth of the blast, heat and fallout produced by regular nuclear weapons.

Radiation from neutron weapons is more intense, but more confined; it can be confined to a radius of 300 yards. And it is short-lived; an area hit by a neutron weapon can be occupied the next day.

One newspaper reports that neutron weapons are "more detrimental to humans than to buildings," a description that also applies to bullets. Sen. Mark Hatfield (R-Ore.) says neutron weapons are "in the realm of such devastation that it is difficult to comprehend."

Not really. Nuclear weapons that neutron weapons would replace would destroy civilians and homes far beyond the battlefield area to which the effects of neutron weapons would be confined.

Since industrial organization became the basis of military power, and especially since the development of air power, the theory and practice of war has blurred the distinction between combatants and noncombatants. Neutron battlefield weapons are a step back from the indiscriminateness of modern war technologies. They make possible reduced collateral damage to civilians.

And that is why they are opposed.

Paul Warnke, President Carter's arms-control adviser, once said, with characteristic excess, that new tactical nuclear weapons capable of more controlled devastation would be "an absolute disaster." Weapons "with lower yield and greater accuracy and presumably few collateral consequences" would undermine the self-deterrence of nations that possess them.

In other words, a weapon must be so indiscriminately destructive in blast and fire effects that we will be deterred from using

it. Similarly, Hatfield objects to neutron weapons because, being precise, they "invite" use.

Sen. Sam Nunn (D-Ga.) rightly notes that opponents of neutron weapons fear that the United States might not be sufficiently reluctant to use them. But as Nunn argues, a deterrent is credible only to the extent that it is usable:

"Those who oppose the warhead apparently believe in self-deterrence . . . that we should keep the weapons so destructive we would never use them or if we did use them, it would only be under the most desperate of conditions. . . . By deterring ourselves from using tactical nuclear weapons, except weapons which would destroy the territory we are pledged in NATO to protect, the advantages which the Soviets now maintain in conventional arms are greatly magnified. . . . I remind my colleagues that the purpose of deterrence in Europe is to deter Soviet aggression, not to deter ourselves from responding to that aggression."

Rejection of clean, precise neutron weapons would be destabilizing in two senses. On the one hand, the Soviets would be given reason for doubting that the United States would use existing tactical nuclear weapons, with their devastating collateral effects, while fighting on allies' soil. On the other hand, while NATO forces are equipped only with such imprecise weapons, NATO will be under pressure to use them early against attack, before superior Soviet conventional forces move the battlefield from the border into the heart of Western Europe.

The basic objection to neutron weapons constitutes an objection to tactical nuclear weapons in general. Neutron weapons do not involve a departure from established principles for defending Europe with tactical weapons.

Opponents should calculate the cost—in money and, in the event of war, in allied and civilian lives—of alternative means of coping with the Soviet advantage in conventional forces. They should, but they won't.

SOCIAL SECURITY REFORM

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, no program affects the financial well-being of our Nation's elderly to the extent that the social security system does. It is imperative that we in Congress act promptly to restore financial stability to the system. The President has submitted his proposals, and the Social Security Subcommittee of the Committee on Ways and Means has begun hearings on these proposals this week. I had the privilege to be the leadoff witness at these hearings and would like to share my comments to the subcommittee with all the Members:

TESTIMONY BEFORE THE SOCIAL SECURITY SUBCOMMITTEE OF THE COMMITTEE ON WAYS AND MEANS, JULY 18, 1977

Mr. Chairman and members of the subcommittee, I am very grateful to appear before you today and commend you for holding these hearings so promptly after your extremely heavy duties related to the President's energy proposal. I believe your desire to hold these hearings as soon as you were able indicates the importance you attach to this issue and your commitment to act on legislation to resolve the system's financial problems.

In submitting his proposals on the financing of social security on May 9, 1977, the President responded promptly to his campaign promise to safeguard the financial integrity of the social security system. I applaud the President's promptness as well as the nature of his response.

Overall, I believe the President's proposal is a major first step in the updating of the social security system and one that should be acted on quickly in order to alleviate any anxiety created by the potential "bankruptcy" of the system. The proposal contains a number of important elements for both the short run and the long run deficit that I would like to comment on. The one element that seems to have gained the most attention initially is the limited use of general revenue funds.

The President's proposed use of general revenues is a very modest and extremely limited one—one that is far more conservative than that proposed by you, Mr. Chairman, last Congress and supported by some 130 co-sponsors, of which I am proud to be one. Mr. Carter would initiate a special countercyclical system through 1982 and retroactive to 1975 which would use general revenues to replace the social security taxes lost when the unemployment rate exceeds 6 percent. Such a program would provide $14.1 billion of the $83 billion needed to balance the old age and survivors insurance and disability insurance trust funds during the short term through 1982.

I am sure that it comes as no revelation to the members of this committee that the use of general revenues to finance benefits under the Social Security System, excluding needs-tested programs, is not new. In fact, in 1976, over $4 billion from general revenues was paid to the trust funds for benefits to certain uninsured persons age 72 and over, for benefits related to military service for parts A and B of medicare, and for noncontributory wage credits for American citizens of Japanese ancestry interned during World War II. It seems clear to me that the present circumstances warrant the extension of this present practice, at least in the short run, to insure the financial stability of the system.

I am reminded by the National Council of Senior Citizens in its "Program for the 95th Congress" that from 1944 to 1950, title II of the Social Security Act contained a provision authorizing the appropriation to the trust funds such additional sums as might be required to finance benefits under the title. It is my understanding that this provision was later eliminated because there was never a need to use it and such a need was not foreseen. I believe that now is an excellent time to reaffirm in statutory language that Congress will guarantee the financial stability of the Social Security System.

In a 1973 survey of social security programs, 105 countries had a social insurance plan for old age, disability and survivors and over half used general revenues from the Government. For example, the government in Japan contributes 20% of the benefit costs: West Germany contributes an annual subsidy of 15%, the United Kingdom contributes about 25%, Ireland about one-third, the Netherlands guarantees against any deficit and pays the contribtuion for low-income workers. Clearly, the use of general revenues in a social insurance plan for old age, disability and survivors is not unique and not some new, untried practice.

The President's proposal also calls for a small increase in the wage base for individuals and the removal of the wage ceiling upon which employers pay social security taxes. I believe this approach is much more equitable than an increase in the tax rate for all. By implementing this change, we will make the financing of the system increasingly proportional and less regressive. Moreover, I was struck by Secretary Califano's testimony before your committee that this approach would actually cost employers almost $4 billion less than if the traditional method of financing were used and the tax rate were increased 0.3% for both employers and employees.

What is now often called a "technical error" in the 1972 amendments needs to be corrected. The President's proposal does address this error which is more formally called "decoupling." Actually, I believe the problem has resulted from the unprecedented high rate of inflation at the same time as high unemployment. This combination would result in benefits rising much faster than wages, and in some future retirees becoming eligible for benefits exceeding any wages they have ever earned. We need to correct this situation so that benefits for future retirees will replace the same proportion of pre-retirement earnings as received by current retirees. At the same time, we should note that benefits at retirement should be determined by a wage-indexed formula which allows retirees to share in productivity increases in the economy. Cetrainly, the purchasing power of benefits should be maintained after retirement by automatic cost-of-living adjustments. In fact, I would support a semi-annual adjustment and a separate consumer price index for the elderly.

While I commend the President's proposal concerning social security in general, I do have some concern about the shift of revenues from the hospital insurance trust fund, especially if such a switch would prevent the improvements in the medicare program that our committee has proposed: For example, increases in home health care services, coverage for preventative check-ups and for medical appliances like eyeglasses, dentures and hearing aids. Perhaps a continued use of general revenue funds would be preferable to a switch of funds between trust funds.

As you know, Mr. Chairman, I have been a long time advocate of eliminating the retirement test under social security for those between 65 and 72. I realize that there are some important financial considerations involved in this matter, but I would hope that this issue will be addressed in any amendments that you might report out. Our committee has advocated the liberalization of the earnings test and I would favor its complete removal as contained in H.R. 1134.

There are, Mr. Chairman, a few additional items related to social security which I believe deserve consideration and which I would support:

Elimination of all of the Social security law which discriminate on the basis of sex;

Extension of the social security system to include mandatory coverage of all workers including State and local jurisdictions;

Elimination of the monthly aspect of the retirement test (if any test is to be kept) and retention of the annual limitation.

The social security system has become a major source of retirement income for millions of Americans. For this reason, the system must be maintained on a sound basis. I am sorry, however, that the present financial situation prohibits our discussing increases in the benefit levels. Today, over 2 million senior citizens—most of whom receive social security—are receiving additional income through the supplemental security income program. The Federal payment level for these persons is still well below the poverty level.

According to a social security survey of newly entitled beneficiaries, over 20 percent of married and 48 percent of the unmarried had only social security as their income and no income from a second pension or earnings. About 40 percent of the married and 65 percent of the unmarried mentioned above had a total income below the poverty level. This situation certainly needs to be corrected.

In concluding, Mr. Chairman, I would like to state that I am most pleased with the

quickness with which the President acted and the nature of his response. It represents a welcome first major step toward preserving the financial integrity of the social security system and I am hopeful that congress will act on this matter promptly and thoroughly.

I want to thank you, Mr. Chairman and members of the subcommittee, for this opportunity to appear befcre you this morning.

CURBING MANDATORY RETIREMENT

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, on the last 2 days, the New York Times has printed two excellent articles on the subject of mandatory retirement and citing the work of the Select Committee on Aging and the Education and Labor Committee in the House on this important subject. Because legislation, H.R. 5383, curbing the practice of mandatory retirement will soon be before the House, I would like to share these articles with all the Members.

Ageism is as odious as racism or sexism. I urge prompt enactment of this critical legislation.

The articles follow:

[From the New York Times, July 17, 1977]

A RIGHT TO WORK FOR THE AGING CLASS

(By Philip Shabecoff)

WASHINGTON.—Hank Aaron, baseball's all-time home-run king, retired last October at 42, a relatively ancient age for a professional athlete. But John Wayne is still a movie tough guy at 70. George Meany, who will be 83 next month, continues to rule the American labor movement with an iron hand. And Artur Rubinstein gave a television piano concert on his 90th birthday.

What is the appropriate retirement age? For these and many other Americans, the answer has to do with skill and strength, with health, energy, intelligence and will—not a particular date on the calendar. But millions of workers are not free to choose when their careers end because their employers impose mandatory retirement at a specific age, usually 65. Now, however, Congress is moving toward legislation that would limit an employer's right to force a worker to retire solely for reasons of age. On Thursday, the House Education and Labor Committee agreed to a bill amending the Age Discrimination Act of 1967.

The bill, introduced by 76-year-old Representative Claude Pepper, Democrat of Florida, and Paul Findley, Republican of Illinois, would eliminate immediately the mandatory retirement age of 70 that now applies to Federal workers. It would also extend to 70 the age at which workers are protected by the discrimination law. Currently the law protects workers between 40 and 65 from age discrimination, including forced retirement. The amendments are aimed at eventually eliminating mandatory retirement entirely.

There are no precise or current statistics showing just how many workers are affected by compulsory retirement programs. A survey taken by the Labor Department in 1973 indicated that about half of employees in private, nonagricultural industries worked for companies that imposed such programs. A survey of new beneficiaries taken by the Social Security Administration in 1969 showed that 36 percent of men and 23 percent of women had a compulsory retirement age on their last job. All the surveys indicated, however, that 65 was the most common age for involuntary retirement. According to the Bureau of Labor Statistics, there were some 2.7 million workers age 65 or older holding jobs as of this May.

How did 65 get to be the magic number? Apparently it can be tracked back to the 19th century and Otto von Bismarck, when Germany's "Iron Chancellor" instituted the first social security system and picked 65 as the obligatory retirement age. When the United States adopted social security in 1935, 65 was arbitrarily chosen as the age when retirees could begin collecting benefits, according to Representative Charles Grassley of Iowa, a Republican member of the House Select Committee on the Aging.

Many businessmen and some economists insist that mandatory retirement is beneficial both to workers and to the economy generally. Older workers, they say, must retire in order to open job and promotion opportunities for younger people. They point to studies showing that most workers reach peak efficiency between 45 and 55 and after that begin to slow down. After 65, they argue, the productivity of workers declines and so, therefore, does their contribution to the gross national product.

It is frequently argued that mandatory retirement that applies equally to all employees removes the "stigma" of retirement. George B. Morris, Jr., vice president for industrial relations of the General Motors Corporation, testified before the Select Committee on Aging that with mandatory retirement, "You're not saying 'poor old Joe' no longer has the mental power or the physical power so he's got to go, somebody's forcing him out. Everyone knows that at age 68 [G.M.'s retirement age] people are going to be retired." It is sometimes argued that the right of older workers to retire at a later age conflicts with the goal of providing equal opportunity for women, blacks and others. Most workers over 50 in responsible high-paying jobs are white males, one government official pointed out. Finally, organized labor, while agreeing that mandatory retirement should not be a unilateral decision by an employer, insists that neither should it be forbidden, in collective bargaining arrangements. An A.F.L.-C.I.O. official said that mandatory retirement can be useful in combating inflation or assuring better pensions.

But foes of mandatory retirement reject these arguments. They point, for example, to a Labor Department survey which indicates that the abolition of mandatory retirement age would increase the size of the labor force by only about four-tenths of one percent. With the work force standing at about 97.6 million in June, this would be about 390,000 workers. Representative Pepper said that "I see no ethical, or social basis for arguing that a young worker has any more right to a job than an older worker." He also scoffed at the notion that compulsion is necessary to remove the "stigma" of retirement, saying that "competent, compassionate personnel managers" should be able to see that retirement is accompanied by as little trauma as possible.

As for the "insidious argument" that mandatory retirement helps women and minorities, "We must not advocate one form of discrimination in the name of abolishing another," Mr. Pepper said. In fact, the principal argument of those who advocate the elimination of mandatory retirement is that the practice violates civil rights. No American, they assert, should be denied equality of opportunity for any reason including age.

An official of the Social Security System agreed that ending compulsory retirement would ease some of the intense pressure on the system both by deferring the age at which many workers start receiving benefits and lengthening the years in which those workers pay into the system

The prospects for passage of the legislation are not clear. The Carter Administration is split. Secretary of Labor Ray Marshall reportedly favors the amendments. But Secretary of the Treasury M. Michael Blumenthal, who apparently had a bad experience with "deadwood" when he headed the Bendix Corporation, is said to oppose the bill.

However, the A.F.L.-C.I.O., despite its feeling that mandatory retirement should be a matter of collective bargaining, probably will not oppose the bill strongly. "George Meany is personally opposed to mandatory retirement at age 65," said a spokesman. "He has been for nearly 18 years," the spokesman added.

[From the New York Times, July 18, 1977]

RETIREMENT A HARSH REWARD FOR MANY AMERICANS

(By Marjorie Hunter)

WASHINGTON, July 17.—"What we have," says Max Serchuck, "is more than 800 million years of experience walking around. Surely, 800 million years of experience can still make a contribution to American life."

Max Serchuck is 76 years old, a retired New York jeweler whose doctor advised him to move to Miami Beach a decade or so ago and "go fishing."

"I'd never been fishing in my life," he says. And he had no intention of learning how.

Instead as president of the Dade County (Fla.) Council of Senior Citizens, Mr. Serchuck has become one of the nation's most vocal apostles of meaningful work and activity for America's 22.9 million men and women who are 65 or older—10.7 percent of the population.

1912 GENERATION RETIRING

The American worker born in 1912 reached 65 this year and, except in rare cases, will enter the growing ranks of the retired, either willingly or against his or her will.

For some, retirement will mean a blessed relief from alarm clocks and commuter traffic jams. It will mean time for fishing and hunting, for bridge parties and traveling, for quiet hours of reading or watching television.

Indeed, there has been a trend toward even earlier retirement—some as early as 45, many by age 55—in industries with reasonably liberal pension systems.

But Congressional investigations and surveys by retirement organizations have concluded that retirement is a hollow dream for millions of Americans who are unwilling to "go fishing." Indeed, the American Medical Association has said that the "sudden cessation of productive work and earning power often leads to physical and emotional deterioration and premature death."

Despite the fact that millions of older Americans are able and willing to work, both Government and private efforts to supply them with meaningful jobs have been extremely modest. Congressional hearings have shown that there is a bias against employment of persons 65 or over.

Only in recent years has the Federal Government recognized the severity of the problem that many sociologists consider one of the greatest now facing the nation.

The Federal response has been primarily one of increasing Social Security payments, providing Medicare and Medicaid to the ill and infirm and funding projects offering a variety of social services, such as meals-on-wheels, and homemakers aides.

Only a few hundred million dollars, a tiny percentage of the $450 billion Federal budget, is set aside for jobs for older Americans who are mentally and physically capable of working.

Fewer than 300,000 persons are now employed in such jobs, some on a part-time basis, some as strictly nonpaid volunteers.

"It's a pretty sorry track record," says Representative Claude Pepper, a 76-year-old Florida Democrat who heads the House Select Committee on Aging.

Mr. Pepper places much of the blame for not using the talents of older Americans on

mandatory retirement policies of the Federal Government and most private companies. The Federal policy mandates retirement at 70; most private industries require retirement at 65.

That may be changing. Last Thursday, the House Education and Labor Committee approved legislation that would end age limits on mandatory retirements in Government service and prohibit mandatory retirement in the private sector before age 70.

On Friday, Mr. Pepper and his House Select Committee on Aging met with President Carter, who indicated that he would favor legislation to bar private companies from imposing mandatory retirement on workers before they reached 70. However, the President did not specifically endorse the Education and Labor Committee's bill.

Appearing today on NBC's "Meet the Press," Secretary of Labor Ray Marshall said that he supported the committee's bill. The bill would "not mean that somebody couldn't retire earlier than 70 if the wanted to do it," Mr. Marshall said, "but I think that discrimination against people who are still very productive is bad."

"It costs the country a lot," he continued; "it costs those people a lot, and we should make it possible for older people to continue their productive lives longer."

As a sponsor of bills seeking to end mandatory retirement in both the public and private sectors, Mr. Pepper recently observed:

"Who would tell Margaret Mead, who is 76, that her contributions to the study of sociolcgy ended at 65? Who would tell Arthur Fiedler, who is 83, or Leopold Stokowski, who is 95, that those over 65 cannot contribute meaningfully to the appreciation of music?

"Who would fault 81-year-old George Burns's performance in 'The Sunshine Boys?' "

Congressional hearings have shown that many Americans forced to retire at 65 not only want to work but also need the money. An estimated 3.3 million older Americans now live below the poverty line.

"Inadequate income in retirement is the No. 1 problem affecting older Americans," according to the Senate Special Committee on Aging, headed by Senator Frank Church, Democrat of Idaho.

Where can an older American turn to find a job?

A few communities have set up free employment referral services for older persons. One of these, in Jackson, Miss., has placed a hundred or so persons in jobs in hospitals, stores and clerical positions.

Jim Smith, personnel director of Jackson's Day Detectives, says that he will hire as many older workers as the registry can provide.

"You really can't count on the young ones," he says. "But nine times out of 10, the older person will come through."

Some older Americans are employed in federally funded community service jobs and public works and economic development projects.

The New York City Department for the Aging placed 1,300 older persons in a variety of jobs. A Western Kentucky community has a federally funded project in which older persons are hired as homemakers and home repairers.

Mrs. Elizabeth Brooks, 74, and Mrs. Bessie Brown, 73, are Foster Grandparents, a program sponsored by ACTION, the Federal volunteer service agency. Five days a week, they spend four to six hours caring for children at St. Christopher's Hospital for Children in Philadelphia.

Both are widows. Both had limited incomes. And both love their jobs.

"Believe me, I'm needed," Mrs. Brooks said. "Besides, this keeps me out of mischief."

"If I didn't have this job, I'd be bored to death and climbing the walls," Mrs. Brown said.

The two women and 14,000 other Foster Grandparents serving in hospitals, orphanages, day care centers and correctional institutions across the nation receive only a small salary, $32 a week—the same amount as when the program was begun more than a decade ago. They also receive carfare and one hot meal each working day.

There are about 2,600 senior companions in 46 localities in the nation, working in hospitals, nursing homes and private homes. They too, receive $32 a week, plus travel expenses.

INTERNATIONAL SOCIAL SECURITY AGREEMENTS ACT OF 1977

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I am introducing today the International Social Security Agreements Act of 1977. A similar bill was introduced last year, and hearings before the Ways and Means Subcommittee on Social Security were held last summer. The subcommittee has begun today 2 weeks of hearings on a number of social security issues, including these totalization agreements.

This bill would authorize the President to enter into agreements with other nations providing for coordination between their systems and our social security system, and "totalizes" the periods of work in each country so that workers would qualify for benefits which they are now denied because the length of their employment in one country does not qualify them for benefits under the systems of either country. The worker would receive benefits from both countries in proportion to the length of employment completed in each. Thus, the work completed while covered by one country's system would be exempt from coverage by the other country.

This legislation simply insures that each nation would be required to pay benefits for the employment completed by an individual in that country if the individual's total number of years employed in both countries would qualify for social security coverage. Usually, the person would be covered by the country in which he has worked longer and is likely to remain after retirement.

This bill would implement the totalization agreements entered into by the United States already—with West Germany in 1976 and Italy in 1973, as well as future agreements with other countries. The measure would particularly benefit former German citizens, many of whom were victims of Nazi persecution, who could voluntarily make contributions to the West German social security system and qualify for benefits. In many cases, these U.S. citizens would be entitled to substantial payments from West Germany.

The International Social Security Agreements Act of 1977 differs from last year's bill in that it provides for a 60-day period during which Congress would have a chance to review proposed totalization agreements approved by the President. This section should resolve objections expressed last summer by some of my colleagues on the Social Security Subcommittee.

Mr. Speaker, this implementing legislation is long overdue. There are thousands of citizens in the United States who have worked many years, both here and in other countries, who are currently being denied social security benefits to which they would be entitled if they had not moved, or been forced to move, across international borders. I hope that my colleagues will support this action to guarantee old age and disability benefits for so many of our naturalized citizens.

H.R.—

A bill to amend the Social Security Act to authorize international agreements with respect to social security benefits

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "International Social Security Agreements Act of 1977".

AUTHORIZATION FOR INTERNATIONAL AGREEMENTS WITH RESPECT TO SOCIAL SECURITY BENEFITS

SEC. 2. Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"INTERNATIONAL AGREEMENTS

"Purpose of Agreement

"SEC. 233. (a) The President is authorized to enter into agreements establishing totalization arrangements between the social security system established by this title and the social security system of any foreign country, for the purposes of establishing entitlement to and the amount of old-age, survivors, disability, or derivative benefits based on a combination of an individual's periods of coverage under the social security system established by this title and the social security system of such foreign country.

"Definitions

"(b) For the purposes of this section—

"(1) the term 'social security system' means, with respect to a foreign country, a social insurance or pension system which is of general application in the country and under which periodic benefits, or the actuarial equipment thereof, are paid on account of old age, death, or disability; and

"(2) the term 'period of coverage' means a period of payment of contributions or a period of earnings based on wages for employment or on self-employment income, or any similar period recognized as equivalent thereto under this title or under the social security system of a country which is a party to an agreement entered into under this section.

"Crediting Periods of Coverage; Conditions of Payment of Benefits

"(c)(1) Any agreement establishing a totalization arrangement pursuant to this section shall provide—

"(A) that in the case of an individual who has at least 6 quarters of coverage as defined in section 213 of this Act and periods of coverage under the social security system of a foreign country which is a party to such agreement, periods of coverage of such individual under such social security system of such foreign country may be combined with periods of coverage under this title and otherwise considered for the purposes of establishing entitlement to and the amount of old-age, survivors, and disability insurance benefits under this title;

"(B)(i) that employment or self-employment, or any service which is recognized as equivalent to employment or self-employment under this title or the social security system of a foreign country which is a party to such agreement, shall, on or after the effective date of such agreement, result in a period of coverage under the system established under this title or under the system

established under the laws of such foreign country, but not under both, and (ii) the methods and conditions for determining under which system employment, self-employment, or other service shall result in a period of coverage; and

"(C) that where an individual's periods of coverage are combined, the benefit amount payable under this title shall be based on the proportion of such individual's periods of coverage which were completed under this title.

"(2) Any such agreement may provide that—

"(A) an individual who is entitled to cash benefits under this title pursuant to such agreement shall, notwithstanding the provisions of section 202(t), receive such benefits while he resides in a foreign country which is a party to such agreement; and

"(B) the benefit paid by the United States to an individual who legally resides in the United States shall be increased to an amount which, when added to the benefit paid by such foreign country, will be equal to the benefit amount which would be payable to an entitled individual based on the first figure in (or deemed to be in) column IV of the table in section 215(a).

"(3) Section 226 shall not apply in the case of any individual to whom it would not be applicable but for this section or any agreement or regulation under this section.

"(4) Any such agreement may contain such other provisions, not inconsistent with this section, as the President deems appropriate.

"Effective Date of Agreement

"(d) Any agreement proposed to be entered into by the President to establish a totalization arrangement pursuant to this section shall be transmitted by the President to the Congress, and shall not be formally concluded or become effective until a period of at least sixty calendar days (excluding any day on which either House of Congress is not in session because of an adjournment sine die or because of an adjournment of more than three calendar days to a day certain) has passed after such transmission. The agreement shall be transmitted to the Senate and the House of Representatives on the same day, and shall be delivered to the Secretary of the Senate if the Senate is not in session and to the Clerk of the House of Representatives if the House is not in session.

"Regulations

"(e) The Secretary of Health, Education, and Welfare shall make rules and regulations and establish procedures which are reasonable and necessary to implement and administer any agreement which has been entered into in accordance with this section.".

RELIEF FROM TAXES

SEC. 3. (a) Section 1401 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(c) RELIEF FROM TAXES IN CASES COVERED BY CERTAIN INTERNATIONAL AGREEMENTS.—During any period in which there is in effect an agreement entered into pursuant to section 233 of the Social Security Act with any foreign country, the self-employment income of an individual shall be exempt from the taxes imposed by this section to the extent that such self-employment income is subject under such agreement to taxes or contributions for similar purposes under the social security system of such foreign country.".

(b) Sections 3101 and 3111 of such Code are each amended by adding at the end thereof the following new subsection:

"(c) RELIEF FROM TAXES IN CASES COVERED BY CERTAIN INTERNATIONAL AGREEMENTS.—During any period in which there is in effect an agreement entered into pursuant to section 233 of the Social Security Act with any foreign country, wages received by or paid to an individual shall be exempt from the taxes imposed by this section to the extent that such wages are subject under such agreement to taxes or contributions for similar purposes under the social security system of such foreign country.".

(c) Notwithstanding any other provision of law, taxes paid by any individual to any foreign country with respect to any period of employment or self-employment which is covered under the social security system of such foreign country, in accordance with the terms of an agreement entered into pursuant to section 233 of the Social Security Act, shall not, under the laws of the United States, be deductible by, or creditable against the income tax of, any such individual.

RESTORE STABILITY TO SOCIAL SECURITY TRUST FUND

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, as the Ways and Means Subcommittee on Social Security begins today receiving public testimony on President Carter's social security refinancing proposals, I recommend that my colleagues consider this thoughtful editorial from the New York Times.

As the Times points out, the administration's plan seems to have upset quite a diverse range of interests and interest groups, particularly over the concepts of eliminating the tax ceiling on the employee wage base and using general revenue moneys to shore up the trust funds in times of high unemployment. Understandably, there are some who are wary of a plan that, at first glance, may appear to deviate from the original principles behind social security financing.

With the two major trust funds facing exhaustion within the next 5 years, however, any attempt at restoring financial stability to the social security system will require certain major modifications in its structure. While the President's proposal does advance a number of significant departures from present policy, the alternatives would require even greater individual and employer tax obligations, continuous Federal contributions from general revenues or both.

Instead, the administration's plan would phase out the wage ceiling on which employers pay payroll taxes. Payroll tax rates would not increase, and, as Secretary Califano noted in his testimony before our subcommittee in May, employers would pay $4 billion less than they would under more conventional payroll tax increase plans which would increase both rates and the wage base. As for general revenues, they would only be used in years of high unemployment—6 percent or more—and, as a result, could not be used to raise benefit levels.

Thus, President Carter's social security plan is not as painful as some early critics have suggested. Mr. Speaker, we have swept the social security financing problem under the rug for too long. I hope that we can move quickly to approve this most rational and restrained approach, insuring that the commitment made by the Federal Government over 40 years ago to provide American workers with old age and disability protection will not end up a hollow promise.

The New York Times editorial follows:

[From the New York Times, May 15, 1977]

PATCHING UP SOCIAL SECURITY

The Social Security system is well on its way to going broke. Payments to beneficiaries have exceeded revenues since 1975, and this year the deficit may reach $5.6 billion. According to recent estimates, reserves set aside to pay disability claims will be exhausted in two years; reserves for old age retirement will be gone in six.

How can the system be saved? Many plans have been offered, their differences reflecting conflicting views on who really should pay for Social Security. President Carter's proposal last week is a hybrid, combining bits and pieces of other solutions. It is a compromise that evades fundamental ideological questions, and thus won't please purists very much. A careful look, however, suggests that the plan is workable and, on the whole, fair.

Social Security finance is complicated, and so are proposals for putting the system back in the black. Every scheme, however, draws on some combination of the following options:

Raise payroll tax rates. Employers and employees now each pay a 5.85 percent tax on covered wages. The rates could be raised—as they often have been—to meet rising benefit payments.

Raise the taxable wage base. Payroll taxes are currently collected on only the first $16,500 earned; scheduled increases would put the taxable ceiling at $23,400 in 1982. That limit could be raised still further, or faster, or eliminated altogether.

Use general tax revenues. The alternative to extracting more revenue from payrolls is to dip into general revenues. This would, in effect, mean the substitution of Federal income taxes for more payroll taxes.

Reduce benefits. A single modification of the formula by which benefits are calculated could cut the projected Social Security deficit by half, yet leave unaltered the fundamental rights of retirees. Under current law, potential benefits of those still working, as well as the actual benefits of pensioners, are keyed to the cost of living. Pensioners need this protection. But since workers' future benefits are, by law, already adjusted for inflationary increases in average wages, workers get an unintended bonanza. Inflation, perversely, actually increases their future purchasing power. Eliminating the extra cost-of-living provision of persons still on the job would equalize the rights of current and future pensioners, and save a lot of money besides.

The President's proposed reform draws on all these choices. A payroll tax increase now scheduled to take effect in 2011 would be imposed much earlier. The wage base on which employee taxes are computed would be raised by $2,400 in small steps, and the ceiling would be eliminated entirely for employer contributions; employers would be taxed on total wages. General revenues would be used for the first time to supplement the Social Security fund, but payments from such revenues would be made only in recession years, when payroll tax collections lag behind obligations. Current benefit payments, but not future benefit rights, would be tied to the cost of living.

To judge from initial reactions, Mr. Carter's compromise has few strong supporters. Businessmen are alarmed by the proposed elimination of the ceiling on the employer's tax base. Congressional conservatives shudder at the prospect of tapping general revenues. Liberals are disappointed that the Administration is not more strongly committed to a shift from payroll taxes to income taxes.

The opposition is understandable; every method for financing Social Security has disadvantages. Payroll taxes are "regressive" in that they extract a higher percentage of total income from individuals who can least afford it. Increasing the taxable wage base is more "progressive," but corporate managers correctly point out that someone—workers,

shareholders or consumers—will have to foot the bill. Tapping income taxes is more progressive still—but every dollar shifted to the Social Security Trust Fund means a dollar less for other Government programs. The general revenue approach also damages the carefully constructed facade of Social Security as insurance rather than welfare. Actually, the system already redistributes benefits from middle- to lower-income families, but the device of funding through payroll contributions supports the general impression that benefits are earned, with important psychological and political effects.

When stripped of camouflaging detail, however, the Carter program seems well tailored to raise a lot of money in a way that does not unduly penalize lower-paid workers. General tax revenues will be used, but in a way that does least violence to the principle of Social Security as a self-supporting institution. Higher payroll taxes, collected largely through the increase in the base, could be somewhat inflationary, since employers will probably have to raise prices to make up for the higher tax. On balance, though, it is hard to see where else the funds could be raised in an equally fair fashion.

For all its problems, Social Security is worth preserving, and the President is offering a prudent way to keep the system intact into the next century.

COMPETITION AND THE TRANSPORTATION OF ALASKA NATURAL GAS

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, pursuant to an amendment which I authored to the Alaska Natural Gas Transportation Act of 1976, the Justice Department last Thursday issued its report on the competitive issues and problems associated with the production and transportation of Alaska natural gas to the Lower 48 States.

While the Justice Department concludes that the particular geographic route selected will make little difference on competition, its report emphasizes that the decision on who is permitted to be owners of the new transportation system will make a difference on competition and probably on prices. The Justice Department recommends a prohibition on any major natural gas producer being allowed to own or operate the Alaska natural gas transportation system.

Of the two groups vying for governmental approval of their overland route proposals, Alcan numbers no natural gas producers among its owners, while the owners of Arctic gas include several major gas producers. The third proposal is that of El Paso, the Nation's largest natural gas pipeline company and third largest in natural gas deliveries.

The problems associated with petroleum company ownership of pipelines are best summarized by the following paragraph from a recent letter from the Justice Department to the House OCS Committee:

On the other hand, current evidence points strongly to the existence of problems arising from pipepline ownership by integrated oil companies. Because pipelines are a natural monopoly, they must be regulated to prevent the owners from reaping monopoly profits by means of reduced transportation throughput. When the pipelines are owned by vertically integrated petroleum companies, however, such regulation is likely to be ineffective. This is so because a vertically integrated company can restrict access to or capacity of its pipeline, thus forcing its competitors to transport their products by less efficient, higher cost alternatives. This will drive up the delivered price of crude or product downstream, since the marginal barrel of crude or product sets the price for all sales in the downstream market. The owner of the pipeline, shipping his product through that pipeline, will then be able to sell in the downstream market at the inflated price, and pocket the efficiency gains of pipeline transportation.

In the report, the Justice Department endorses for the first time the concept of "pipeline divestiture"; that is, prohibiting the integrated petroleum companies from transporting petroleum they own through pipelines they own. I have introduced legislation (H.R. 7784) to require such pipeline divestiture, because consumers are forced to pay tens—perhaps hundreds—of millions of dollars every year in unreasonably high petroleum product as a result of petroleum company ownership of pipelines.

I would like to take this opportunity to commend the Justice Department and particularly Acting Assistant Attorney General John Shenefield for preparing this excellent and thoughtful report, and also for recently challenging the unjustified rates requested by the Alyeska Pipeline Co., for the transportation of Alaskan crude oil. I hope that the Department will continue to respond in this manner to the efforts of Congress to take a more active role in antitrust law review of matters affecting energy, as required by a number of the laws originating in the House Interior Committee in recent years which require the Department to consider the antitrust implications of the development, production, transportation, and sale of Federal energy resources.

Mr. Speaker, because Congress will soon be called upon to consider the system to be selected for the transportation of Alaska natural gas, excerpts and the executive summary of the Justice Department's report follow these remarks.

REPORT OF THE ATTORNEY GENERAL PURSUANT TO SECTION 19 OF THE ALASKA NATURAL GAS TRANSPORTATION ACT OF 1976

EXCERPTS

Thus, by shifting pipeline profits upstream, the producer-owners can circumvent tariff regulation. The benefits of efficient pipeline transportation could be pocketed by the producer; resources would be misallocated—the supply of Alaskan natural gas would be artificially restricted and the relatively inefficient Gulf Coast supply chain would be excessively relied upon for satisfying Midwestern demand.

* * * * *

A nonintegrated owner cannot earn upstream profits—he has no upstream operations; he is motivated by pipeline profits only. Regulation forces him to expand throughout with the result that, absent market power in production, a properly designed Federal Power Commission tariff would eliminate all excess profits—upstream, downstream and in the pipeline. The clean solution to the vertical integration problem is to place all pipelines in the position of the nonintegrated owner—prohibit producer ownership in the pipeline.

The current regulatory system, whatever its other adverse effects, if effective, should prevent competitive abuses in the transportation of Alaskan gas. Relaxation of wellhead price regulation, however, combined with city gate pricing to clear the downstream market (a regulatory initiative that may be preferable to the current scheme) creates a situation in which pipeline ownership by Alaskan producers would entail an unacceptable danger of anticompetitive behavior. Under such a regulatory regime, vertically integrated producer-owners could circumvent pipeline tariff and city gate regulation by restricting pipeline capacity (and consequently access) while achieving monopoly profits in their upstream operations. Initial sizing of the pipe for large capacity does not necessarily solve this problem, since it will be in the interest of producer-owners to resist future expansion and thus discourage future entry into Alaskan gas production.

Therefore, companies which are significant producers of natural gas should be prohibited from participating in ownership of the proposed Alaskan natural gas transportation system. Among the three proposals, only Arctic Gas currently has a producer of substantial amounts of gas as a member. We would recommend, therefore, that if Arctic Gas is selected Exxon's subsidiary, Imperial (and Gulf Canada, Shell Canada and Union Gas, Limited, if they will be producers of significant amounts of gas delivered through the pipeline from Mackenzie Delta) be prohibited from participating in the transportation system.

* * * * *

Section 13(a) has been interpreted by the Federal Power Commission to impose common carrier obligations upon the pipeline, requiring equal access to its facilities. It is not clear to us, however, that the language of Section 13(a) clearly imposes common carrier obligations upon the pipeline. Thus, we would recommend that this ambiguity be clarified through additional legislation which would clearly indicate that the Alaskan natural gas transportation system is to operate as a common carrier.

Common carrier status is an important safeguard necessary for this transportation system. Arbitrary conditions for use of the line may disadvantage some users of the line. In our experience with common carrier oil pipelines, conditions relating to product specification, product cycles, batch size, tankage ownership and the like, may have acted to preclude use of the line to some shippers even with common carrier obligations imposed on the system. Without such common carrier obligations, nonowners shippers would be in a more disadvantageous position. The Alaskan transportation system should not be operated to accommodate the desires of the owners to the exclusion of others. Imposition of full common carrier obligations would help alleviate our concerns, although diligence would be required to make sure the transportation system was abiding by its obligations.

We do not advocate, however, that common carrier obligations be imposed on all natural gas pipelines. The Alaskan natural gas transportation system is unique in that it will be the only transportation system transporting gas from the North Slope. In addition, it will be one of the few joint ventures in the gas transmission segment of the industry. Its sponsors should not be given the opportunity to use their ownership position to their advantage in competing with nonowner pipelines in regional markets.

EXECUTIVE SUMMARY

This report is submitted to Congress in compliance with Section 19 of the Alaska Natural Gas Transportation Act of 1976. That provision requires the Attorney General to conduct a thorough study of the antitrust issues and problems relating to the production and transportation of Alaskan natural gas.

Based on our analysis of all information currently available, we find that antitrust

considerations do not militate against selection of any of the three proposed projects as the transportation system for moving Alaskan natural gas to the lower 48 states; nor do competitive considerations point to selection of one of the three projects in preference to the other two. Although we have identified several potential antitrust problem areas associated with the projects, these problems may impact on any project that is selected and thus do not make one project seem more desirable than the others.

This report has identified several potential competitive problem areas, which can be addressed through: (1) the imposition of conditions upon the license issued to whichever project is chosen; (2) the enactment of legislation; and (3) collateral action by the Federal Power Commission, or its successor agency. Since some of the identified problems are not directly associated with the transportation of natural gas but are associated with the sale of natural gas, these problems would have to be addressed in the context of the required examination of the gas purchase contracts.

The report first provides a general introduction to the three proposed projects, the methods of transportation and routes proposed and the participants in each proposed project. There are two overland pipeline projects proposed by Alcan and Arctic Gas, and a combination pipeline and liquified natural gas tanker system proposed by El Paso.

(1) The Alcan route follows the Alaska oil pipeline route to Fairbanks and then follows the Alcan Highway through Canada. Alcan has proposed two different sized pipelines. Originally Alcan proposed a 42-inch pipeline but more recently has proposed a 48-inch pipeline similar to that of Arctic Gas.

(2) The Arctic Gas route proceeds east from the North Slope to the Mackenzie Delta of Canada, where it is expected additional gas reserves will be developed. The route then proceeds south through Canada to the United States border.

(3) The El Paso project calls for a pipeline to follow the Alaska oil pipeline to Point Gravina on Prince William Sound. There the gas would be converted to liquid natural gas and shipped by tanker to the coast of California.

The proponents of the three projects are as follows:

(a) Arctic Gas—

Alaska Arctic Gas Pipeline Company
Canadian Arctic Gas Pipeline Company, Ltd.
Alberta Natural Gas Company, Ltd.
Northern Border Pipeline Company
Pacific Gas Transmission Company
Pacific Gas and Electric Company

The first two above are shell companies, formed to construct and operate the pipeline in Alaska and Canada. Owners of the two companies are:

American Members—
Columbia Gas Transmission Corporation
Michigan Wisconsin Pipe Line Company
Natural Gas Pipe Line Company of America
Northern Natural Gas Company
Pacific Gas & Electric Company
Pacific Lighting of California
Panhandle Eastern Pipe Line Company
Texas Eastern Transmission Corporation
Canadian Members—
Alberta Natural Gas Company, Ltd.
The Consumers' Gas Company
Canada Development Corporation
Gulf of Canada, Ltd.
Imperial Oil, Ltd. (a 70 percent owned subsidiary of Exxon)
Northern and Central Gas Company, Ltd.
Shell Canada, Ltd.
TransCanada Pipelines, Ltd.
Union Gas, Ltd.

(b) Alcan—

Alcan Pipeline Company (a wholly-owned subsidiary of Northwest Pipeline Company)
Alberta Gas Trunk Line Company, Ltd.
Alberta Gas Trunk Line (Canada), Ltd.
Westcoast Transmission Company, Ltd.
Foothills Pipeline (Yukon), Ltd.

(c) El Paso—

The El Paso project is proposed by El Paso Alaska Company, a wholly owned subsidiary of El Paso Natural Gas Company.

The gas transportation and distribution industries are not highly concentrated on a national basis at this time. Although standard industry concentration measures are less meaningful in the natural gas industry because it is pervasively regulated and because pipelines are to a great extent natural monopolies; these ratios and individual company shares do give an indication of the relative industry positions of the prospective Alaskan natural gas participants.

The proponents of the El Paso project control 8.2 percent of gas supplies from all sources (as of 1974), the Alcan American proponent controls 4.3 percent and the Arctic Gas American proponents control 36 percent of gas supplies from all sources. Although there is some danger that the sponsors of the Arctic Gas project, if they were the only purchasers of Alaskan gas, could use their control of Alaskan gas in combination with their control of other gas supplies to manipulate displacement plans to their own advantage or to affect regional competition among pipelines, regulation by the Federal Power Commission minimizes this danger.

Present Federal Power Commission regulation of city gate prices also appears to preclude an opportunity for competitive abuse by the gas producers or transmission companies provided the price ceilings set by Federal Power Commission regulation are effective. However, if the regulation of the wellhead price of gas were relaxed and the Alaskan gas producing areas were workably competitive, producer ownership or control of the transportation system could circumvent Federal Power Commission regulation of the pipeline and monopoly profits could be taken by the integrated company by transferring some or all of the profits stemming from the transportation monopoly to unregulated upstream production operations through denial of access to non-owners and restricting downstream supply. If the regulation of the wellhead price of gas were relaxed and the Alaskan gas producing areas were not workably competitive, but were instead characterized by producer market dominance, gas supplies could be restricted at the production stage without any need to derive market power from the pipeline.

However, such market power is not necessarily permanent and could be reduced by discovery and development of new fields by other producers, creating a situation where an integrated producer/pipeline owner would seek to restrict access and throughput to take monopoly profits. Therefore, we recommend that an ownership interest, or participation in any form in the transportation system, by one or more gas producers of significant amounts of gas be prohibited. The license to be issued to the selected system should contain a condition that prevents participation in any manner by such gas producers.

Ownership of a transportation system by the buyers of gas will not result in any potential anticompetitive conduct as long as Federal Power Commission regulation of city gate prices continues in the present mode, which it appears likely to do. If the regulatory scheme changes, potential monopsony problems can be cured by appropriate regulatory action. Therefore, we do not oppose ownership of the transportation systems by the buyers of the gas.

During the period from 1971 to 1975 the major North Slope producers, Exxon, ARCO and BP/Sohio entered into agreements to negotiate for the sale of their natural gas with various transmission companies, all members of the Arctic Gas consortium. These agreements called for advance payments from the transmission companies to help the producers develop the North Slope fields. In December, 1975, the Federal Power Commission struck down all advance payment contracts entered into after December 28, 1973, as not in the national interest. Thus, there is currently no plan for distribution of Alaskan gas.

Collateral to these advance payment agreements, the transmission companies entered into a variety of side arrangements with the producers. The side arrangements provided for renegotiation of existing gas sale contracts in the lower 48 states to raise prices or to permit revenue sharing between producer and pipeline with respect to existing production. These side arrangements are clear evidence of evasions of wellhead price regulation and demonstrate the extreme difficulty of holding down the price of a scarce resource. Some pipeline companies would be disadvantaged in seeking to gain access to North Slope gas if these arrangements were to continue, since not all pipeline companies have existing relationships that can be altered or other goods or services to barter in addition to paying the wellhead price. The competitive effects of this disadvantage, if any, are uncertain. It may well be that the Federal Power Commission should require disclosure of all collateral considerations in our gas purchase agreement. The Commission could then carefully examine each Alaskan gas purchase contract and disapprove or condition any such agreement that it finds not to be in the public interest.

With current Federal Power Commission regulation of well-head gas prices, competitive forces cannot operate to distribute gas in the most efficient manner. If a wide distribution of Alaskan natural gas is deemed important, it may be necessary to create a regulatory allocation mechanism.

Competition among pipelines for existing customers and new customers may exist in regional markets. Regional competition can be an important complement to regulation and its importance has been recognized by Congress, the courts and the natural gas industry. The potential for this competition should be preserved to the greatest extent practicable. Several problems associated with the operation of an Alaskan natural gas transportation system arise because of potential effects on this regional competition.

Equal access to the transportation system, as well as other competition rules, would be required if producers are permitted to participate in the Alaskan natural gas transportation system. Moreover, even where producers are not owners, equal access to a transportation system retains some importance as a means to preserve regional competition among pipeline companies by preventing owners of the transportation systems from denying or restricting access to other pipelines that might compete in regional markets.

Section 13(a) of the Alaska Natural Gas Transportation Act provides for equal access to a proposed transportation system. Although the Federal Power Commission interprets this provision to mean that an Alaskan natural gas transportation system must be operated as a common carrier, it is not clear this was the intention of Congress. Read literally, the statute merely provides that access cannot be denied based on ownership or the lack thereof. We believe that those facilities (pipelines, LNG facilities, etc.) constructed or utilized as an integral part of the system carrying gas to the lower 48 states should be operated as common carriers, with equal access thereto available to all purchasers and shippers of Alaskan natural gas. Congress ought to clarify the ambiguous language of existing Section 13(a) to clearly state that the Alaskan natural gas transportation system be operated as a common carrier.

Section 13(a) does not require the transportation system to implement a prorationing scheme in the event the system achieves

full capacity, nor does it permit or require any government agency to order such prorationing. Such prorationing during the period of construction of additional capacity is necessary to insure no shipper may be competitively disadvantaged. To insure the equal access provided for under Section 13 (a), we recommend that Congress consider granting the Federal Power Commission authority, where gas is available in excess of pipeline capacity, to order prorationing of pipeline capacity among shippers.

It has been argued that retaining Section 13(a) may prove to be an impediment to financing. We find that Section 13(a) will not be such an impediment, since pipeline companies will be willing to invest in order to insure the construction of such a system. In addition, the possibility of receiving the substantial cash flows from the system which would result from ownership is another incentive to invest in the system.

It is likely that much of the Alaskan gas will be delivered throughout the lower 48 states by displacement rather than by direct delivery. Displacement is a process that would allow Alaska gas to be supplied to conveniently located customers of other pipeline systems that, in turn, could use their "displaced" gas to serve customers of other pipelines. Such a displacement scheme provides considerable savings and ease of delivery but also creates two potential problems. First, a transmission company could thwart the displacement plan by refusing to cooperate and displace gas in its system. To remedy this problem we recommend that legislation be enacted to give the Federal Power Commission, or its successor agency, authority to order participation in displacement programs for Alaskan natural gas.

Displacement also presents potential for anticompetitive activity because implementation of a displacement program requires pipeline companies to meet to agree upon supply reallocation. Obviously, the potential for anticompetitive agreements in the implementation of such a process exists, and almost regardless of the actual risks of such agreements being made, the public perception that such possibilities exist requires some antitrust protection.

This is not an insuperable problem. If the companies do no more than is reasonably necessary to effect the displacements, no antitrust issues should be presented. A method of insuring that no anticompetitive discussions or acts take place is to have interested government agencies monitor such meetings, and to have proposed allocation plans subject to government review and approval.

An all-events cost-of-service tariff has been proposed that would guarantee to the owners full reimbursement of all costs associated with the operation of the transportation system. These costs would be passed on to the consumer. These guarantees extend to all unit transportation costs, even if underutilization of the pipeline makes the unit cost excessively high. Guaranteeing these costs would eliminate incentives for the transportation system owners to prudently determine pipeline size and propose the most efficient pipeline based upon expectations of deliverability.

The deliverability of the Prudhoe Bay reserves is unsettled and highly disputed. The forecasts vary substantially; however, 2.0 Bcf/d appears to be the most likely rate of deliverability. The producers have stated their opposition to any form of deliverability guarantee and, since gas and oil production are related, may in the future restrict or eliminate gas production in order to increase the production of higher-priced oil. With the best deliverability estimate being 2.0 Bcf/d and the possibility of less gas production, there is potential for underutilization of the transportation system. Underutilization will mean higher unit costs of transportation and under the proposed tariff, this higher transportation cost will be borne by the consumer. Deliverability should be carefully evaluated before a system is selected, and the high cost of constructing a system is undertaken. Further, the sizing of the proposed pipelines should be carefully evaluated, since the proposed tariff guarantees may have diminished incentives on the part of the proponents to determine and propose the most efficient pipeline size.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows for:

Mr. MARRIOTT (at the request of Mr. RHODES), for personal reasons.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. CORCORAN of Illinois) to revise and extend their remarks and include extraneous material:)

Mr. COHEN, for 5 minutes, today.
Mr. FINDLEY, for 5 minutes, today.
Mr. CONABLE, for 5 minutes, today.
Mr. EDWARDS of Oklahoma, for 15 minutes, today.
Mr. CLEVELAND, for 5 minutes, today.
Mr. GOLDWATER, for 10 minutes, today.
Mr. FISH, for 10 minutes, July 19, 1977.

(The following Members (at the request of Mr. RAHALL) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. JACOBS, for 60 minutes, today.
Ms. OAKAR, for 5 minutes, today.
Mr. WEISS, for 5 minutes, today.
Mr. KOCH, for 5 minutes, today.
Mr. REUSS, for 30 minutes, today.
Mr. THOMPSON, for 5 minutes, today.
Mr. DOWNEY, for 10 minutes, today.
Mr. ASHLEY, for 10 minutes, today.
Mr. ALEXANDER, for 30 minutes, today.

EXTENSION OF REMARKS

SENATE BILL AND CONCURRENT RESOLUTION REFERRED

A bill and a concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 1532. An act to authorize appropriations for the Federal Maritime Commission, to require the Commission to recodify its rules. and for other purposes; to the Committee on Merchant Marine and Fisheries; and

S. Con. Res. 25. Concurrent resolution providing for the acceptance of a statute of the late Senator Ernest Gruening presented by the State of Alaska for the National Statuary Hall collection, and for other purposes; to the Committee on House Administration.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on July 15, 1977 present to the President, for his approval, bills and a joint resolution of the House of the following title:

H.R. 186. To implement the Convention on the International Regulations for Preventing Collisions at Sea, 1972;

H.R. 1551. Granting the consent of Congress to an amendment to the Sabine River Compact entered into by the States of Texas and Louisiana;

H.R. 5638. To amend the Fishery Conservation Zone Transition Act in order to give effect during 1977 to the Reciprocal Fisheries Agreement between the United States and Canada;

H.R. 6893. To amend title 4 of the United States Code to make it clear that Members of Congress may not, for purposes of State income tax laws, be treated as residents of any State other than the State from which they were elected;

H.R. 7636. Making appropriations for the Department of the Interior and related agencies for the fiscal year ending September 30, 1978, and for other purposes; and

H.J. Res. 24. To provide for the designation of a week as "National Lupus Week."

ADJOURNMENT

Mr. RAHALL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 4 minutes p.m.) the House adjourned until tomorrow, Tuesday, July 19, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1951. A letter from the Chairman, Cost Accounting Standards Board, transmitting a proposed cost accounting standard entitled "Part 413—Adjustment and Allocation of Pension Cost," pursuant to section 719(h)(3) of the Defense Production Act, as amended; to the Committee on Banking, Finance and Urban Affairs.

1952. A letter from the Department of Agriculture, transmitting a draft of proposed legislation to change from a fiscal to a school year basis certain provisions of the National School Lunch Act, as amended, and the Child Nutrition Act of 1966, as amended; to the Committee on Education and Labor.

1953. A letter from the Director, Defense Security Assistance Agency, transmitting a quarterly report as of March 31, 1977, on foreign military sales letters of offer, pursuant to subsections 36(a) (1) and (2) of the Arms Export Control Act (I-7968); to the Committee on International Relations.

1954. A letter from the Director, Defense Security Assistance Agency, transmitting a quarterly report as of March 31, 1977, on foreign military sales letters of offer, pursuant to subsections 36(a) (1) and (2) of the Arms Export Control Act (I-7969); to the Committee on International Relations.

1955. A letter from the Secretary of Transportation, transmitting a report on the availability and use of abandoned railroad rights-of-way, pursuant to section 809(a) of Public Law 94-210; to the Committee on Interstate and Foreign Commerce.

1956. A letter from the Chairman, U.S. Regulatory Commission, transmitting the eighth report on abnormal occurrences at licensed nuclear facilities for the period January-March 1977, pursuant to section 208 of Public Law 93-438; jointly, to the Committees on Interior and Insular Affairs, and Interstate and Foreign Commerce.

1957. A letter from the Comptroller General of the United States, transmitting a report on the Labor Surplus Policy (PSAD-77-133, July 15, 1977); to the Committee on Government Operations.

1958. A letter from the Comptroller General of the United States, transmitting a report on the Clarence Cannon Dam and Reservoir project (PSAD-77-131, July 18, 1977); jointly, to the Committees on Government Operations, and Public Works and Transportation.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. APPLEGATE:

H.R. 8374. A bill to amend the Appalachian Regional Development Act of 1965 to secure a continuation of child development programs while further research is conducted; jointly, to the Committees on Public Works and Transportation, and Interstate and Foreign Commerce.

By Mr. COLLINS of Texas:

H.R. 8375. A bill to prescribe the conditions with respect to affirmative action programs required of Federal grantees and contractors in complying with nondiscrimination programs, to prescribe the necessary requirements for a finding of discrimination in certain actions brought on the basis of discrimination in employment and to prescribe reasonable limits on the collection of data relating to race, color, religion, sex, or national origin, and for other purposes; jointly, to the Committees on the Judiciary, and Education and Labor.

By Mr. FREY:

H.R. 8376. A bill to amend the Public Health Service Act to provide assistance for Tay-Sachs disease screening, counseling, and research programs; to the Committee on Interstate and Foreign Commerce.

H.R. 8377. A bill to amend the Internal Revenue Code of 1954 to provide a basic $5,000 exemption from income tax, in the case of an individual or a married couple, for amounts received as annuities, pensions, or other retirement benefits; to the Committee on Ways and Means.

H.R. 8378. A bill to amend title II of the Social Security Act to increase to $750 in all cases the amount of the lump-sum death payment thereunder; to the Committee on Ways and Means.

H.R. 8379. A bill to amend title XVIII of the Social Security Act to include hearing aids and dentures among the items and services for which payment may be made under the supplementary medical insurance program; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. GOLDWATER:

H.R. 8380. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for the purchase and installation of certain teletypewriters for use by individuals whose sight, hearing, or speech is impaired; to the Committee on Ways and Means.

By Mr. JOHNSON of California (for himself, Mr. HOWARD, Mr. HARSHA, Mr. ANDERSON of California, Mr. CLEVELAND, Mr. MCCORMACK, Mr. SNYDER, Mr. BREAUX, Mr. HAMMERSCHMIDT, Mr. OBERSTAR, Mr. WALSH, Mr. NOWAK, Mr. COCHRAN of Mississippi, Mr. RISENHOOVER, Mr. ABDNOR, Mr. HEFNER, Mr. GOLDWATER, Mr. YOUNG of Missouri, Mr. HAGEDORN, Mr. STUMP, Mr. STANGELAND, and Mr. APPLEGATE):

H.R. 8381. A bill authorizing certain public works on rivers for navigation, and for other purposes; jointly, to the Committees on Public Works and Transportation, and Ways and Means.

By Mr. MCCORMACK:

H.R. 8382. A bill to amend the Internal Revenue Code of 1954 to allow certain spouses of military personnel to deduct payments into retirement savings to the extent that such payments do not exceed $900 for a taxable year; to the Committee on Ways and Means.

By Mr. MEEDS:

H.R. 8383. A bill to extend the benefits of Federal labor relations acts to public employees and their employers; to the Committee on Education and Labor.

By Mr. MILLER of Ohio:

H.R. 8384. A bill to amend the Internal Revenue Code of 1954 to provide a basic $5,000 exemption from income tax for amounts received as annuities, pensions, or other retirement benefits; to the Committee on Ways and Means.

By Mr. MOAKLEY (for himself, Mr. CHARLES WILSON of Texas, Mr. WINN, Mr. MCCORMACK, Mr. FLOOD, Mr. WALKER, Mr. WALSH, Mr. EDGAR, Mr. KINDNESS, Mr. HUGHES, Mr. PANETTA, Mr. SANTINI, Mr. LAGOMARSINO, Mr. BINGHAM, Ms. MIKULSKI, Mrs. SPELLMAN, Mr. PATTERSON of California, Mr. JENRETTE, Mr. ROSE, Mr. MAZZOLI, Mr. MINETA, Mr. BONIOR, Mr. BENJAMIN, and Mr. GRASSLEY):

H.R. 8385. A bill to revise chapter 99 of title 18 of the United States Code to provide for the punishment of sexual assaults in the special jurisdiction of the United States; to the Committee on the Judiciary.

By Mr. MOTTL (for himself, Mr. TEAGUE, Mr. ROBERTS, Mr. HAMMERSCHMIDT, Mr. HANNAFORD, Mr. ALLEN, Mr. APPLEGATE, Mr. HEFNER, and Mr. WALSH):

H.R. 8386. A bill to amend title 38, United States Code, to increase the rates of vocational rehabilitation, education assistance and special training allowance paid to eligible veterans and persons, to make improvements in the educational assistance programs, and for other purposes; to the Committee on Veterans' Affairs.

By Ms. OAKAR:

H.R. 8387. A bill to provide rules respecting the use by depository institutions of electronic fund transfers; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PATTEN:

H.R. 8388. A bill to require that rail and motor carriers provide timely notice to the chief executive of any State within which hazardous materials are scheduled to be transported or shipped; jointly, to the Committees on Interstate and Foreign Commerce, and Public Works and Transportation.

By Mr. PEPPER:

H.R. 8389. A bill authorizing the President of the United States to present a gold medal to the widow of Robert F. Kennedy; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PRICE (for himself and Mr. BOB WILSON) (by request):

H.R. 8390. A bill to authorize appropriations during the fiscal year 1978 for procurement of aircraft and missiles, and research, development, test and evaluation for the Armed Forces, and for other purposes; to the Committee on Armed Services.

By Mr. REUSS (for himself and Mr. MATTOX):

H.R. 8391. A bill to promote the accountability of the Federal Reserve System; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SIMON (for himself, Mr. MITCHELL of Maryland, Mr. BADILLO, Mr. NIX, Mr. OTTINGER, Mr. EDWARDS of Oklahoma, Mr. RAHALL, Mr. VENTO, Mr. FINDLEY, Mr. BALDUS, Mr. BAUCUS, Mr. ANDREWS of North Dakota, Mr. HOLLAND, Mr. MINETA, Mr. GUDGER, Mr. MIKVA, and Mr. STARK):

H.R. 8392. A bill to amend the Federal Railroad Safety Act of 1970 to require the locomotive of all trains to be equipped with strobe lights; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS (for himself and Mr. ROONEY):

H.R. 8393. A bill to amend the Department of Transportation Act and the Regional Rail Reorganization Act of 1973 to extend the eligibility for financial assistance under the rail service assistance programs, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. STEIGER (for himself and Mr. GINN):

H.R. 8394. A bill to provide for payments to local governments based upon the acreage of the National Wildlife Refuge System which is within their boundaries; to the Committee on Merchant Marine and Fisheries.

By Mr. TRAXLER (for himself, Mr. BYRON, Mr. MURPHY of Pennsylvania, Mr. KASTENMEIER, Mr. TRIBLE, Mr. WYDLER, Mr. NOLAN, Mr. JENRETTE, Mr. HAWKINS, Mr. GOODLING, Mr. PATTERSON of California, Mr. COUGHLIN, Mr. LUKEN, and Mr. HEFNER):

H.R. 8395. A bill to provide for the monthly publication of a Consumer Price Index for the Aged and Other Social Security Beneficiaries, which shall be used in the provision of the cost-of-living benefit increases authorized by title II of the Social Security Act; to the Committee on Ways and Means.

By Mr. TRAXLER (for himself, Mr. DICKS, Mr. BYRON, Mr. MURPHY of Pennsylvania, Mr. KASTENMEIER, Mr. TRIBLE, Mr. WYDLER Mr. NOLAN, Mr. HAWKINS, Mr. GOODLING, Mr. PATTERSON of California, Mr. LUKEN, and Mr. HEFNER):

H.R. 8396. A bill to amend title II of the Social Security Act to provide that the automatic cost-of-living increases in benefits which are authorized thereunder may be made on a semiannual basis (rather than only on an annual basis as at present; to the Committee on Ways and Means.

By Mr. UDALL:

H.R. 8397. A bill to provide that a certain tract of land in Pinal County, Ariz., held in trust by the United States for the Papago Indian Tribe, be declared a part of the Papago Indian Reservation; to the Committee on Interior and Insular Affairs.

By Mr. YOUNG of Florida (for himself and Mr. ERTEL):

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

The SPEAKER presented a petition of Bonifacio Aparicio Llanes, Rio Piedras, Puerto Rico, relative to proposed legislation on minimum wages; which was referred to the Committee on Education and Labor.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 5400

By Mr. BADHAM:

Page 28, strike out line 6 and all that follows down through line 15 and insert the following:

(B) submitting—

(i) a form of identification establishing the identity and place of residence of such individual and showing a photograph of such individual; and

(ii) a form of identification which corroborates the place of residence of such individual. The requirement of this subsection may be met by providing an item which was delivered to such an individual at the stated place of residence by the United States Postal Service or an affidavit attesting to the identity and place of residence of the individual desiring to register to vote under this section, which is executed by a person who is pre-registered to vote at the polling place involved and is present at such polling place with such individual. The requirement of the submission of such shall not be deemed to be a test or device within the meaning of the Voting Rights Act of 1965, as amended (42 U.S.C. 1973aa.).

Page 29, strike out line 6 and all that follows down through line 16.

Page 29, line 17, strike "(5)" and insert in lieu thereof "(4)".

Page 29, line 22, strike "(6)" and insert in lieu thereof "(5)".

Page 29, line 23, strike the dash following the word "who," and strike lines 24 and 25. Immediately following the word "who", add "has not executed another such affidavit on such date."

Page 30, strike out line 1 and all that follows down through line 6.

Page 30, line 7, strike "(7)" and insert in lieu thereof "(6)".

On page 20, line 12 strike the word "Universal" and insert in lieu thereof "Election Day".

On page 20, line 13 strike the word "Voter".

By Mr. PEASE:

Page 28, beginning on line 6, strike out "If additional identification is required by the State or unit of general local government involved,".

Page 28, after line 15, insert the following: "An individual shall be in compliance with subparagraph (B) if he elects to make a submission under either clause (i) or clause (ii) of such subparagraph. Such election shall

be within the discretion of such individual, and the State or unit of general local government involved may not, by law or otherwise, restrict or impair the exercise of such discretion.".

By Mr. SAWYER:

On page 43, strike out line 11 and all that follows down through line 17, insert the following new paragraphs, and redesignate the following paragraph of section 10(c) accordingly:

(2) Any program established and maintained by a State under pargraph (1) shall include a procedure through which—

(A) not less than 5 percent of the individuals who registered to vote in such State in any Federal election under section 6(a)(1) and section 6(b) shall be randomly selected after such election;

(B) information and materials relating to the registration of the individuals so selected shall be reviewed to verify the information described in paragraph (1); and

(C) not more than 60 days after the Federal election involved, the results of such review (together with a statement of the number of individuals who registered section 6(b), the number of individuals selected pursuant to subparagraph (A), and the number of individuals so selected for whom any item of information described in paragraph (1) was not verifiable) shall be transmitted to the Commission.

(3)(A) Not more than 90 days after the Federal election involved, the Commission shall compile and publish the results transmitted to the Commission under paragraph (2)(C).

(B) If, with respect to any such election which is a general election for Federal office, the number of individuals selected under paragraph (2)(A) for whom any item of information described in paragraph (1) was not verifiable exceeds 15 percent of the total number of such individuals in each of one-fourth of the States for which no waiver was granted by the Commission under section 6(a)(2)(B), this Act shall expire on the date of the publication by the Commission of the results transmitted under paragraph (2)(C) relating to such election.

(C) The expiration of this Act pursuant to subparagraph (B) shall not affect any administrative, civil, or criminal action or proceeding, whether or not pending on the date of expiration, based on any act committed or liability incurred on or before such date.

By Mr. ABDNOR:

Title V, section 501(b), page 15, line 12, after the words "by the Secretary," insert the words "oats and".

H.R. 7171

By Mr. BOWEN:

Page 157, immediately after line 15, insert the following:

"SUBTITLE III—REGIONAL SOLAR ENERGY RESEARCH AND DEVELOPMENT CENTERS

"REGIONAL CENTERS

"SEC. 1418. In order to provide for research and development projects having a national or regional application, the Secretary of Agriculture shall establish in existing federal facilities or in cooperation with State and local government agencies, including State departments of agriculture, colleges and universities, or other qualified persons and organizations, including local non-profit research groups, no less than three nor more than five regional solar energy research and development centers in the United States, to be variously located so as to reflect the unique solar characteristics of different latitudes and climatic regions within the United States. Funds used in the operation of such regional centers may be used for the rehabilitation of existing buildings or facilities to house such centers, but may not be used for the construction or acquisition of new buildings.

"AUTHORIZATION FOR APPROPRIATIONS

"SEC. 1419. There are authorized to be appropriated such funds as are needed to carry out the provisions of this subtitle."

By Mr. BROWN of California:

On Page 7, line 23, after the word "crop,", insert the following: "except that the target price shall be $2.90 per bushel for the first 18,000 bushels of wheat for which each producer is determined to be eligible for payment under the provisions of this section,".

On Page 16, line 4, after the word "crop,", insert the following: "except that the target price shall be $2.00 per bushel for the first 36,000 bushels of corn for which each producer is determined to be eligible for payment under the provisions of this section.".

By Mr. BURLISON of Missouri:

Page 50, line 15, insert after "such level" the following: ", not less than $4 per bushel,".

By Mr. CONTE:

Page 53, strike out line 11 and all that follows through line 14 on page 58 and redesignate the subsequent sections accordingly.

Page 5, strike out lines 5 through 7 and insert in lieu thereof the following new section:

SEC. 205. Effective December 31, 1977, section 804 of the Agricultural Act of 1970 is repealed.

By Mr. ENGLISH:

Page 7, line 23, strike out "$2.65" and insert in lieu thereof "$2.90".

Page 7, line 18, insert after "(ii)" the following: "with respect to the 1977 crop, the acreage on the farm from which wheat is actually harvested and, with respect to the 1978 through 1981 crops,".

Page 7, strike out lines 10 through 16 and insert in lieu thereof the following: "multiplying (i) the amount by which the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary,".

By Mr. FITHIAN:

Page 2, line 3, insert "SUGAR," immediately after "FEED GRAINS,";

Page 2, line 13, add a new paragraph as follows:

"(2) The total amount of payments which a person may receive under any program established under the Agricultural Act of 1949, as amended, for sugar shall not exceed $50,000."

By Mr. HARKIN:

Line 25, page 17, after the words "disaster payments" insert the words "for prevented planting".

Line 3, page 18, strike out the period and insert the following: "and disaster payments for low-yield shall be made as provided in this section: *Provided*, That no disaster payments for low-yield for such crop shall be made under this section prior to October 1, 1977: *Provided further*, That in the event any producers have received disaster payments for low-yield for the 1977 crop under prior law, they may retain such payments and if such payments are less than the amounts to which they are entitled under this section, the Secretary is authorized and directed to pay to such producers such additional amounts as may be due them under this section."

By Mr. HARKIN:

Page 2, line 4, insert "(a)" after "SEC. 101."

Page 2, after line 13, insert the following new subsection:

(b) Section 101 of such Act is amended—

(1) by redesignating paragraphs (3) and (4) as paragraphs (4) and (5), respectively;

(2) by inserting "or loans" after "payments" each place such term appears in paragraph (4), as redesignated in paragraph (1) of this subsection;

(3) by striking out "earned" each place such term appears in paragraph (4), as redesignated in (1) of this subsection and inserting in lieu thereof "obtained";

(4) by striking out "payment reduction" in paragraph (4), as redesignated in paragraph (1) of this subsection, and inserting in lieu thereof "payment or loan reduction";

(5) by inserting "and loans" after "payments" in paragraph (5), as redesignated in paragraph (1) of this subsection; and

(6) by inserting after paragraph (2) the following new paragraph:

"(3) The total amount of loans which a person obtains under one or more of the annual programs established under the Agricultural Act of 1949 with respect to the 1978 through 1981 crops of wheat, peanuts, feed grains, soybeans, rice, and cotton, respectively, shall not exceed $100,000 with respect to each of the 1978 through 1981 crops of such commodities.

By Mrs. HECKLER:

Page 41, line 14 strike "such levels" and all that follows through page 42, line 2. Insert in lieu thereof: "the following levels per ton:

1978	$390
1979	$375
1980	$360
1981	$345"

By Mr. JEFFORDS:

In title XII, page 28, insert after line 8 the following new section:

"RECOVERY OF BENEFITS WHERE INDIVIDUAL'S ADJUSTED GROSS INCOME FOR YEAR EXCEEDS TWICE POVERTY LEVEL

"SEC. 9. (a)(1) If—

"(A) any individual receives food stamps during any calendar year, and

"(B) such individual's adjusted gross income for such calendar year exceeds the exempt amount,

then such individual shall be liable to pay the United States the amount determined under subsection (b) with respect to such individual for such calendar year. Such amount shall be due and payable on April 15 of the succeeding calendar year and shall be collected in accordance with the procedures prescribed pursuant to subsection (g).

"(2) If, at the time prescribed by paragraph (1) for the payment of any liability imposed by such paragraph on any individual, such individual is a member of a household receiving food stamps, the time for the payment of such liability to the extent that such liability exceeds any offset provided pursuant to subsection (g) shall be extended until such individual is no longer a member of a household receiving food stamps.

"(3) No interest or penalty shall be assessed or collected with respect to any liability imposed by paragraph (1).

"(4) Except in the case of a husband and wife who live apart at all times during the calendar year, in the case of a married individual—

"(A) this section shall be applied by treating both spouses as one individual, and

"(B) the liability imposed by paragraph (1) shall be apportioned among the spouses in accordance with regulations prescribed by the Secretary (after consultation with the Secretary of the Treasury).

"(b)(1) For purposes of this section, the amount determined under this subsection with respect to any individual for any calendar year is the lesser of—

"(A) the value of the food stamps received by such individual during such calendar year, or

"(B) the excess of (i) the adjusted gross income of such individual for such calendar year, over (ii) the exempt amount.

"(2) For purposes of this section—

"(A) if an individual maintains a household for any calendar year, such individual shall be treated as receiving all of the food

stamps received by such household during such calendar year, or

"(B) if subparagraph (A) does not apply with respect to any household for any calendar year, each member of such household shall be treated as receiving a portion (determined under regulations prescribed by the Secretary) of the food stamps received by such household during the calendar year.

"(3) For purposes of this section, an individual shall be treated as maintaining a household for any calendar year if at least 80 percent of the cost of maintaining such household for such year is furnished by such individual.

"(c) If the Secretary determines that this section may apply with respect to any individual for any calendar year, not later than January 31 of the succeeding calendar year, he shall furnish such individual a written statement which—

"(1) sets forth the value of the food stamps received by such individual during such calendar year, and

"(2) contains an explanation that such amount may be recovered in accordance with the provision of this section.

"(d) The Secretary (after consultation with the Secretary of the Treasury) may waive any liability imposed by subsection (a) if he determines that such liability would result in an undue hardship.

"(e)(1) For purposes of this section—

"(A) The term 'exempt amount' means, with respect to any individual for any calendar year, an amount equal to twice the income poverty guidelines for a household which consists of such individual, his spouse, and any dependent of the individual with respect to whom the individual is entitled to a deduction under section 151(e) of the Internal Revenue Code of 1954 for such calendar year. For purposes of the preceding sentence, the term 'income poverty guidelines' means the guidelines as calculated in section 5(c) of this Act.

"(B) The terms 'taxable year', 'adjusted gross income' and 'dependent' have the same meaning as such terms have when used in chapter 1 of the Internal Revenue Code of 1954.

"(C) The determination of marital status shall be made under section 143 of such Code.

"(2) In the case of an individual whose taxable year is not a calendar year, this section shall be applied under regulations prescribed by the Secretary.

"(f) All funds recovered pursuant to the provisions of this section shall be deposited as miscellaneous receipts of the Treasury and shall be available to the Secretary of the Treasury to defray administrative costs incurred in carrying out the provisions of this section and shall be available to the Secretary of Agriculture to carry out the provisions of this Act in such amounts as may be specified in appropriation Acts.

"(g) The Secretary (after consultation with the Secretary of the Treasury) shall by regulations prescribe the procedures for collecting any liability imposed by this section. Such regulations shall provide that—

"(1) where feasible, any such liability shall be collected by the Secretary of the Treasury in coordination with his responsibilities under other Federal laws, and

"(2) any liability not collected by the Secretary of the Treasury shall be collected by the Secretary.

Such regulations may provide that any such liability may be offset by any overpayment of a Federal tax to which the individual is entitled and such an offset shall be treated as a refund of such overpayment.

Redesignate the succeeding sections, and any references thereto, accordingly.

By Mr. McHUGH:

Strike section 1320 (at p. 111, line 23 ff) and renumber the following sections appropriately.

By Mr. MADIGAN:

Title IV, section 401, is amended by striking the word "If" as it appears on page 8, line 15, and page 9, line 2, and insert in lieu thereof the following:

"Effective only with respect to the 1978 and 1979 crops of wheat, if";

Title V, section 501, is amended by striking the word "If" as it appears on page 16, line 23, and page 17, line 10, and insert in lieu thereof the following:

"Effective only with respect to the 1978 and 1979 crops of feed grains, if";

Title VI, section 602, is amended by striking the word "If" as it appears on page 26, line 20, and page 27, line 1, and insert in lieu thereof the following:

"Effective only with respect to the 1978 and 1979 crops of cotton, if"; and

Title VII, section 704, page 32, line 5, immediately after the semicolon, insert the following new paragraph (6) and redesignate existing paragraph (6) as paragraph (7):

"(6) striking the word 'If' in the third and fourth sentences in paragraph (4) and insert in lieu thereof 'Effective only with respect to the 1978 and 1979 rice crops, if' ".

By Mr. MATHIS:

Add the following new title:

TITLE —CONGRESSIONAL REVIEW

"SEC. . (a)(1) Notwithstanding any other provision of this Act, simultaneously with promulgation or repromulgation of any rule or regulation, the agency promulgating or repromulgating the rule or regulation shall transmit a copy thereof to the Secretary of the Senate and the Clerk of the House of Representatives. Except as provided in paragraph (2), the rule or regulation shall not become effective, if—

"(A) within 90 calendar days of continuous session of Congress after the date of promulgation, both Houses of Congress adopt a concurrent resolution, the matter after the resolving clause of which is as follows: 'That Congress disapproves the rule or regulation promulgated by dealing with the matter of , which rule or regulation was transmitted to Congress on .', the blank spaces therein being appropriately filled; or

"(B) within 60 calendar days of continuous session of Congress after the date of promulgation, one House of Congress adopts such a concurrent resolution and transmits such resolution to the other House, and such resolution is not disapproved by such other House within 30 calendar days of continuous session of Congress after such transmittal.

"(2) If at the end of 60 calendar days of continuous session of Congress after the date of promulgation of a rule or regulation, no committee of either House of Congress has reported or been discharged from further consideration of a concurrent resolution disapproving the rule or regulation, and neither House has adopted such a resolution, the rule or regulation may go into effect immediately. If, within such 60 calendar days, such a committee has reported or been discharged from further consideration of such a resolution, or either House had adopted such a resolution, the rule or regulation may go into effect not sooner than 90 calendar days of continuous session of Congress after its promulgation unless disapproved as provided in paragraph (1)(A).

"(b)(1) The agency may not promulgate a new rule or regulation identical to one disapproved pursuant to this section unless a statute is adopted affecting the agency's powers with respect to the subject matter of the rule or regulation.

"(2) If the agency proposes a new rule or regulation dealing with the same subject matter as a disapproved rule or regulation, the agency shall comply with the procedures required for the issuance of a new rule or regulation."

By Mr. NOLAN:

TITLE IV—WHEAT

Page 6, strike out line 24, and page 7, strike out lines 1 and 2 and insert in lieu thereof the following: "100 per centum of parity, except that—

"(1) if such minimum loan rate for a given year is less than 80 per centum of the average price received by farmers in the United States during the three-year period preceding the scheduled date for the announcement of the rate, then the loan rate for that year shall be not less than 80 nor more than 90 per centum of the three-year average farm price, as the Secretary determines appropriate to accomplish the purposes of this Act, unless the rate so determined exceeds 90 per centum of the then average price received by farmers in the United States, taken over the preceding ninety days, in which case

"(2) the loan rate shall be the higher of (i) 90 per centum of such current average price received by farmers in the United States, or (ii) the aforementioned minimum loan rate for that year."

TITLE V—FEED GRAINS

Page 14, strike out lines 19 through 22, and insert in lieu thereof the following: "per bushel for each of the 1978 through 1981 crops, except that

"(1) if such minimum loan rate for a given year is less than 80 per centum of the average price received by farmers in the United States during the three-year period preceding the scheduled date for the announcement of the rate, then the loan rate for that year shall be not less than 80 nor more than 90 per centum of the three-year average farm price, as the Secretary determines appropriate to accomplish the purposes of this Act, unless the rate so determined exceeds 90 per centum of the then average price received by farmers in the United States, taken over the preceding ninety days in which case

"(ii) The loan rate shall be the higher of (i) 90 per centum of such current average price received by farmers in the United States, or (ii) the aforementioned minimum loan rate for that year."

Page 2, insert the following immediately after line 13:

"SEC. 102. Section 101 (4) of the Agricultural Act of 1970, as amended, is renumbered as section 101 (5) and the new section 101 (4) is added as follows:

"(4) No payments shall be made under the annual programs established under the Agricultural Act of 1949, as amended, for the 1978 through 1981 crops of wheat, feed grains, upland cotton, and rice to;

"(a) a corporation, partnership, or other legal entity comprised of more than one person if a majority interest in such legal entity is held by stockholders, partners, or persons who themselves are not engaged in farming operations as a sole proprietorship;

"(b) a trust or similar arrangement established by a person who would not have been eligible for payment under this subsection;

"(c) The provisions of this subsection shall not prohibit program participation by:

"(i) Any farmer-owned and controlled cooperative, corporation, or association which meets the requirements of the Act entitled "An Act to authorize association of producers of agricultural products", approved February 18, 1922 (42 Stat. 388, 7 USC 291–292, the Capper-Volstead Act) or as defined in section 15(a) of the Agricultural Marketing Act of 1929 (49 Stat. 317: 12 USC 1141).

"(ii) Any family farm corporation founded primarily for the purpose of earning income from agricultural production. A majority of the shares must be held by, and a majority of the shareholders must be, close relatives. To qualify, a farm must be lived on or actively operated by one of the related family member stockholders.

"(iii) An organization described in section 501(c)(3) of the Internal Revenue Code of 1954 and exempt from tax under 501 (a) of such Code."

By Mr. NOWAK:

Page 16, line 25, redesignate subsection "(h) as "(h)(1)";

Page 17, following line 12, add the following:

"(2) The Secretary shall require each State to submit a plan of operation for providing food stamps for households that are victims of a disaster. Such plan shall include, but not be limited to, procedures for informing the public about the program and how to apply for benefits, coordination with Federal and private disaster relief agencies and local government officials, application procedures to reduce hardship and inconvenience and deter fraud, and instruction of caseworkers in procedures for implementing and operating the disaster program;

"(3) The Secretary shall establish a Food Stamp Disaster Task Force, to assist states in implementing and operating the disaster program. The task force shall be available to go into a disaster area and provide direct assistance to state and local officials after the Secretary has determined that a disaster exists."

By Mr. ROSE:

On page 5, line 8, insert the following:

SEC. 206. Sec. 203(c) of the Agricultural Marketing Act of 1946 is amended by inserting immediately before the period at the end thereof the following semicolon (;): "; *Provided*, That within 30 days of enactment of the Agriculture Act of 1977, the Secretary of Agriculture shall by regulation adopt a Standard of Quality for ice cream which shall provide that ice cream shall contain at least 1.6 pounds of total solids to the gallon, and weighs not less than 4.5 pounds to the gallon, and contains not less than 20 percent total milk solids, constituted of not less than 10 percent milkfat nor less than 10 percent Non Fat Milk Solids, of which whey shall not, by weight, be more than 25 percent. Only those products which meet the standard issued by the Secretary shall be entitled to be called "ice cream." ".

On page 5, line 8, insert the following:

SEC. 206. Section 203(c) of the Agricultural Marketing Act of 1946 is amended by inserting immediately before the period at the end thereof, the following "; *Provided*, That within 30 days of enactment of the Agriculture Act of 1977, the Secretary of Agriculture shall by regulation adopt a Standard of Quality for ice cream which shall provide that ice cream shall contain at least 1.6 pounds of total solids to the gallon, and weighs not less than 4.5 pounds to the gallon, and contains not less than 20 percent total milk solids, constituted of not less than 10 percent milkfat nor less than 10 percent Non Fat Milk Solids, of which they shall not, by weight, be more than 25 percent. Only those products which meet the standard issued by the Secretary shall be able to bear a symbol thereon indicating that it meets the USDA standard for 'ice cream.' ".

Offered by Mr. WEAVER:

Page 77, line 8, after the semicolon, strike out "and".

Page 77, line 11, strike out the period and insert in lieu thereof "; and" and, after such line, insert the following new paragraph:

(13) establish a new program of research and extension concerning genetics, nutrition, reproduction, disease, and health care of dairy goats and concerning marketing of milk and milk products produced by dairy goats.

H.R. 7940

By Mr. JEFFORDS:

On page 42 of H.R. 7940, strike out lines 12 through 15 and insert in lieu thereof the following:

(k) Notwithtanding any other provision of law, the Secretary, in accordance with arrangements entered into with the Secretary of Health, Education, and Welfare, may pay (or upon the request of the highest officer of a State, shall, in such State, pay) qualifying households—

SENATE—*Monday, July 18, 1977*

(Legislative day of Wednesday, May 18, 1977)

The Senate met at 10:30 a.m., on the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. METCALF).

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Hear the words of the 42d Psalm, first verse:

"As the heart panteth after the water brooks, so panteth my soul after Thee, O God, My soul thirsteth for God, for the living God: . . ."

Let us pray:

O God who hast made us for Thyself so that our hearts are restless until they rest in Thee, we come to Thee thirsting for that life-giving water which comes from Thee, and from Thee alone. In the reverent silence of this moment may Thy Spirit find its way into our souls. However busy we become, however crowded the hours or stressful the day, help us to make time for contemplation and meditation—not apart from the world but in the midst of daily work. Created in Thy image, help us to live so as to reflect that divine birthright.

In Thy holy name we pray. Amen.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Friday, July 15, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is ordered.

Mr. ROBERT C. BYRD. Mr. President, I have no further use for my time.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Alaska is recognized.

Mr. STEVENS. Mr. President, I ask unanimous consent that the time allocated to the minority leader be allocated to that already assigned to the Senator from Nebraska.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SPECIAL ORDERS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Nebraska (Mr. CURTIS) is recognized for not to exceed 30 minutes.

OPPOSITION TO ROBERT MENDELSOHN

Mr. CURTIS. Mr. President, I rise in opposition to the confirmation of Robert Mendelsohn as Assistant Secretary of the Interior for Policy, Budget, and Administration.

If confirmed, Mr. Mendelsohn will assume responsibility for the Interior Department's $4.3 billion budget. He would be one of the five highest ranking Interior Department officials who, Secretary Cecil Andrus has said, will serve as the department's "high command." He would have direct authority over such matters as personnel management and audit operations and would be in charge of the personnel who review environmental impact statements.

I am sure my colleagues would agree that such an important position calls for someone who is adept at handling money as well as accounting for it. In addition, I should expect this position to be filled by someone with an exceptional environmental record in view of the public standards announced by President Carter and Secretary Andrus.

It is my belief that Mr. Mendelsohn does not possess these qualities. Since his nomination serious questions have been raised which I wish to bring to the attention of my colleagues.

Some of these questions deal with large unpaid loans and bills for his unsuccessful 1974 race for State controller and contributions for other campaigns of his, as well as the circumstances under which the Mendelsohn campaigns received contributions and loans in the past.

Mr. Mendelsohn was elected to the San Francisco Board of Supervisors in 1967, then was reelected in 1971 and 1975. In 1974, he lost a race for the State Senate.

In November of 1971, he failed to report a $12,000 interest-free loan he got from R. K. Miller, head of the Pacific Gas & Electric Co.'s San Francisco operation, for use during his successful reelection campaign. Failure to report this substantial loan was in all probability a violation of the State's campaign law.

In late October 1971, a CORO Foundation intern, working in the Mendelsohn campaign, picked up the $12,000 personal check from Miller for the campaign. Mendelsohn said the check missed the procedure for logging in, because it had passed quickly to pay for advertising at the campaign's end. It may be of interest to my colleagues that Earl Rouda, Mendelsohn's campaign treasurer, told a San Francisco newspaper he knew nothing of the existence of the P.G. & E. check, or the loan.

On November 2, 1971, Mendelsohn filed his campaign statement with the registrar's office. He said he read the face sheet, but not all the back pages, before it was filed. He said he did not notice the omission of the $12,000 loan of the week before. In June 1973 the CORO intern, who had earlier noticed the omission of the Miller loan on Mendelsohn's campaign statement, mentioned the violation to a local political figure, and word of the loan began to surface.

Mendelsohn stated that, in July, while he was on vacation in France his campaign volunteers—in the course of preparing to pay off back debts—discovered that the loan had never been reported. They informed him of this on August 19, 1973.

On or about August 30, Mendelsohn went to Sacramento and, according to Mendelsohn, talked to Ed Arnold in the Secretary of State's office about amending his campaign statement. During the week of September 24, the CORO intern wrote Mendelsohn informing him he intended to go to the Secretary of State if Mendelsohn did not correct his campaign statement. After a hearing with Judge Joseph Karesh, Mendelsohn received permission to file an amended campaign statement. The amended statement included the loan, 18 previously unreported guarantors of other campaign loans, and $63,805 in previously unreported late-coming contributions.

On March 31, 1977, Mendelsohn filed a campaign statement that said he owed $285,321 from his past elections. But, he later stated there were errors in the disclosure statement and the true figure was about $150,000.

In a May 17, 1977, article appearing in the Los Angeles Times a friend of Mendelsohn's explained the deficit. The friend's analysis showed Mendelsohn owed $23,000 in personal notes to contributors, $27,000 in campaign related bank loans, his committees owed $119,000 in IOU's; $16,000 in campaign bills were unpaid and $25,000 was owed to a political consultant. This totals $210,000.

Mendelsohn said, according to the Times, that he won forgiveness of some of these debts months ago but had forgotten to report the forgiveness transactions. He said amended reports would show these transactions. He said the oral agreements to forgive loans and bills due make the actual amount around $150,000.

Mr. Mendelsohn made no public correction and did not file an amended report until the evening of his May 20 Senate hearing. Mr. President, how can we possibly confirm a man who makes over $100,000 worth of mistakes on his campaign finances as Assistant Secretary for Policy, Budget, and Administration?

According to a New York Times May 9 story, Mendelsohn held a reception and dinner in San Francisco to reduce his debts. He contended he raised enough money to reduce his total debt to $40,000.

Later it was disclosed that the fundraiser had produced only $10,000 in cash, and that $100,000 had been obtained in writeoffs from persons he owed. The largest writeoff was from his campaign publicists in the amount of $24,984. The writeoff I found most interesting, however, was by a Mrs. Max Drob, a Pacific Telephone operator in San Pedro. She forgave at least $8,500 and the Interior Department shows her forgiveness as $15,000. Pacific Telephone must pay very high salaries to its operators.

There seems to be little documentation as to how the debt, be it $285,321 or $150,000, was reduced to $40,000. And in fact, Mendelsohn testified before the Senate Energy and Natural Resources Committee that the amount of the remaining debt was $68,000.

Mr. President, I would like to read a portion of these hearings wherein Mr. Mendelsohn tries to explain the situation:

Chairman JACKSON. The other question then discussed in the press is that you reported a campaign deficit last fall which was substantially larger than your actual deficit. Will you explain the reasons for this discrepancy?

MENDELSOHN. There had been forgivenesses that we had not yet reported because the appropriate time had not, in the committee's opinion arrived.

We had intended to have a fund raiser in the spring to try to put the bottom line to that comptroller deficit which is now three years old. During the two years ensuing from the '74 campaign, as we were paying off various loans and deficits, some of the creditors had indicated the willingness to forgive and had told us that they did.

I know that they had but they had not all yet been reported. It was the intention to report them in this final filing. That's the major reason for this discrepancy but there is another reason, too, and that is that there was an error in the filing.

The California filing requirements are incredibly complicated, Mr. Chairman, and most of this work has been carried out by volunteers because I don't maintain a continuing public accountant on a professional basis to do this. A basic mistake had been made early on, that continued and that is, you list in two separate places loans, both as a contribution and also as an accrued expense. A mistake was made and a $60,000 accumulation of loans was listed twice. So it made it appear that the deficit was in fact $60,000 more than it was but that error was discovered.

So the short answer to your question, Mr. Chairman, is that the difference between what was reported in the press as the deficit and what the deficit actually was, was loan forgiveness that had not yet been reported and which has now been reported and that one entry of the same thing in two places because it appeared to be required.

Chairman JACKSON. How much was that discrepancy?

MENDELSOHN. Approximately $130,000, given the loan forgivenesses that were not yet reported.

The seriousness of these discrepancies caused the California Political Practices Commission to undertake a complete audit on Mr. Mendelsohn.

Mr. President, a further controversy exists. Mendelsohn served on the North-Central Regional Coastline Commission and was its representative to the State coastal commission until recently when the regional agency voted to replace him. The action was occasioned by Mendelsohn's pending move to Washington and complicated by a dispute over his actions on the State commission.

According to the Los Angeles Times, a fellow coastal commissioner who asked not to be identified, said Mendelsohn should not hold the job under the circumstances because, in the commissioner's opinion, Mendensohn is overly favorable to development interests. The controversy involved a 1,625-unit housing development called Bodega Harbour proposed by Transcentury Properties, Ltd., a subsidiary of the Potlatch Corp.

Mendelsohn initially voted against allowing Transcentury an exemption from Coastal Commission controls for 336 units on which work had begun before voters passed the coastal initiative in November 1972.

In an interview in April 1977, with the Los Angeles Times, Mendelsohn stated:

I would have liked to have denied them the right to proceed, I didn't feel they should have had anything.

However, Mendelsohn advocated a settlement that many say was favorable to the developer and spoke with other commissioners in an effort to win their support.

One former close friend described Mendelsohn as an advocate whose desire to get the settlement was "fierce."

Lane, the Coastal Commission chairman, said:

There was no question Bob was working very hard on a settlement. It was obvious to everyone.

Mendelsohn's advocacy was such that Dr. Brad Lundborg, who replaced Mendelsohn as the regional representative on the State commission said he regarded Mendelsohn's actions as "outside the proper scope of a commissioner's duties."

Lundborg said he was concerned that Mendelsohn's actions "represented some interest, other than the regional commission's or the public's."

Mendelsohn said:

I don't deserve any damn criticism on Bodega Harbour. I worked hard to produce a good, fair settlement and anyone who is at all objective will recognize that.

Mendelsohn demanded that the Los Angeles Times interview Michael Fischer, who was executive director of the North-Central Regional Coastline Commission at the time of the Bodega Harbour housing controversy. Mendelsohn said Fischer would give a "fair, accurate, and unbiased" account of the supervisor's role in the Transcentury matter.

When interviewed later, Fischer said:

The settlement Mendelsohn advocated was one that Transcentury said would produce the greatest cash return for them.

Fischer said the Coastal Commission staff wanted additional homes built in a meadow away from the water, while Transcentury wanted to develop lots close to the ocean.

Mendelsohn, who has worked as a planning consultant, said one of the guiding principles he followed on the Coastal Commission was avoiding "stringing out development up and down the coast."

But Fischer said the settlement Mendelsohn advocated, and which was largely adopted, resulted in "lots spread out all

over the bluff, committing another half-mile of bluff and coastal terrace to that kind of sloppy development the commissions were created to prevent."

Mendelsohn said the way in which he sought to settle the Bodega Harbour dispute "certainly contributed" to the regional commission voting to oust him as its representative to the State Coastal Commission, an action which took place in January.

Mr. President, I would like to bring up one more piece of information from Mr. Mendelsohn's background.

On November 5, 1973, Supervisor Mendelsohn asked the San Francisco Board of Supervisors to adopt a motion to award a certificate of honor to a Mr. John Factor. Mr. Factor contributed $2,000 to Mendelsohn's 1974 controller race. The board voted to award this honor without knowing the identity of Mr. Factor. I would like to read a statement made by Supervisor Kopp 2 weeks after voting when he discovered the identity of Mr. Factor:

Had the identity of Mr. Factor, who is a resident of Los Angeles, been revealed to us by the maker of the motion (Mendelsohn), I can assure you that my vote would have been in the negative for this certificate of honor. I feel that we should have been given an explanation of the fact that Mr. Factor is a resident of Los Angeles and the same man who has been known for over fifty years as "Jake the Barber," a former Chicago mob figure, and a man well known to law enforcement authorities all over the country. I also feel that awarding a certificate to a person, whose reputation is less than honorable, is demeaning, not only to this Board but also to all of those deserving people to whom we have awarded certificates of honor in the past. I believe that the pride with which these certificates are both given and received has been tarnished by this action, and I regret having been made a part of it.

Mr. President, it is clear to me that Robert Mendelsohn is not the best person for this position. If he could not get his financial disclosure straight, how can he deal with the sums he must in the Federal Government? If there is even the slightest possibility he has acted in behalf of special interests he should not be confirmed. I believe that possibility exists. Mr. President, can we afford to have this man serve our country as Assistant Secretary of the Interior? I think not. Therefore, I urge my colleagues to join me in voting against this confirmation.

Mr. President, I read a portion of an article by James A. Finefrock, published in the San Francisco Examiner of July 12, 1977:

A secret $16,500 contribution may have been made to the Robert Mendelsohn campaign for state controller in 1974 by the developers of Bodega Harbour, court records indicate.

William Grader, a man who helped persuade Mendelsohn to make a run for the Democratic nomination for state controller, testified yesterday in Ukiah that he received a $16,500 check from Transcentury Properties Inc. and then channeled a like sum through three business firms into the hands of Bodega Bay restaurant owner Wanda Yankich. (Graders attorneys maintain all transactions were legitimate.)

Zankich then gave the money to her sister, Louise Drob, a telephone operator from San Pedro, who bought cashier's checks and delivered them the same day to Mendelsohn campaign headquarters in San Francisco, according to an affidavit filed by the state Fair Political Practices Commission in Mendocino Superior Court.

The FPPC is investigating whether Mendelsohn received laundered campaign contributions that have created a conflict of interest for him in his votes on the Bodega Bay issue as a member of state and regional coastal commissions.

Mendelsohn, a San Francisco supervisor, is President Carter's nominee for assistant secretary of the U.S. Department of the Interior. That nomination has been held up by the U.S. Senate until the FPPC completes its investigation.

Mr. President, I ask unanimous consent to have the article printed in the RECORD, as well as another article published in the San Francisco Examiner on July 17, 1977.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

DEVIOUS ROUTE OF MENDELSOHN GIFT

(By James A. Finefrock)

A secret $16,500 contribution may have been made to the Robert Mendelsohn campaign for state controller in 1974 by the developers of Bodega Harbour, court records indicate.

William Grader, a man who helped persuade Mendelsohn to make a run for the Democratic nomination for state controller, testified yesterday in Ukiah that he received a $16,500 check from Transcentury Properties Inc. and then channeled a like sum through three business firms into the hands of Bodega Bay restaurant owner Wanda Zankich. (Grader's attorneys maintain all transactions were legitimate.)

Zankich then gave the money to her sister, Louise Drob, a telephone operator from San Pedro, who bought cashier's checks and delivered them the same day to Mendelsohn campaign headquarters in San Francisco, according to an affidavit filed by the state Fair Political Practices Commission in Mendocino Superior Court.

The FPPC is investigating whether Mendelsohn received laundered campaign contributions that have created a conflict of interest for him in his votes on the Bodega Bay issue as a member of state and regional coastal commissions.

Mendelsohn, a San Francisco supervisor, is President Carter's nominee for assistant secretary of the U.S. Department of the Interior. That nomination has been held up by the U.S. Senate until the FPPC completes its investigation.

Yesterday's testimony by Grader stemmed from his attempt to quash a subpoena issued by the FPPC for his financial records. Grader's attorney, Don Kates of San Francisco, claimed that many of those transactions were protected by the attorney-client privilege.

Superior Court Judge John J. Golden, on assignment from neighboring Lake County, said he would rule today or tomorrow on whether Grader must surrender the records.

Golden also refused the request of FPPC attorneys that yesterday's hearing be held in chambers and that certain documents, including the FPPC affidavit, be sealed.

FPPC attorneys had argued that "any substantial publicity concerning the facts being reviewed by the commission involving possible violations of the Political Reform Act might result in the withdrawal of Mr. Mendelsohn's nomination."

Grader, a Ft. Bragg fish wholesaler, told the court that he received a $16,500 check from Transcentury Properties in the spring of 1974 as an option to buy property owned in partnership by Grader on the Noyo River east of Ft. Bragg.

Grader testified he deposited that check to the account of the Skagit Co. (owned by Grader). Then, Grader said, Skagit gave a $15,000 check to the law firm of Peterson, Lonergan and Larson. (Robert Peterson and Thomas Lonergan were partners with Grader in the Noyo River property.)

The law firm, Grader said, then repaid him in a check for $15,000. Grader said he took that check, along with a $1,500 check drawn on the account of the Public Lands Association (another Grader business) payable to him and $500 in cash out of "my own pocket" and gave all it to Zankich.

Zankich, according to the FPPC affidavit, turned all the money and checks—a total of $17,000—over to Louise Drob.

According to Mendelsohn campaign records, Drob lent the Mendelsohn campaign $15,000 and contributed $1,500 outright on May 20, 1974.

Mendelsohn last night again maintained that he had no knowledge of the laundering scheme, if there was one. "The one thing we knew," he said, "was that Louise Drob had made a loan and a contribution."

Mendelsohn, from the fall of 1974 on, was a leading advocate for a settlement with Transcentury Properties Inc on the controversial Bodega Harbour development near the town of Bodega Bay.

Zankich, who served with Mendelsohn on the North Central Regional Coast Commission, was also a strong supporter of the project, located a few hundred yards down from the Tides Restaurant and Wharf, which she co-owns.

Last week a Sonoma County judge ordered Zankich to comply with a FPPC subpoena for her financial records. She was told to furnish the records within 30 days.

In the Sonoma County proceeding, an FPPC affidavit was ordered sealed, but in Mendocino County, Judge Golden insisted that it be open to public inspection.

The FPPC affidavit is the sworn statement of Richard Miller, an attorney for the FPPC's compliance division. According to an article in the Santa Rosa Press Democrat, the statement says there is a "strong possibility" that Drob's contributions to the Mendelsohn campaign may actually have been "monies belonging to Grader or others."

After years of wrangling, the Bodega Harbour development was approved in scaled down form in November, 1976 by the state coastal commission.

No formal accusations have been made by the FPPC against Mendelsohn or anyone else.

Mendelsohn referred to Grader as "one of my earnest supporters" and said he was one of the people who persuaded him in 1972 to run for state controller.

Grader, through his business concerns, made reported contributions and loans to the Mendelsohn for state controller campaign committee of $12,000 in 1974.

As an unpaid aide to former state Sen. Randolph Collier, Grader lobbied for the development of Bodega Harbour. Grader is also active in Democratic party politics. He was an unsuccessful congressional candidate in 1963, served as deputy director of the state Natural Resources Department, and as a member until 1974 of the North Coast Regional Coast Commission.

Neither Grader nor his attorneys could be reached for comment. Transcentury president William Chamberlain could not be reached.

A MONEY CLOUD OVER MENDELSOHN

(By James A. Finefrock)

Robert Mendelsohn switched his vote on Bodega Harbour after he received $16,500 in campaign contributions that according to court documents, may have been secretly made by the developer of the project.

Contributions to Mendelsohn's 1974 campaign for state controller and his record as

a member of two coastal commissions are being investigated by the state Fair Political Practices Commission. The San Francisco supervisor's nomination by President Carter to be assistant secretary of the Interior Department has been held up until that investigation is completed.

There has been no evidence presented that Mendelsohn, in his unsuccessful 1974 race, had knowledge of any contributions by Transcentury Properties Inc., developer of Bodega Harbour.

Mendelsohn denies he switched positions on the controversial development and says he felt no need to question the source of the $16,500 contributions.

Before the May 1974 contributions, Mendelsohn voted three times as a member of state and regional coast commissions to deny the application of Transcentury for exemption from the controls of the 1972 Coastal Zone Conservation Act, according to coast commission records reviewed by the Examiner.

After May 1974, Mendelsohn voted 10 times—often in the minority—in favor of the multimillion-dollar project near the sleepy fishing village of Bodega Bay in Sonoma County.

Mendelsohn did vote, before May 1974, to approve an exemption for the subdivision's first 336 lots, which virtually everyone concerned with the issue, including the state attorney general, agreed Transcentury was legally entitled to. On one occasion after May 1974, Mendelsohn voted against Transcentury on a procedural motion.

After May 1974, Mendelsohn acted as a strong advocate for Bodega Harbour, once persuading a reluctant commissioner to vote for the project and once proposing a plan of his own that was more generous to the developer than the plan ultimately adopted.

A coast commission staff report said that a plan of the size Mendelsohn suggested would "overwhelm" the village of Bodega Bay, and a deputy attorney general questioned the propriety of Mendelsohn's proposal.

The controversial Bodega Harbour project was one of the two largest developments—Sea Ranch was the other—to come before the coast commission in Northern California.

Its developer, Transcentury, a subsidiary of Potlach Corp., had secured county permits and had started building some of its proposed 1,650 homes before the 1972 Coastal Act took effect.

By January 1977—after four years of battles with coast commissions, court litigation, and the passage of special interest legislation—Transcentury had secured approval to build or sell lots for a 725-home project. Its investment then, according to Transcentury, exceeded $16 million.

Bodega Harbour proved to be a Hydra-headed monster for the coast commissions. It involved conflicting interpretations of the issue of coastal protection vs. the economic rights of developers. It included myriad designs and redesigns of the original proposal. It was shot through with political pressure and behind-the-scenes maneuvering.

Mendelsohn says his position on Bodega Harbour was clear.

"If the attorney general hadn't ruled in the spring of 1973 that Transcentury was legally entitled to exemption from coastal controls on 336 of the 1,650 lot. I wouldn't have given them anything because I don't like exemptions," he said last week.

On June 7, 1973, records show that Mendelsohn—on the advice of the attorney general—voted to grant Transcentury an exemption for 336 homes, but to deny the company's exemption claim for the remaining 1,314 homes.

The North Central Regional Coast Commission agreed with Mendelsohn by an 8–4 vote. (Both items were considered in a single motion.)

Commission member Wanda Zankich, later to become a key figure in the investigation into possible laundering of Mendelsohn campaign funds, voted against the motion. Zankich owns a restaurant and a complex of other businesses less than a mile from the development.

It was the last time—with the exception of one procedural motion—that she and Mendelsohn would vote on opposite sides of the Bodega Harbour issue.

On Sept. 5, 1973, Transcentury's appeal of the regional commission decision went before the state commission. Six state commissioners, including chairman Melvin Lane, voted to grant Transcentury an exemption for 226 homes, in additional to the original 336. Mendelsohn and four other commissioners voted against granting the exemption.

Seven votes were required for approval. A "yes" vote from Mendelsohn would have swung it.

The same day, Sept. 5, all 11 state commissioners voted to deny Transcentury an exemption for its entire 1,650-lot project.

Between September 1973 and September 1974, and for months after, the Bodega Harbour issue bounced around in the courts over the exemption question and whether the developer was proceeding with unauthorized work.

On May 20, 1974—two weeks before the June 4 Democratic primary—Louise Drob, a San Pedro telephone operator, walked into a Mendelsohn campaign office and contributed $16,500, Mendelsohn campaign records show.

Drob obtained that money, a Fair Political Practices Commission affidavit states, from her sister, Wanda Zankich, who served with Mendelsohn on the North Central Regional Coast Commission.

Zankich, the FPPC affidavit states, got the money from William Grader, a Ft. Bragg fish wholesaler and an outspoken supporter of Bodega Harbour.

Grader, according to his own testimony, got the money—a check from $15,000—from the law firm of Petersen, Lonergan & Larson. Attorney Robert Petersen testified in a sworn affidavit that the check was a repayment for money Grader had given him on behalf of Transcentury as an option to buy property.

The affidavit states Grader also gave Zankich a check for $1,500 drawn on the account of Public Land Association, which Grader controls, and $500 out of his own pocket. The affidavit also says Zankich gave Drob both checks and the cash. It quotes Zankich as saying Drob kept the $500 cash.

Mendelsohn lost the primary election for state controller in June and went back to his posts as a San Francisco supervisor and coast commissioner.

On Sept. 26, 1974, Transcentury returned to the regional commission—this time to seek a permit for completion of its 1,850-lot project. The company had been "directed" by Randolph Collier, then a state senator, to try again, said Transcentury president William Chamberlain, according to the minutes of the meeting.

Despite some commissioners' complaints that Transcentury's proposal was a "waste of time," the matter was carried over to the commission's Oct. 24 meeting, partly at Mendelsohn's suggestion.

At the Oct. 24 meeting, it was clear the Transcentury proposal had little chance. (Five of 11 commissioners had voted to kill it Sept. 26—eight votes were required for approval.)

Mendelsohn was late for the Oct. 24 meeting. At the request of Zankich, the commissioners postponed voting on Bodega Harbour until Mendelsohn arrived.

When commissioner Bradford Lundborg questioned whether that was fair to other applicants, Zankich, according to meeting minutes, responded: "Whether or not it's fair to others. I always have felt it's fair when the fate of people is on the line."

Mendelsohn arrived shortly after 10 a.m. After discussion and two procedural votes on Transcentury's permit request, Mendelsohn offered his own plan: A reduction in the number of lots to 956. He outlined how they might be apportioned among the five areas of the subdivision.

Deputy Atty. Gen. William Chamberlain (no relation to the Transcentury president) questioned the propriety of Mendelsohn's plan.

"It's up to the applicant to bring an application before (the commission)," Chamberlain said, according to meeting minutes. "I don't think it's proper for the commission to do what you're attempting to do."

Zankich said she had worked out "some really quite similar conditions" to Mendelsohn's, according to the minutes. She said she also wanted to add approval of the golf course, stages of the sewage plant and some model homes.

"I would agree to that," Mendelsohn said.

Commissioner Gary Giacomini pointed out that Mendelsohn's proposal far exceeded the commission's staff recommendation. Staff argued that a development larger than 400 units (only 64 more than had already been approved) would "overwhelm" the historic, 188-household fishing village of Bodega Bay.

The report, prepared by regional commission executive director Michael Fischer, said, "if (Bodega Harbour) were being presented afresh to the commission . . . there is virtually no question that a complete rejection would be in order. The nature, design and location of this kind of use on the open agricultural hillsides surrounding the village of Bodega Bay would be totally inappropriate and undesirable. However, we are not starting out with a clean slate . . . Unit 1 (336 lots) has been developed."

Arguing for a limit of 400 homesites at Bodega Harbour, Fischer said any heavier development would "virtually close" Highway 1 to outsiders and "threaten to overwhelm (Bodega Bay) visually, socially and economically."

A straw vote on Mendelsohn's 956-lot proposal failed. Six commissioners voted for it, seven against.

After the straw vote, a motion on whether to vote on the full 1,650-lot Transcentury proposal was defeated 9–4. Zankich voted "aye"; Mendelsohn "nay." It marked the only time after May 1974 that Mendelsohn voted against Transcentury.

In the 10 months following October 1974, a number of other Bodega Harbour proposals were developed.

On Aug. 14, 1975, Transcentury sought and won regional commission approval for a plan that would allow a total of 750 lots at Bodega Harbour.

The commission, on a motion by Mendelsohn, had voted to consider a plan favorable to Transcentury instead of the one commission staff preferred.

"The most important difference (in the two plans)," says Chamberlain, the deputy attorney general, "is that in the option (favored by staff), all units on the south side of Pinnacle Gulch would be moved to the north side."

But that also would have cost the developer money—the area south of Pinnacle Gulch contained "the most profitable lots close to the ocean," Transcentury said.

The option favored by Mendelsohn—and largely incorporated in the final Bodega Harbour settlement—resulted in "lots spread out all over the bluff, committing another half mile of coastal terrace to that kind of sloppy development the commissions were created to prevent," Fischer said recently.

The motion on the option that Mendelsohn championed failed by a single vote when commissioner Robert Theiller abstained because he, as a Sonoma County supervisor, wanted the county to review the plan.

Mendelsohn convinced him to change his vote to "aye," assuring the plan's approval. The commission's minutes say:

Mendelsohn: "It would seem to me that, with a statement that you would want to have an opportunity to revise it at the local level, procedurally it would be better to vote for the permit."

Theiller (after some discussion), "I'll change my abstention to yes, but I want the record to clearly show that I'm not in total agreement with the conditions . . ."

The vote was 8–5—eight votes needed to pass.

That might have settled the Bodega Harbour issue, but the Sierra Club appealed to the state commission.

On Dec. 3, 1975, the state commission passed a modified plan allowing Bodega Harbour 725 lots. Because of the modification, the plan was sent back to the regional commission for concurrence.

That never came. Three times—Dec. 11, 1975, Jan. 8, 1976, and again Oct. 30, 1976—the regional commission refused to support the state plan, though Mendelsohn and Zankich supported it each time.

Each vote was close, and the day before one vote, the Sonoma County Board of Supervisors replaced Theiller as one of its representatives to the regional commission to assure the state plan's defeat.

On Oct. 30, 1976—only hours after the last regional commission turndown of the state plan—Gov. Brown signed into law special interest legislation (passed by a two-thirds vote of both the Assembly and Senate) that allowed the state commission to act unilaterally on Bodega Harbour.

Although the regional commission opposed the state plan, Mendelsohn—as the regional commission's representative to the state coast commission—voted for passage of the 725-lot state plan on Nov. 4, 1976.

The full state commission concurred, by an 8–2 margin, and Bodega Harbour was finally settled.

Grader and Zankich are under court order to hand over their business records to the FPPC. An FPPC supboena has also been issued for Drob's records.

HE DENIES VOTE SWITCH

"I never switched my vote on Bodega Harbour," Robert Mendelsohn said last week.

"Comparing an exemption vote with a permit vote or a settlement (of litigation) vote is like comparing apples and oranges," he told the Examiner in a phone interview.

"In the ultimate settlement on Bodega Harbour, we got 550 acres of public open space and a mile of beach-front land that would have been lost with an exemption," he said.

"Eight of 10 state coast commissioners voted for the final settlement and an overwhelming majority of state legislators voted to allow us to do that. That should tell you something," he said.

Mendelsohn insists that his position on Bodega Harbour was consistent from beginning to end: That he opposed any exemption for the development, and then sought to find a compromise acceptable to all.

"All of us on the state and regional commissions were stingy with exemptions," Mendelsohn said, "and rarely gave them because they didn't give us the opportunity to impose conditions on the developer."

Mendelsohn said his vote has never been influenced by campaign contributions. He said he had no knowledge that any of his campaign funds may have come from anyone other than the reported donor.

"All I know," Mendelsohn said of the May 1974 contribution, "is that Louise Drob walked into my campaign office and made a contribution. I was very pleased, just as I am with any contribution."

On his proposal to allow 956 units at Bodega Harbour at a time coast commission staff said a development that large would "overwhelm" the nearby town of Bodega Bay, Mendelsohn said:

"It seemed to me at the time that 956 units made sense. It still does. I simply disagreed with that staff report, as I disagree with many staff reports.

"There's nothing dark and nefarious about this. My position on Bodega Harbour was similar to my position on projects up and down the coast."

Mendelsohn denies that his persuading fellow Commissioner Robert Theiller to change his vote from "abstain" to "aye" in August 1975 was improper.

LAUNDRY ROUTE?

How the money may have traveled from the developer of Bodega Harbour to the Robert Mendelson campaign for state controller in May 1974, according to a Fair Political Practices Commission affidavit and the testimony of William Grader.

$16,500 check from William Chamberlain, president of Transcentury Properties, Inc. (TCP) developers of Bodega Harbour.

TCP check given to Grader, deposited to account of Skagit Trading Company, a firm controlled by Grader, in May 1974.

Check from Skagit for $15,000 given to Fort Bragg law firm of Petersen, Lonergan & Larson. It represented, Grader told Petersen, TCP money for an option to purchase land owned by Petersen, Lonergan & Grader, another partnership.

Grader, according to Petersen, says TCP deal has fallen through; asks for a repayment. On May 20, 1974, a check is issued in Grader's name from Petersen, Lonergan & Larson.

Grader takes that check for $15,000, adds a second check for $1,500 from Public Land Association, (which Grader controls) and $500 "from his own pocket." He delivers all of this to Wanda Zankich at her Tides Restaurant in Bodega Bay, May 20, 1974.

Zankich gives the checks and cash to her sister, Louise Drob. The sisters drive to the Bank of America branch in Sebastopol where Drob gets two cashier's checks—one for $15,000; the other for $1,500. She pockets the $500 cash. May 20, 1974.

The sisters drive to Mendelsohn for Controller campaign headquarters in San Francisco. Drob contributes the $1,500 cashier's check and makes a loan with the $15,000 cashier's check. Campaign records show the date as May 20, 1974.

Drob later forgives virtually the entire loan.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

LABOR-MANAGEMENT RELATIONS—MESSAGE FROM THE PRESIDENT—PM 96

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was referred to the Committee on Human Resources:

To the Congress of the United States:

I am transmitting to Congress proposals to make the laws which govern labor-management relations work more efficiently, quickly and equitably.

I have pledged to make Federal regulatory agencies more responsive to the people they serve. Government regulation only works well if it is fair, prompt and predictable. Too often this has not been the case with the regulatory process that governs collective bargaining and labor-management relations. Our labor laws guarantee employees the right to choose freely their representatives, and to bargain collectively with employers over wages, fringe benefits and working conditions. But legal rights have limited value if many years are required to enforce them.

The National Labor Relations Board (NLRB) administers our labor laws. In recent years there has been growing agreement that those laws should be amended to ensure that the Board can function more effectively to protect employees rights. While the great majority of employers and unions have abided by the labor laws, a few have unfairly abused the procedures and practices under which the Board must operate.

As a result, the American Bar Association, many Federal courts, and the NLRB's own Task Force each recently suggested ways to improve the Board's procedures. The NLRB's internal report, which proposed a number of administrative changes, has already produced some beneficial changes. But it seems clear that legislation is actually needed to enable the Board to administer the labor laws properly.

Unnecessary delays are the most serious problem. In even the simpler cases, the NLRB typically takes almost two months to hold an election to determine whether workers want union representation. The enforcement of Board decisions is also subject to unnecessary delay: lengthy proceedings before the Board and extended litigation can sometimes delay final action for years.

The problem of delay has been compounded by the weakness of the Board's remedies. One of the reasons the regulatory process has worked so slowly is that a few employers have learned that, because of the problems the Board has in enforcing its decisions, delay can be less costly than initial compliance with the law. In one case, for instance, workers who were illegally fired for their

union activities in 1962 are still awaiting payment for lost wages.

Because of these problems, workers are often denied a fair chance to decide, in an NLRB election, whether they want union representation. The same problems often deny employers the predictability they too need from the labor laws.

To help reduce the problems of delay, and to cure a number of related problems with our labor laws, I am today recommending to the Congress a set of reforms for the National Labor Relations Act. These reforms are designed to accomplish three important goals:

—To make the NLRB procedures fairer, prompter, and more predictable.

—To protect the rights of labor and management by strengthening NLRB sanctions against those who break the law.

—To preserve the integrity of the Federal contracting process by withholding Federal contracts from firms that willfully violate orders from the NLRB and the courts.

I believe these goals can be met through the following changes in our labor laws:

An election on union representation should be held within a fixed, brief period of time after a request for an election is filed with the Board. This period should be as short as is administratively feasible. The Board, however, should be allowed some additional time to deal with complex cases.

The Board should be instructed to establish clear rules defining appropriate bargaining units. This change would not only help to streamline the time-consuming, case-by-case procedures now in effect, but would also allow labor and management to rely more fully on individual Board decisions.

The Board should be expanded from five to seven members. This change would enable the NLRB to handle better its increasing caseload.

The Board should establish procedures that would allow two members of the Board to affirm summarily the less complex decision of its administrative law judges. Similar procedures have already been adopted by the Federal courts of appeal.

All appeals of Board decisions should be required to be filed within 30 days of the Board's decision. If no appeal is filed, the Board should refer its orders to the courts for enforcement without further delay. This procedure is similar to that used by such other Federal regulatory agencies as the Federal Trade Commission.

When employers are found to have refused to bargain for a first contract, the Board should be able to order them to compensate workers for the wages that were lost during the period of unfair delay. This compensation should be based on a fixed standard, such as the Quarterly Report of Major Collective Bargaining Settlements published by the Bureau of Labor Statistics (BLS). Workers would be entitled to the difference between the wages actually received during the delay and those which would have been received had their wages increased at the average rate for settlements reported during that period, as recorded in the BLS index.

The Board should be authorized to award double backpay without mitigation to workers who were illegally discharged before the initial contract. This flat-rate formula would simplify the present time-consuming back-pay process and would more fully compensate employees for the real cost of a lost job.

The Board should be authorized to prohibit a firm from obtaining Federal contracts for a period of three years, if the firm is found to have willfully and repeatedly violated NLRB orders. Such a debarment should be limited to cases of serious violations and should not affect existing contracts. This restriction could be lifted under two conditions: if the Secretary of Labor determines that debarment is not in the national interest, or if the affected Federal agency determines that no other supplier is available.

Under current law, the Board is only required to seek a preliminary injunction against a few types of serious union unfair labor practices, such as secondary boycotts or "hot cargo" agreements. The Board should also be required to seek preliminary injunctions against certain unfair labor practices which interfere seriously with employee rights, such as unlawful discharges.

There are related problems that should also be reviewed by the Congress in this effort to ensure that our labor laws fulfill the promise made to employees and employers when the Wagner Act was passed 42 years ago—that working men and women who wish to bargain collectively with their employers, in a way fair to both, shall have a reasonable and prompt chance to do so. In that way, the collective bargaining system, which has served this country well, can be strengthened for the benefit both of American workers and employers.

I have asked the Secretary of Labor to work closely with the Congress in the months ahead to explore these and other possible ways of improving our labor laws.

I ask the Congress to move promptly to pass legislation implementing the reforms I have recommended.

JIMMY CARTER.

THE WHITE HOUSE, *July 18, 1977.*

MESSAGES FROM THE HOUSE

At 12:15 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House insists upon its amendment to the bill (S. 717) to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes; requests a conference with the Senate on the disagreeing votes of the two Houses thereon; and that Mr. PERKINS, Mr. GAYDOS, Mr. DENT, Mr. MURPHY of Pennsylvania, Mr. CORNELL, Mr. ZEFERETTI, Mr. LE FANTE, Mr. MICHAEL O. MYERS, Mr. MILLER of California, Mr. SARASIN, Mr. BUCHANAN, Mr. SHUSTER, and Mr. QUIE were appointed managers of the conference on the part of the House.

The House disagrees to the amendments of the Senate to the bill (H.R. 1139) to amend the National School Lunch Act and the Child Nutrition Act of 1966 to revise and extend the summer food service program for children, to revise the nonfood assistance program, and for other purposes; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. PERKINS, Mr. FORD of Michigan, Mr. ANDREWS of North Carolina, Mr. BLOUIN, Mr. SIMON, Mr. ZEFERETTI, Mr. MOTTL, Mr. MURPHY of Pennsylvania, Mr. LE FANTE, Mr. WEISS, Mr. HEFTEL, Mr. CORRADA, Mr. KILDEE, Mr. MILLER of California, Mr. QUIE, Mr. BUCHANAN, Mr. PRESSLER, Mr. GOODLING, Mrs. PETTIS, and Mr. PURSELL were appointed managers of the conference on the part of the House.

The House insists upon its amendments to the bill (S. 1377) to extend the time for commencing actions on behalf of an Indian tribe, band, or group, disagreed to by the Senate; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. DANIELSON, Mr. UDALL, Miss JORDAN, Mr. MAZZOLI, Mr. HARRIS, Mr. MOORHEAD of California, and Mr. COHEN were appointed managers of the conference on the part of the House.

The House has passed the following bill in which it requests the concurrence of the Senate:

H.R. 2777. An act to provide for consumers a further means of minimizing the impact of inflation and economic depression by narrowing the price spread between costs to the producer and the consumer of needed goods, services, facilities, and commodities through the development and funding of specialized credit sources for, and technical assistance to self-help, not-for-profit cooperatives, and for other purposes.

At 3:18 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House disagrees to the amendments of the Senate to the bill (H.R. 7553) making appropriations for public works for water and power development and energy research for the fiscal year ending September 30, 1978, and for other purposes; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. BEVILL, Mr. BOLAND, Mr. WHITTEN, Mr. SLACK, Mrs. BOGGS, Mr. DICKS, Mr. SHIPLEY, Mr. CHAPPELL, Mr. MAHON, Mr. JOHN T. MYERS, Mr. BURGENER, Mrs. SMITH, and Mr. CEDERBERG were appointed managers of the conference on the part of the House.

At 6:25 p.m., a message from the House of Representatives delivered by Mr. Hackney announced that:

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7557) making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1978, and for other purposes; that the House recedes from its disagreement to the amendments of the Senate numbered 15, 26, 27, 28, and 38 and concurs therein; and that the House

recedes from its disagreement to the amendments of the Senate numbered 12, 34, and 39 and concurs therein, each with an amendment in which it requests the concurrence of the Senate.

The House agrees to the report of the committee of conference on the disagreeing votes of the two houses on the amendments of the Senate to the bill (H.R. 7556) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes; that the House recedes from its disagreement to the amendments of the Senate numbered 32, 61, 62, 63, 64, 65, 66, 67, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, and 81 and concurs therein; and that the House recedes from its disagreement to the amendments of the Senate numbered 33 and 52 and concurs therein, each with an amendment in which it requests the concurrence of the Senate.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-269. Assembly Joint Resolution No. 26 adopted by the Legislature of the State of California relative to telephone rates; to the Committee on Commerce, Science, and Transportation:

"ASSEMBLY JOINT RESOLUTION No. 26

"Whereas, Monopolies are sanctioned in the American economic system only where competition is not feasible and, in such cases, government regulation is employed as a substitute for competition, although it is incapable of providing the full benefits of competition; and

"Whereas, There has always been significant competition in telecommunications in the United States, particularly after the expiration of the original telephone patents in 1893; and

"Whereas, Increased competition within the telecommunications industry and whether it has an effect on basic residential telephone rates is a matter of great public interest; and

"Whereas, Much discussion has been generated regarding the benefits of such competition to the users of telecommunications services, to the manufacturers of customer-provided devices, and to the public generally; and

"Whereas, It has been pointed out in this discussion that the widespread use of specialized common carrier services and customer-provided devices has not been shown to cause increased costs for residential telephone service, or to result in increased costs paid by the small business and residential customers, including persons in lower income groups and those on fixed incomes; and

"Whereas, It is the duty of every carrier serving California customers to furnish adequate, efficient, just, and reasonable service, instrumentalities, equipment and facilities, as are necessary to promote the safety, health, comfort and convenience of its patrons; and

"Whereas, It has come to the attention of the Members of the Legislature that the United States Congress has had under consideration legislation concerning possible limitations on competition in the telecommunications industry; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Members of the Legislature express their interest and concern regarding an investigation by Congress into telephone competition and interconnection; and be it further

"Resolved, That the Congress is requested to include in its deliberations a full inquiry into the possible economic impact of any action it may contemplate, with the view of assuring that its action will not have an adverse effect on telephone rates applicable to the general public and particularly to low-income individuals and small business, so that the public interest will be served; and be it further

"Resolved, That the Federal Communications Commission is requested to authorize competition in telecommunications only where it is feasible and in the public interest, and is urged to pay close attention to the effects of such competition on the various segments of the public concerned; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Federal Communications Commission."

POM-270. Senate Joint Resolution No. 2 adopted by the Legislature of the State of California relative to telephone competition; to the Committee on Commerce, Science, and Transportation:

"SENATE JOINT RESOLUTION No. 2

"Whereas, Increased competition within the telecommunications industry and its effect on basic residential telephone rates is a matter of great public concern; and

"Whereas, Much discussion has been generated regarding the possible benefits of such competition to the large users of telecommunications services and to the manufacturers of customer-provided devices; and

"Whereas, It is pointed out in these discussions that the widespread use of private transmission services and customer-provided devices may cause increased costs for residual telephone service, with the result that much if not all the increased costs will, of necessity, be paid by the utilities' small business and residential customers, including persons in lower income groups and those on fixed incomes; and

"Whereas, It is the duty of every public utility serving California customers to furnish adequate, efficient, just and reasonable service, instrumentalities, equipment and facilities as are necessary to promote the safety, health, comfort and convenience of its patrons; and

"Whereas, It has come to the attention of the Members of the Legislature that the United States Congress has had under its consideration legislation concerning possible limitations on competition in the telecommunications industry; now, therefore, be it

"Resolved by the Senate and the Assembly of the State of California, jointly, That the Members do hereby express their interest and concern regarding the Congress' investigation into telephone competition and interconnection; and be it further

"Resolved, That the Congress be requested to include in its deliberations a full inquiry into the possible economic impact of any action it may contemplate, with the view of providing complete assurance that its action will not have an adverse effect on telephone rates applicable to the general public, and particularly to low-income individuals and small business, so that the public interest will be served; and be it further

"Resolved, That the Federal Communications Commission is requested to delay full implementation of its policies fostering competition until Congress has had the opportunity to complete its investigation and to develop national policy; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States, and to the Federal Communications Commission."

POM-271. House Resolution No. 106 adopted by the House of Representatives of the State of Michigan memorializing the Congress of the United States to adopt legislation providing financial compensation to communities affected by the closing of military installations; to the Committee on Governmental Affairs:

"HOUSE RESOLUTION No. 106

"Whereas, The economic contribution of military installations to the communities in which they are located is considerable; and

"Whereas, The closing of such installations can therefore severely cripple the economy of a community and, in so doing, make life harder for hundreds, even thousands, of citizens already pressed by our inflationary times; and

"Whereas, For that reason alone, the transition of such installations from military to civilian use is a desirable and necessary element in the realization and maintenance of a community's economic base; and

"Whereas, Current legislation unfortunately does not provide for specific financial compensation to the communities affected by the closing of a military installation in order to assist in such a transition; and

"Whereas, At least ten percent of the estimated ten-year cost savings as determined in the Department of Defense Environmental Impact Statement should be allocated to the community to assist in the transition from military to civilian use; now, therefore, be it

"Resolved by the House of Representatives, That the Michigan Legislature hereby memorialize the Congress of the United States to adopt legislation providing for the appropriation of funds to areas affected by the closing of military installations; and be it further

"Resolved, That such funds be allocated on a proportional basis to the various local units of government that are affected by the closing of the installations, as determined by the Department of Defense Environmental Impact Statement; and be it further

"Resolved, That a copy of this resolution be transmitted to the Speaker of the United States House of Representatives, the President of the United States, and to the Michigan delegation of the United States Congress."

POM-272. A petition from Mr. and Mrs. Charles Green, Frostproof, Florida urging the President and the Congress to do everything in their power to stop the surrender of the Panama Canal; to the Committee on Foreign Relations.

POM-273. A petition from Mrs. J. J. Jimenez, Los Angeles, California, urging the President and the Congress to do everything in their power to stop the surrender of the Panama Canal; to the Committee on Foreign Relations.

POM-274. A petition from Mrs. J. C. Trawick Sanford, Florida, urging the President and the Congress to do everything in their power to stop the surrender of the Panama Canal; to the Committee on Foreign Relations.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. INOUYE, from the Committee on Appropriations with amendments:

H.R. 7797. An act making appropriations for Foreign Assistance and related programs for the fiscal year ending September 30, 1978, and for other purposes (Rept. No. 95-352).

HOUSE BILL REFERRED

The following bill was read twice by its title and referred as indicated:

H.R. 2777. An act to provide for consumers a further means of minimizing the impact of inflation and economic depression by narrowing the price spread between costs to the producer and the consumer of needed goods, services, facilities, and commodities through the development and funding of specialized credit sources for, and technical assistance to, self-help, not-for-profit cooperatives, and for other purposes; to the Committee on Banking, Housing and Urban Affairs.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent the second time, and referred as indicated:

By Mr. HELMS (for himself and Mr. MORGAN):

S. 1876. A bill to amend the Internal Revenue Code of 1954 with respect to the net operating loss deduction allowable in the case of certain taxpayers; to the Committee on Finance.

By Mr. BENTSEN (for himself, Mr. TALMADGE, and Mr. DOLE):

S. 1877. A bill to amend Title XVIII of the Social Security Act to provide payment for rural health clinic services; to the Committee on Finance.

By Mr. SCHWEIKER (for himself, Mr. MCINTYRE, Mr. CHAFEE, and Mr. LAXALT):

S. 1878. A bill to encourage the States to establish cost and quality standards, and to provide incentives to contain inflationary rises in hospital costs, and for other purposes; to the Committee on Finance.

By Mr. HASKELL:

S. 1879. A bill relating to the authority of the Secretary of the Interior to grant rights-of-way for pipelines under the Mineral Leasing Act, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. HELMS (for himself, Mr. GOLDWATER, and Mr. SCHWEIKER):

S. 1880. A bill to provide procedures for calling constitutional conventions for proposing amendments to the Constitution of the United States, on application of the legislatures of two-thirds of the States, pursuant to Article V of the Constitution; to the Committee on the Judiciary.

By Mr. JAVITS (for himself, Mr. HUMPHREY, Mr. MOYNIHAN, Mr. MATHIAS, Mr. CLARK, Mr. RIEGLE, Mr. BAYH, Mr. MCGOVERN, Mr. WILLIAMS, Mr. KENNEDY, Mr. BROOKE, Mr. CHAFEE):

S. 1881. A bill to amend title 38 of the United States Code to provide for the payment of supplemental tuition allowances for certain veterans pursuing educational programs; to the Committee on Veterans' Affairs.

By Mr. GLENN (for himself and Mr. BAYH):

S. J. Res. 71. A joint resolution to authorize and request the President to issue annually a proclamation designating September of each year as "National Sickle Cell Month"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with the above introduced bills and joint resolutions are printed at the conclusion of Senate proceedings today.)

ADDITIONAL COSPONSORS

S. 708

At the request of Mr. CLARK, the Senator from New Jersey (Mr. WILLIAMS) was added as a cosponsor of S. 708, to amend title XVIII of the Social Security Act.

S. 1200

At the request of Mr. ABOUREZK, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 1200, to amend the Consolidated Farm and Rural Development Act.

S. 1245

At the request of Mr. GRIFFIN, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 1245, the Corrections Construction and Program Development Act of 1977.

S. 1421

At the request of Mr. MELCHER, the Senator from Michigian (Mr. RIEGLE) was added as a cosponsor of S. 1421, the Comprehensive Veterans Readjustment Assistance Act.

S. 1545

At the request of Mr. ABOUREZK, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 1545, relating to the financing of water resource facilities.

S. 1766

At the request of Mr. RIBICOFF, the Senator from Arkansas (Mr. MCCLELLAN) and the Senator from New York (Mr. JAVITS) were added as cosponsors of S. 1766, the Federal Computer Systems Protection Act.

S. 1774

At the request of Mr. NELSON, the Senator from South Carolina (Mr. HOLLINGS), the Senator from New Mexico (Mr. DOMENICI), the Senator from South Dakota (Mr. ABOUREZK), the Senator from South Carolina (Mr. THURMOND), the Senator from Tennessee (Mr. SASSER), and the Senator from Missouri (Mr. EAGLETON) were added as cosponsors of S. 1774, to amend the Internal Revenue Code.

S. 1854

At the request of Mr. TALMADGE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1854, to provide emergency assistance to producers suffering from the disastrous drought conditions in 1977.

S. 1872

At the request of Mr. CHURCH, the Senator from California (Mr. HAYAKAWA), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Florida (Mr. STONE) were added as cosponsors of S. 1872, to provide price support for sugar.

SENATE JOINT RESOLUTION 56

At the request of Mr. HUMPHREY, the Senator from Vermont (Mr. STAFFORD) was added as a cosponsor of Senate Joint Resolution 56, the rural telecommunications policy measure.

SENATE JOINT RESOLUTION 67

At the request of Mr. ABOUREZK, the Senator from Alaska (Mr. GRAVEL) was added as a cosponsor of Senate Joint Resolution 67, the initiative constitutional amendment.

SENATE RESOLUTION 222—SUBMISSION OF A RESOLUTION OF DISAPPROVAL OF REORGANIZATION PLAN 1

(Referred to the Committee on Governmental Affairs.)

Mr. RIBICOFF (by request) submitted the following resolution:

SENATE RESOLUTION 222

Resolved, That the Senate does not favor the reorganization plan numbered 1 transmitted to the Congress by the President on July 15, 1977.

AMENDMENTS SUBMITTED FOR PRINTING

REGULATION OF DETERGENTS IN THE GREAT LAKES—S. 1015

AMENDMENT NO. 519

(Referred to the Committee on Environment and Public Works.)

Mr. NELSON. Mr. President, I send to the desk an amendment which contains a series of refinements and technical corrections to S. 1015, legislation that establishes a limitation on the amount of phosphorus contained in detergents sold within the Great Lakes Basin. This legislation now has six cosponsors—Senators ANDERSON, HART, RIEGLE, BAYH, LEAHY, and PROXMIRE.

The PRESIDING OFFICER. The amendment will be received and appropriately referred.

DEFENSE APPROPRIATIONS, 1978—H.R. 7933

AMENDMENT NO. 520

(Ordered to be printed and to lie on the table.)

Mr. METZENBAUM (for himself, Mr. MOYNIHAN, Mr. HEINZ, Mr. HATHAWAY, Mr. CHAFEE, Mr. HUMPHREY, Mr. LUGAR, Mr. BROOKE, and Mr. CASE) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

AMENDMENT NO. 521

(Ordered to be printed and to lie on the table.)

Mr. ALLEN (for himself and Mr. SPARKMAN) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 7933), supra.

AMENDMENT NO. 522

(Ordered to be printed and to lie on the table.)

Mr. BELLMON submitted an amendment intended to be proposed by him to the bill (H.R. 7933), supra.

AMENDMENT NO. 523

(Ordered to be printed and to lie on the table.)

Mr. GOLDWATER (for himself and Mr. BARTLETT) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 7933), supra.

AMENDMENT NO. 524

(Ordered to be printed and to lie on the table.)

Mr. GOLDWATER submitted an amendment intended to be proposed by him to the bill (H.R. 7933), supra.

AMENDMENT NO. 525

(Ordered to be printed and to lie on the table.)

Mr. KENNEDY submitted an amendment intended to be proposed by him to the bill (H.R. 7933), supra.

AMENDMENT NO. 526

(Ordered to be printed and to lie on the table.)

Mr. HELMS (for himself, Mr. HUMPHREY, and Mr. NUNN) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 7933), supra.

AMENDMENT NO. 527

(Ordered to be printed and to lie on the table.)

Mr. ALLEN (for himself, Mr. GOLDWATER, Mr. SPARKMAN, and Mr. PROXMIRE) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 7933), supra.

NOTICES OF HEARINGS

HALFWAY HOUSES IN THE REHABILITATION OF ALCOHOLICS

Mr. HATHAWAY. Mr. President, a hearing by the Subcommittee on Alcoholism and Drug Abuse of the Human Resources Committee will be held on July 27 on the subject of the "Role of Halfway Houses in the Rehabilitation of Alcoholics."

The hearing will commence at 9:30 a.m. in room 1202 of the Dirksen Senate Office Building. The subcommittee will receive testimony from representatives of the administration, the Association of Halfway House Alcoholism programs, the Manhattan Bowery Project, Men's Service Center Halfway Houses, the Addiction Research Foundation, and independent halfway house directors.

As many of my colleagues are aware, this is a long unexplored area in the alcoholism treatment field. In this hearing we hope to examine several aspects of alcoholism treatment halfway houses: their funding, their efficacy—including cost-effectiveness—their function in the continuum of care process, as well as possible alternatives to halfway houses.

Questions about this hearing should be directed to Dr. Hal Hunter or Jeffrey Rosenthal of the subcommittee staff at 224–8386.

S. 1542—COUNCIL ON WAGE AND PRICE STABILITY

Mr. PROXMIRE. Mr. President the Committee on Banking, Housing and Urban Affairs previously announced that it would hold 2 days of hearings on S. 1542, which would amend the Council on Wage and Price Stability Act. Due to a need to change its schedule the committee will now hold hearings on a single day, July 19, 1977, to begin at 10 a.m. in room 5302 of the Dirksen Senate Office Building.

The committee shall receive the testimonies of six witnesses: Charles L. Schultze, Chairman, Council of Economic Advisers; Barry Bosworth, Director-designate of the Council on Wage and Price Stability; Andrew J. Biemiller, director, Department of Legislation, American Federation of Labor and Congress of Industrial Organizations; Louis G. Peloubet, controller of Union Carbide Corp., and representing the Business Roundtable; Albert Rees, director, in dustrial relations section and professor of economics, Princeton University, and Hendrik S. Houthakker, professor of economics, Harvard University.

Anyone interested in obtaining additional information about the hearings or desiring to submit comments for the record should contact Steven M. Roberts of the committee staff at (202) 224–0893.

LAW OF THE SEA CONFERENCE

Mr. METCALF. Mr. President, I wish to announce for the information of the Senate and the public the rescheduling of a public hearing before the Public Lands and Resources Subcommittee of the Senate Energy and Natural Resources Committee.

A hearing to receive testimony from Ambassador Elliot Richardson regarding negotiations at the recently adjourned United Nations Law of the Sea Conference, was originally scheduled for Thursday, July 21, 1977.

Due to a delay in the issuance of the current draft of the treaty, Ambassador Richardson will testify instead on July 26 at 10 a.m. in room 1318, Dirksen Senate Office Building, Washington, D.C.

For further information regarding this hearing, you may wish to communicate with Norm Williams of the subcommittee staff at 224–5249.

ENERGY CONSERVATION AMENDMENTS

Mr. JOHNSTON. Mr. President, the Subcommittee on Energy Conservation and Regulation of the Senate Committee on Energy and Natural Resources will hold hearings on Monday, July 25 and Tuesday, July 26 on proposed energy conservation amendments to the President's energy bill, S. 1469. These hearings will commence at 8 a.m. in room 3110 of the Dirksen Senate Office Building. Testimony will be received from administration and selected private witnesses.

Questions about these hearings should be directed to Benjamin S. Cooper or James T. Bruce of the committee staff at 224–9894.

ADDITIONAL STATEMENTS

(Additional statements are printed at the conclusion of Senate proceedings today.)

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

DEFENSE APPROPRIATIONS, 1978

The PRESIDING OFFICER (Mr. DECONCINI). Under the previous order, the Senate will now proceed to the consideration of H.R. 7933, which will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations with amendments.

The PRESIDING OFFICER. Time for debate on this bill is limited to 4 hours, to be equally divided between and controlled by the Senator from Arkansas (Mr. MCCLELLAN) and the Senator from North Dakota (Mr. YOUNG), with 1 hour on amendments in the first degree, except any amendments dealing with the B–1, on which there shall be 2 hours.

On any amendment deleting funds for the civilian firing range, there shall be 2 hours. On each of the following committee amendments there shall be 1 hour, unless the limitation is disapproved by the Senator from Alabama (Mr. ALLEN): two amendments resulting in the reduction of funds for the Civil Air Patrol; amendments resulting in the reduction of funds for the BMD program; and an amendment adding section 857 and any degree, debatable motion, appeal, or amendment changing appropriations occasioned by adding section 857, with 30 minutes on any amendment in the second point of order.

Mr. ROBERT C. BYRD. I suggest the absence of a quorum. I ask unanimous consent that the time not be charged against either side on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STONE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STONE. Mr. President, I ask unanimous consent that Mr. George Patten, of the staff of Senator Chiles, and Mr. Barry Schochet, of my staff, be accorded the privilege of the floor during debate and votes on this defense appropriations bill.

The PRESIDING OFFICER. Without objection, it so ordered.

Mr. ALLEN. Mr. President, I ask unanimous consent that Mr. Carlton Betenbaugh and Mr. Fred Eiland, of my staff, be accorded the privilege of the floor during debate and vote on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHILES. Mr. President, I ask unanimous consent that George Patten and Ron Chido of my staff be accorded the privilege of the floor during consideration of the defense appropriations bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHILES. I suggest the absence of a quorum.

The PRESIDING OFFICER. Without objection, the time will not be charged.

Mr. ROBERT C. BYRD. Mr. President, let the time be equally charged.

The PRESIDING OFFICER. Without objection, the time will be equally charged.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, what is the pending order of business before the Senate?

The PRESIDING OFFICER. The clerk will state the pending business.

The assistant legislative clerk read as follows:

An act (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending Sept. 30, 1978, and for other purposes.

Mr. STENNIS. Mr. President, I have just had a conference in the corridor here with the Senator from Arkansas (Mr. McCLELLAN), who is chairman, as we all know, of the Appropriations Committee; and he is chairman also of the subcommittee. He and the Senator from North Dakota (Mr. YOUNG) held the hearings on this bill and started off on the writeup of it, assisted, of course, by other members of the committee from time to time; and the full committee also has passed on it.

Then we have had some special additional amendments from the committee, proposed after the bill was reported.

The Senator from Arkansas has asked me to proceed here for him as acting floor manager of the bill, especially for the time being, and I am glad to undertake to render any service that I can in that respect.

Therefore, I ask for the floor as floor manager of the bill, and will make the opening statement prepared for the floor manager, Mr. McCLELLAN, to make, and then I hope the Senator from North Dakota will also seek recognition.

Mr. President, at the suggestion of the Senator from West Virginia, our majority leader, I ask unanimous consent that the authority heretofore given by the Senate to the Senator from Arkansas (Mr. McCLELLAN) to have control of the time as floor manager of the bill be transferred for the time being to me.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. STENNIS. I thank the Chair.

Mr. President, I will proceed now with the opening statement, and I hope that the Senator from North Dakota will then seek recognition.

Mr. President, the Committee on Appropriations has carefully considered H.R. 7933, the Defense Appropriations Bill, and recommends an appropriation of $111,094,847,000 in new budget authority for the Department of Defense for fiscal year 1978.

The figure of $111 billion to which I have just referred applies to the bill as reported to the Senate on July 1, 1977, however, the President's decision not to proceed with production of the B–1 strategic bomber has brought some changes which I shall now explain.

The fiscal year 1978 defense appropriations bill as passed by the House and reported by the Senate Committee on Appropriations includes $1,431,400,000 to procure five B–1 bombers with initial spares and advance procurement funds for future buys. On July 12, the Senate received a budget amendment related to the B–1 bomber program. The Committee on Appropriations met on July 13, and, by a vote of 10 to 5, recommended an amendment to delete $1,466,400,000 in B–1 aircraft and SRAM–B missile production funds. This is the amount in the reported bill which the President now asks be deleted.

So I intend to offer that committee amendment after the conclusion of my remarks and after the Senator from North Dakota has made his opening statement. I reiterate that the following remarks refer to the bill as reported prior to receipt of the B–1 budget amendment.

Many difficult funding choices were required in order to arrive at this recommendation, but we believe that it establishes a level of spending that will be adequate for our national security while it is commensurate with our available resources.

The Committee on Appropriations spent many hours examining the various programs submitted by the administration, and we have pruned the request of low-priority projects that are less vital to our national security than others.

While not all Members of the Senate will be content with every recommendation contained in the bill, the committee has tried to be prudent while meeting the challenges which face us.

Thus, Mr. President, I believe this bill deserves the support of the entire Senate and hope that it will be approved without crippling amendments.

OVERALL RECOMMENDATIONS

In addition to the $111,094,897,000 in new budget authority contained in this bill, the committee proposes transfers totaling $258,500,000, so that the amount actually recommended totals $111,353,397,000, as I have already mentioned. But, Mr. President, of this amount only $102,313,297,000 is available for real defense purposes since over $9 billion must go to pay for pensions for retired military personnel. Appropriations in the amount of $9,010 billion for retired military and $35,100,000 for the Central Intelligence Agency retirement fund are contained in this bill. This money—this $9 billion plus amount—contributes absolutely nothing to our military preparedness effort. It is not available to the Department for any purpose—not for procurement—not for research and development—nor for routine operation and maintenance.

I want to make that clear for the information of the press and the Members of the body. It is for retirement compensation only.

By division according to the services, our bill would provide $26,876,454,000 for the Department of the Army, $38,296,314,000 for the Navy Department, $32,572,266,000 for the Department of the Air Force, $4,293,813,000 for the defense agencies and related items, and $9,010,000,000 for retired military pensions.

By title, the committee's recommendations include: $25,915,724,000 for military personnel appropriations, $9,010 million for retired military personnel, $33,010,008,000 for operation and maintenance accounts, $31,833,767,000 for procurement, $11,108,548,000 for research and development, including the small foreign currency program, and $46,050,000 for the Central Intelligence Agency retirement fund and for miscellaneous other programs. This bill does not include funds for military construction. family housing, foreign military assistance, and civil defense—all of which are included in other appropriations bills.

RECOMMENDED REDUCTIONS

The $111,094,897,000 in new budget authority recommended in the bill for fiscal year 1978 is a reduction of $2,782,383,000, or 2 percent below the administration's budget request. It is $1,012,589,000 more than the House bill and $5,988,572,000, or 5.6 percent, above the amounts appropriated for the Defense Department in fiscal year 1977—including all supplementals. The bill recommended by the committee will result in outlays of $73,529 million in fiscal year 1978. These outlays, plus outlays of $28,017 million from prior year defense appropriations, will result in total defense outlays in fiscal year 1978 of $101,546 million.

MAJOR CHANGES FROM HOUSE BILL

There is a very large number of changes in the bill before the Senate when compared to the House bill. For convenience, the committee summarized and highlighted the major changes on pages 5 through 9 of its report. I shall insert those pages in the record following my statement, since they provide a convenient summary.

In order to convey to this body the magnitude of the task accomplished by the Committee on Appropriations, I am also including a table showing the number of line items acted on by the committee. The budget request contains 800 line items in military personnel and retired pay, 250 in operation and maintenance, 1,486 in procurement, and 769 in research and development. In all, 3,305 line items were reviewed.

Even these numbers do not reveal the total picture, for the operation and maintenance and military personnel accounts are further subdivided into numerous pieces, but I believe these numbers clearly demonstrate the high level of effort required. The House made adjustments in 550 programs, with reductions totaling $3,778,434,000 from the budget request they considered. The House bill is actually $1,012,289,000 below the budget request considered by the Senate committee. The committee reviewed every adjustment made by the House, and, of these reductions, restored $1,555,838,000 involving 178 programs.

In addition, the committee recommended other reductions totaling $559,787,000 below the House bill in 182 programs. Therefore, the net recommendations in the bill are $2,782,383,000 below the House bill, involving 732 line items, and there is a very significant difference in the mix of programs funded and in dollar amounts.

SUMMARY OF ITEMS IN THE BILL

The funds recommended in the committee bill buy two basic things—the day-to-day pay and operating costs of our military forces, and second, investment in new items of military equipment, including both research and development of new weapons and equipment, as well as actual procurement.

The bill includes recommendations of $58,925,732,000 for the pay and operating costs of active duty military, Reserve Forces, and Department of Defense civilians. This amount includes $25,915,724,000 for military personnel and $33,010,008,000 for operation and maintenance—which includes the pay for most of the civilian personnel.

In the first category, the recommended funds will pay for an active Army of 16 divisions and 6 separate brigades, a Navy with 462 commissioned ships in the active fleet and 3,712 active aircraft, 3 active Marine Corps divisions, each with an associated aircraft wing, and an Air Force with 9,253 aircraft and 1,054 ballistic missile launchers.

Manpower funded in this bill is: 2,058,042 in the Active Forces and 858,342 in the Reserve components, for a total of 2,916,384. In addition to the military manpower, funds are included for a total of $1,006,240 civilian employees of the Department of Defense. This is a reduction of 15,074 from the budget request and approximately 3,000 below the level in the authorization bill.

Now I shall turn to the second aspect of the purpose of funds in this bill: The development and procurement of new weapons and equipment for our Armed Forces. The committee recommends $42,939,835,000 for these programs, which are a key part of the modernization needed by our Military Establishment. This amount consists of $11,106,068,000 for research and development and $31,833,767,000 for procurement.

The committee recommends a total of $2,352,758,000 for Army research and development. This includes: $58.8 million for the ballistic missile advanced technology, $56.2 million for ballistic missile defense system technology, $24.2 million for a forward area air defense gun, $165 million for a utility tactical transport helicopter, $165 million for an advanced attack helicopter, $214 million for the Patriot surface-to-air missile system, and $117 million for the XM–1 tank.

A total of $4,029,114,000 is recommended for Navy research and development. This includes: $332 million for Trident missile, $210.3 million for the strategic cruise missile, $60 million for the advanced Harrier aircraft, $626.6 million for F–18 fighter aircraft, $29.7 million for the HARM antiradiation missile, $20 million for ELF communications, and $107.3 million for the LAMPS antisubmarine helicopter.

For Air Force research and development, the committee recommends $3,953,918,000. This includes: $134.4 million for intercontinental ballistic missile technology, $442.5 million for the B–1 bomber, $120 million for the air launched cruise missile, $100 million for AWACS aircraft, $192 million for the F–16 aircraft, $40.6 million for C–5 rewinging, $124 million for the space shuttle, and $60.6 million for defense satellite communications.

In the area of procurement, some of the major programs include the following:

For the Army, $17.2 million for 20 C–12 cargo aircraft; $194 million for 56 UTTAS utility tactical transport aircraft; $502.9 million for the procurement of 800 M60A3 tanks; $57.6 million in advance procurement funds for the new combat tank, the XM–1; $93.3 million for 509 improved Hawk missiles and six battery sets of ground support equipment; $77.7 million for 360 nonnuclear warheads and spares for the Lance surface-to-surface missile system; and $42.3 million to procure 445 Stinger air defense missiles.

For the Navy, the committee recommends: $107.4 million for the purchase of 12 A–7E attack aircraft; $28.7 million for 34 T–34C aircraft; $157.9 million for 12 A–6E attack aircraft; $129.7 million for six EA–6B electronic warfare aircraft; $623.4 million for 40 F–14A fighter aircraft; $29.3 million in advance procurement funds for the F–18 fighter aircraft; $21.6 million for the procurement of 22 CTX utility aircraft; $921.1 million for the Trident missile program; $81.6 million for advance procurement of the CVN nuclear aircraft carrier; $614 million for two DD–963 air capable destroyers; $1,490.3 million for the purchase of two Trident nuclear ballistic missile submarines; $278.5 million for the purchase of one SSN–688 class nuclear submarine; $180 million in advance procurement funds for the CGN–42 AEGIS cruiser; $930 million for one DDG–47 guided missile destroyer; and $1,205.3 million for eight FFG guided missile frigates. The committee also directs that prior year funds be used to fund five more patrol hydrofoil missile—PHM—ships to complete the six-ship program.

For the Air Force, the committee recommends: $652 million for 120 A–10 close air support aircraft; $1,523.7 million for 97 F–15A air superiority fighter aircraft; $1,152.4 million for 96 F–16 air combat fighters; $62 million for C–130H transport aircraft; $201 million for three AWACS aircraft; $25.6 million for the NavStar global positioning system; $83.2 million for the satellite data system; and $61.9 million for backup Titan IIID boosters. The committee also recommends approval of the F–15A production Eagle package.

The bill also includes $9,010 million for retired military personnel. There will be over 1,120,000 retired persons on the rolls in fiscal year 1978. The final items funded in the bill are $35,100,000 to meet the current unfunded liability of the CIA retirement pension fund, and $8,950,000 to support the intelligence community staff, an independent body responsible to the Director of Central Intelligence for oversight of the entire intelligence community and associated programs.

DEFENSE BILL IN RELATIONSHIP TO THE FIRST CONCURRENT RESOLUTION ON THE BUDGET

Mr. President, on page 12 of the committee report, there is a table comparing the amounts in the bill with the committee allocation of amounts in the first concurrent resolution for 1978. This bill is $1,905 million below the budget authority allocation and $2,154 million below the outlay allocation made by the Appropriations Committee to the Defense Subcommittee. I shall insert the table in the RECORD following my remarks. I must advise the Members that this is not as great a savings as it may first appear, since the committee currently expects to receive supplementals of $2.3 billion. This amount includes current estimates of the impact of pay raises for military and civilian personnel and miscellaneous other small items. If the total of this supplemental is added to the amounts recommended in the bill, total funds would be about $0.4 billion above the resolution in budget authority and $0.2 billion above the outlays. On the basis of past history, however, reductions will be made to the supplemental request, and the committee believes that amounts ultimately appropriated for the Department of Defense in fiscal year 1978 will be within the level contained in the first concurrent resolution.

DEFENSE IN COMPARISON WITH OTHER FEDERAL AGENCIES

Outlays for national defense have shrunk during the 10-year period 1968–78 from 44.4 percent of the total Federal budget outlays in fiscal year 1968 to 24.4 percent in the bill pending before you for fiscal year 1978.

Since fiscal year 1968, the cost of the Federal Government has gone up $284.1 billion—from $178.8 to $462.9 billion currently estimated by the Congressional Budget Office for fiscal year 1978. Of that total increase, only $33.8 billion, or 11.9 percent, is attributable to national defense spending. The remaining 88.1 percent or $250.3 billion, is attributable to nonmilitary functions and services such as human resources and general government.

Since fiscal year 1968, nondefense programs, including Federal outlays for human resource items—education, manpower, health—including medicare and medicaid, income security—including individual benefits—have increased from 55.6 percent of the total budget to 75.6 percent. In dollar terms, the increase in the last 10 years for nondefense functions was $250.4 billion, from $99.4 to $349.8 billion.

Thus, while national defense costs were rising by 42 percent over the past 10 years—from $79.4 to $113.0 billion—the total of other government expenditures was climbing from $99.4 to $349.8 billion—an increase of 251 percent.

And the defense share of both the total Federal budget and the gross national product continues to decline. In fiscal year 1978, for example, proposed national defense outlays will constitute only 23.7 percent of the total budget—down over 20 percent from the fiscal year 1968 level of 44.4 percent of the budget. Between 1968 and 1978, national defense outlays will decline from 9.6 percent of the gross national product to 5.6 percent. During this same period, outlays for the nondefense portion of the budget rose from 12.0 to 17.2 percent of the gross national product.

Moreover, defense spending has been rising far less rapidly than any other major item in the budget.

For example, during the past 10 years:

Federal aid to education, manpower, and social services jumped 284 percent, from $7.0 to $26.9 billion.

Income security programs increased 334 percent, from $33.7 to $146.5 billion.

Health services, including medicare and medicaid, increased by 359 percent, from $9.7 to $44.6 billion.

Interest on the national debt increased by 203 percent, from $13.7 to $41.7 billion.

I will insert a table that shows the detail of all these figures in the RECORD following my remarks.

CUTS IN DEFENSE COMPARED WITH CUTS IN OTHER AREAS

I would like to point out, Mr. President, that in fiscal year 1973, the year that Senator MCCLELLAN became chairman of the Senate Appropriations Committee, the Congress was able to reduce the regular Defense Department appropriation requests by $5.2 billion in budget authority. Between fiscal year 1973 and fiscal year 1977, we have reduced the Department of Defense request by $24.5 billion. The committee is recommending a cut of $2.8 billion in this bill.

Over the past 5 years, the Congress has cut the administration's total budget by $25.2 billion in regular appropriations bills. Of this total reduction, $24.5 billion was slashed from the defense budget, while only $0.7 billion of the total was cut from regular appropriations bills for all other Government agencies and departments.

Mr. President, I point out that the greatest percentage of reductions made in nondefense areas was made in foreign aid spending. A very small percent, indeed, Mr. President, of the total reductions in this 5-year period have been made from areas other than national defense and foreign aid. Many other agencies of the Government have had their appropriations increased over the President's budget.

With a cut of $2.8 billion from funds requested for defense recommended for this year, we will have reduced military spending by over $27 billion in the last 6 years. I will place in the RECORD a table showing these items following my remarks.

Mr. President, we live in a period of international tension and uncertainty. We must have a strong and ready defense force if we are to provide credibility to our foreign policy.

I ask unanimous consent to insert at this point the various tables and other material I have referred to previously.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SIGNIFICANT ITEMS AND MAJOR CHANGES TO HOUSE BILL

The Committee recommends the following major actions, particularly with respect to the House Bill:

MILITARY PERSONNEL

Military Personnel in Non-Appropriated Fund Activities—Recommends replacing with civilians the 14,000 military personnel currently serving in Non-Appropriated Fund Activities such as Post Exchanges and officers' clubs. These military personnel will be returned to military duties.

Transfer of Certain Reserve Functions from Pay Categories A and B to Pay Category D—Recommends against the House proposal to transfer Reserve Functions (Civil Affairs, Public Affairs, Law/Legal, Chaplains, and Research and Development) from 24 to 48 annual drills plus two weeks annual Active Duty Training, to Active Duty Training only.

Career Counselors—Recommends reducing funding for the full-time career counselor program in the Army National Guard. Supports a limited test of the full-time career counselor concept using existing resources.

Enlisted Aides—Recommends limiting number of enlisted aides for general/flag officers to a total of 150 for the Department of Defense.

RETIRED MILITARY PERSONNEL

Retired Pay—Recommends a general provision prohibiting retired military personnel employed by the Federal Government from receiving military retired pay. The provision applies only to new employees hired after September 30, 1977. The limitation does not apply to any military retiree whose annual retired compensation rate is less than $6,000 per annum as of September 30, 1977.

OPERATION AND MAINTENANCE

Base Operating Support—Recommends military and civilian reductions totaling $324 million base operating support as a result of the Subcommittee's base-by-base analysis of the cost of the day-to-day operating costs of military bases.

Commissary Clerk-Hire Subsidies—Recommends a three-year phaseout of the appropriated subsidy for commissary clerk-hire.

Inflation in Operating Accounts—Recommends reducing budget request of $1.2 billion by $500 million. Provides inflation factor only for military readiness items.

Materiel Readiness—Recommends increase of $146.1 million for depot maintenance overhaul of equipment to improve materiel readiness.

High School Completion Programs—Recommends elimination of high school completion programs not required as remedial preparation or for military occupational specialties. Continues all off-duty high school programs.

Consolidation of Undergraduate Helicopter Pilot Training—Recommends against consolidation proposed in the President's budget, and agreed to by the House.

Advanced Undergraduate Pilot Training—Recommends a general provision which prohibits the use of funds for the consolidation or realinement of advanced undergraduate pilot training squadrons of the Navy.

Elimination of Subsidy for Transportation for Exchange Goods Overseas—Eliminates a $70 million subsidy since it is not in accordance with present law.

Contracting Out—Recommends striking a House provision that prohibits the Department of Defense from contracting out for certain base support functions.

Secretary of Defense Readiness Fund—Recommends a new appropriation of $300 million to be used solely to improve military readiness.

Wage Board Employees—Recommends a general provision which prohibits pay raises that would cause pay of wage board employees to exceed prevailing rates in the private sector but stipulates that no employee's pay shall be reduced from current levels.

PROCUREMENT

Aircraft

Army: C–12A cargo aircraft—Adds $17.2 million for buy of 20 aircraft.

UTTAS utility tactical transport aircraft system—Sustains House in providing funds for buy of 56 helicopters.

Navy: A–7E attack aircraft—The House provided $92.5 million to buy 12 aircraft. Committee recommends the authorized amount of $107.4 million to fund buy of 12 aircraft and $5.0 million for advance procurement.

T–34C trainer aircraft—House provided no funds. Committee recommends authorized amount of $28.7 million to buy 34 aircraft.

A–6E attack aircraft—Sustains House in providing funds for procurement of 12 aircraft.

EA–6B electronic warfare aircraft—Sustains House in providing funds to buy 6 aircraft.

F–14A fighter aircraft—Sustains House in providing authorized amount of $623.4 million to buy 40 aircraft, $33.4 million for spares, and $132.3 million for advance procurement.

F–18 fighter aircraft—Sustains House in providing $29.3 million for advance procurement.

CTX utility aircraft—Sustains House in providing $21.6 million for procurement of 22 aircraft.

Air Force: A–10 close support aircraft—House provided $741.8 million to buy 144 aircraft, $48.7 million for advance procurement, and $30.2 million for spares. Committee recommends $652.0 million to procure 120 aircraft, $43.8 million for advance procurement, and $27.2 million for spares. Recommend total reduction of $97.7 million under House.

F–15 fighter aircraft—House provided $1,259.1 million to buy 78 aircraft and $69.6 million for advance procurement. Committee recommends program of $1,523.7 million for procurement of 97 aircraft and $69.9 million for advance procurement.

F–15 Production Eagle Package (PEP 2000) program—Committee recommends approval of the program.

B–1 strategic bomber—Sustains House provision of $1,172.6 million for buy of 5 aircraft, $120.8 million for spares, and $138.0 million for advance procurement.

F–16 air combat fighter—House provided $1,256.2 million to buy 105 aircraft, $208.8 million for spares, and $37.7 million for advance procurement. Committee recommends $1,152.4 million to buy 96 aircraft, $208.8 million for spares, and $37.7 million for advance procurement. Recommend reduction of $103.8 million under House.

C–130H transport aircraft—Sustains House provision of $62.0 million to buy 8 aircraft and spares.

E–3A AWACS aircraft—Sustains House allowance of $201.0 million to buy 3 aircraft, $12.8 million for spares, and $40.5 million for advance procurement.

Missiles

Hawk missile system—Sustains House provision of $93.3 million to buy 509 missiles and six battery sets of ground support equipment.

Lance missile system—House provided $65.0 million for non-nuclear warheads. Committee recommends authorized amount of $77.7 million to buy 360 non-nuclear warheads and spares.

Stinger missile system—House provided $34.0 million to buy 258 missiles. Committee recommends authorized amount of $42.3 million to procure 445 missiles.

Trident missile program—Provides full budget request of $921.1 million and $213.6 million for advance procurement.

NavStar Global Positioning System—House provided no funds. Committee recommends the authorized amount, $25.6 million.

Satellite Data System—Committee recommends authorization of $83.2 million.

Backup Titan IIID boosters—House provided no funds. Committee recommends authorized request of $61.9 million.

Navy ships

CVN nuclear aircraft carrier—House provided no funds. Committee recommends authorized amount of $81.6 million for advance procurement.

DD–963 destroyer (air capable)—House provided no funds. Committee recommends authorized amount of $614.0 million for two ships.

Patrol hydrofoil missile (PHM) ship—House concurred in DOD proposal to terminate the program. Committee directs prior year funds be used to fund five more ships and complete the six ship program.

Trident nuclear ballistic missile submarine—Sustains House buy of two submarines.

SSN–688 class nuclear submarine—Sustains buy of one ship.

CGN–42 AEGIS cruiser—Committee recommends $180.0 million for advance procurement.

DDG–47 guided missile destroyer—Committee recommends $930.0 million for first ship of new class.

FFG guided missile frigate—Committee recommends $1,205.3 million for procurement of eight ships.

Army tracked vehicles

M–60 series tanks—House provided $420.3 to buy 759 M60A3 tanks. Committee recommends authorized amount of $502.9 million to procure 800 M60A3 tanks.

XM–1 combat tank—House provided $37.0 million for advance procurement. Committee recommends authorized amount, $57.6 million.

RESEARCH, DEVELOPMENT, TEST AND EVALUTION

Army

Ballistic Missile Defense—Deletes $100,000,000 from the Ballistic Missile Defense program, leaving a total of $114,000,000.

Conventional Airfield Attack Missile—Restores $2,968,000 to begin development of an airfield attack missile in conjuction with Pershing II.

Advanced Forward Area Air Defense System—Restores $24,200,000 to continue development of an air defense gun.

Interim Scout Helicopter—Restores $7,500,000 to study a new scout helicopter and test an infrared device on a Cobra helicopter.

Food Research—Adds $3,000,000 for food research.

Tactial Surveillance System—Deletes $11,274,000 for tactical surveillance.

Navy

Defense Research Sciences—Restores $10,000,000 for Defense Research Sciences.

Surface Effects Ship—Restores the budget request of $43,949,000 to continue the Surface Effects Ship.

Tactical Airborne Signal Exploitation System (TASES)—Restores the budget request of $15,795,000 to continue development of TASES.

Hi-Speed Anti-Radiation Missile (HARM)—Restores $14,738,000 to the budget level of $29,738,999 for engineering development of HARM.

ELF Communications (Seafarer)—Restores $20,141,000 to continue Seafarer in advanced development.

AEGIS Test Site—Reduces the funding for the land based test site for AEGIS by $7,000,000 to delete Civil Service manning at the site.

Shipboard Intermediate Range Combat System (SIRCS)—Deletes $3,894,000 for SIRCS because program is unduly restricted and thus unworkable.

Enforcer Aircraft—Provides $3,900,000 to begin procurement and test of four Enforcer aircraft.

F–14 engine—Provides $24,000,000 to continue development of a replacement engine for F–14 aircraft.

Air Force

Strategic Bomber Penetration—Adds $7,600,000 for RAMJET technology.

SAC Communications—Restores the budget request of $18,800,000 for SATIN IV communications system.

Ground Launched Cruise Missile—Restores $13,900,000 to the budget level of $27,900,000 for Ground Launched Cruise Missile studies.

Defense Satellite Communications (DSCS III)—Restores $60,600,000 to continue development of the DSCS III satellites.

NATO Early Warning Aircraft—Restores $15,700,000 for NATO AWACS integration.

LINE ITEM REDUCTIONS AND RESTORATIONS

	Total number of line items, program elements, or projects in account (all services)	Total number of line items or programs where House bill made adjustments	Value of House adjustments (thousands)	Number of programs House cut where Senate restored funds or made adjustments	Value of Senate restorations or adjustments (thousands)	Number of programs Where Senate made adjustments not in House bill	Value of Senate adjustments (thousands)	Total number of programs adjusted by Senate	Total value of Senate adjustments (thousands)

COMPLIANCE WITH SECTION 308 OF THE BUDGET CONTROL ACT

Section 308(a) of the Budget Control Act (Public Law 93–344) requires that this Committee include in its report specific budgetary information on the status of recommended appropriations relative to the First Concurrent Resolution. The following table provides these data:

BUDGETARY IMPACT OF H.R. 7933 [1]

[In millions of dollars]

	Budget authority		Outlays	
	Committee allocation	Amount in bill	Committee allocation	Amount in bill
I. Comparison of amounts in the bill with the committee allocation to its subcommittees of amounts in the 1st concurrent resolution for 1978: Subcommittee on Defense	113,000	111,095	103,700	[2] 101,546
II. Summary by functional category of 1978 budget amounts recommended in the bill:				
050—National defense	113,000	111,093	103,700	[2] 101,545
800—General government		2		2
III. Financial assistance to State and local governments for 1978 in the bill				
IV. Projections of outlays associated with budget authority recommended in the bill:				
1978				[3] 73,529
1979				19,747
1980				9,703
1981				3,994
Future year				4,122

[1] Prepared by the Congressional Budget Office pursuant to sec. 308a, Public Law 93–344.

[2] Includes outlays from prior year budget authority.

[3] Excluded outlays from prior year budget authority.

While the above indicates that appropriations recommended by the Committee result in levels $1.9 billion below the Resolution in budget authority and $2.2 billion in outlays, it should be pointed out that an additional $2.3 billion has yet to be considered. This amount, to be transmitted next year as a supplemental budget request, includes current estimates for the impact of pay raises for military and civilian personnel and miscellaneous smaller items. On the basis of past history, however, reductions will be made to the current estimate for the supplemental request, both by the Department and by the Congress. The Committee is certain that amounts ultimately appropriated for the Department of Defense in fiscal year 1978 will be well within the levels for budget authority and outlays contained in the First Concurrent Resolution.

BUDGET OUTLAYS BY FUNCTION—10-YEAR COMPARISON, FISCAL YEARS 1968-78

[In millions of dollars]

	Fiscal year 1968			Fiscal year 1978 (President's budget)			
	Amount	Percent of total budget	Percent of GNP [1]	Amount	Percent of total budget	Percent of GNP [1]	Amount and percentage increase from fiscal year 1968 to fiscal year 1978
National defense (050)	79, 409	44. 4	9. 6	113, 046	24. 4	5. 6	Up $33,637,000,000 or 42 percent.
(Department of Defense—051)	(77, 373)	(43. 4)	(9. 3)	(109, 258)	(23. 6)	(5. 4)	(Up $31,885,000,000 or 41 percent.)
Education, training, employment, and social services (500)	7, 004	3. 9	. 8	26, 900	5. 8	1. 3	Up $19,896,000,000 or 284 percent.
Health (550)	9, 708	5. 4	1. 2	44, 622	9. 6	2. 2	Up $34,914,000,000 or 359 percent.
Income security (600)	33, 680	18. 8	4. 1	146, 496	31. 6	7. 2	Up $112,816,000,000 or 334 percent.
(General retirement and disability insurance—601,602)	(27, 212)	(15. 2)	(3. 3)	(109, 022)	(23. 6)	(5. 4)	(Up $81,810,000,000 or 300 percent.)
(Public assistance—604)	(4, 059)	(2. 3)	(. 5)	(25, 364)	(5. 5)	(1. 2)	(Up $21,305,000,000 or 524 percent.)
Interest (900)	13, 751	7. 7	1. 7	41, 708	9. 0	2. 0	Up $27,957,000,000 or 203 percent.
General government and all other functions	35, 281	19. 6	4. 3	90, 110	19. 5	4. 5	Up $54,829,000,000 or 155 percent.
Total	178, 833	100. 0	21. 5	462, 882	100. 0	22. 7	Up $284,049,000,000 or 158 percent. [2]
10-YEAR COMPARISON OF DEFENSE OUTLAYS TO TOTAL OUTLAYS							
National defense (050)	79, 409	44. 4	9. 6	113, 046	24. 4	5. 6	Up $33,637,000,000 or 42 percent.
(Department of Defense—051)	(77, 373)	(43. 3)	(9. 3)	(109, 258)	(23. 6)	(5. 4)	(Up $31,885,000,000 or 41 percent.)
Federal Government other than defense	99, 424	55. 6	12. 0	349, 836	75. 6	17. 2	Up $250,412,000,000 or 251 percent.
Total	178, 833	100. 0	21. 5	462, 882	100. 0	22. 7	Up $284,049,000,000 or 158 percent. [2]

[1] Using GNP estimates of $830,300,000,000 for fiscal year 1968 and $2,636,700,000,000 for fiscal year 1978.

[2] Of the total increase of $284,000,000,000, only 11.9 percent is attributable to national defense while 88.1 percent is attributable to nonmilitary functions.

Note: Columns may not add due to rounding.

[1] Education considered in separate bill in fiscal year 1976.

[2] Does not include public works employment appropriation bill (Public Law 94-447).

Note: Detail may not add to totals because of rounding.

Source: Prepared by the Congressional Budget Office at the request of the Senate Appropriations Committee, Feb. 28, 1977.

Mr. STENNIS. Mr. President, this statement is for the information of the membership. Few Members are interested in all these points, but some Members are interested in virtually every one of them. And, of course, the press and the public are interested. We have tried to set forth in the report first, and then in the summary statement which we bring to the floor, all of the major high points, and many of the points which are not so major, which the committee has worked on and what we have done about them.

Mr. President, I believe I have come to a convenient stopping place. I would like to yield the floor, but I want to invite the Senator from North Dakota to proceed at this point, if he wishes to.

Mr. YOUNG. I thank the Chairman.

Mr. President, the distinguished Senator from Arkansas (Mr. MCCLELLAN) and I held hearings on this bill for 3 months. The Senator from Arkansas has been attending to much other legislation besides this, and I believe he has overdone it. For a whole he was not very well. Now he has recovered and he has been working on this bill and other legislation most of the time. I am glad he used good judgment in not trying to handle this bill himself. He could not have picked a more able and qualified person to take his place than the Senator from Mississippi.

Mr. President, the distinguished Senator from Mississippi (Mr. STENNIS) has provided detailed information concerning the pending defense appropriations bill. If further information is desired by any Member of the Senate, I am sure the Senator from Mississippi, or I, would be happy to provide such information.

I will briefly comment on certain aspects of the bill and indicate those areas which I think need the most emphasis and consideration by the Senate.

This bill, as reported by the committee, recommends $111 billion for fiscal year 1978, which is $2.7 billion under the budget request. It is $1 billion over the House bill and $5.9 billion over the fiscal year 1977 appropriations for defense. If the amendment to be proposed by the committee concerning the B-1 is approved, the bill will be approximately $500 million under the House bill.

Mr. President, the bill as reported does not reflect a major last minute development—President Carter's decision to discontinue the B-1 bomber. As a result, an amendment will be offered, as approved by the Senate Appropriation Committee as requested by the President, to terminate the B-1 bomber which will reduce the bill by $1 billion 466.4 million.

That same budget amendment also requests the approval of additional items, many of which I believe are necessary. Approval of these items later in the

supplemental appropriations bill would add $449 million to the defense budget.

President Carter's decision to discontinue the B–1 bomber makes the stepped up development and production of the cruise missile in this bill far more necessary than before. Members of the Senate will recall that President Carter's position is to substitute the cruise missile for the B–1 bomber as a major segment of our defense system.

Personally, I believe it is a serious mistake to discontinue the B–1 bomber. We had already spent $4,395,500,000 and the estimated cost of terminating contracts for the B–1 is over $600 million. These are only preliminary estimates. Termination costs may be well over $1 billion. I made a motion during a meeting of the Senate Appropriations Committee to continue the B–1 bomber, but it lost by a 2-to-1 vote.

Mr. President, termination of the B–1 is not unlike other actions that have taken place in the past. Further production of the Minuteman III missiles was ordered discontinued by President Carter. These were to replace the 450 old, and far less effective, Minuteman II's. The costs of terminating the contracts for these will be roughly the same as if we had gone ahead and built the 60 additional Minuteman III's for which we had contracted. This is another indication of needless waste.

Only a short time ago, Congress unilaterally terminated the Safeguard antiballistic missile system, after an expenditure of more than $5.3 billion. The Congress directed the site at Grand Forks, N. Dak., to be dismantled before its operational capabilities could be evaluated and valuable experience gained.

More in line with the termination of the B–1 program was the termination of the B–70 program, after an expenditure of $1.5 billion.

Understandably, there are new weapons systems that should be discontinued if they are determined to be unnecessary or not cost effective. However, this should be done early in the development, before hundreds of millions, or even billions, of dollars are wasted. Such action is a terrible waste and Congress is just as much to blame as the Department of Defense and the President.

Let me give another example of a wasteful expenditure. The United States and the West German Governments, back in 1963, initiated a program of jointly developing a new tank that would be used by both countries. This seemed like a good decision, but somehow problems developed between the two countries and this new venture was discontinued, after hundreds of millions of dollars has been spent.

The Germans went ahead with the new Leopard tank and now we are trying to develop a new, more modern and effective tank of our own, the XM–1. Hopefully, this will start to replace our present M–60 tank by 1980. The point I am trying to make, Mr. President, is that this joint venture with West Germany cost us at least $700 million and much valuable lost time in developing a badly needed, more modern tank.

Mr. President, many other cases can be cited of wasteful and unnecessary spending in defense programs and, again, the responsibility must be shared by the Defense Department, the Congress, and the President.

Mr. President, the cruise missile undoubtedly will be a very effective and important weapon, but it will be several years before it will be in production and much of its importance will be lost without the new B–1 bomber, which is closely associated with an important element of the cruise missile delivery system.

This bill will provide a total active force in the Army, Navy, Marine Corps, and Air Force of 2,058,042, which is a reduction of 26,038 personnel. In addition, it provides reserve strength in the Army, Navy, Marine Corps, Air Force, Army National Guard, and Air National Guard of 858,342, which is an increase of 37,042.

The manpower reductions recommended are in the support areas and not in the combat units. Therefore, it is expected that the Army, Navy, Air Force, and Marine Corps combatant units will remain at their present strength.

Funding is provided in this bill to buy 381 combat aircraft for the Air Force and the Navy. This includes 120 A–10's, 97 F–15's, 96 F–16's, 40 F–14's, and 12 A–7's. These aircraft are needed if the services are to be permitted to retire older, obsolete aircraft and provide the Guard and Reserve with more capable combat aircraft.

Funds were also provided for procurement of 19 combatant ships and advanced procurement for two combatant ships. This funding would provide for two DD–963 destroyers, six patrol hydrofoil missile ships—PHM—two Trident nuclear ballistic missile submarines, one DDG–47 guided missile destroyer, and eight FFG guided missile frigates.

In addition, advanced procurement is provided for a CVN nuclear aircraft carrier and a CGN–42 Aegis cruiser.

Funding is provided for the Army to procure 800 M–60 tanks and for advanced procurement for the XM–1 combat tank.

Sum of $11,106,068,000 is provided for research and development. This is $671,650,000 more than was provided for fiscal year 1977 and $260,357,000 more than was provided by the House.

The committee went into great detail on our research and development programs and has made reductions in those areas that were not contributing to a strong research and development program. At the same time, we increased those programs that would insure a continued emphasis on maintaining a U.S. lead over the Soviet Union in research and development.

In considering the research and development items in the budget request, the committee went down literally hundreds of line items, ranging from basic technology through advanced technology and engineering and development for aircraft, missiles, tanks, computers, guidance systems, and many others.

Mr. President, with the deletion of $1.4 billion for the B–1 bomber, this bill will be $4.1 billion under the estimate of the Office of Management and Budget. It is also under the target ceiling established by the first concurrent resolution. Much of this reduction, as a result of discontinuing the B–1 bomber, will have to be restored in the supplemental defense appropriations bill, which I referred to previously.

Mr. President, I believe this bill before us represents the best thinking of the Armed Services Committees of the House and Senate, as well as the Appropriations Committees of the two Houses. It represents many compromises of differing positions among the Members of Congress, the Defense Department, and the President of the United States.

While this defense appropriations bill does not contain many of the items the Defense Department feels are necessary, it represents an increase over last year's appropriations bill, and I believe it will retain our present favorable balance of power with respect to Russia.

I hope it will be approved by the Senate without major changes.

Mr. STENNIS. Mr. President, there have been certain unanimous-consent agreements already agreed to with reference to the consideration of this bill. I am not going to undertake now to disturb that at all.

I see the Senator from Alabama is present on the floor, as he always is. I am glad he is here. I want to make some unanimous-consent requests about certain technical corrections, and so forth, in the Senate amendments and related matters of that kind that are usual. The Senator might listen to be certain that nothing is done that conflicts with what has already been done with reference to these matters.

Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical corrections in the engrossment of the Senate amendments to H.R. 7933, including the amendment which I send to the desk.

The PRESIDING OFFICER. Without objection, it is as ordered. The amendment will be stated.

UP AMENDMENT NO. 675

The assistant legislative clerk read as follows:

The Senator from Mississippi (Mr. STENNIS) proposes the unprinted amendments on behalf of the committee No. 675.

On page 54, line 5, add a comma after the word "Act".

On page 54, line 7, add a comma after the figure "$50,000".

The PRESIDING OFFICER. Is there objection to the amendment?

Mr. ALLEN. Reserving the right to object, Mr. President, does this amendment have to do with the B–1 appropriation?

Mr. STENNIS. Yes. All the amendment does is insert two commas that were omitted by mistake.

Mr. ALLEN. I see. I have no objection, of course.

The PRESIDING OFFICER. Is there objection?

The amendment was agreed to.

Mr. STENNIS. May we bring up this matter now? I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill, as amended, be considered as original text for the purpose of further amendment,

with the understanding that no points of order be considered as having been waived by reason thereof.

I know the Senator from Alabama has certain amendments reserved as to time. Could he consider reserving these same amendments from this unanimous-consent request? If he could, it would help.

Mr. ALLEN. I thank the distinguished Senator.

Reserving the right to object, as indicated on last Friday, there are three areas of Senate amendments that I wish to interpose an objection to being considered and approved en bloc. As I stipulated at that time, those amendments are the amendment or amendments that have to do with the reduction in the appropriation for the Civil Air Patrol.

As best I can figure out, that is in two places in the bill. It will take an amendment in two places. If there are other places, I should like to reserve that.

The second area would be in the amendment or amendments that reduce the appropriation for the ABMD program.

The third is the amendment or amendments—specifically section 857 of the bill—that have to do with prohibiting the consolidation of the helicopter training program.

Those three areas, I should like to object to. I have no objection whatsoever to the approval of the remaining amendments en bloc, but I do object to the approval of the amendments in the three areas I have outlined.

The PRESIDING OFFICER. Is there objection to the request with those exemptions?

Hearing none, without objection, it is so ordered.

Mr. STENNIS. I thank the Chair very much.

Mr. President, with reference to proceeding here, there are many amendments.

I would like to pick out one that will start the debate and will not have anything to do with the reservation of the Senator from Alabama to see if we cannot move into this bill and get the debate started and see what is coming to a vote.

I yield to the Senator from Alabama.

Mr. ALLEN. If I may be presumptuous and make this suggestion, it might be well to approve the committee amendment on the B–1 at this time. The committee has that right. Then, second, I believe the proper order would be to take the committee amendments in order.

I believe we can dispose of at least two of those amendments that I reserve objection to, if that would be satisfactory with the distinguished manager of the bill. But if he wishes to proceed with other amendments first, I have absolutely no objection.

Mr. STENNIS. I hope to get wound up a little as we go along.

What are the other wishes of the Senator from Alabama regarding his amendments?

Mr. ALLEN. I would like, according to the rules, to take up the first amendment that the Senator from Alabama made reservation concerning. I believe that is going to be accepted, having talked with some of the Members involved and some of the staff members; that is on the Civil Air Patrol.

Then we might move next in the bill to the BMD program.

I have talked to the distinguished Senators from Florida with respect to the consolidation of the helicopter program. They are agreeable to putting that particular amendment over until the bill is laid before the Senate again after the votes that take place on the legislative appropriations bill at 4 o'clock.

But I am not insisting on that order. I would certainly adjust my schedule to any desire of the distinguished manager of the bill.

Mr. STENNIS. What did the Senator say about the helicopter amendment?

Mr. ALLEN. To allow that to be carried over until after 4 o'clock. We have votes that come up on the legislative appropriations bill at that time by unanimous consent.

Mr. STENNIS. Yes.

Mr. ALLEN. Then when the bill is again laid before the Senate, bring up the helicopter amendment. Is that satisfactory?

I make no insistence at all.

Mr. STENNIS. I would like to reserve judgment on that.

My purpose is to accommodate everyone I can, but on a big bill like this we cannot always fit it in just the way everyone wants it.

Mr. ALLEN. I make no insistence at all.

Mr. STENNIS. I do not think it is well to try that, anyway.

I want to get this B–1 matter up to see what we will have, whether we will have an offer to change the committee amendment. It does have precedence, as I understand it. There are several that want to speak, which is entirely all right.

But I would like to call it up now. Some can be here now and some can be here later. I believe that will fit in.

Mr. ALLEN. That is perfectly all right with me.

Mr. STENNIS. I thank the Senator from Alabama.

Mr. ALLEN. I accede to the Senator's wish.

Mr. YOUNG. Mr. President, I understand there are several Senators who want to speak against the B–1 bomber amendment. I hope we would not try to come to a vote until later.

Mr. STENNIS. No.

The floor manager does not have any purpose in trying to come to a vote on this matter now, but we want to get it out in debate and just see where we are and what is going to be done.

Therefore, Mr. President, I call up, for the committee, this is a committee amendment, the so-called B–1 amendment which calls for the reduction of $1.4 billion plus and ask that the committee amendment be stated.

The PRESIDING OFFICER. Until the Chair can determine the placing of the accepted committee amendment, it cannot state whether this amendment is in order.

UP AMENDMENT NO. 676

Mr. STENNIS. Mr. President, I have two amendments now that I send to the desk and I ask unanimous consent that they may be considered en bloc.

These are the amendments on the B–1 and the five B–1 bombers. The committee proposes that money be deleted, that $138 million additional be deleted for advance procurement parts, that $120 million be deleted for initial spares, and that the SRAM–B missile production be reduced $35 million.

Those are committee amendments that I call up.

The PRESIDING OFFICER. Could the Senator inform the Chair whether or not this is the first committee amendment? If it is, then it is in order.

Mr. STENNIS. The first committee amendment after the bill has been reported.

The PRESIDING OFFICER. If it is, then it is in order.

Mr. STENNIS. It is an additional committee amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendments will be considered en bloc.

Mr. STENNIS. I thank the Chair.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Mississippi (Mr. STENNIS) on behalf of the committee, proposes unprinted amendment No. 676:

On page 25, line 9, strike the amount "$7,543,000,000" and insert in lieu thereof "$6,111,600,000".

On page 26, line 7, strike the amount "$1,772,200,000" and insert in lieu thereof "$1,737,200,000".

Mr. STENNIS. Mr. President, I have certain brief remarks that I will make now on this B–1 amendment. Then I propose that no one speak on it now, that we set it aside, if necessary, and go to something else. But I do think it is generally understood that it was going to be debated today. I do not know whether it will come to an actual rollcall vote.

Mr. President, just to get this B–1 amendment now clearly before the body, let me point out that Congress specially required the President to make a definite decision regarding the procurement or further production of the B–1.

I had consistently and actively supported the B–1 from the start and expected President Carter to continue a further production program as a modernization of the Triad as a part of our strategic defenses. However, President Carter had decided to stop the B–1 production at its present position, keep the future research and development actively going, and launch an enlarged research and development program on the air launch Cruise missile and related parts of the Cruise missile program.

I think it would be a great mistake now, and we would lose virtually a year of time in arguing about the decision by the President as to the B–1 or in seeking now to reverse the decision. I favor it being discussed and debated and talked about. even on this bill, to the extent that any Member might wish; but I caution now against waiting or postponing a decision as to this $1 billion plus item until a decision is fully reached as to what the alternative program is.

The thing to do now, as I see it, is to hold the B–1 program where it is, continue any needed further research on the B–1, and move forthwith on a positive program for an air-launched cruise missile and the means of launching this missile on target.

Accordingly the Senate Armed Services advance procurement parts, that $120 Committee, through the Research and Development Subcommittee, chaired by the Senator from New Hampshire (Mr. McINTYRE), is preparing hearings on this matter to begin this week. It is just a matter of days, as soon as the staff at the Pentagon can be prepared and our staff people can be prepared.

The hearings will be started this week, looking to the consideration by the committee and Congress of adequate authorizations supporting a positive cruise missile program.

I feel strongly that such a bill will be ready for Senate consideration by the beginning of the August recess. That is a short time, but time is of the essence.

I am vitally interested in the principle of authorization being carried forward. Therefore, I think the committee will waive the in-depth hearings on this new proposal about the cruise missile, which is not a new thing, and we can get this bill here for the Senate's consideration by the August recess.

This course will not be an abandonment of the B–1 bomber, which will be available for further consideration as the facts may develop. I mean the progress we already have made on the B–1 bomber.

I hope these matters can be settled on this basis and that the initial step will be taken by provisions in the pending appropriation bill, H.R. 7933.

The figures about which I have spoken in connection with this matter are those I have read already, that there be a deletion of $1,466,400,000 from the bill. That is what the Appropriations Committee voted on by a vote of 10 for the reduction and 5 against.

Mr. President, if there is any further discussion on the amendment now, it certainly would be in order.

Mr. GARN. Mr. President, I yield to the Senator from Maine for a unanimous-consent request.

Mr. HATHAWAY. Mr. President, I ask unanimous consent that my legislative assistant, John Doyle, and another member of my staff, Charles Peck, be accorded the privileges of the floor during the debate and votes on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GARN. Mr. President, I will not take a long period of time.

The PRESIDING OFFICER (Mr. GRAVEL). Who yields time?

Mr. YOUNG. Mr. President, I yield 5 minutes to the Senator.

Mr. GARN. I will not take a great deal of time. This issue has been debated over and over again. In the last 3 weeks, I have hardly discussed anything else around the country.

I want it as part of the record that at least this Senator is seriously concerned and distressed by the decision of the President of the United States to eliminate the B–1. I believe it was a political decision, not based on fact, and a decision that endangers the security of the United States.

For a long, long time, Congress and Presidents in both parties have pushed consistently the triad system of defense, that the greatest deterrent we could have would be to have this three-legged stool composed of manned bombers, intercontinental land-based ballistic missiles, and sea-launched ballistic missiles. It is important to look at the context in which the President made his decision to cut off one of the legs of the triad, because the other two legs also are weak. That is why I make the point that I think this decision, along with others, is endangering the strategic deterrent capability of this country.

We have submarine-launched ballistic missiles at the present time, which are primarily Polaris and Poseidon, which are older missiles, to be replaced by the Trident submarine weapons system. The important thing is that the Trident is only 40 percent complete. The Trident submarine system will not be fully operational until the mid-1980's at the earliest. So we have an older weapons system there, in contrast to the Soviet Union, which has its new class submarine in operation today to replace the Yankee class.

As to ICBM's, the President of the United States, 3 or 4 days later, made a decision to stop the only ICBM production line in the free world, while the Russians continue to operate four. We have not deployed an ICBM in more than 10 years.

We rely on aging Minuteman II's that have liner problems, that have some cracks, that are not very accurate, and that really cannot counteract the effects of a nuclear act. They are not hardened for that—the missiles themselves or their silos. We have stopped production.

At the same time, during those 10 years, the Russians have deployed four or five new missiles, from the SS–16 through the SS–20, with much greater throw weight, in a very short period of time, and a greater MIRV capability.

So as to the second leg of the triad, we have made a decision to stop, despite the fact that we unilaterally have put on a limit of 1,054 ICBM's. At the time we did that in 1967, the Russians had only 500, and we did it with some naive feeling that if we just stopped, they would, also. Well, that naive feeling was very ill-founded, because today they have about 1,600 missiles and we still have 1,054.

The replacement for the Minuteman III is the so-called MX missile, which would be a very good one, which certainly would counteract anything the Russians have, but we are also looking at the mid-1980's before that is operational.

So in this context, when you produce nothing new for 10 years, when you will not produce any replacements for another 8 to 10 years in submarines or ICBM's, it does not make very much sense to me to stop the production of the B–1, which is tested and would become operational much sooner than the other two replacements in ICBM's and submarine-launched ballistic missiles.

We hear a great deal about cost. That is the major reason we hear that the B–1 should not be built. We constantly hear the rhetoric that there are less costly alternatives. Yet, if we examine the facts of those alternatives—and let us do that for a moment—we are going to spend money operating the B–52. Some of the crews flying the B–52 today were not born when it became operational. It has been a very fine airplane, but it is also very old and outdated. If we upgrade a B–52 to be a standoff cruise missile carrier, as some have indicated, the cost is estimated at $18 billion. The whole B–1 fleet could be built for approximately $25 billion—$7 billion more.

The point is that an upgraded B–52, it does not matter how much money you spend on it, if you spend $100 billion you cannot turn it into a B–1. It has a bigger radar cross-section; it does not have the penetration capability; it cannot fly at the low level, just below supersonic speeds; it cannot fly at the high level, supersonic speeds of a B–1.

It does not have the electronic countermeasures capability. I could go on and on and on, that you cannot turn a B–52 into a B–1.

The Air Force has testified that the airframe is good through the 1990's. Well, big deal. That does not say anything about its capabilities as a weapons system. The DC–3's airframe will be good for the 1990's. It has been good since 1937. Maybe we should hang cruise missiles on a DC–3. I do not know.

The point is you do not turn a B–52 into a B–1 no matter how much money you spend on it, and I think any money we would spend towards doing that would be a waste of time and money.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. STENNIS. I yield the Senator 5 minutes.

Mr. GARN. Then we hear another alternative. The President has proposed in his recommended changes in the budget to buy a 747, and we have heard all the talk about a 747 being used to carry cruise missiles and carry double the number of the B–1.

Well, nobody really knows what it will do because it has not been tested, it has not been tried. It is on paper at this point.

But when we complain about a B–1 costing $100 million, which I am sure it would, if you want to buy a 747 right now from Boeing it will cost you $43 million in a civilian passenger version, and nobody really knows how much it is going to cost to modify that just structurally to carry cruise missiles, to militarize it, and no estimate of the cost of all of the electronic gear that would be necessary to go in it.

I think it would be a fair estimate that a 747, if we are looking at it totally on the basis of cost, could cost upward of $100 million, too, and what do we have? We still do not have a B–1. A 747 or a B–52 cannot be turned into a B–1 no matter how much is spent on it.

Now, if the opponents were making an argument that we did not need a manned bomber, that is something different. If they said we do not need that leg in the Triad, that is something entirely different. But if they say we do need it, and you start exploring the alternatives, it is just as I have said, the B–52 and the 747 cannot be turned into a B–1 no matter how much they cost. Then when you start throwing in the cost figures, they both become very, very expensive and almost as expensive as the B–1, without the capabilities.

The cruise missile is talked about as an alternative. You are comparing oranges and apples. We ought to have a B–1 as a launcher for cruise missiles. The range is not very long at this time, and the President is talking about limiting the range of the cruise missiles.

I will not take any more time, Mr. President, at this point, but I did want to let my opposition be known, to make it very strong, that I believe the President of the United States has made a very serious series of decisions. The B–1, with the stopping of the Minuteman III production line would seriously endanger the long-time security of the United States.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield for the Senator from North Dakota 5 minutes to the Senator from Texas.

Mr. TOWER. Mr. President, I think I can add a little more to what the distinguished Senator from Utah has said about the relative capabilities of the B–1 and the cruise missile.

The cruise missile is a very, very fine weapons system, one that is currently under development and one, of course, that we know the Soviets are concerned about. That, of course, is an indication that the cruise missile can be an effective part of our strategic arsenal.

But the fact of the matter is it is not a substitute nor really an alternative to the B–1 for the reasons that the Senator from Utah has made very clear. I think there are very few who would contend that we now have in sight any alternative that can do everything the B–1 can do. That leads us to the conclusion that the B–1 is the best system. As a matter of fact, the Secretary of Defense said if it was a little bit cheaper we would go ahead and opt for production of the B–1.

I think, for the most part, nearly everybody expected the President to opt for a limited production of the B–1, and there was very great surprise and, I might note, some jubilation on the part of some of those who would like to see us unilaterally disarm when the President made that decision.

But this is what disturbs me: The clear implication is that the Department of Defense and the administration regard the B–1 as a superior weapons system, and the reason for not opting for the production of the B–1 is that it costs too much. So what is the bottom line here? The bottom line is this: That the best is too expensive for the defense of the United States. We cannot afford the best system.

Now, this to me is a kind of rationale that can be applied to other weapons systems, and, therefore, it gives me cause for great worry and great concern. At some other time are we going to select some other superior or superb weapons system and say, "Yes, it is the best but we cannot afford it; we cannot afford the best for our national security"?

If we are going to put a maximum security price tag on what the security of the United States is worth, then we must accept now the fact that we are programing ourselves to become a second-rate military power over the next few years. We have nothing to replace the B–52 when it goes out of inventory. We have nothing in sight.

Of course, one thing that, perhaps, was lost in the backwash of the B–1 cancellation was the fact that the President also shut down the production line of the Minuteman III. How far are we going to go? If there is a maximum price tag on weapons systems amounts above which we will not pay, then we are automatically placing ourselves at a decided disadvantage to the Soviet Union, because in the Soviet mentality there is no weapons system that is too expensive. You will never hear Brezhnev say, "We would develop and deploy the best system, but it is too expensive." They will pay what is necessary, they will devote whatever resources are necessary to include in their arsenal the best weapons system in the world.

I submit, Mr. President, that in going along with this decision on the B–1 we are then endorsing the idea that there is a maximum price tag, there is a cost above which we will not go, to maintain the most effective military posture possible in our confrontation with our potential great adversary, the Soviet Union.

I fear for the state of defense of this country in the mideighties if we are to endorse this kind of mentality.

What is the security of the United States worth? I submit we cannot have a great society and an affluent society, a fair and equitable society or any other kind of society if we do not make the defense of the United States our first priority. There should be nothing more important because should the Soviet Union become the most powerful nation in the world, if they are militarily the most powerful, it will be politically and economically the most powerful nation in the world. We will find ourselves ultimately at the mercy of the Soviets in terms of world political and economic policy. We will find ourselves unable to achieve the kind of economic growth we need to maintain a high quality of life for our people, and to provide us with the resources to elevate the condition of the disadvantaged people in the world.

We cannot have a good welfare program if our economy is taking a downward plunge, which it certainly will if the Soviets, through superior military power, are able to dominate the economy of this world, and we are very much a part of the world economy, we are dependent on the rest of the world not only for the supply of materials but for markets.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. TOWER. Will the Senator yield 1 additional minute?

Mr. YOUNG. I yield an additional 1 minute.

Mr. TOWER. So I think we need to think in terms of long-term implications of this decision on the B–1. I think we need to set policy to the effect that the defense of the United States, the military strength of the United States, and the necessity of maintaining a position at least at parity if not superiority to the Soviet Union is our No. 1 priority, and we must pay what it cost. We will shortchange our people over the long term if we fail to do so.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, there are others who want to speak on this B–1 matter.

I yield myself 3 minutes.

Mr. President, as a matter of information I wish now to outline the President's recommendations for additions, to which I referred a few minutes ago, that he recommended when he canceled further production of the B–1 for the time being.

He asked for $65 million extra for what are called a B–52 bomber modification, to install pylons and bomb racks to carry cruise missiles and a better navigation system. That is the beginning of a possible program in that field. That is an item that I refered to when I said that we have already introduced an authorization bill. Senator MCINTYRE and the Research and Development Subcommittee of the Armed Services Committee have already set up hearings and are going to hold those hearings as soon as the Pentagon experts are ready.

I hope that Senator MCINTYRE can be in the Chamber soon, and he will speak for himself on that.

Another item is strategic bomber enhancement, improved electronic countermeasure equipment in the amount of $24 million. Next is cruise missile development production to accelerate certain programs here including the Tomahawk. This is the cruise missile and is not another neutron bomb. We are not going to have another debate on that this week. This is $217 million now for the cruise missile we have been reading about.

Another item is $90 million for the TALCM carrier to explore the use of wide-bodied commercial aircraft as carriers for cruise missiles. We have an R. & D. program on that proposition now, using commercial aircraft, but for carrying the cruise missiles. That would be a new proposed use and this R. & D. program is several years old.

Improved bomber warning system, $20 million, to provide better warning systems for the bomber force includes $10 million to buy software for perimeter acquisition radar.

Mr. President, could those gentlemen find some other place to confer? I believe the Senate Members should insist on that desk not being used down there to impede the Chair hearing what is being said. We have to protect the Chair.

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. $20 million as I said to explore that part. And then provide better warning system and to buy software for the perimeter acquisition radar; that is the PAR program.

The PRESIDING OFFICER. The Senator's 3 minutes have expired.

Mr. STENNIS. I yield myself 3 additional minutes, Mr. President.

Another item for $4 million is to accelerate terrain contour matching data. That is a small item. Next is the advanced cruise missile technology, research and development and test evaluation and second generation cruise missile and stronger radar cross section and greater speed in the amount of $29 million. That all related to the air launch cruise missile is a total amount of $449 million.

That is the amount of the program that I said that I hope we can move rapidly on, and we can argue about the B–1. That is all right. But the policy as announced, and I believe the majority of Congress is behind this now, is for this year we will make this initial step with reference to the cruise missile, and the B–1 matter can be settled and will be actually settled later.

Mr. President, I yield back the time to myself that I did not use.

There are others who want to speak as I understand on the B–1, and for the purpose of giving them time, I suggest the absence of a quorum, and ask unanimous consent that the time be chargeable to both sides equally.

The PRESIDING OFFICER. Without objection, it is ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. YOUNG. How much time does the Senator wish?

Mr. GOLDWATER. Ten minutes to start with.

Mr. YOUNG. How much?

Mr. GOLDWATER. I ask unanimous consent that Mr. Will Ball and Mr. Robert Old of the committee staff be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, if the Senator will yield to me, I ask unanimous consent that Jim Smith, a staff member of the Armed Services Committee, be accorded the privilege of the floor during the consideration of this bill entirely.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, I know that the amendment before us is to delete funds for the B–1 bomber, and having been probably the Senate's most vocal advocate of the B–1 and its longest proponent and admirer I oppose this amendment, but frankly I cannot see any sense in appropriating money for a weapons system that the President has declared he does not want. But I think we should discuss the whole situation.

Mr. President, since 1969 the Senate has unanimously supported the concept and the need for a follow-on manned bomber for our B–52 force. In support of that goal, Congress has authorized and appropriated almost $4.4 billion for research and development and procurement. Yet today, after 7 years, the Senate is proposing, with very little debate and discussion, without hearings, and without going through the normal congressional process, to delete all procurement moneys for the B–1 program.

Since 1969 the Senate has voted at least five times on the B–1 issue. In 1969 an amendment against the AMSA program, the forerunner of the B–1, was rejected. In 1973 an amendment to study other alternatives to the B–1 was rejected. In 1974 an amendment that would have restricted the R. & D. effort to $200 million was rejected. In 1975, 57 Senators rejected an amendment to delete all B–1 funds. In 1976 48 Senators again rejected the same amendment. In the entire history of the B–1 program there has not been one time that the Congress voted unanimously against the B–1.

Now, Mr. President, after all these years of support, we are apparently, with very little questioning, with very little resistance, going to accept the pronouncement of an administration that has studied this question less than 6 months, as opposed to the Congress that has looked at and approved this program over a period of 7 years.

Mr. President, over the years I have made many statements in support of the B–1. In fact, I have probably made more statements on behalf of the B–1 than any other Member of the Congress. I always try to speak of the B–1 and the mission that it is intended to do with an appreciation of how a future SAC air crew would need an aircraft like the B–1. I have flown the B–52 and I am well acquainted with the strategic mission and the value of man in the system and the necessity to base a portion of our strategic deterrence on the manned bomber. I was also privileged to fly the B–1 and it is a quantum improvement over the B–5. There was never any question in my mind about the ability of the B–1 to carry out its assigned mission.

However, the performance of the B–1 is really not the issue here today. What the Senate must come to grips with and be totally aware of is the fact that our future strategic policy has, as the result of the President's decision, incurred a very drastic change. Suddenly, and without adequate documentation or study, we are being asked to drop manned bombers and base a portion of our future strategic deterrent capability on a standoff cruise missile strategy.

This means that the Triad of the future will contain three totally untried systems rather than the present two. We have never used the SLBM or the ICBM in any war situation nor have we ever used the standoff missile concept in any conflict. Man is the only element in the Triad that is a proven quantity, yet that is the one element the President has elected to eliminate.

There is another basic change that is taking place in our future strategic force and that is our ability to carry and deliver the required megatonnage on Soviet targets. Over 50 per centum of our strategic megatonnage would be carried by the manned bomber force. How will this new strategic force mix proposed by the Carter administration address that problem?

In reviewing our present strategic force balance in offensive forces, the United States leads in long range bombers and MIRVed launchers whereas the U.S.S.R. leads in ICBM and SLBM launchers. The Carter decisions means, of course, that our long range bomber force is going to eventually be attrited from the strategic Triad. On the other hand, the Soviet Union continues to develop the Backfire bomber and its own strategic bomber force. Once again we are giving the lead to the Soviet Union in yet another category.

Looking at our offensive force capabilities, the United States leads in deliverable warheads and hard target destruction potential—due mainly to bombers and ICBM accuracy—whereas the Soviet Union leads in throw-weight megatonnage and land mobile ICBM's. The Carter decision to kill the B–1 program assures that the Soviets will continue to increase their lead in megatonnage and that our ability to kill hard targets without bomber force will decrease.

The President in making his announcement indicated there could be an increased reliance on cruise missiles because the technology of that system was progressing at a rather rapid rate. I have always supported cruise missiles, but only as complementary systems to the manned bomber and certainly not as a substitute for the manned bomber. Referring now to the Senate Appropriations Committee hearings this year on the Air Force budget request, on page 920, the Air Force statement says the following about the air-launched cruise missile:

> Employed as an adjunct to the penetrating bomber, it will increase the composite system's lethal "footprint" by allowing greater flexibility in routing and target coverage while diluting the effectiveness of area air defenses.

The report also states:

> It should be stressed that the proper role for the cruise missile in our strategic arsenal is as a bomber weapon and not as a bomber replacement. As an independent penetrating system, launched from outside of Soviet air space, its ability to penetrate peripheral barrier defenses may be limited. Furthermore, it cannot successfully attack targets that are protected by terminal defenses.

In spite of what experts say, the Carter administration is going against this expert opinion and moving us toward a standoff missile force. In our Research and Development Subcommittee hearings on bomber weapons in March of this year I asked Gen. Alton Slay, DCS for Air Force Research and Development, the following question:

> Looking at your projection of the Soviet defenses, what is it that would preclude an all cruise missile force from being as effective as bombers with lay-down weapons?

He answered as follows:

The projected combinations of Soviet Airborne Warning and Control (AWAC) aircraft and long range fighters could intercept cruise missile carriers at great distances from their target areas. Unless these carriers were used in combination with a penetrating bomber, Soviet concentration on such long range defenses could force cruise missile launches far from Soviet territory, seriously decreasing target coverage, or requiring the development of longer range cruise missiles. Penetrating bombers can use defense suppression weapons, tactics and electronic counter-measures (ECM) to defeat fighters and their controlling radars and are thus not as vulnerable to long range area defenses.

Intelligence projections of Soviet Air defenses also include surface-to-air missile (SAM) systems which could defend valuable targets and inflict significant attrition upon an all-cruise-missile force. Manned bombers can assess the defenses and avoid and degrade SAMs, use SRAM to suppress SAM defenses prior to target strike, or strike SAM-defended targets with SRAM. Reliance on a cruise missile force would require the development of similar cruise missile capabilities against defended targets.

An all-cruise-missile force would therefore have limited application and could severely degrade the bomber leg of the Triad. A mix of cruise missiles and penetrating bombers forces dilution and diversification of Soviet defense efforts and allows efficient application of cruise missiles and other bomber weapons in the defensive environment where they perform best.

The significance of this statement is that with an all-cruise missile force you are deprived of the SRAM's which are needed to suppress defenses.

Mr. President, also during those hearings I asked a number of questions for the record which lay out very clearly the degradation that will take place in our future strategic forces if we pursue this all-cruise-missile-force concept. I ask unanimous consent that these questions and answers appear at this point in my remarks.

There being no objection, the questions and answers were ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS

Senator GOLDWATER. What flexibility is there in your planned bomber weapons program in case the threat changes?

General SLAY. The bomber is the most flexible weapon system in the Triad. The variety of weapons carried by the bomber ranges from high yield gravity bombs to the long range cruise missile. The primary weapon used to fire through or suppress enemy defenses is the SRAM. This weapon is extremely capable because of its small radar cross-section and high speed. If the Soviets were to deploy larger numbers of more sophisticated SAM's in the future, we would employ additional SRAM, or in the outyears, possibly advanced strategic air launched missiles to offset the threat. The mix of SRAM, gravity weapons, and cruise missiles programed for use on the B-52 and B-1 should make these forces as insensitive as possible to variations in the threat.

Senator GOLDWATER. How long will it take to carry out all of these programs?

General SLAY. Our current bomber weapon programs include SRAM B, ALCM A and B, and the Advanced Strategic Air Launched Missile (ASALM). Our bombers will also utilize the new full fuzing option bomb (B-77). The SRAM B, ALCM, and B-77 will be operational in the 1980-1981 time period. The ASALM which is currently in technology development would not reach an IOC until the mid-eighties.

Senator GOLDWATER. Are more apt to be required if the threat becomes more severe?

General SLAY. The expanding Soviet capabilities have increased the number of planned targets. In addition, if the Soviets choose to expand hardening of their industrial base, the number of weapons required to achieve the required damage levels will increase. If the SAM threat becomes more severe, the mix of bomber weapons would require more SRAM or ASALM type weapons to fire through or suppress these defenses.

Senator GOLDWATER. Do programs like this involve a management strategy?

General SLAY. Yes, sir. We not only continually examine our bomber weapons requirements through studies and planning, but we have managerially combined the development of these weapons systems under one organization within the Air Force Systems Command. At the Aeronautical Systems Division at Wright-Patterson AFB, the SRAM, ALCM, and ASALM bomber weapons programs are combined under single overall management. In addition, the ALCM, Sea Launched and Ground Launched Cruise Missile programs are under joint Navy/Air Force management.

Senator GOLDWATER. How do you categorize the weapons as to their priority for penetration or target destruction?

General SLAY. Weapons are not categorized per se. For the SIOP to accomplish the goals set forth by national guidance, the target system is prioritized. These targeting priorities are the guidelines used to allocate weapons against the target base. During the SIOP weapons application phase, planners take full advantage of the weapon systems' inherent characteristics to optimize the probability of penetration and target destruction. For example, a bomber with SRAMs and gravity weapons will employ the SRAMs against the defended targets and the gravity weapons against undefended area targets that require a larger yield weapon. If the area target is defended, the SRAMs are used on the defenses so the gravity weapon can be placed on the objective target.

Senator GOLDWATER. How does the bomber weapons program change if less than 210 UE B-1s are bought? Is it possible the SIOP could not be carried out to the extent required if there is no B-1 force?

General SLAY. The bomber weapon program is related to the aircraft programs. If less than 210 UE B-1s are purchased, the weapon program would have to be reevaluated to determine requirements. The successful accomplishment of SIOP objectives is dependent upon the availability of a highly effective, survivable Triad force. Any option that does not upgrade or modernize these forces, such as not purchasing B-1, could seriously erode our ability to meet SIOP requirements.

Senator GOLDWATER. Is there any way within existing SALT agreements that the ICBM and SLBM force could be expanded to carry/deliver the megatonnage of the bomber?

General SLAY. As the US. strategic forces are currently constituted, the megatonnage carried by each leg of the Triad is [deleted].

An increase in the megatonnage capability of the ICBM force could be achieved through modernization, which is allowed under existing SAL agreements. [Deleted.]

On the other hand, achieving this megatonnage with the SLBM force would be unrealistic. Although the existing SAL agreement does not permit additional SLBM launchers on submarines, a new SAL agreement based on the Vladivostok Accord would allow additional SLBM launchers as long as the SNDV/MIRV totals remains within the 2400 aggregate and 1320 MIRV limits. [Deleted.]

Senator GOLDWATER. What is the toughest penetration problem for the bomber; i.e., SAM's, ECM, fighters, anti-aircraft guns?

General SLAY. All the threats identified can affect bomber penetration. The impact of each will vary with the particular operational scenario. In the general war case, fighters and high altitude capable Surface to Air Missiles (SAM's) force the bomber into a low altitude flight profile. There, low altitude SAM's and Anti-Aircraft Artillery (AAA) must be faced. While enemy Electronic Counter Measures (ECM) will not directly attrite the penetrating bomber, they can affect the aircraft radar and hamper target acquisition.

To counter these threats, the penetrating bomber has an array of equipment and tactics. They center on the principles of avoid, degrade, and destroy. Threats that cannot be avoided through mission planning or real time maneuver are degraded with on-board ECM. Objective targets in highly defended terminal threat areas are destroyed with Short Range Attack Missiles (SRAM's) to preclude direct bomber/threat interaction.

With these considerations in mind, it leaves the fighter as the predominant threat faced by the bomber in a general war scenario. Because of the low level tactic, this threat is currently minimized and bomber penetration factors are very high.

On contingency missions, threat activity (both type and intensity) would depend upon the particular area of operations. While the same threat elements (fighters, SAM, AAA, ECM) would apply, the dominant factor could vary greatly.

Senator GOLDWATER. Why is [deleted] damage expectancy the planning factor? What would the impact be if the standard was reduced by 5 percent, by 10 percent in terms of: Soviet reaction, requirement for warheads, delivery vehicles, and concomitant ripple throughout the force?

General SLAY. [Deleted.] Damage expected is a function of weapon yield/CEP combination, target characteristics, and the weapon probability of arrival. Soviet reaction is considered in the computation for weapon probability of arrival.

An incremental reduction of damage expectancy requirements could, in a broad sense, have a direct effect on the number of delivery vehicles and warheads required. While damage expectancy is computed for individual targets, it is also measured in the aggregate as an average for certain target categories. If lower average damage expectancies were directed, this could be translated into a lower requirement for delivery vehicles and warheads.

[Deleted.]

Mr. GOLDWATER. The administration has also indicated that the cost of the cruise missile is something less than $1 million. Yet, Gen. David C. Jones, Air Force Chief of Staff, in testimony to the Senate Appropriations Committee stated that—

The cost of the aircraft cruise missile will be $1 million to $2 million each if we go to the larger buy. If you buy fewer, you are in the $2 million category.

We have yet to find out what the total inventory requirement for cruise missiles will be under the Carter plan to revise our strategic forces.

Mr. President, it is quite obvious that we have in the President's request to delete the B-1 funds a "cart-before-the-horse" situation. The President is asking the Congress in effect to terminate the B-1 program which has been supported by the Congress over the years and ac-

cept in lieu thereof a system that we know very little about.

For example, the administration is requesting in its revised program $90 million to buy a commercial wide-bodied aircraft for the demonstration of a cruise missile carrier capability. Yet, the administration is also requesting an additional $2 million to cover cruise missile carrier studies and $9.9 million for advanced cruise missile concepts. So, it is quite evident to me the configuration of this cruise missile force is a long way from being determined. Certainly one would have to question buying a wide-bodied jet to demonstrate cruise missiles when on the other hand studies on cruise missiles are still required.

It should be obvious to all that the administration is cancelling one ongoing tried and proven program, the B–1, for a program that it knows very little about. We should not agree to that.

Mr. President, the President of the United States made a promise during his campaign not to launch the B–1, and I suppose we should have great respect for the President for keeping his word, because we have a lot of people today who make promises and then forget them. But I think a promise made in the heat of the campaign, particularly when the candidate is not knowledgeable at all on the subject, can be changed, if he listened to the right people and took everything into account.

But obviously he did not want the B–1, while at the same time we watch the Soviets develop the Backfire bomber—not develop it; it is in production.

The Backfire bomber is capable of a higher mach than the B–1. It will reach the United States. It may not be able to get back, but the Soviets do not care much about that. It might not even get outside the continental limits of the United States on the return trip, but that makes no difference to them.

We constantly hear the argument that we are ahead of the Soviets in strategic bombers. Mr. President, that is not true. When we halted the production of our B–47's, they did not take one of their medium bombers out of their inventory. When you add all of their long-range and medium-range strategic bombers, they have more strategic bombers than we do.

One of the reasons why the President wanted to do away with the B–1 was the Cruise missile. Mr. President, like the B–1, I have been in on the development of the Cruise missile since they first dreamed it up. I have watched the development from the drawing board to the actual missile.

But, Mr. President, we are at best 5 years away from an operational Cruise missile. It may be 10. But the opponents of the B–1 are talking about a 2,500-mile range for the Cruise missile. There is no such thing, Mr. President. We are going to be very lucky if we get a Cruise missile with a 1,500-mile range. It will probably be more in the nature of a thousand miles.

The aircraft proposed to use to carry this missile—the B–52, the 747, the DC–10, or whatever wide-bodied aircraft selected—can be picked up, at those distances, by Russian radar without any trouble at all, and destroyed by Russian interceptors, while the B–1, flying 100 or 200 feet above the deck, can never be detected by Russian radars until it is too close—until, as they say, they can reach out and pat them on the nose.

Mr. President, we are talking here about deleting money from this appropriation bill to continue the construction of the B–1. I think it is a disastrous mistake. I think we should have it, but it is difficult to stand here on this floor and try to argue down the President of the United States, who has made the choice.

I have said in several speeches lately, and in papers I have written for a long time, that wars are not gotten into on purpose. Of some 1,800 wars I have studied, every single one was stumbled into. Neither side wanted to go to war.

Four times in my life, Mr. President, this country has gone to war because of mistakes that the Presidents have made.

Woodrow Wilson could not conceive of this country going to war, and we were not prepared.

Franklin Roosevelt knew the world situation, but he did not want to tell the American people the truth and tell them we were going to have to go into World War II, for which we were not prepared. That was mistake No. 1 of Mr. Roosevelt. Mistake No. 2 was not leveling with the American people.

Mr. Truman rightly, in my opinion, went into Korea, but wrongly said, "You cannot cross the Yalu."

The PRESIDING OFFICER. The Senator's 10 minutes have expired.

Mr. GOLDWATER. I will take 5 more minutes.

Mr. YOUNG. I yield the Senator 5 additional minutes.

Mr. GOLDWATER. If he had not done so, there would have been no disgrace in Korea, and the Red Chinese and their military machine would have been, in all probability, destroyed.

Then when President Kennedy decided to send 17,000 troops into South Vietnam with orders not to shoot back, mistake No. 4.

Is the B–1 mistake No. 5? I pray to God it is not. The only thing we have left now to dicker with and to deal with with the Soviet is the cruise missile. I made this a matter of record the other day on a national television show. I offered to bet that the next thing that the President would bargain away would be the cruise missile.

Mr. President, I want to warn my colleagues that the action that is being contemplated today may impact on our future strategic forces to the point where we might never be able to recover. Acceptance of this amendment after absolutely no hearings on the revised Carter strategic program is totally contrary to the way the Congress should go about doing its business.

I remind my colleagues of the joint strategic bomber study which concluded that an all-cruise missile force was the least effective in the damage assessment category of all the forces examined. That analysis showed that only about one-third of the ALCM's launched were able to survive to their target. It was also pointed out that a 747-type cruise missile carrier force may also be vulnerable to threats such as over-the-horizon radars vectoring long range fighters to intercept them prior to their launch.

The forces which contain the B–1's were found to be the most cost effective. A standoff missile force was found to be not competitive with the penetrating bomber. However, it was implied they could be cost effective in a complementary role going against undefended target complexes.

Mr. President, the Congress has not yet received the rescission notification on the three B–1's in the fiscal year 1977 program. That notification, if it is properly documented, should, I presume give the detailed rationale for the Carter decision. To date we have not seen the apparently new data that would justify this decision since everything we have on the record goes counter to the strategic force alternatives being proposed.

Mr. President, in view of the extreme lack of data concerning that decision, the amendment being proposed by the committee should be rejected. The President would certainly be able to veto the bill or if he preferred, he could forward a rescission notification on the fiscal year 1978 B–1 program. That course of action would allow the Congress adequate time to review, in the detail required, the rationale of the Carter decision.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield to the Senator from New Hampshire. I yield 5 minutes now and such additional time as he may need.

Mr. McINTYRE. Mr. President, when President Carter indicated that the B–1 bomber would be dropped, his revisions to the defense budget, represented a procedural problem for the Appropriations Committee. It has wisely been decided that if the B–1 cuts are made on the floor to comply with the President's request, that the balance of the President's request, what we call add-ons or additions, would be referred in the normal authorization process to the Armed Services Committee of both Houses and then on to the Appropriations Committees of both Houses for a solid look at the advisability of the additions.

The additions total, in all, $449 million. This is money in excess of what was originally requested by the President for fiscal year 1978. Of that $449 million, $224 million will be new programs in the cruise missile field, and I believe $400 million in the cruise missile and the B–52 modifications generally.

The present bill before us today, Mr. President, already has $400 million, somewhat over, for various cruise missile R. & D. That is in the bill before the Senate now. The President, in his new request, has requested $224 million more for additional cruise missile R. & D.

So the appropriations bill has nearly a half billion dollars for the development of various and sundry cruise missiles, be

they ALCM's, GLCM's, SLCM's, or whatever. And the Appropriations Committee and the leadership have decided, and rightly, to take the supplemental request of $400 million or so and refer it to the authorization process so we can take a good look at it.

There is in the bill now before the Senate $124 million for air launch cruise missile research and development, and $40 million for its procurement. This would accelerate the deployment of the air launch cruise missile by 18 months to the middle of 1980 when these ALCM's could be put aboard the B–52.

There is in the bill now before the Senate about $225 million for Tomahawk research and development for both the sea-launched and the ground-launched applications. Moreover, the land attack version of the Tomahawk which is supported in the present bill before the Senate, is identical technology to that which the Pentagon proposes in its supplemental to apply to the B–52. So the current bill already clearly supports the Tomahawk technology in full-scale development.

In addition, the appropriations bill now before the Senate follows the lead of the Armed Services Committee authorization bill in accelerating by $13 million the development of a new missile which will combine the speed of the SRAM missile with the accuracy and range of the air-launched cruise missile. We had anticipated, in effect, the President's supplemental request for such an acceleration.

I and the bulk of the R. & D. Subcommittee, to my knowledge, have, since 1973, supported the development of air-launched cruise missile and we supported it, Mr. President, as a hedge to the B–1. We saw the price of the B–1 constantly going up each an every year in research and development. The first time that your R. & D. Subcommittee and authorization committee in defense heard of the B–1 it was a $30 million per copy bomber. Today, when the President decided he was going to shut it down, the bomber had reached the astronomical price of $102 million to $105 million per aircraft.

We in the R. & D. Subcommittee have always supported this air-launched cruise missile as a hedge—if you will—to the B–1. I must say, Mr. President, that the Department of the Air Force, time and time again, were in a contrary position.

Mr. President, if we are not to have a B–1, it is absolutely critical that we choose a well-conceived alternative strategic bomber force. We have to find something that is going to make up the third leg of our Triad. It looks as if it is going to be the B–52 that will do the standoff, even a penetration job, possibly. And we might be able to penetrate with the FB–111 if we can stretch it, because, as you know, Mr. President, that aircraft is one that flies supersonic at 200 feet off the ground.

It is very critical, with this important decision on the B–1 being made, that we do not rush helter-skelter, pellmell; that, for the sake of saying, B–1—No, cruise missile—Yes, we do not make any serious mistakes that will, in the future, cause programs to be interrupted and the taxpayers' money to be unnecessarily spent on overruns.

But we have a problem, Mr. President. The R. & D. Subcommittee of the Senate Committee on Armed Services, which subcommittee I chair, is prepared and ready to go. We are ready now, to look at these various and sundry programs, because of the critical nature of the issue and because of the desire of the leadership and of the chairman of the Armed Services Committee of the Senate to move as rapidly as possible. We only have about 3 weeks before we take the August nonlegislative period.

The supplemental request proposes the modification of the B–52 bomber at a cost of $65 million. This will install pylons and bomb bay racks to carry cruise missiles and a better navigation system.

The supplemental requests $24 million additional money for strategic bomber enhancement which includes the ASALM that I mentioned. It also includes $10 million to improve the bombers' ECM, electronic countermeasure, equipment.

The Department also proposes additional cruise missile development and production money and would terminate the ALCM–A program and accelerate the ALCM–B and the Tomahawk programs.

The ALCM–A—air launch cruise missile—which currently is moving in the R. & D. field, is a missile of a range of approximately 700 miles. The President's proposal would change that and go to the ALCM–B. The ALCM–B is the air launch cruise missile which is capable of ranges up to about 1,500 miles. You can see, Mr. President, the rationale there, because it looks at the B–52 as a long-range standoff bomber, as the addition to the new Triad.

The PRESIDING OFFICER. The Senator from New Hampshire has used 10 minutes.

Mr. STENNIS. Mr. President, what time is remaining? That is a committee amendment that is the pending measure.

The PRESIDING OFFICER. The Senator from Mississippi has 24 minutes; 38 minutes remain to the Senator from North Dakota.

Mr. STENNIS. I yield to the Senator 4 more minutes.

Mr. McINTYRE. I think it is important, Mr. President, that we delineate these for the record.

The next proposed program is the ALCM/TALCM carrier. That is the Tomahawk air-launched cruise missile. We shall be exploring use of wide-bodied commercial aircraft, 747's, perhaps, as a carrier for the cruise missiles.

The supplemental also requests $20 million for the improved bomber warning. This will provide a better warning system for the bomber force. It includes $10 million to buy software for the perimeter acquisition radar, known as PAR.

To accelerate the processing at long-range TERCOM data, the supplemental requests $4 million, the work to be done by the Defense Mapping Agency. And for advanced cruise missile technology, for research and development of technology in the second generation cruise missile, with smaller radar cross section and greater speed, the supplemental requests $29 million. That is a total of $449 million.

Mr. President, as chairman of the Research and Development Subcommittee, I can tell you, we are ready to go to work. But I must warn not only the leader, but my distinguished chairman, that the willingness of the subcommittee on R. & D. to go ahead and go to work does not solve the primary problem. The basic problem facing us is that the preliminary information from the Department of Defense strongly suggests that they have not yet had enough time to think through important elements of their proposals.

For example, "detailed" descriptive studies received by the full committee last Friday contained only one sentence each in support of the two major requests, both of them new programs, totaling about $200 million.

Mr. President, even with that handicap, in order to keep the leadership happy, I, as chairman of that subcommittee, will do my utmost to report or get some sort of bill to the full committee of the Senate a day or two before we recess for the nonlegislative day period through August.

Mr. STENNIS. I did not get all of the Senator's statement.

Mr. McINTYRE. I am just saying to chairman of the full committee that we shall do our utmost. But the problem is not that the horses on the team in the Senate are not ready to go. I just stated that the problem is that the Pentagon has some real hard thinking to do. They have some explaining to do. For example, the $224 million for a standoff cruise missile does not come off easily. We are not shopping in Hecht's.

But we shall still do our utmost to try to get that to the full committee before the August recess, if we want to call it that, or in time for the full committee to give it a good look.

Mr. STENNIS. Mr. President, I am anxious for the Senator and his subcommittee to go into it. First, they will give it an awfully good working over.

No. 2, they will move as fast as they can. I hope the Senator insists on the Pentagon getting ready and coming over here and move this thing along just as fast as he can. After it leaves his subcommittee, it has to go to the full committee, come to the Senate floor, then go to conference. At the same time, an appropriations bill has to follow the same course.

As he knows, these things take time. But we do have his assurance now that he is going to continue to push them for the earliest possible date for its being prepared and presented to his subcommittee.

The PRESIDING OFFICER. The additional 4 minutes has expired.

Mr. STENNIS. I yield an additional 1 minute.

Mr. McINTYRE. In order to apply my own intelligence about this, I think we try to do this job as best we can. It would be possible, during the recess, to have some more hearings if necessary. We could then come to the floor with additional information when we report the bill.

Mr. STENNIS. If the Senator can make a preliminary, tentative report before we leave for the August recess, I think that would be progress. Then every Senator can come back with his mind fully informed as to what the Senator is proposing. That will enable us to pass on it, maybe, the day after we get back and get it up to the floor. Anything the Senator can do along that line, I feel he will do, and I thank him.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. STENNIS. Mr. President, this is an awfully important subject. I ask unanimous consent that we may have a quorum call not to exceed 7 minutes, not charged to anyone's time.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that any votes that are ordered on the defense appropriations bill prior to the hour of 4 o'clock be scheduled immediately after the votes that are ordered on the legislative appropirations bill.

The PRESIDING OFFICER (Mr. HATHAWAY). Is there objection?

Without objection, it is so ordered.

Mr. ROBERT C. BYRD. And then, Mr. President, I ask unanimous consent that the Senate resume consideration of the defense appropriations bill following the votes.

Mr. YOUNG. Mr. President, reserving the right to object, I cannot hear the Senator.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, we will see if we can get something more known about the situation. I do not have any additional time to yield on quorum calls or anything. I think we could manage that, though, because we have consent here not to vote until 4 o'clock.

But I have only 18 minutes left. This is an important amendment. I do not know whether there is going to be a request for the yeas and nays or not. This is on the matter of the B–1 and the committee amendment on the B–1.

The other side has 38 minutes. I do not know how many speakers they have.

I do not know if I have any more. But I want to preserve this 17 minutes that I have left.

I suggest to the leader that if we have to have quorum calls, he could ask they not apply to either side.

Mr. ROBERT C. BYRD. Could it be charged against both sides on the bill? I believe we have 4 hours.

Mr. STENNIS. This is a mighty long bill, and a lot of amendments, and a challenge, and a lot that are added.

Mr. ROBERT C. BYRD. Senators should come on the floor to call up their amendments.

Mr. STENNIS. I am ready.

Mr. ROBERT C. BYRD. The Senator is ready, always.

Mr. STENNIS. We could ask unanimous consent that no time be charged to anyone for quorum calls.

Mr. GOLDWATER. Will the Senator yield?

Mr. STENNIS. Yes.

Mr. GOLDWATER. We are going to ask for the yeas and nays on the B–1 amendment.

Mr. STENNIS. All right. Let us see if we cannot agree then it will come after x minutes of debate on each side, following the votes on the legislative appropriations bill.

Does that suit the leader?

Mr. ROBERT C. BYRD. Yes.

How much time would the Senator like to reserve for that? What would the Senator suggest?

Mr. STENNIS. Fifteen minutes to the side.

Well, we have 17. But I think we ought to preserve some time for those that do not know.

Mr. GOLDWATER. Will the Senator yield?

Mr. STENNIS. Yes.

Mr. GOLDWATER. I do not really think many Senators will speak on the B–1. It is sort of a fait accompli.

Mr. ROBERT C. BYRD. That is right.

Mr. GOLDWATER. We recognize it does not make much sense to appropriate money for an airplane the President is not going to buy. But I would like to have the chance to be recorded as opposed to the President's action.

So I do not really think it might be wise to poll those people who wanted to speak on it.

But Senator THURMOND would like about 10 minutes. I do not know of anyone else. They are not around. I think it was a shame to make the first vote at 4 o'clock. I am on three other amendments. They are going to take some time to argue.

Mr. STENNIS. There are three votes, as I understand, on the legislative bill itself. That starts at 4 o'clock. My proposal was that we vote after the legislative votes are completed—say, 10 minutes to a side. Certainly, $10 billion is worth 10 minutes to a side.

Mr. ROBERT C. BYRD. There is a series of votes beginning at 4 o'clock on the legislative proposals, without debate.

Mr. GOLDWATER. Senator ALLEN has two amendments that are very important. Senator CANNON and I have an amendment that should not take long because it merely will be a parliamentary inquiry relative to authorization on the appropriation bill.

Mr. STENNIS. Let us keep the record straight. The committee is ready for votes on any amendments, now. I mean, after a brief debate.

Mr. ROBERT C. BYRD. Could we agree, then, to have 20 minutes, equally divided, on the B–1 bomber, immediately following the disposition of the legislative appropriation bill—20 minutes, equally divided, and then vote?

Mr. GOLDWATER. That is after 4 o'clock?

Mr. ROBERT C. BYRD. Yes.

Mr. GOLDWATER. That is all right with me.

Mr. STENNIS. In the meantime, if others come in and wish to speak, we can use some of the time we have remaining now.

Mr. ROBERT C. BYRD. They can use time on the bill.

Mr. STENNIS. I am not surrendering the 17 minutes I have.

Mr. ROBERT C. BYRD. I will object to not charging the time against something, Mr. President. There are 4 hours on the bill.

Mr. STENNIS. We are in agreement on it. If someone wants to speak, I want to have time for him between now and 4 o'clock.

Mr. ROBERT C. BYRD. The Senator has time on the bill. I will try to be helpful in getting other Senators to call up their amendments.

Mr. STENNIS. Senator THURMOND was here a few moments ago and wants to speak. The Senator from Virginia might ask him.

Mr. ALLEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLEN. The B–1 amendment having been laid aside——

Mr. STENNIS. Mr. President, I ask unanimous consent that further proceedings at this point on the B–1 be laid aside for the purpose of considering the amendment that the Senator from Alabama proposes to offer, with the understanding that it will not disturb the 4 o'clock agreement.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. ROBERT C. BYRD. I say to the distinguished Senator from Mississippi that I do not believe the Chair put my request with respect to the 20 minutes following the votes on the legislative bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Alabama is recognized.

Mr. ALLEN. Mr. President, a parliamentary inquiry. Would not the pending

business now be the consideration of the first committee amendment?

FIRST REMAINING COMMITTEE AMENDMENT

The PRESIDING OFFICER. There are four committee amendments that have not been disposed of. The question now is on the first of those four. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 3, beginning on line 10, strike the numeral and insert "$7,149,609,000".

Mr. STEVENS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STEVENS. Is the Senate adopting these amendments as original text for the purpose of amendment, or is the committee offering amendments to be adopted so that they would bar further amendment to the same numbers in the bill?

The PRESIDING OFFICER. That was done in the case of all other committee amendments, except these four.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that it be in order to ask for the yeas and nays on the B–1 matter.

The PRESIDING OFFICER. Is there objection to ordering the yeas and nays at this time? The Chair hears none, and it is so ordered.

Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

(The following proceedings occurred later in the day and are printed at this point by unanimous consent:)

Mr. STEVENS. I ask the Senator from Alabama if he would have any objection if I would ask unanimous consent at this time that assuming his amendment is adopted, as I hope it will be, my amendment No. 499 which also concerns the same figure on page 7 would still be in order.

Mr. ALLEN. Mr. President, this covers two points in the bill. One is on page 7. What line does the Senator have?

Mr. STEVENS. My amendment No. 499 also would amend the figure on page 7, line 17.

Mr. ALLEN. That is covered in this amendment.

Mr. STEVENS. But I am doing it for some commissary. It is another matter. I did not want my subsequent amendment to be not in order when the Senator's amendment carries that and restores the money for the Civil Air Patrol. I am trying to restore money that was similarly deleted from the same item.

I ask unanimous consent that my subsequent amendment still be in order following the adoption of the Senator's amendment.

Mr. ALLEN I have no objection, of course, if it is a matter of unanimous consent. In other words, the Senator wants to increase the same figure; is that correct?

Mr. STEVENS. That is correct. I have an amendment to increase the same figure. If it is adopted it would modify the figure that the Senator's amendment would amend.

Mr. ALLEN. I have no objection that being the case of unanimous consent.

Mr. STEVENS. I thank the Senator from Alabama.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment of the Senator from Alabama amends both the first and the second committee amendment. The Chair would not object to consider the second committee amendment having been read and considered en bloc with the first committee amendment and this entire proceeding will be placed at the point prior to the time the Senator from Alabama introduced his amendment.

Mr. STEVENS. I thank the Chair.

Just so I am now correct if my amendment is offered amendment No. 499 following the adoption of Senator ALLEN's amendment, it would still be in order notwithstanding in fact it is amending the same figure.

The PRESIDING OFFICER. The Senator is correct.

Without objection, it is so ordered.

SECOND REMAINING COMMITTEE AMENDMENT

The second committee amendment is as follows:

On page 7, line 16, strike "$8,346,886,000" and insert "$8,146,638,000";

(This concludes proceedings which occurred later in the day.)

UP AMENDMENT NO. 667

Mr. ALLEN. Mr. President, I send to the desk an amendment which contains two parts and I ask unanimous consent that the two amendments, which are in effect one amendment, be considered en bloc.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. STENNIS. Mr. President, I wish to make a parliamentary inquiry about the previous committee amendment. Did the Chair inform the Senator from Alaska that the previous committee amendment was adopted?

The PRESIDING OFFICER. No.

Mr. ALLEN. This is an amendment to the committee amendment.

Mr. STEVENS. I, too, have an amendment; and I do not want to be blocked by those four committee amendments.

The PRESIDING OFFICER. The amendment by the Senator from Alabama is an amendment to the first committee amendment.

The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN) for himself, Mr. SPARKMAN, Mr. STEVENS, Mr. HUMPHREY, Mr. GOLDWATER, and Mr. BAKER, proposed an unprinted amendment numbered 677 to the committee amendment:

On page 3, line 11, strike "$7,149,609,000" and insert in lieu thereof: "$7,150,731,000"

On page 7, line 17, strike "$8,146,638,000" and insert in lieu thereof "$8,147,738,000"

Mr. ALLEN. Mr. President, in connection with the previous unanimous-consent agreement, I ask that there be no time limit on the amendment, although I do not believe many minutes will be used.

Mr. President, I hope the Members of the Senate will not be frightened by the tremendous sums that the clerk has read. It was necessary to amend two sections of the bill in order to save the Civil Air Patrol from emasculation, though only approximately $2.222 million is involved in the amendment.

The amendments I have offered on behalf of myself and the cosponsors, for the defense appropriation bill for fiscal year 1979, would restore the civilian salary funding and military spaces and Air Force liaison function for the Civil Air Patrol. The amendments merely restore the $2.222 million reduction recommended by the committee amendment and bring the Civil Air Patrol appropriation back to the $5.5 million level provided in the House bill.

The Senate, in acting on the level set by the House of $5.5 million for this very valuable work with the Civil Air Patrol, does cut approximately $2.2 million from the appropriation. That is found in two sections of the report, not shown in the bill, these tremendous amounts covering hundreds of different items.

But in order to reach it we have got to amend these two items in the bill and add this $2.2 million back to the appropriations for the Civil Air Patrol.

The Civil Air Patrol has, since 1941, provided our country with a small, but dedicated group of patriotic volunteers who have risked their lives to aid their fellow citizens in distress. Since 1960, CAP has participated in 7,810 Air Force designated search and rescue missions. Since 1965, when "finds" were first recorded and since 1967, when "saves" began to be credited, the CAP has located 2,057 search objectives and received credit for 402 lives saved. In 1976, CAP flew 817 missions and saved 34 lives.

It goes without saying that we, as Members of the Senate, share a great mutual concern about national fiscal responsibilities. However, if the taxpayers have ever received a bargain, the $5.5 million that we invest annually in CAP through the Air Force is it. It would be impossible to place a dollar figure on the services rendered by CAP volunteer members at local, State, national and international levels.

The recommended reduction in CAP funding would also mean the end of a CAP cadet program that has some 27,000 young men and women currently enrolled. This program has historically contributed sizable numbers to the Air Force Academy, Air Force ROTC, and Active Forces.

Congress saw the need to establish the Civil Air Patrol as a private, nonprofit corporation following World War II. Its purpose was directed toward informing our citizens on the application of airpower and aviation; developing youth through leadership training and providing a trained resource to meet local or national emergencies throughout the country.

As an all-volunteer organization whose members dedicated their time

away from their jobs or professions, the Civil Air Patrol needed a foundation to bring continuity to its programs. The Air Force provides this foundation and has done so since 1948, when Congress set forth the relationship between the Civil Air Patrol and the Air Force in public law.

The military and civilian members of the Air Force who assist the Civil Air Patrol are a small number of advisory personnel. These liaison personnel provide the training and management assistance to the Civil Air Patrol on a day-to-day basis. They maintain the continuity for the Civil Air Patrol, whose members must must leave their place of work in time of emergency to perform search and rescue missions or disaster relief missions for the Air Force. The capability and success of these missions are directly attributable to the training and assistance provided by the Air Force.

The Committee on Appropriations has recommended in their report—No. 95-325—the deletion of 155 of the total 205 military spaces for Civil Air Patrol liaison. It further deleted the civilian salary funding for all the 70 civilian personnel of the Air Force in this program.

I am firmly convinced that this action would result in the Civil Air Patrol becoming unable to meet its responsibilities that Congress chartered for it. The Civil Air Patrol relies primarily on the Air Force for its support through the liaison program. Without these advisers, all three of the Civil Air Patrol's missions of aerospace education, youth development in the cadet program and humanitarian relief will be faced with detrimental decline in capability. The overall result will be a delayed, fragmented, ineffectual program.

Congress identified several areas of support for the Civil Air Patrol; however, the liaison function is the focal point of the entire support effort.

I strongly urge the restoration of this program to its current level as reflected in the House bill. That is the purpose of this amendment that has been offered by a number of Senators and myself, to restore, not to add anything to it, but to restore, the level of appropriation as provided in the House bill. This amendment was introduced, even though it does not say it is, for the Civil Air Patrol, and the legislative history in this discussion here at this time will indicate the purpose of this amendment specifically is to restore the Civil Air Patrol appropriation to the $5.5 million level provided in the House bill.

I trust that with this legislative history, if the amendment is agreed to, that automatically will increase the appropriation back to its former level. These dollars will, in turn, benefit the entire country and insure that this small but responsive organization will be able to accomplish its objectives in support of the citizens of this Nation.

I hope the amendment will be agreed to.

I am delighted to yield to my senior colleague, Mr. SPARKMAN.

Mr. SPARKMAN. I am a cosponsor of this legislation. I believe strongly in it. If I speak on it I would be saying very much the same things that my colleague has said, so I shall not do that. I do have prepared a summarization of the program. I ask unanimous consent that this summary in support of this amendment be printed in the RECORD at this point.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

CIVIL AIR PATROL AUXILIARY OF THE U.S. AIR FORCE

Civil Air Patrol, a nationwide organization:

CAP in every State, Puerto Rico and District of Columbia.

Each State directed by corporate official with a number of subordinate units in many local communities.

Members are volunteer local citizens, either adults or young men and women in cadet program.

Congress established CAP and Air Force relationship under law:

CAP designated an auxiliary of the Air Force.

Air Force employs CAP resources on noncombat missions.

Air Force provides support for CAP programs.

Air Force missions performed by CAP:

Search and rescue in Continental United States, Alaska, Hawaii and Puerto Rico at an average cost/flying hour of $20.—17,600 hours on 817 missions in 1976; saving 34 lives.

Disaster relief missions throughout United States from floods, tornadoes, blizzards and hurricanes.

Use of Air Force resources for these missions would be at considerably higher cost.

Air Force benefit from CAP cadet training:

Air Force personnel perform a large share of cadet training.

Cadets from a valuable source of pre-service trained personnel for the Air Force. Since 1955, over 1,400 cadets have entered the Air Force Academy. The largest single number entered the academy in August 1976.

CAP cadets are also a source for enlisted requirements and college ROTC programs.

Aerospace Education:

Air Force liaison personnel assist in college workshop program for aerospace education.

180 college workshops each year.

10,000 teachers from all levels of education receive courses on the application, benefit and background of aerospace places CAP and Air Force in direct contact with public throughout the country.

CAP support by the Air Force:

Only fuel, lubricant and communication costs reimbursed to CAP members on Air Force missions.

Excess DOD equipment may be provided to CAP. Light aircraft, vehicles and communications equipment needed for Air Force requested missions.

Air Force liaison personnel, military and civilian, advise and assist as well as train CAP members.

Liaison personnel assist in all areas of management of the CAP program. Liaison structure designed and located to insure CAP supervisors and their units receive maximum assistance.

Mr. ALLEN. I thank the Senator.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ALLEN. I would be delighted to yield to the distinguished Senator from Arizona.

Mr. GOLDWATER. Mr. President, I am very proud to be a cosponsor of this amendment, and I want to compliment my friend from Alabama for having introduced this.

I was interested in finding out how come after all these years the Civil Air Patrol was finally dropped from the appropriations. I made inquiry. It seems there was no presentation by any organization, particularly the Air Force, opposing this. I have a strong feeling that the derivation of this change came from a staff member or staff members.

Mr. President, the Civil Air Patrol is a private nonprofit volunteer organization, designated as an auxiliary of the Air Force. The missions performed appear to be internal support of CAP or State activities including humanitarian missions. That pretty well describes what this organization is, Mr. President.

I just want to speak as a Senator from a far western State, southwestern State, where we have as high a per capita of aviation activity as any State in the Union, and where we have probably the worst terrain to fly over of any State in the Union.

I will be perfectly honest with you, Mr. President, I do not know how we could fly with safety in the southwestern part of the United States—and this goes for the entire West—without the knowledge that we had the Civil Air Patrol to depend on should anything happen during flight that required a forced landing.

I have no idea how many of these rescue missions the Civil Air Patrol has participated in during the years since its inception in about 1941, but I imagine even in my State it runs up into the hundreds.

They work very closely with other organizations. They work with the sheriff's office, for example. They work with the regular Air Force installations like Luke Air Force Base, Davis-Monthan Air Force Base, Williams Air Force Base, and with the Marines and the Army, both of which have air programs in my State.

One of the things we keep forgetting about this organization is the great work they did for our country during the early days of their founding around 1941 or 1942, particularly when the members of this patrol flew regular antisubmarine missions flying out over the Gulf of Mexico, flying off the coast of Florida and the rest of the Atlantic coast looking for enemy submarines.

They delivered the mail. They, in fact, were the modern version of the ancient air mail.

I recall an old flying friend of mine, a woman, who used to fly mail from El Paso, Tex. to Phoenix, a distance that you can cover now in a modern jet in less than an hour, yet it took her all day to fly those missions day after day after day in the heat of the summer and the uncertainty of the winter weather.

So, Mr. President, when we are talking now about just really capriciously—and I use that word advisedly—cutting off this organization, I think we are making a mistake. For example, 7 percent of the graduates of the Air Force Academy were Civil Air Cadets. If we did nothing else with this organization this would be of value to us, these men and women now going on to become officers in the Air Force.

They fly or they occupy operational or directional jobs, and their background in the Civil Air Patrol is invaluable to them.

So, Mr. President, I am very hopeful that when the time comes to vote on this my colleagues in this body—I think there are many Senators in this body who actually flew with the Civil Air Patrol—will support this amendment. It is certainly a worthwhile amendment because no one has called for the abolition of the Civil Air Patrol.

If the Air Force came over and said, "Fellows, we do not need it any longer," that might be something else. But the Air Force had nothing to do with this. I doubt the Air Force knew this language was in this bill until they received a copy of it and were reading it and were rather shaken up to see one of their really nice assisting bodies was to be dropped.

I thank again my friend from Alabama for having introduced this amendment. While I never have been a member of the Civil Air Patrol, I have long been a backer of it, and I would like to think that I can spend many more years backing this group that has, as one of its most interesting, most intense and most beneficial programs, interested young men and women in the career of becoming aviators to the end that they may even fly for our country.

I thank my friend.

Mr. ALLEN. I thank the distinguished Senator for his splendid comments and his personal support.

I yield the floor.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, I am pleased to cosponsor this amendment of our colleague from Alabama (Mr. ALLEN) to reinstate the $1.1 million civilian funding for the CAP, and I point out that it does reinstate a similar amount for the support of Air Force personnel associated with the CAP program.

Air Force support is extremely important to the continued success of the Civil Air Patrol as Senator ALLEN has pointed out. This organization is important to each and every State as well as to Puerto Rico and the District of Columbia. Every corner of our Nation has at some time experienced an emergency in which Civil Air Patrol volunteers have been part of the assistance rendered to those in distress.

Coordinating these activities and training the members of the Civil Air Patrol has in large measure come from the Air Force military and civilian personnel assigned to the liaison or advisory role with the CAP. We are now being asked to remove all the advisers, except for a single Air Force representative in each of the 50 States, from this congressionally chartered auxiliary of the Air Force.

Our Appropriations Committee in our report for the fiscal year 1977 defense appropriations bill expressed special concern for the needs of the Civil Air Patrol in terms of equipment support from the Air Force and the Department of Defense. While much of this equipment is excess to the needs of the Department of Defense, the Air Force liaison personnel are the key element in screening and acquiring such items from the defense department. Additionally, I understand that the Air Force liaison personnel have been instrumental in an aircraft revitalization program upgrading Civil Air Patrol's light aircraft fleet. They have also started a program to help all Civil Air Patrol wings identify their equipment needs. It is this continued type of assistance that the Civil Air Patrol needs from the Air Force to sustain its activities. I believe we need to maintain the status quo in Air Force civilian and military support of the Civil Air Patrol.

I welcome this opportunity to commend the many pilots in the United States who fly search and rescue operations for the Civil Air Patrol. Not only do these individuals donate their time, but they also fly their own aircraft; through their dedication and service many lives have been saved each year.

My State in particular has great need for the Civil Air Patrol. In our State with its immense terrain and diverse climatic conditions there is presented a herculean task for the Civil Air Patrol. Despite these obstacles, the Civil Air Patrol plays a particularly invaluable service in search and rescue in Alaska. According to a recent article in the Air Force magazine, Alaska's Civil Air Patrol units fly two-thirds of all rescue missions in the State and leads units in all other States in terms of the number of people found, assisted and saved.

While most people associate the Civil Air Patrol with their humanitarian efforts in search and rescue missions, they also perform several other invaluable services such as aerospace education, and they are a reservoir for potential Air Force personnel, as the Senator from Arizona has stated.

I urge the Senate to act favorably on this amendment.

Mr. STENNIS. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Under the agreement we have when we complete this amendment, we automatically go back to the committee amendment on the B–1. I just call that to the Senator's attention.

I do not know if the Senator from Alaska understood that or not. But we were on the committee amendment concerning the B–1. We temporarily laid that aside for the purpose of considering the amendment of the Senator from Alabama. If we dispose of his amendment, then we automatically go back to the B–1 amendment by the committee.

Mr. STEVENS. The Senator from Alaska understood that situation.

Mr. STENNIS. That is fine.

I was diverted in my attention momentarily.

Mr. STEVENS. I might say to the manager of the bill I was just trying to make certain that my subsequent amendment would not be barred because Senator ALLEN's amendment amends the same figure in the bill.

Mr. STENNIS. All right. I thank the Senator. I am glad to understand that.

Mr. President, now with reference to this amendment on the Civil Air Patrol, let me give a little background. I mentioned in the opening statement that this bill actually has 3,359 line items that were considered in the markup of this bill. This is splendid argument in favor of something that I realize that the volume of work that the Senate is called on to do every year has just gotten so large that it cannot give the in-depth consideration these items deserve.

On this amendment I do not know just what happened in the consideration. There were so many of them. But I do not think the membership really was opposed to this relatively small sum here to be distributed around among 50 States.

I yield to the Senator from North Dakota, who is versed in these matters.

Mr. YOUNG. Mr. President, the Senator from Mississippi is correct. The committee handled over 3,000 items. We tried from the beginning to save all the money we could.

I think there is merit for this item. It may not have been given the attention that is deserved. Therefore, I think it would be well to accept the amendment.

Mr. STENNIS. Yes. It is an item that is in the budget, and it is in the House bill, and we think partly, at least, through inadvertence in some way, it got mixed in with some bad company, maybe, and got left out of this bill. Anyway, the amount is $1.1 million multiplied by 2. So we are glad to support the amendment.

Mr. ALLEN. I thank the distinguished Senator. I am ready to vote.

Mr. STENNIS. Mr. President, I yield back whatever time I may have.

Mr. ALLEN. The time was not limited, I believe, under the agreement.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama.

The amendment was agreed to.

Mr. ALLEN. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. STENNIS. I move to lay that motion on the table, Mr. President.

The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, I am ready to go into some other amendment.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments, as amended.

The first and second remaining committee amendments, as amended, were agreed to.

Mr. STEVENS. Mr. President, may I inquire of the manager of the bill? I have my amendment No. 500, which deals with the problem of Wage Board employees. I would be pleased to take that up at this time. The Senator from Alabama (Mr. ALLEN) and the Senator from New Hampshire (Mr. DURKIN) wish to be added as cosponsors of that amendment. I would be pleased to take that up at the Senator's convenience.

I also have two other amendments, one dealing with commissaries, and the other dealing with the so-called "double dipping" provision. I know that the B–1

comes back here automatically, and I do not want to abuse the process.

Mr. STENNIS. Yes. Mr. President, the situation now is that we here, at 1:41 p.m., cannot vote until 4 o'clock under the agreement, which is all right; it helps to have the agreement, to save time. But anything we argue now that cannot be disposed of by voice vote would have to be reargued later, following several votes that have already been agreed to, to occur following 4 o'clock. I do not see much to be gained——

Mr. STEVENS. Is there a time agreement?

The PRESIDING OFFICER. There is not a time limitation.

Mr. STENNIS. By us arguing it twice.

Mr. STEVENS. I might state to the Senator, as he knows, in committee I offered an amendment, that did carry, on wage board language, and was unaware that the House bill itself contained language which dealt with the same question that was covered by the committee amendment that was proposed, that upon my motion was deleted.

After we discovered that, I offered this amendment No. 500, which deals with the provision concerning wage board salaries. I would have covered that with my amendment in committee had I known the House bill provision was there, but the situation as it stands now is that the bill contains language which is equally, in my opinion, as offensive as the proposed committee language which was deleted at my request.

I do not know whether the committee has had an opportunity to look at my proposed amendment, which would strike the House language on wage boards.

That would be in conference, in any event, I point out to the chairman. Oh, no, wait a minute; I am misinformed. I understand the House had struck that language on the floor, too, and the committee put it back in.

Mr. STENNIS. Mr. President, the situation is that this proposal involves blue collar wage board salary employment. That is the subject matter. It was taken up in the House, where there was a division vote on the floor, and, by a vote of 19 to 11, on a division vote, according to my memorandum, this amendment was voted out of the bill.

Mr. STEVENS. I understand.

Mr. STENNIS. If I may just finish stating the facts, we had this up before the committee and had a rather full discussion and review of the facts, and being that it involves an estimated $300 million saving for fiscal year 1978, we voted to have the amendment in. I do not see how we can dispose of that without a rollcall vote.

Mr. STEVENS. All right. The Senator recalls that my amendment in the committee, which did carry, was deleted from the amendment, the proposed committee amendment dealing with the 3 percent?

Mr. STENNIS. Yes.

Mr. STEVENS. This other amendment, which I was not informed was to be in the bill, or did not realize it was in the bill in another place——

Mr. STENNIS. Yes.

Mr. STEVENS. I would have moved to strike in committee also. But if the Senator wishes to contest my amendment, I am perfectly willing to take it up any time he desires. I would be happy to take it up now, and have the vote later, or take it up after the votes, whichever the chairman would desire.

I have the amendment on commissaries which I have been requested not to offer until another Senator returns who wants to participate in the debate.

The third amendment is an amendment which touches Senator EAGLETON'S amendment, and I am sure it would be proper to notify him if we are to take that up.

So I leave it to the manager of the bill when he would like to take up these three amendments.

Mr. STENNIS. Well, I am ready now, but we cannot dispose of them, that is the problem, and we would have to go back into them some later.

As I see it, there is nothing to be gained unless the Senator would rather get his explanation into the RECORD now. That would be all right with me, and then we could go over it again later.

Otherwise, I am going to suggest that we just take a recess until 4 o'clock, after advising with the leadership to see if there is any reason to the contrary. We are aware that we cannot dispose of these amendments now.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum, temporarily.

The PRESIDING OFFICER. On whose time? Will the Senator from Mississippi state to whose time the quorum call is to be charged?

Without objection, the time for the quorum call will be equally divided. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SPARKMAN). Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I understand, that the senior Senator from Maine has a matter concerning this bill. The junior Senator has another matter.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield such time to the senior Senator from Maine as he may use.

Mr. MUSKIE. Mr. President, I appreciate that courtesy on the part of the distinguished floor manager, the able Senator from Mississippi.

Mr. STENNIS. That is on the bill.

Mr. MUSKIE. In the course of our consideration of the appropriations bills this year, Mr. President, I should like to say I have been pleased, as chairman of the Committee on the Budget, representing the committee, that the managers of the bill and the Appropriations Committee have maintained the discipline of the budget so that it has not been necessary for me, as often as last year, to speak to the budget implications of these appropriations bills. This one is of such significance and magnitude in terms of cost that I thought I ought to comment briefly on it.

First, I hasten to say that I rise in support of the defense appropriation bill for fiscal year 1978. I want to express my views about the bill and how it relates to the national defense targets Congress established in the first budget resolution for fiscal year 1978.

First, I extend my congratulations to the distinguished Senator from Mississippi (Mr. STENNIS), the distinguished Senator from Arkansas (Mr. MCCLELLAN), and the other very able members of the Defense Subcommittee for the work they have done and the time they have devoted to this important measure, and also to the distinguished ranking Republican member of the committee (Mr. YOUNG). They have worked extremely hard, Mr. President, in bringing before the Senate a defense spending measure that is within the budget targets that Congress mandated for defense.

I remind the Senate that it was not easy to arrive at agreement with the House conferees on those budget targets and that agreement was achieved only after several days of rather vigorous disagreement and debate.

The bill before us appropriates funds totaling $111.1 billion in budget authority. Outlays associated with the bill are $101.5 billion, which includes outlays of $28 billion from prior-year authority.

Under section 302(b) of the Budget Act, the Committee on Appropriations divides among its subcommittees the budget authority and outlays allocated to it under the first budget resolution. Under this process, the Defense Subcommittee was allocated $113 billion in budget authority and $103.7 billion in outlays. The bill before us leaves $1.9 billion in budget authority and $2.2 billion in outlays remaining within the subcommitee's allocation.

Having said that, however, I hasten to point out that possible later requirements for Defense Department pay raises and military retired pay are now estimated at $2.1 billion in both budget authority and outlays. This would place the Defense Subcommittee over its allocation by $0.2 billion in budget authority and slightly below the level of its allocation in outlays.

Mr. YOUNG. Will the Senator yield on that?

Mr. MUSKIE. Yes; I yield.

Mr. YOUNG. The Senator from Maine is making a good point. Also, we shall have to give serious consideration to the add-ons that the President sent over in the budget, which amounts to $449 million. That, along with the pay raise, would put us over the budget ceiling.

Mr. MUSKIE. I am happy to have the Senator from North Dakota make that point. We must always bear in mind the future amounts that come down the budget pike in the years ahead. This is a tight budget. We knew it would be when we set the defense function budget totals. I am delighted that the committee has worked so hard and effectively at holding the line so closely, but there is no room for additional play with these figures.

Mr. President, we must, of course, be watchful when subcommittee allocations

are exceeded. In the case of this appropriation bill, however, I believe there is no cause for concern. There are several reasons: First, the President's recent decision regarding the cancellation of the B–1 production program could have a downward impact on the final level of the bill. Second, the House-passed version of the defense appropriation bill is $1 billion in budget authority under the Senate-reported version, and it is possible that the Senate level may be reduced in conference. Moreover, even at the Senate level, we now expect the full Senate Appropriations Committee to remain within its first budget resolution committee allocation by approximately $5 billion in budget authority—an expectation fully supported by the distinguished chairman of the Appropriations Committee, who is also the chairman of the Defense Subcommittee.

Finally, Mr. President, the combination of the defense appropriation bill, as reported in the Senate, plus action to date on other appropriation bills, indicates that the Congress is well within the national defense functional targets established in the first budget resolution. It is currently estimated that the national defense function would be $1.2 billion in budget authority and $1.4 billion in outlays below the functional targets if this bill were enacted as reported.

I have a detailed chart depicting the derivation of these figures and I ask unanimous consent that the table be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FUNCTION 050: NATIONAL DEFENSE

[In millions of dollars]

	Resolution assumptions		Appropriation bills	
	Budget authority	Outlay [1]	Budget authority	Outlay [1]
Civil defense activities	142	141	130	[2] 130
Renegotiation Board	6	6	6	[2] 6
ERDA-Defense	2,380	2,162	2,330	[3] 2,141
Selective Service	6	6	6	[2] 6
Military assistance	975	887	880	[4] 591
Military construction	3,016	3,612	3,131	[3] 3,621
Defense	112,400	102,736	[5] 111,095	[3 5] 101,546
Possible later requirements	2,000	2,000	2,119	2,060
Total appropriations	120,925	111,550	119,697	110,101
Trust funds and receipts	−2,425	−550	−2,425	−550
Total function	118,500	111,000	117,272	109,551
Under target			(−1,228)	(−1,449)

[1] Includes outlays from prior-year authority.
[2] Senate passed.
[3] Senate reported.
[4] House passed.
[5] House has passed Defense bill of $110,100,000,000 in budget authority and $102,100,000,000 in outlays.

Mr. MUSKIE. Mr. President, in concluding my remarks, I extend my appreciation again to the distinguished chairman of the Committee on Appropriations (Mr. MCCLELLAN), and to the entire committee membership and staff for their efforts in producing a bill within the congressional budget targets for defense. I might also add that the distinguished chairman provided the Budget Committee sound counsel and able assistance during our deliberations in arriving at the first budget resolution, and I want to publicly thank him for his support of the budget process.

Mr. President, I support this defense appropriation bill, of course reserving the right to support or oppose floor amendments. I congratulate the distinguished chairman for reporting a bill that is consistent with the budget resolution targets and the committee's allocation; and I encourage him to continue his efforts in this regard in the subsequent conference with the House.

I repeat my congratulations to the Senators involved, the ranking Republican and my good friend from North Dakota, the distinguished floor manager of the bill (Mr. STENNIS), and Senator MCCLELLAN, the chairman of the full committee. I express my appreciation for the cooperation we are receiving from the Appropriations Committee on all matters affecting the budget.

Mr. DURKIN. Will the Senator yield for a unanimous-consent request?

Mr. MUSKIE. Yes, I yield.

Mr. DURKIN. Mr. President, I ask unanimous consent that Mark Coven and Ann Schlesinger be accorded the privilege of the floor during consideration on this and pending measures today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I support the fiscal year 1978 defense appropriation bill. This is a vital bill because it provides the funding to maintain our national security, and it also accounts for 22 percent of the Federal budget. Two aspects of this bill are important to the Congress ongoing effort to bring the budget under control: First, this bill has a major impact on whether the national defense function stays within the targets set by Congress in the first concurrent budget resolution. Second, this bill contains some important budgetary savings which will pay increasing dividends in future years and will help us obtain more muscle from our defense dollars. I would like to discuss each of these areas briefly.

As reported, the bill before us makes available $111.1 billion in BA and $101.5 billion in outlays—including $28 billion from prior-year authorizations. Together with the possible later requirements, the BA figure exceeds by $0.2 billion the BA amount which the Senate Appropriations Committee allocated to the Defense Subcommittee under section 302(a) of the Budget Control Act. In outlays the bill is right at the subcommittee allocation. The slight overage in BA can be accommodated because it appears that the sum of all the appropriation subcommittees, plus all the possible later requirements envisioned at this time, will be significantly below the budget authority available to the full Appropriations Committee under the first budget resolution.

The relationship between this bill and the national defense function is even more favorable. Taking into account all the other components of the function, including the pay supplemental expected later in the year, this bill leaves the function below the targets set in the first budget resolution by $1.2 billion in BA and $1.4 billion in outlays.

What is particularly praiseworthy, Mr. President, is the way in which the committee has achieved the cuts from the President's request which were needed to meet the targets in the first budget resolution. Through careful examination, low priority items were identified and eliminated while the vital components of our Nation's military strength were enhanced. For example, the subcommittee made a base-by-base analysis of daily operating costs of military installations and identified savings of over $300 million from the President's request. The committee also dropped the funds to cover the impact of anticipated inflation in the "other purchases" portion of the operation and maintenance account. This is consistent with normal budgetary practices to encourage local commanders to make savings where possible and to trim the lowest priority expenses. The committee also directed that about $250 million of prior-year unobligated balances be reprogramed and applied to the fiscal year 1978 budget request. On the other hand, the committee's reductions in the more important areas of weapons procurement and military manpower totaled less than 1 percent from the President's budget.

These are significant accomplishments, and our distinguished chairman of the Appropriations Committee, Senator MCCLELLAN, and all the members of his Defense Subcommittee deserve high praise for their diligent efforts in producing a bill which is consistent with the defense function targets and does not cut our Nation's military strength.

Mr. President, the House-passed Defense Appropriation bill is below our bill by about $1 billion in BA, but it is above our bill by $0.6 billion in outlays. This means we need to demonstrate strong support on the floor for Senator MCCLELLAN's bill in order to aid his efforts at the conference committee meetings. This is particularly true for the cost sav-

ings described earlier, most of which have high outlay rates in the first year. Since the bill before us is at the level of the Defense Subcommittee allocation, and there appears to be only about $0.2 billion leeway in outlays for the whole Appropriations Committee, we cannot afford to move very far toward the higher House outlay number without causing the Appropriations Committee to break its budget allocation. As we all know, additions to the outlay number add directly to the fiscal year 1978 deficit which already exceeds the level most of us believe is appropriate.

Mr. President, H.R. 7933 contains several provisions involving reforms which have important implications for outyear budgetary savings. Because I strongly believe these reforms are crucial to bringing defense support costs under control and thus increasing the resources available for improving direct-combat capabilities, I would like to take a few moments to highlight some of them.

Perhaps most important is the issue of wage-board salary reforms. Numerous studies have shown that Federal pay exceeds local wage rates for the same work in the private sector. A careful study by the Congressional Budget Office estimates that Federal rates average at least 9 percent above local private sector wages. Both Presidents Ford and Carter have proposed reform of Federal wage-board pay scales to bring them into line with prevailing private sector wage rates. The bill before us makes an important first step in achieving this much needed reform. Rather than reducing the salary of any employee, it would restrict Federal pay increases for any employee until pay in the private sector for that employee's skills has caught up with his salary. This provision is estimated to save between $200 and $300 million in fiscal year 1978; future year savings would grow considerably. A similar provision was recommended by the House Appropriations Committee, but it was deleted by a 19 to 11 division vote. Mr. President, this is a needed reform, and I urge my colleagues to support it here and our conferees to bring it back in the conference report.

A second overdue reform is a 3-year phaseout of the salaries subsidy for the personnel who operate and manage military commissaries. This will not result in the closing of any commissary and is estimated to leave prices in the commissaries still below local supermarkets by 15 to 20 percent. A similar provision passed the Senate last year but was dropped in conference. Since military salaries rose 127 percent from 1964 to 1975 while the Consumer Price Index increased only 74 percent, this operating subsidy cannot continue to be justified. The Senate must again take the lead in achieving needed budgetary savings.

Finally, Mr. President, this bill continues to allow the Department of Defense to convert certain base support functions to commercial contract. I strongly urge the Senate conferees to uphold this provision because my State contains a convincing example of how contracting out support activities can save the taxpayer significant amounts. Vance Air Force Base in Oklahoma has been contractor-operated for several years. Two Rand Corp. studies—in 1973 and 1976—concluded that the support costs at Vance were 15 percent less than a similar Air Force-operated base. In view of these demonstrated savings, it does not make sense to prohibit the Department of Defense from making use of contract support where it believes it is appropriate.

Mr. President, these are several examples which show how our Appropriations Committee is working to reduce support costs and thus maximize the capability obtained from the taxpayers' defense dollars.

In summary, the fiscal year 1979 Defense Appropriations bill as reported by the Senate Appropriations Committee is consistent with the targets Congress set in the first budget resolution. I support the bill; I applaud the committee's efforts.

Mr. MUSKIE. Mr. President, I yield the floor.

UP AMENDMENT NO. 678

The PRESIDING OFFICER. Who yields time?

Mr. HATHAWAY. Mr. President, I ask unanimous consent that an amendment which I send to the desk may be in order at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maine (Mr. HATHAWAY), for himself, Mr. MUSKIE, and Mr. MOYNIHAN, proposes unprinted amendment No. 678.

On page 60, line 21, insert "(1)" before "to maintain".

On page 60, line 22, strike out the period and insert in lieu thereof a comma and the following: "and (2) to establish and maintain Reserve Officer Training Corps units in the State merchant marine academies pursuant to the policy expressed in section 603 of the Department of Defense Appropriation Authorization Act, 1977 (90 Stat. 929; 46 U.S.C. 1126–1).".

Mr. HATHAWAY. Mr. President, on behalf of Senator MUSKIE and myself, I am offering an amendment to section 855 of the DOD appropriations bill. This section of the bill prohibits the expenditure of funds on any senior Reserve Officer Training Corps program which has not had a minimum of 17 junior year students in at least one of the past 4 years or this upcoming academic year, or 12 students in the junior year in the case of a 2-year program. The section provides one exception in that funds would be available to maintain at least one ROTC unit in each State.

Our amendment would add a second exception to this prohibition, which would recognize the special relationship between the Navy and the merchant marine programs. The amendment provides that funds would be available to establish and maintain ROTC programs at the State maritime academies.

The reason for this amendment is quite straightforward; approximately a year-and-a-half ago, the Navy announced its intention to disestablish its ROTC units at the Maine Maritime Academy. The strong protest of the entire Maine congressional delegation was made to Navy at that time; and subsequently an amendment was adopted to the 1977 military authorization bill reiterating the clear congressional policy that there be maximum integration of our naval and maritime forces. Strong ROTC programs at the maritime schools clearly help to implement such a policy and last year's amendment directed the Secretary of the Navy to take "special steps" to assure the maintenance of naval ROTC programs at merchant marine academies.

After the passage of this amendment last year, a new review was carried out by the Navy of the ROTC programs in the maritime schools in Maine and New York. I have now been informed that Secretary Claytor agrees that the programs in Maine and New York should be reestablished, and that he has requested the Office of the Secretary of Defense to implement reestablishment.

This reversal of the original decision is good news to Maine and New York; however, section 855 of the pending bill would appear to jeopardize reestablishment. Although it is not certain that either Maine or New York would be unable to meet the requirement of this section in the upcoming year, at present the uncertainty is such that the question of reestablishment is again thrown into doubt. Hence, students who might otherwise continue in the program could well decide at these schools that the question of whether or not the program is going to be maintained is so in question that they will not bother to continue in ROTC.

There are many special circumstances surrounding the ROTC programs at Maine and New York which the sole reliance on numbers in section 855 cannot take into account. First, there is a special relationship between our naval and merchant marine forces and the maritime schools are in the business of training individuals qualified to become licensed deck officers for ocean-going vessels.

Second, disestablishment of the units at Maine and New York does not result in any significant cost savings to the Navy in its ROTC program. Navy intends to continue its naval science program at the schools and would save only the cost of providing the one or two personnel necessary to run the ROTC program itself. In the case of each school, the estimated cost savings is approximately $34,000 per year.

Third, the decision to disestablish was made without any consultation with the Maritime Administration and in their view was in violation of their agreement with Navy under which the programs were originally established in the two schools.

Finally, the programs at these two schools have not been in operation long. The program at the Maine academy was set up in 1972 with the first entering class in 1973. As of now, there have not even been four consecutive third-year classes which could have met the requirement that there be 17 students in one of those classes. I understand the New York program is even newer than the one at Maine. With the decision and announce-

ment to disestablish coming just 2½ years after the program began in the case of Maine Maritime, the program has never really grown to its full potential. In addition, the Navy has offered little in the way of support activities so that the program might grow in size.

The program at Maine Maritime Academy has now been kept in limbo for over a year while the Navy's second review of the program was carried out. During that time, students interested in ROTC have transferred or dropped out of the program because of the uncertainty surrounding its future. In addition, with one exception, entering students have not been able to join the program, and scholarships have not been available at the school. These two maritime schools are now caught in a Catch-22 situation; although Navy has reversed its decision to disestablish, the programs at the schools are in such disarray because of Navy's prior actions that they may not be able to meet the numbers requirement of section 855. To permit these programs at the maritime academies to be effectively killed in this backhanded manner would, I think, be against the best interests of our overall naval and maritime policies, and in clear contravention of the policy established in last year's military authorization bill.

In summary, our amendment would permit Navy to reestablish these units at Maine and New York, as it has said it wishes to do. It does not mandate the establishment of any new units at the other four State maritime academies. Our intention is to permit the policy of last year's military authorization bill to be carried out, and to prevent an end to two programs whose circumstances are unique and which should not be subject to these provisions in the upcoming fiscal year.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. YOUNG. Mr. President, I suggest the absence of a quorum, the time to be charged to neither side.

The PRESIDING OFFICER. Without objection, the clerk will call the roll.

The clerk will call the roll.

Mr. GOLDWATER. Mr. President, before the quorum call is made, I ask that the Senator from Mississippi return so that he can make a decision on this amendment. I think it is a noncontroversial amendment.

Does the Senator from Maine ask the Senator from Mississippi to step back in? I think they can reach a decision on the amendment. I think the Senator is in the cloakroom.

Mr. HATHAWAY. The Senator from Mississippi is delayed momentarily in the cloakroom. I am sure he will be out in 4 or 5 minutes.

Mr. YOUNG. Is there anyone else desiring time?

Mr. President, I suggest the absence of a quorum and the time not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

Mr. CANNON. Mr. President, I have an amendment to send to the desk.

The PRESIDING OFFICER. There is an amendment pending. This amendment is not in order at this time.

Mr. CANNON. Mr. President, I ask unanimous consent that the pending amendment be temporarily laid aside that I may call upon this amendment.

The PRESIDING OFFICER. Is there objection?

The Chair hears none. Without objection, it is so ordered.

Mr. YOUNG. Mr. President, what happened to my request for a quorum?

The PRESIDING OFFICER. Does the Senator ask for a quorum call at this time?

Mr. YOUNG. No, not now. I wondered what happened to my request.

Mr. CANNON. I am sorry, I did not hear the Senator suggest the absence of a quorum.

The PRESIDING OFFICER. The request for a quorum call is withheld.

Mr. CANNON. Mr. President, I ask unanimous consent that Charles Cromwell and Frank Krebs of the committee and my staff be granted privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 679

Mr. CANNON. Mr. President, the amendment I send to the desk is an unprinted amendment and I ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON), for himself, Mr. GOLDWATER, and Mr. RIEGLE, proposes an unprinted amendment number 679:

On page 28, lines 17 and 18, strike out "$4,029,114,000" and insert in lieu thereof "$4,025,214,000".

Mr. CANNON. Mr. President, this amendment would delete the $3.9 million added by the Defense Appropriations Subcommittee to start building four prototypes of the Enforcer airplane. Also, I am pleased to add the distinguished Senator from Michigan (Mr. RIEGLE) as a cosponsor to this amendment. The total cost of this prototype program is estimated at over $10 million to build these four planes.

Mr. President, the Enforcer is a World War II P–51 fighter reengineered with a turboprop. Its inventors already have constructed several prototypes of this airplane. The Air Force tested the Enforcer during a flyoff competition in 1971 held to see if a light strike airplane should be bought for the undefended air war environment of South Vietnam. This competition was called Pave Coin. After a thorough flight test of the Enforcer and other competing airplanes, the Air Force decided not to buy any of these planes and instead used existing A–37 jets for the South Vietnamese Air Force. The Air Force test report stated that there were several deficiencies with the Enforcer prototype tested. Among these were poor visibility, roll control problems, and so forth. These problems, however, are not at issue in the Enforcer debate because they could be corrected.

The real issue is whether the Enforcer is the kind of plane that deserves additional testing to evaluate its suitability for the U.S. Air Force in the modern high threat air defense environment that would exist in Central Europe or most places in the world that the Air Force would be involved in combat. I believe that the answer is a resounding "no," and this opinion is shared by all of the military services, including a most recent statement from the Joint Chiefs of Staff in a letter on April 8 of this year.

Let us review some history of the efforts by the inventors of the Enforcer to promote this prototype program at the expense of the American taxpayers. Despite the fact that there still is an existing Enforcer prototype which could be used for more flight tests of the plane, its promoters have been attempting to get funding to build four new prototypes. They succeeded in obtaining hearings before the House Defense Appropriations Subcommittee in May 1974, hearings before the House Armed Services Committee, August and November 1974; the Senate Defense Appropriations Subcommittee in May 1975, the Senate Armed Services Committee's R. & D. Subcommittee in July 1975 and the Senate Armed Services Tactical Air Subcommittee in March 1977. All of these hearings have plowed the same ground. They have revealed that the Enforcer already has been tested, they have revealed that the Department of Defense has done numerous evaluations of the cost, performance, and military worth of the Enforcer and have found it unworthy as a candidate for the services' inventory and have found that further testing would serve no useful purpose.

Despite all of the hearings that have been held in order to satisfy the promoters of the Enforcer, there never has been a budget request from the Defense Department for the plane and neither of the Armed Services Committees ever has added an authorization of funding for the plane.

Mr. STENNIS. Mr. President, will the Senator yield for a question?

Mr. CANNON. I yield.

Mr. STENNIS. Does the Senator know what Members of this body were sponsors of this matter in the committee? I was not there when it was added, and Mr. McConnell thinks it was Senators CHILES, EAGLETON, and PROXMIRE.

Mr. CANNON. I am sorry, I do not know. It just came out of the blue, as the Senator knows. We did not authorize it, and I was shocked to find that it was in this bill for $3.9 million, when it was not authorized. We held hearings on it, and we have been up and down the hill on this matter for more than 3 years.

Mr. STENNIS. I was not at the committee meeting, but I think that, as a matter of courtesy, they should be notified and given a chance to speak.

I thank the Senator for yielding to me. I will try to get in touch with them.

Mr. CANNON. It is true that 2 years ago the Senate Appropriations Committee did add funding for the plane, but the Senate wisely deleted that funding

as a result of the floor amendment offered by Senator GOLDWATER and myself.

Mr. President, to sustain the Enforcer funding in this bill would directly contravene our traditional practice of requiring authorization for new programs in research and development before allowing appropriation of funding for such projects. The $3.9 million in this bill has not been authorized, and as I said earlier a proposal to authorize the Enforcer was rejected this year in the Senate Armed Services Committee.

In summary, if we sustain this appropriation we will be violating the principles and practices of the authorization process, will be adding money for a project which our services say is not worth pursuing and is unworthy of a budget request, and in my opinion will be perpetrating a ripoff of the American taxpayer in order to pursue a boondoggle intended to recoup the investment of the investors of the Enforcer airplane. Therefore, I urge the Senate to support our amendment and delete the $3.9 million for this project.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. GOLDWATER. Mr. President, I am not going to reiterate everything that has been said by my chairman, the Senator from Nevada, because we have lived through this thing for the last 3 or 4 years.

As my able colleague Senator CANNON has stated, this amendment would delete the $3.9 million in R. & D. funding that was added by the Appropriations Committee to start a prototype program for the Enforcer aircraft. However, Enforcer has not been requested by the DOD and none of the senior management with the Department of Defense believe that an operational test of Enforcer is needed.

Again, this year we held very extensive hearings on the Enforcer aircraft and I chaired those hearings. For the record, I asked General Slay, Deputy Chief of Staff for R. & D., the following question:

The Air Force is on record to agreeing with the claims made by Mr. Lindsay for Enforcer's performance. Yet, Mr. Lindsay says an operational test is needed. What additional data could be gained from an operational test?

And General Slay responded:

In our opinion, very little would be gained from an operational test. The Air Force is on record as agreeing with the aerodynamic performance claimed for the Enforcer. Consequently, we believe a flight test to show its aerodynamic performance is unnecessary. With regard to support and maintenance factors (e.g., turboprop aircraft characteristics, reliability, maintainability, etc.) we could obtain added experience for estimating life cycle costs, however, we have substantial experience in similar aircraft which can be used to predict Enforcer operational characteristics. USAF and Navy/Marine Corps A–1 Skyraider and OV–10 Bronco experience, as well as USAF F–15 experience from a baseline for predicting propeller aircraft combat capabilities in terms of formation flying, tactics, turn-around times, operations from forward operating bases, operational procedures, etc. The Enforcer's predicted maneuverability is somewhat similar to the A–10's, thus our very successful operational tests of the A–10 at Fort Polk, Louisiana; McChord AFB, Washington; Gila Bend, Arizona; and Nellis AFB, Nevada have given us excellent standards for comparing close air support aircraft capabilities.

In summary, what little we do not already know about Enforcer's characteristics, both technical and operational, we can predict confidently based on our experience with similar systems. Thus, we believe very little additional data could be gained from an operational test of the Enforcer.

Mr. President, let me stress again that General Slay indicated that what they do not already know about the Enforcer, either technical or operational, they are able to predict confidently based on their experience with similar systems. Therefore, as General Slay pointed out, very little additional data could be gained from an operational test.

A further point related to this operational test is that, in my opinion, it would be in violation of proper competitive procedures. If the Government conducts an operational test on the Enforcer, why should not any other manufacturer who has an aircraft he considers to be militarily capable, be entitled to ask the Government to conduct an operational test on his aircraft? Is it possible that other potential competitors do not have the clout with Congress that the sponsors of the Enforcer do?

Let us take the operational test one step further and assume that the Department does, in fact, conduct the test on Enforcer. What then? Remember that the Air Force stated that they could confidently predict all additional data they might be lacking on the Enforcer. But, now that the operational test is completed, what do we then do with the data and what do we then do with the four prototype aircraft? Obviously, the sponsors of Enforcer are not going to let the matter drop there, because the entire intent of this program is to try and force the Services, primarily Air Force, to buy an aircraft they do not want nor have a requirement for.

There is another point that should be made about this requested operational test. It has been stated that the Enforcer has a potential for foreign sales since it has a capability to be used in a low intensity, guerrilla-type conflict. However, foreign governments are reluctant to buy aircraft direct from U.S. manufacturers that have not been endorsed by our Government. In addition, most prefer to deal through the U.S. Government, rather than direct with a manufacturer, since if the deal should go bad, the foreign government can hold the U.S. Government liable rather than the private manufacturer. Chances for resolution of any grievance are much better.

Therefore, in my opinion, another reason for this requested Enforcer test is to gain some sort of U.S. Government or Department of Defense endorsement in order to enhance the Enforcer's foreign sales potential. Now, I do not have a specific objection to a manufacturer trying to get his product qualified in the best way possible, but it need not and should not be done at the expense of the Defense Department.

If we want to qualify various weapon systems to enhance their sale value to foreign governments, then those projects should be authorized and funded within the Foreign Military Sales Act.

Mr. President, the sponsors of this Enforcer aircraft say that only $10 million is going to be required over a period of 3 years to develop these four prototypes. That is not an accurate estimate according to Air Force. The Air Force estimate is $18.5 million not including propeller development and Maverick missile capability. Mr. President, I ask unanimous consent that the response from General Slay to my question on this subject be printed at this point in my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

RESPONSE OF GENERAL SLAY

Regarding the question on whether evaluation of the Enforcer or a future development of this aircraft by the Air Force would be in keeping with the intent of OMB Circular A–109, our interpretation of the Circular is that first of all a mission need must be established. Only after the mission need is documented and validated do we start to talk about specific hardware solutions. The Circular then specifies that alternative system design concepts will be solicited from a broad base of qualified firms. Demonstration of a single system design concept that has not been competitively selected should be considered only if justified by factors such as urgency of need, or by the physical and financial impracticability of demonstrating alternatives. In summary, we do not believe an operational evaluation or a sole-source development of the Enforcer is in keeping with the intent of OMB Circular A–109.

The Air Force now estimates that it would cost approximately $18.5 million (FY 77 $) to conduct operational testing as previously proposed by the Enforcer advocates. The cost is broken out as follows:

	Millions
Four aircraft prototype program as contained in July 30, 1975 Air Force testimony to SASC R&D Subcommittee (Fiscal Year 1975 $)	$10.8
Escalation to 1977 $	3.5
AFTEC operational test	1.0
Engineering change orders and management reserve	1.0
Option to add head up display to prototypes	1.1
Option to add 106mm rifle to prototypes	1.1
Total prototype program (FY 1977 $)	[1] 18.5

[1] Excludes: 1. propeller development and/or modifications and propeller recurring costs. 2. Maverick capability.

The Air Force now estimates that a full scale engineering development program would cost approximately $156.5 million (FY 77 $).

Mr. GOLDWATER. Mr. President, this is the only new start item in this bill that has not been authorized. I am not aware that we have eliminated our standing procedure in the Senate of authorization followed by appropriation. I would remind my colleagues that when the fiscal year 1975 Defense appropriations bill came to the floor, Senator CANNON and I proposed the identical amendment that we are proposing today to strike funds for the Enforcer. Then, as now, we pointed out that the funds and the building of the prototypes had not been authorized. If I recall correctly, during that debate, there was an agreement to con-

duct hearings on the Enforcer aircraft and the following year the Research and Development Subcommittee, under Senator McINTYRE, did hold hearings on the Enforcer aircraft. Even so, no authorization was forthcoming in the following year's bill. Now, this year we again held hearings, probably the most comprehensive that have yet been held on the Enforcer, and still our Armed Services Committee did not see fit to authorize funds for the Enforcer aircraft.

However, even if an authorization had come from the Armed Services Committee, I would have been against funding the Enforcer because the military services have never indicated they have a requirement for this type of aircraft. That is the major point that everyone seems to be overlooking; the services do not have a requirement for this aircraft.

Mr. President, I note that the $3.9 million is contained in the Navy account within the bill. I am not sure why it is carried that way and perhaps a member of the Appropriations Committee could offer an explanation when I complete my statement. But, noting that the funding would be the responsibility of Navy, I wrote to Admiral Holloway and asked him if the Navy had a requirement for the Enforcer. I will quote one paragraph from Admiral Holloway's letter which I believe sums up the situation very well. The paragraph reads as follows:

There is no requirement for building or operationally testing the Enforcer aircraft. Its flying qualities are readily predictable and its components are all presently in service. The aircraft's specific capabilites have never been in question.

Mr. President, I ask unanimous consent that the letter from Admiral Holloway to me concerning the Enforcer aircraft be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHIEF OF NAVAL OPERATIONS,
July 15, 1977.

Hon. BARRY GOLDWATER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GOLDWATER: This responds to your request of 1 July 1977 concerning the Enforcer aircraft in the Department of the Navy aircraft inventory.

Naval and Marine forces are dedicated to the mission of Sea Control and, therefore, are required to accomplish a wide spectrum of tasking with flexibility. While the Enforcer may meet some of the requirements for Close Air Support, it meets few of the requirements for area support, deep strike or interdiction. Accordingly, there is no requirement for the Enforcer in the Department of the Navy aircraft inventory.

The capabilities and vulnerabilities of the Enforcer have been examined by all the services in the environment of today's tactical scenario. The general conclusion iterated after each Enforcer study has been that it could be used in the CAS mission against relatively benign air defense systems but is not suitable for the CAS mission requirement in amphibious operations because it is not shipboard capable. It is a relatively slow aircraft compared to the active force aircraft and would require an increase in force strength. The restricted force structure does not allow for maintenance of a single mission aircraft. Given the vast tasking which must be considered in naval force structuring, the sophistication and variety of the Soviet threat and budgetary constraints, cost-effectiveness of each system becomes paramount. The fighter/attack aircraft in the current inventory, plus those programmed for procurement, best fit that criteria.

There is no requirement for building or operationally testing the Enforcer aircraft. Its flying qualities are readily predictable and its components are all presently in service. The aircraft's specific capabilities have never been in question.

I trust that this will establish the Navy's position concerning the Enforcer aircraft.

Sincerely,

J. L. HOLLOWAY, III,
Admiral, U.S. Navy.

Mr. GOLDWATER. Mr. President, it is quite clear the Air Force has no requirement for the Enforcer aircraft, the Navy has no requirement for the Enforcer aircraft, and further, the Joint Chiefs of Staff can see no requirement for building or for operationally testing prototypes of the Enforcer. Regarding that last point, I ask unanimous consent that a letter from Gen. George S. Brown, Chairman, Joint Chiefs of Staff, to me on the Enforcer aircraft be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE JOINT CHIEFS OF STAFF,
Washington, D.C., April 8, 1977.

HON. BARRY S. GOLDWATER,
U.S. Senate, Washington, D.C.

DEAR SENATOR GOLDWATER: This responds to your letter requesting the judgment of the Joint Chiefs of Staff on whether there is a requirement for the Enforcer aircraft in the US tactical air forces.

It is the judgment of the Joint Chiefs of Staff that there is no requirement for the Enforcer in the US tactical air force inventory. That judgment has been supported by an extensive review of the Enforcer proposal, including the capabilities and vulnerabilities of such an aircraft in the predicted threat environment used in structuring tactical air forces. Each of the Services is constantly seeking systems which will provide the most effective combat capability at the least cost. Given the spectrum of conflict which must be considered in force structuring, the growing sophistication of the Soviet threat, and budgetary constraints, cost effectiveness of each system becomes paramount. The Joint Chiefs of Staff believe the fighter/attack aircraft in the current inventory plus those programmed for procurement best fit that criterion. The United States cannot afford to hedge its bet by further procurement of a highly specialized aircraft, however inexpensive, when thorough review of all analysis to date shows it not to be as cost effective or survivable as other aircraft already being procured.

Further, the Joint Chiefs of Staff can see no requirement for building or for operational testing of prototypes of the Enforcer. Specific capabilities of the Enforcer have not been at question in previous analysis. The technology embodied in the aircraft and its systems makes its operational characteristics predictable with confidence.

The Joint Chiefs of Staff trust this will establish clearly their position concerning the Enforcer aircraft.

For the Joint Chiefs of Staff:

GEORGE S. BROWN,
Chairman,
Joint Chiefs of Staff.

Mr. GOLDWATER. Mr. President, in summary, there is no requirement for Enforcer, there is no authorization for Enforcer and, consequently, there is no need for the funds contained in this bill. I urge my colleagues to support the amendment to delete these funds.

I yield the floor.

Mr. STENNIS. I yield myself 1 minute.

Mr. President, the question about this matter being authorized has been raised by the Senator from Nevada. The Senator from Florida is interested in this matter, and I have reached him. As a matter of courtesy, he certainly is entitled to be heard on it, and I would like to yield some time to him.

This matter was taken up in the committee. It was discussed there and it was argued, and it was put in the bill. I believe that those who sponsored it are entitled to a chance to be heard. They are entitled to the courtesy of being notified.

Mr. CANNON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. CANNON. I certainly agree with the Senator.

Our problem has been that we could not find out who sponsored it. We did not know of anyone to notify because this just popped up, and we did not know who sponsored it.

Mr. STENNIS. I thought he was here, but, when I turned to yield to him, I did not see him. The Senator from Florida wishes to have some time to speak on this matter. I cannot support it.

Mr. CHILES. I thank the distinguished Senator.

I was for the amendment when it came up before the committee, as most of the members of the committee were. This has come before the Appropriations Committee on more than one occasion. As I understand the feeling of the majority of the Appropriations Committee, it always has been this: Why do we not test this airplane and find out what its propensities are? For the life of the members of the Appropriations Committee, we have not been able to understand why the Air Force or others would not test this airplane.

We have had a debate about it on the Senate floor before. It has been up before us on the floor. I have some material—I do not have that material with me right now. I did not know the amendment was coming up on the floor now. I do have a statement I would like to have included in the RECORD. But, as I say, I do not have that with me now. I think the vote in the committee was strong for the funding so that we can go ahead and have a test of the Enforcer, and see whether it lives up to the claims which it is supposed to have.

The Enforcer is designed to perform close air support. It is going to cost about $2 million a copy as opposed to all of the other planes we are thinking of funding.

It can be used for the role in Europe. It will take all of the missiles, heat-seeking missiles, and it will take all the targetry devices that would guide in all of the other firepower that could be used to stop the Russian tanks if they break out in Europe.

From that information it just seems that for what we are talking about here and what we spend on testing, this was a small number of dollars to determine if

this plane at $2 million a copy would carry out the kind of role it is designed to carry out, and if it would, it would certainly be of great benefit to the inventory of this country and probably then the Air Force might decide they like the plane. Evidently they did not start off with this plane. It was sort of underdesigned for the Air Force. It does not have enough gadgetry, it does not cost enough, and it seems to be one of the reasons why no one has ever wanted to test the plane to actually see what it would do.

As I say, the vote, I thought, was clear and convincing in the Appropriations Committee, as it has been in the past, that the appropriation of $3.9 million to provide the first year's funding for the construction and test of the four prototypes, whose total cost will not exceed $10.6 million, was something that was wise, and the committee wanted to support it, and I certainly support it.

I have the statement now to which I previously referred.

Mr. President, since last year's debate on the Enforcer, a thorough hearing has been conducted by the Armed Services Committee which demonstrated to my satisfaction that we should at least test this aircraft.

Mr. Lindsay and Mr. Helms have, I believe, invented a better mousetrap by combining some space age technology with an old, but reliable airframe which dates back to the Second World War. What the Air Force wanted was a close air support fighter for the 1980's. What they are getting is the A–10, an all too typical overdesigned aircraft with the usual enormous cost overruns. What they could get is David Lindsay's better idea: A modified P–51 Mustang with a jet prop engine, space age armor, and some inexpensive but deadly accurate weapons systems.

The idea of introducing a modified WWII fighter might seem, at first glance, to be a rather odd idea. Actually, it is a very good one. Close air support craft do not have to be the super fast, and super expensive, planes designed as interceptors and attack aircraft. Close air support planes are essentially supposed to be flying gun platforms. Speed is not essential—as any fighter pilot can tell you, it is harder to hit a ground target when you are approaching at 1,000 miles an hour than it is at 300.

Here again the principles embodied in the Office of Management and Budget's circular A–109 could have saved the taxpayers a lot of money. If, in the beginning, the Air Force had not immediately jumped to the conclusion that its air support aircraft had to be like all the other aircraft in its inventory—fast, complicated, and mighty expensive, they could have looked at the mission instead. The mission is to hang a flying gun platform over the battlefield. Hopefully, the gun platform would be reasonably fast, simple to fly and repair, slow enough to permit the pilot to hit his target, and, for the sake of the taxpayers, relatively cheap. The Enforcer appears to have all of these characteristics. The A–10, whatever its other qualities, is certainly not cheap.

Accordingly, I support the committee's action to provide $3.9 million to begin a 2-year test of the aircraft, $6.7 million additional being required for the second year.

The PRESIDING OFFICER (Mr. MELCHER). Who yields time?

Mr. STENNIS. Mr. President, will the Chair indulge me for just a moment, please?

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. I ask that the Chair indulge me for just a moment and the Chair can charge me with the time.

Mr. President, I yield myself 3 minutes. Excuse me, did the Senator want to use some time?

Mr. GOLDWATER. I just wanted to answer a question that was raised by the Senator from Florida. It will not take me more than 2 minutes.

Mr. YOUNG. I yield 2 minutes.

Mr. GOLDWATER. Mr. President, the questions raised by the Senator from Florida are indeed intelligent questions. They are questions that deserve an answer, but I feel we have given these answers for 3 or 4 years not just on the floor of the Senate but in the hearings held on this particular aircraft by the Research and Development Subcommittee, of which I am a member, and by the Tactical Air Subcommittee, of which I am a member.

We questioned General Slay, who is chief of research and development of the Air Force, relative to this, and I read the main part of his answer:

> Regarding the question of whether evaluation of the Enforcer or future development of this aircraft by the Air Force would be in keeping with the intent of OMB circular A–109, our interpretation of the circular is that, first of all, the mission need must be established. Only after the mission need is documented and validated do we start to talk about specific hardware solutions. The circular then specifies that alternative system design concepts will be solicited from a broad base of qualified firms. Demonstration of a single system design concept that has not been competitively selected should be considered only if justified by factors such as urgency of need or by the physical and financial impracticability of demonstrating alternatives.
>
> In summary, we do not believe an operational evaluation of a sole source development of the Enforcer is in keeping with the intent of OMB circular A–109.

Now that, I think, is pertinent language, Mr. President, that we are faced with in this. This is not just a close air support aircraft. This is a very lightweight close air support aircraft that has very limited ability to carry certain weapons so that it certainly could not be called a tank destroyer as we talk about the A–10. It cannot carry that type of weapon.

The thing is, Mr. President—and I think this is very important—if the Air Force or the Army decided they needed this weight aircraft in the inventory for ground support, then we would have to throw this open to competition, and if we yield to the request of the Senator from Florida to include this in the appropriations bill then what we are doing is excluding at least four or five other companies that could build a modern close air support aircraft of this weight, and I think that in itself is something we cannot ignore.

Mr. President, regardless of what they break the cost down as being, the Air Force feels that a full-scale engineering development program would cost about $156.5 million on this particular aircraft at this time.

So this is an aircraft that has been tested. It has been found that they did not want it in the role it was prepared for. It is a very vulnerable airplane to ground fire and air-to-air fire, and as I say, Mr. President, had we needed it, had the Air Force wanted it, they would have said so 4 years ago. I think that was the first time we began hearing about this.

Mr. STENNIS. Mr. President, may we have quiet down at the desk? I want to speak to the Senator from South Carolina.

Mr. President, does the Senator from South Carolina wish time on the pending matter now, which is this Enforcer? I would be glad to yield to him such time as he would like to take.

Mr. President, the Senator from South Carolina did not know this matter was coming up. I suggest the absence of a quorum on my time on this amendment until the Senator can get his material.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MCINTYRE). Without objection, it is so ordered.

Mr. STENNIS. Mr. President, we have a situation here about an amendment concerning ROTC, the Maritime Academy, and several matters. As I understand, after this is disposed of, on the same subject matter, the Senator from Texas is going to have an amendment to strike all of it, if a modification passes.

I think it would be far better to take the matter up at such time as the Senator from Texas can be here, so we can get the whole matter before the Senate. These are really legislative matters that are brought in here on an appropriation bill, but it seems to me that it is almost necessary to get those two viewpoints before the Senate at the same time.

The Senator from South Carolina has been sent for some hours ago about the B–1 matter, and he is now here and is prepared to speak. That is really the major matter pending before the Senate. We have the other matter here that the Senator from Nevada brought up about this Enforcer plane, which is in a peculiar situation, and I think those gentlemen who are to respond ought to try to get together with the Senator from Utah.

I suggest that we go back to hearing the distinguished Senator from South Carolina with reference to the B–1, and then we will proceed, if it is agreeable to the Senate, to some other program that we can perhaps dispose of before 4 o'clock.

The PRESIDING OFFICER. Without objection, the Senator from South Carolina is recognized.

Mr. STENNIS. I am glad to have the Senator from South Carolina speak. However, he is speaking, I believe, in opposition to the committee's position, and I could not yield him time. But the Senator from North Dakota can.

Mr. YOUNG. How much time does the Senator from South Carolina request?

Mr. THURMOND. About 10 minutes.

Mr. YOUNG. I yield the Senator from South Carolina 10 minutes.

The PRESIDING OFFICER. Without objection, the amendments of the Senator from Nevada and the Senator from Maine are temporarily laid aside, and the question recurs on agreeing to the amendment of the Senator from Mississippi.

The Senator from South Carolina is recognized.

Mr. THURMOND. Mr. President, the Congress is today faced with its most crucial defense decision since the advent of intercontinental weapons, as regards termination of the B–1 bomber program.

Our strategic defense over the last two decades has been based on the Triad concept, a three-legged strategic response capability embodied in land-based missiles, sea-based missiles and manned bombers.

Now the President is recommending we abandon the manned-bomber leg and depend instead primarily on soft, wide-bodied aircraft to carry and launch the cruise missiles.

Mr. STENNIS. Mr. President, may we have it quiet, so the Senator can be heard?

The PRESIDING OFFICER. The Senate will be in order. The Senator from South Carolina will suspend to see if we can get order in the Senate. Conversations will be taken to the cloakrooms. Senators will take their seats.

The Senator from South Carolina may proceed.

Mr. THURMOND. Mr. President, it has consistently been my opinion that we should go forward with production of the B–1 and use cruise missiles as a strengthening adjunct to the penetrating, hard and fast manned bombers.

My views are well known, but today I am alarmed at the rapidity with which the Senate has apparently accepted the B–1 decision by the President.

There are many hard questions which must be asked and explored reference the cruise missile. This missile has as many weaknesses as strengths, and Congress has an obligation to explore these matters fully, and do so prior to terminating the B–1 program. Here are some points which must be considered.

First. The cruise missile cannot carry the variety of weapons of a penetrating bomber, thus much flexibility is lost.

Second. The cruise missile is vulnerable to mobile defensive systems and to aircraft interceptors. It can be programed to avoid fixed sites, but is ineffective against defended targets. Obviously, the Soviets will increase surface-to-air missiles (SAM's) at these sites.

The Defense Department for years has been making a good case that the cruise missile, while a very important technological advance, was not a substitute for the manned bomber. Thousands of pages of testimony exist on this basis. Now, all of a sudden the arguments have flip-flopped because one man has made a decision.

Third. The cruise missile range is presently only about 750 miles in one version and about 1,800 miles in another. Many important targets in the great land mass of the Soviets will be well outside these ranges.

Fourth. Many will say we can increase the cruise missile's range, increase its payload and put on countermeasures to make it less likely to be shot down. However, we all know that increased range, more payload and added countermeasures will mean a larger missile with a correspondingly larger radar signature. That increases its chances of being shot down.

Fifth. Thus, with added capability and better airborne launches needed, the cost effectiveness of the cruise missile is diminished.

Sixth. Without any type of penetrating bomber the Soviet defense problems will be made much simpler. They may well develop their own AWACS (Airborne Warning and Control System). This will enable them to more easily locate the huge cruise missile carriers now envisioned as standoff launching platforms for the missile. It will also push these platforms further away from the target areas, making the effectiveness and survival of the platforms and the cruise missile a greater task.

Mr. President, these are but a few of the key questions Congress must consider in this far-reaching decision by President Carter. I do not have all the answers to these questions, but neither does the administration.

Early this week I called for extensive hearings, urging that we study the recommended alternatives prior to killing the B–1 program. Unfortunately, the administration is not waiting on Congress, as they have already caused dismissal orders to be issued to over 5,000 B–1 employees. This action was taken before Congress had an opportunity to explore these matters and represents an affront to the rescission process set up by Congress.

Everyone is falling into line: the Pentagon, the contractors, many in the public sector. Unfortunately, where the real responsibility lies, here in Congress, I see a similar inclination to accept outright the recommendation of one man.

What about the B–52's? How many hundreds of millions will be needed to modify them and extend their life? Can designs of the 1950's be altered sufficiently to carry these planes into the next decades? What will it cost to build a new cruise missile carrier if commercial transport aircraft are not adaptable? These are but a few more questions which must be addressed prior to termination of the B–1 program.

While the B–1 is costly, current prices are $60 million per copy excluding research and development costs. Current costs of the 747 are $35 million and this price will accelerate when, and if, it is adapted for military use.

In addition, it is well to note there are many in the Congress who do not favor the cruise missile, especially a long-range cruise missile. They see it as provocative and destabilizing. Will their viewpoints prevail? Will we limit the range of our missiles at SALT? I would like to review these questions prior to striking B–1 funds.

I have the greatest respect for President Carter. He loves this country and wants to defend it as much as I do. But, he, like each of us, can make mistakes in judgment. This Congress has a responsibility to carefully examine this far-reaching proposal on the B–1, and I urge, plead with the Congress to examine it promptly and prior to any final action on the B–1 program.

Mr. President, for years our Defense Department has been working on a modern bomber. After years of research and years of development, the Defense Department, and specifically the Air Force, has come up with what they say now is the finest bomber the mind of man has ever conceived. That is the B–1. Just as we are now ready to go into production and go forward with this bomber, is it wise to cancel the B–1, to waste all these billions of dollars which have been spent in research and development, and now turn to a different and relatively untested weapon, the cruise missile?

I am in favor of the cruise missile. Those who have had part in developing this weapon feel it will be a valuable weapon. But how do we know? We have not yet had experience with it. Can we afford to put the security of this Nation on an untried and untested weapon instead of going ahead and developing the B–1 bomber, even though it costs a lot of money? It is big money, but if it means our survival, can we afford not to do it?

Mr. President, I am convinced that the one weapon the Soviets would fear more than any other is the B–1 bomber, because this is the bomber that can go in below the radar systems; it can send in its missile from 50 to 75 miles away; it can fly far, high and fast in the sky, traveling faster than sound. It is a supersonic bomber. We feel for the safety and security of the people of this Nation we cannot afford to now take a chance and stop the development of the B–1 and the production of the B–1.

I hope the Senate will see fit to reverse the action of the Appropriations Committee and allow this B–1 to go forward.

Yes, I know it costs a lot of money, and I want to repeat that. It costs much more than I would like to see us have to pay for any weapon. But if it means protecting the security of the people of this country, if it means deterring war, that is what we want to do, to deter war, not have to fight a war. This weapon, in my judgment, will help to deter a war because the Soviets will know we will not only have the missiles in the silos, we will not only have the missiles in the submarines, but we will have the manned bomber which can go within 70 miles of a target and send in its missiles without having to go there itself, and then turn around and come back home.

Mr. President, I do not think we can afford to be without this B–1 or some other modern bomber, though this is the only one we have at the moment. We want to protect this country. In order to do that, the Soviets have to be convinced that we have the wherewithal to do it.

If we have this Triad of land-based missiles, sea-based missiles and the modern manned bomber, that will be a deterrent to war and will help to protect the citizens of this Nation. I hope the action of the Appropriations Committee will be reversed and that the B–1 program can go forward.

Mr. President, in closing, I ask unanimous consent that an article which appeared in The State, of Columbia, S.C., written from Washington, entitled "B–1 Afterthoughts Provoke Debate," be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Columbia (S.C.) State, July 16, 1977]

B–1 AFTERTHOUGHTS PROVOKE DEBATE

WASHINGTON.—Second thoughts following the rhapsodic first reaction to President Carter's cancellation of the B–1 bomber are producing a different response, confronting the Administration with serious problems for which solutions are not presently in sight.

A new great debate over U.S. strategic policy seems assured, now that the B–1 supersonic bomber—whatever its immense costs to the taxpayer—has been scrapped. Plans for such a debate are now being laid by defense-oriented members of Congress who want to know, among other things, whether Mr. Carter has hidden plans for some new and cheaper manned-bomber to penetrate Soviet air defenses after the B–52 dies of old age in the next 10 to 12 years.

The deepening concern inside the defense bloc is that the virtual abandonment of the strategic (long-range) B–1 bomber—with no other replacement for the B–52 yet visible—was primarily a sudden money-saving move with inadequate study of its profound implications.

Some of these implications seem, at least on the surface, to pose horrendous new problems. For example, under the long-held American nuclear-balance thesis of mutual deterrence, or mutual assured destruction, the United States has allowed its air defenses to atrophy. The Soviet Union, to the contrary, has done just the opposite: constructed the world's most remarkable air-defense system.

No air defense has been developed against the low-flying cruise missile. Yet, even though U.S. experts hint broadly that the American missile may be equipped with counter-electric measures that blind Soviet radars, the threat of an eventual effective Soviet defense against the cruise is real.

Moreover, it is axiomatic that what the United States does, the Soviets eventually can also do, Jimmy Carter's abrupt decision to cancel the B–1, leading to all-out U.S. development and production of the cruise missile—not as a bargaining counter for strategic arms talks but as the replacement for the long-range bomber—will predictably lead to a crash cruise-missile program in the Soviet Union. If successful, leading congressional defense experts warn, this Soviet capability will either force the United States into an immensely expensive air-defense program or hand the Soviets an unacceptable advantage.

"We've got the marbles right now with the cruise missile," a top military expert told us, "but 10 years down the road, the cruise is going to turn into our problem, not theirs."

There is, moreover, growing suspicion on another score on Capitol Hill even among hawkish members of Congress who always have felt that the air-launched cruise missile was the American ace-in-the-hole. The suspicion; that without the B–1 to take a major role in the air-launched nuclear bomb force—one leg of the strategic triad—the 2,500-kilometer ceiling on the range of the air-launched cruise missile is clearly inadequate. That ceiling was offered the Russions by Secretary of State Vance last March, but never negotiated into an agreement.

With the B–1 as its partner, it was felt that the cruise missile could be restricted to that maximum range (about 1,500 miles) from the point of launch. Without the B–1's versatility, that range will give sanctuary safety to vast Soviet areas, say congressional critics who will make the ceiling a key.

The effect of the B–1 decision on the strategic arms limitation talks (SALT) barely begins with the question of lifting that 2,500-kilometer range ceiling for the cruise missile. More important in the long run is the question of verifying the range, numbers and payloads of the Soviet cruise missile.

Verification lies at the heart of congressional worry about any new SALT agreement with the Russians. Yet no way exists to "verify" the existence of whatever numbers of cruise missiles the Soviets say they possess—once they master development and move into production.

This presents the Administration with a profound problem. John L. McLucas, who as Undersecretary of the Air Force in the early Nixon days was head of National Reconnaissance—the top verification job—recently defined that problem.

In a letter to The Washington Post July 9, McLucas warned that "the President is moving away from a world of known weapon systems . . . to a world where there is no way to count how many each side has. He will have traded a temporary advantage in technology for a loosened control over weapons in general."

Underlying these rising concerns is the fact that Mr. Carter cancelled the B–1 with no apparent offset of any kind from Moscow, a paradox deeply troubling to his critics.

The President's new budget amendment, asking Congress to kill $1.5 billion in B–1 funds and transfer $500 million to the cruise missile, was due on Capitol Hill this week. Mr. Carter is certain to get what he wants, but he may also get what he does not want—the start of a great debate on the strategic position of the United States as it looks ahead to a new period.

The PRESIDING OFFICER (Mr. BUMPERS). Who yields time?

UP AMENDMENT NO. 680

Mr. EAGLETON. Mr. President, I have an amendment I send to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. There are two amendments pending.

Mr. STENNIS. Mr. President, I believe I know the situation. I do not believe this will take long. I ask unanimous consent, Mr. President, that we now proceed to the consideration of the amendment of the Senator from Missouri, and that other matters be temporarily laid aside until it is disposed of.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Missouri (Mr. EAGLETON) proposes unprinted amendment No. 680.

On page 65, after line 2 insert the following:

"Sec. —. None of the funds appropriated in this Act may be used directly or indirectly for the Air Force projects known as Project MAX or Project Mini-Max".

Mr. EAGLETON. Mr. President, this amendment is really quite simple. It strikes all funds for the Air Force's so-called Project MAX and part of the Air Force depot management system, which was the subject of extensive hearings this year before this Defense Appropriations Subcommittee. I participated in those hearings as did Chairman MCCLELLAN and the distinguished Senator from North Dakota (Mr. YOUNG).

"Project MAX" was part of the Air Force's Advanced Logistics System which the Congress thought it had terminated in December 1975. The Advanced Logistics System, despite 6 years of development and over $200 million in expenditures, had been found to be unworkable; hence the congressional termination. However, in our investigation this year, the Defense Subcommittee discovered that: First, part of the "terminated" system, Project MAX, has continued anyway; second, the Air Force had developed new plans for the terminated system, involving much the same technology, minus the old labels; third, had contrived definitions of what was essential to the mission of these depots, contrary to the clear meaning of language in the Defense Appropriations conference report of December 1975; and, fourth, had taken steps to keep Congress uninformed—even misinformed—as to what was going on. During our hearings, we discovered that the new plans involved over $800 million, while the committee had been led to believe they would only be about one-half that amount, or some $400 millions.

After the hearing we took what I believe were most generous steps to give the Air Force another chance to do some much-delayed, honest analysis. The committee's report directs that expenditures for all ALS follow-on work be strictly limited to not more than $500,000 per month until an "impartial" study had been completed. The key sentence in our report is:

It is the Committee's understanding that the Comptroller of the Air Force has been appointed to head a group that will consist of recognized logistics and engineering experts outside of both the Air Force Logistics Command and the Air Force Staff agencies who have a vested interest in the interim ADP plan.

That supposedly impartial study is due not later than September 1, 1977.

Since our committee marked up this bill, new evidence has come to my attention which indicates that the Air Force, despite our clear instructions, has again violated the language of an Appropriations Committee report. Namely, without advising Congress, the Air Force has planted its study group with those representing vested interests of the Air Force. While eliminating from this study group those within the Air Force, like cost adviser A. Ernest Fitzgerald and his associates, who had critized the old Project MAX, the Air Force loaded the game by permitting others who were part of

the old debate to take part in the "impartial group."

When my office asked for a list of members of the new study group, I was sent a list. It did not contain certain names my staff learned of through independent investigation. Again we were sent another list—this time listing additional members of the study group, only defining them as "consultants" only. But these "impartial" experts were allowed to travel with the study group—and confidential documentation from Air Force sources shows that the original list of study group members I was given is incomplete. Today, I received still another list which lists three more people who seem to have taken part in this study—two of whom are familiar because of our investigative hearings.

It is clear that the Air Force is doing everything in its power to load the study mission with types who will come in with a recommendation for this project we thought we terminated in 1975. The Air Force mission will not suffer if we again terminate "Project MAX," indeed, the justification has changed again in recent months. But our integrity will suffer if we allow these games to be played by Air Force bureaucrats at our sufferance. If between now and the conference the Air Force can prove it truly intends to be impartial, then we have the option to restore the funding.

I think, Mr. President, that Project MAX, which we thought we had terminated and killed in 1975—should be killed now.

I have various lists. Mr. President, that I can put in the RECORD of the "impartial study group." The most recent one I have is dated July 18. This was the updated study group, with the various members. Then, at the bottom, it says:

Others who have participated in trips and/or meetings are listed below. None of these personnel, exception noted, will take part in the final deliberations and writeup of the team's findings.

I say "ha, ha" to that.

The group below includes Mr. Claude Farinha, who has consistently, as all of the documentation will show, been a principal proponent of Project MAX, almost from beginning to end. He has been shadowing this "impartial study team" around the country while they have been conducting their so-called impartial study.

Mr. President, it is my opinion that Congress meant what it said back in December of 1975: Project MAX was to be terminated. This amendment now pending before us will drive the final justifiable nail into the Project MAX coffin.

The PRESIDING OFFICER. Who yields time?

Mr. HELMS. Mr. President, will the Senator yield to me for a unanimous-consent request?

Mr. STENNIS. Yes, I yield to the Senator for a unanimous-consent request. It is on my time.

Mr. HELMS. I thank the Senator.

Mr. President, I ask unanimous consent that Mr. Richard Bryan and Dr. James Lucier of my staff be accorded the privilege of the floor during consideration of the pending measure and all votes thereon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON. Mr. President, I ask unanimous consent that the list I just described, entitled "U.S. Air Force Depot Maintenance Management Study Group," with the name of Mr. Farinha on the bottom of that statement, be printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

U.S. AIR FORCE DEPOT MAINTENANCE MANAGEMENT STUDY GROUP

TEAM MEMBERS

Name, rank/grade, and organization:

Charles E. Buckingham, Lieutenant General, USAF, HQ USAF, Team Chief/Comptroller of the Air Force.

Kenneth S. Caldwell, partner, Ernst & Ernst (E & E).

Emrick A. Webb, partner, E & E.

Hugo Swan, principal, E & E.

Ernest P. Hanavan, Colonel, USAF, San Antonio Air Logistics Center (ALC).

Eugene A. Narragon, consultant, Logistics Management Institute (LMI).

Charles E. Clark, manager, E & E.

Ralph A. King, consultant, E & E.

Joe P. Ferguson, GS-14, Air Force Accounting & Finance Center (AFAFC).

Daniel G. Bates, Major, USAF, Air Force Contract Management Division.

Edwin G. Gunderson, Major, USAF, HQ USAF/Directorate of Budget.

Steven M. Hunt, Major, USAF, Air Force Data Systems Design Center.

Joseph Monroe, Major, USAF, U.S. Air Force Academy.

Edwin H. Moore, Major, USAF, HQ USAF/Directorate of Manpower & Organization.

Others who have participated in trips and/or meetings are listed below. None of these personnel, exception noted, will take part in the final deliberations and write-up of the team's findings.

Name, rank/grade, organization, and remarks:

Jim Bassage, consultant, E & E, Advisor, on call—will take part in deliberations.

Claude Farinha, GS-16, Sacramento ALC, Background advisor—at request of Commander AFLC.

Ronald E. Gordon, Captain, HQ USAF/Directorate of Maintenance Engineering & Supply, Ogden ALS visit only.

Roy Haberlandt, GS-15, HQ AFLC, Asked to accompany team. Permission granted by Lt Gen Buckingham.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield to the Senator from North Dakota such time as he may need.

Mr. YOUNG. I wanted, as minority manager, to say that I was at the hearing of the Subcommittee on Defense Appropriations. I think the Senator from Missouri makes a good point. I am perfectly willing to take this item to conference.

Mr. STENNIS. Mr. President, the Senator has spoken. The Senator from North Dakota was at the hearings, so was the Senator from Missouri.

I join in that position, Mr. President. We shall take his amendment and do what we can with it in conference with the House. I am impressed with some of the points he has made. I can see where it is a serious matter, even though the amount involved here is relatively small.

Mr. President, we support the amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. EAGLETON. I yield back the remainder of my time.

Mr. STENNIS. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. EAGLETON. I move to reconsider the vote by which the amendment was agreed to.

Mr. STENNIS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT 679

The PRESIDING OFFICER. The question recurs on unprinted amendment No. 679, offered by the Senator from Nevada (Mr. CANNON). Who yields time?

Mr. STENNIS. Mr. President, on that amendment, I know there has been time for the material to be assembled.

Mr. President, there are four or five Members involved in this amendment, considering both sides. They are not on the floor now. I think some of them will come. We have sent for them. I do not know whether all of them will come.

Under the circumstances, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. STENNIS. On my time.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, this brings us back to the item in the bill for $3.9 million, I believe it is, of a $8 million program for the Enforcer, a small plane.

Mr. President, that plane was not authorized and I cannot support that item. But there are strong sponsors here that are ready. The Senator from Pennsylvania is interested, the Senator from South Carolina, the Senator from Nevada, who is the sponsor of the amendment, is on the floor.

It occurs to me now that it is agreeable to continue the debate on this matter. We cannot vote on it until sometime after 4 o'clock, but we can carry it over then to its place on the voting list and get to it in time after we dispose of the legislative bill.

The Senator from Pennsylvania is here.

Mr. SCHWEIKER. Mr. President, I thank the distinguished chairman of the Senate Armed Services Committee for permitting me to have an opportunity to speak against this amendment.

Mr. President, I rise in support of the Senate Appropriations Committee position and in opposition to the amendment which would delete the funds for a test program for the Enforcer aircraft. There are a number of points which should

be understood by the Members of the Senate about the Enforcer.

Before I begin, there is something which should be cleared up. It is usually claimed that the Enforcer developers are trying to sell us a World War II P–51 Mustang to fight the wars of the 1970's and 1980's. This is patently untrue. Similarities between the Enforcer and the P–51 begin and end with external appearance. Against this "similarity" there are these differences:

The Enforcer has a turbo-prop jet engine; the P–51 has a piston or reciprocating engine. The turb-prop is used in the Chinook helicopter, and is currently under production for the Shah of Iran, who is not usually accused of wanting obsolete technology.

For the Enforcer, 20 percent of the dry weight of the aircraft is ceramic armor, capable of defeating the most common Soviet anti-aircraft gun; the P–51 had no such armor.

The Enforcer has modern avionics—in fact, the same electronic weapons controls that will be used on the A–10; the P–51, of course, had nothing similar.

The Enforcer has the capability to employ every air-to-ground close air support weapon in the U.S. arsenal; the P–51 had very limited air-to-ground capability.

In short, the developers of the Enforcer have looked at the mission to be done, and they have combined a proven, high-quality airframe design with the very latest production subsystems for the engine, avionics, armor, and weapons to produce a new plane that can do the job at a much lower cost than anything now in the arsenal. Any talk that we are simply advocating a reengined P–51 is simply inaccurate in this debate.

The other points I would like to make are all supported in the extensive hearing record which has been built up on the Enforcer. In the interests of brevity, I will simply outline other features that have persuaded me that we would make a big mistake by not testing the Enforcer.

First. The Enforcer is a low-risk program, using proven technology in the airframe, armor, engine, and weapons. There is little chance of the unpleasant surprises so common to our defense systems, or of escalating prices per unit.

Second, the Enforcer would increase our capability to act quickly in emergencies in adverse conditions.

It can operate from a dirt strip: It does not require a paved runway.

It uses commonly available fuel and does not require external starting assistance, such as liquid oxygen.

Third. The Enforcer is a bargain.

It costs less to buy—$1 million per copy versus $4 million for the A–10.

It costs less to run—it uses less fuel per hour, resulting in lower costs and more flight hours for pilots. In fact, the fuel savings over 10 years for an equally effective force of Enforcers compared with the A–10 would pay for the entire cost of buying the Enforcer.

Fourth. The Enforcer can do the job.

It is heavily armored; 20 percent of the "dry weight" of the plane is armor.

It can carry every weapon that the A–10 can.

It will have all modern avionics, including the same "heads up" display that is used on the A–10.

Fifth. A full-scale test program is needed.

The program, and the Air Force's response to it, have generated a lot of controversy. A test program would clear the air, and determine whether the Air Force's objections are based on substance or on a "not invented here" syndrome.

There are significant differences between the Air Force and the manufacturer concerning the performance of the plane. Even accepting the Air Force data it looks like a good plane, but the manufacturer's data indicates it is much better. These questions need to be resolved by putting the Enforcer into the air with military pilots to evaluate it.

Further, a test program would be an insurance policy for the Nation. If problems developed, either in performance or cost overruns, with an existing program, the Enforcer would be ready to go. Also, this test would establish a guideline against which to measure the performance of planes like the A–10, the A–18, and the advanced attack helicopter. We often spend tens or hundreds of millions of dollars to get a program to the point where it can be tested like this one: This test will only cost $10.6 million over 2 years.

Sixth. The Enforcer offers a tactical "hedge" for our defenses.

When we went into Vietnam, we thought we had great weapons, but we learned that the aircraft we had could not do the close air support that was needed. As a result, we brought DC–3's, B–26's, T–28's, and other similar planes out of mothballs, because they had the staying power to remain over the battlefield. All these planes were propeller driven.

In the 1973 Mideast war, the equipment losses were staggering. In 8 days there were more tanks consumed than were lost by both sides in the entire North Africa campaign of World War II. Other equipment losses were similar. Large numbers of low cost equipment, such as the Enforcer, may be the only way we have anything to fight with after the initial stages of a war.

War is always uncertain. At the start of World War II, "conventional wisdom" doubted the need for fighter aircraft, and the lack of fighters cost the allies the battle of Britain. In Vietnam we overrated the power of jet aircraft. In the Yom Kippur war the Israelis underrated modern air defenses.

Development of the Enforcer would give us another option, should the future trends of warfare again be full of surprises. By having a mix of planes, we increase our capability and confuse the job of the enemy, which must take more possible threats into account.

For all these reasons, I urge my colleagues to defeat this amendment, and to approve a fair test of the Enforcer.

The PRESIDING OFFICER. All time of the opponents of the amendment has expired.

Mr. STENNIS. Mr. President, to meet the situation here, I yield the Senator another 5 minutes.

Mr. SCHWEIKER. Three minutes.

Mr. STENNIS. Three additional minutes on the bill.

Mr. SCHWEIKER. Mr. President, I just think it is rather ironic the Pentagon can pay millions and millions and millions of dollars for one mistake or one cost overrun. Here is a situation where no Federal money was spent. This R. & D. effort was all private initiative. The taxpayers did not pay a dime. Yet the sponsors of this amendment are begrudging the opportunity for a fair test to see if this is a better product than the ones that come out of the military test system.

Why are we so against the fair test? What is it about the plane that we cannot get a test done?

We can spend hundreds of millions of dollars on one mistake or one cost overrun, but we stall on a few million dollars for a test.

Mr. President, I strongly urge we give a fair test and see what the plane can do.

Mr. President, I yield my remaining time to the Senator from South Carolina.

Mr. THURMOND. Will the Senator yield 12 minutes?

Mr. YOUNG. I yield 12 minutes on the bill.

The PRESIDING OFFICER. Does the Chair understand the Senator from South Carolina is being yielded 12 minutes on the bill?

Mr. YOUNG. I yield 12 minutes.

Mr. THURMOND. I thank the able and distinguished Senator from North Dakota.

Mr. President, I support the $3.9 million in the Defense bill for a flight test of the Enforcer aircraft.

The question before the Senate, that of an operational test of the Piper Enforcer aircraft, relates directly to the public interest.

The Senate now has an opportunity to approve a test of a relatively simple, practical, inexpensive yet highly effective close support aircraft. A vote in favor of the Enforcer test could serve as a signal to the defense industry that Congress will demand simpler, less expensive weapons.

The beauty of this proposal is that prototype development has already been done by private industry and the object of the funds in the bill is to validate the developer's claims. In my remarks today, I would like to propound and answer some of the arguments used by opponents against the Enforcer tests.

OLD TECHNOLOGY

First. It is charged that Enforcer is World War II technology.

The hearings this year clearly showed the Enforcer is representative of the most modern subsystem technology.

While the prototype will use some P–51 parts for economy, the production aircraft will be entirely new design and construction to accommodate higher weights and weapon loading.

The Enforcer production aircraft will contain zero P–51 parts.

It uses the Bristol ceramic armor to protect the pilot and the engine.

All electrical, communication, and navigation systems are latest state of the art.

It has a laminar flow wing, state of the art for the close support speed range.

Its Avco-Lycoming turboprop engine is currently in inventory and production and judged most efficient for the close support role.

It is adapted to carry the Maverick tank killing missile.

It has a Marconi-Elliott heads-up display.

It has a special firing system so the pilot can select and fire his weapons without taking his eye off the target.

It can carry the 20-millimeter in pods, the Aden-Defa 30-millimeter standard NATO cannon and the new GAU-8 30-millimeter pod.

It has an ejection seat and air-conditioning.

It has 10 weapon racks on internally, totally redesigned wings.

It has redundant controls throughout the air frame.

Simply stated, Mr. President, the Enforcer utilizes inexpensive construction and the proper balance of old and new technology, the idea being to keep costs low.

Some often forget that a rivet in 1977 is the same as a rivet in 1945, aluminum skins on air frames are the same, and most important, the same speeds, ranges, and aerodynamic equations of 1945 for close air support apply today.

In fact, a turboprop engine such as that on the Enforcer is more efficient at lower altitudes than the jet engines some insist on having in the 1970's.

Second. It is charged the Enforcer cannot survive in today's very hostile environment.

Mr. President, all close support aircraft will take losses. I submit the Enforcer can survive as well as others, and perhaps better. Here is why:

The basic simplicity of the overall system makes it less vulnerable and more survivable.

It can survive on the ground, as it is easily dispersed in unmarked, unpaved forward areas.

Its entirely mechanized controls obviate the dangers of easily damaged hydraulic controls.

Its engine exhaust is cooler and located over the wing, thus making it far less susceptible to heat-seeking missiles.

The pilot and engines are protected with ceramic armor which has shown in tests it can defeat the dreaded Soviet quad ZSU 23-millimeter gun at zero obliquity. On the A-10, the two engines are not armored and each A-10 engine is wider than the Enforcer fuselage.

It carries one-fifth its weight in armor, a factor which speaks for itself.

It has the speed necessary to move in fast and accelerate out, the speed all agree is essential to increase survivability in this mission.

It presents a much smaller target—and this is critical—because a key to survivability is the size of the target presented. The Enforcer is one-third the size of the A-10. Imagine the difference if you are the enemy gunner, or missile man. One-third smaller target is a great difference.

Third. Charges are also made the Enforcer is not lethal enough; it cannot hit the enemy targets with a big gun.

Mr. President, in reply, let me make these points:

The Enforcer carries the Maverick missiles. Does that missile destroy any less if fired from the Enforcer or the A-10? We all know the answer is "No."

Operating from a forward field, the Enforcer can carry 4,000 pounds of bombs and ordnance, the same as the A-10. Does that make it any less lethal than the A-10? No.

The Enforcer can also carry the two GAU-8 30-millimeter pods, although many enemy vehicles and even some tanks can be knocked out with smaller guns.

Thus, if the Enforcer can carry essentially the same armaments as the A-10, fly at the same speeds, use the same tactics and has the advantage of being one-third the size, certainly it should be as lethal.

The Enforcer can carry any mix of ordnance in the nonnuclear inventory, mainly because the air intakes being forward are not troubled with missile or gun gases.

Now for one final comment on lethality. For about $1 million, you can have this plane carrying the Maverick and similar weapons, but at that price you could have four or five for the cost of one current close support plane. That means you get a great deal more lethality for the same amount of money.

Fourth. Opponents charge the Enforcer has not been authorized, so it should not be appropriated.

Mr. President, as a senior member of the Armed Services Committee, I feel very strongly that authorization should precede appropriation. But under the rules of the Senate, such a procedure does not go down to the final penny.

In the military authorization bill, we were dealing with over 35 billion in weapons; here, the Defense Appropriations Committee is dealing with a total program cost of $10.6 million, with only $3.9 million requested this year.

This program was held in the Tac Air Subcommittee, but only two of eight Senators attended. Upon polling the subcommittee, the vote was 4 to 4, a deadlock. Defense Appropriations has broken that deadlock with a 6-to-1 vote favorably, and it was confirmed in the full Appropriations Committee.

The opponents of this test do not claim this $3.9 million in the current bill is a violation of Senate rules. Dr. Floyd Riddick, author of "Senate Procedures," addresses this issue on page 132 of his book when he writes:

> The Committee on Appropriations under Rule XVI, may propose to increase appropriations or propose a new item of appropriation in excess of authorizations or even in the absence of any legislative authority as long as the proposed amendment does not include legislation.

Therefore, it is clear the Appropriations Committee is clearly within its jurisdiction in this matter.

Mr. President, due to limited time on this amendment I have left to others many key points supportive of the Enforcer test, but rather used my time to answer some of the criticisms raised by the proponents of this amendment.

In conclusion permit me to make these points:

Defense Agency analysis has shown that the Enforcer is one of the two most survivable close support aircraft in the world, the A-10 being the other.

The Air Force and Piper are in relatively close agreement on the cost claims made by the contractor.

This is not a sole source selection, as it is not procurement but rather a test. The contractor is willing for others to build it although there is a legal opinion it can be bought from Piper under current regulations.

Operational tests are essential if necessary answers are to be received on the Enforcer's capabilities.

The "not invented here" syndrome appears to be a factor in Air Force rejection of the Enforcer tests.

The around $1 million per copy cost of the Enforcer could be a big breakthrough in leading to a low-cost approach on other unnecessarily expensive weapon system programs.

Mr. President, in conclusion I urge my colleagues to commit the Senate to a test of this aircraft—not procurement, not development, as private individuals have paid for that, but rather a modest test.

Now, Mr. President, why would the Air Force object to this test if here is a plane that can be manufactured and sold for about $1 million, where they now have to pay $4 million for the A-10? We are not fighting the A-10. I have supported the A-10. In fact, I have supported the B-1 and just about every plane the Air Force has requested.

But I say to the Members of this body and to the American people, Why encourage private industry to go and develop things and then not even give it a test? That is all we are asking here is a test.

Here we have people who have put their own money into building a plane that they say will do the job, and which the Air Force admits will do the job, and now they do not even want to give it a test.

Mr. President, I think this plane deserves a test. The people who have worked with it for years and years deserve to be commended, and we feel it is nothing but right that we let this test take place so it can then be determined which is the better plane, which will be cheaper, which will do the job cheaper.

Our opinion is when this plane is tested, it will do the job, it will do it cheaper, and save the American taxpayers money.

Why would the Air Force want to refuse a test? I do not know whether it is, because they did not come up with the idea of this plane or just what. But at any rate, are they afraid of something? Are they afraid this plane will show up so well that it will cause some other plane to be discontinued?

Mr. CANNON. Mr. President, will the Senator yield?

Mr. THURMOND. Let me finish and then I will yield.

At any rate, all we are asking for here is that the Air Force give this plane a test, and we believe that it will fill the bill.

The PRESIDING OFFICER. The Senator has been yielded 2 more minutes.

Mr. CANNON. Mr. President, if the Senator will yield, I would like to ask the Senator a question. Why does the Senator ask about the Air Force opposing it? The money is here in the bill for the Navy. The Navy opposes it. So I wonder if the Senator would direct his questions to why the Navy opposes it, not the Air Force. The Air Force opposed it before.

Mr. THURMOND. Mr. President, the Air Force has opposed this plane for years.

The able and distinguished Senator from Nevada knows the Air Force has opposed it. He is an excellent pilot himself, and he is chairman of the Tactical Air Subcommittee. He knows the Air Force has opposed this plane consistently year after year.

Now, why the Navy opposed it is simply because they feel it is out of their line of work, and they do not want to take the responsibility, I guess, for having to conduct the test. But those who sponsor this test program, I understand, feel if they get a fair and objective test, it will be necessary for the Navy or some other agency other than the Air Force to conduct this test because the Air Force has shown that they are not willing even to give it a test.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. CANNON. Mr. President, what is the time situation?

Mr. YOUNG. How much time does the Senator want?

Mr. GOLDWATER. Not more than 5 minutes.

Mr. YOUNG. I yield 5 minutes on the bill.

Mr. GOLDWATER. Mr. President, we have listened now to the same arguments, I guess, for 4 years.

When we heard the Enforcer was in this appropriation bill, we could not for the life of us find out who put it there. We finally found out it was in the Navy program. So I wrote and asked Admiral Holloway asking him if he wanted it. I received a response and had it put in the RECORD here. But just one paragraph:

> There is no requirement for building and operationally testing the Enforcer aircraft. Its flying qualities are readily predictable. Its components are all presently in service. The aircraft's specific capabilities never have been in question.

The Air Force has never questioned the aerodynamic abilities of the Enforcer. We have a letter from the Chairman of the Joint Chiefs of Staff, which I have put in the RECORD, stating they do not feel this aircraft is needed.

Now, Mr. President, this aircraft was developed by two good friends of mine. If I were acting in a friendly way I would say let us go ahead and give them their money back. But there was no call for the airplane. They took an old P–51. They put a turbine engine in it, and down through the years they have improved it. I will admit it. They now have some commercial company that is interested in developing it.

I would like to call the attention of my friend from South Carolina to something that maybe has slipped his mind. We are just not operating here according to our own desires. The OMB states that unless a mission is documented and the need for the mission is documented and validated, they cannot talk about specific hardware solutions.

Then the circular specifies that alternative systems design will be solicited from a broad base of qualified firms.

Mr. President, what we are being asked here today to do is not only to authorize an appropriation, which we never do, but we are being asked to authorize an aircraft out of competition. If we are going to buy an aircraft like this, we should say to the five or six firms in this country, and maybe more, that can make just as good an airplane as the Enforcer, and start from scratch, "We are going to have a competition to determine which aircraft we are going to buy."

So, Mr. President, I think the arguments are old. They have been defeated before, and I think we are acting out of order when we try to acquire money in this way. No authorized hearings? We have held hearings in tactical air, and research and development in the Armed Services Committee for years.

No testing? This aircraft was tested in the Coin test, and the Coin test was held to determine what kind of light aircraft we would provide for Southeast Asia use, and the Enforcer did not hack it. It did not make the competition.

So there has been plenty of competition. The Navy does not want it, the Air Force does not want it, and we have had hearings, I think, on this every year.

Mr. President, I close my argument saying we are acting in my opinion illegally. The entire report on this is enclosed in two sentences on page 101 which does not list any proponents of the Enforcer. It merely says, "The committee recommends," and mind you if some of us had not had our ears wide open we would never even have heard and it might have sneaked through and then the military services would be faced with having to direct a competition.

The PRESIDING OFFICER. The Senator's time has expired. Who yields time?

Mr. CANNON. Mr. President, I yield myself 5 minutes.

Mr. YOUNG. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. CANNON. I yield.

Mr. YOUNG. Mr. President, I ask unanimous consent that Dick Vodra, of Senator SCHWEIKER's staff, be permitted the privilege of the floor during the discussion of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I ask unanimous consent that Mr. Kenney, of the Armed Services Committee staff, be accorded the privilege of the floor during debate and vote on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, the arguments that the opponents of this amendment, the supporters of the Enforcer aircraft, make, remind me very much of a saying by Henry Wheeler Shaw many years ago in a book that was called "Uncle Sam's Uncle Josh." He was known as Josh Billings at that time, and he said:

> It hain't so much ignorance that ails mankind as it is so much knowing things that hain't so.

That is the way I feel about the arguments that have been presented by the supporters of this Enforcer aircraft, about the things that they know so much that "hain't" so about this aircraft.

First, on the propriety of bringing the amendment, the argument has been made that you can properly do this, and unfortunately that is true. In the House of Representatives you cannot. But unfortunately, under our rules you can amend and you can add in an appropriations bill something that is not authorized by the authorizing committee.

But I point out that the authorizing committee with jurisdiction over this matter considered the matter and turned it down. And we did the same thing in 1975 when the supporters of this aircraft brought it up at that time, and they were defeated by almost a 2-to-1 margin. But they do not give up. They come again and try and try it again, try to slip it through the back door as they did in this instance.

Mr. President, I quote from a memorandum for the Deputy Secretary of Defense on this very subject. This is the Assistant Secretary of Defense, not the Secretary of the Air Force. It states:

> The Enforcer cannot compare on an effectiveness basis with existing close air support aircraft, in particular the A–10. To provide a credible capability the Enforcer must be weaponized, resulting in a unit flyaway cost of about $1.5 million. The services have no requirement for an aircraft such as the Enforcer. Proceeding with the Enforcer program proposed by Piper Aircraft—

In conjunction with the inventor and developer of it—

> would involve potentially significant legal and policy implications.

Mr. President, on top of that, the Senator from Arizona has already pointed out that the firepower of this aircraft is not great. It is equipped basically with a 50-caliber machinegun. A 50-caliber machinegun is not worth much against tanks. They say that it has the capability to carry the GAU–8 gun. This is something new. I had not heard that until we got in this debate this time. But a pod for the GAU–8 gun would weigh 1,500 pounds and carry only 350 rounds of ammunition. So if you had two pods for a GAU–8 on that aircraft you would have a hard time getting it in the air, without any other capability, without any bombs, without carrying anything else that could be usable.

So, Mr. President, this aircraft just simply cannot do the job.

The Senator from South Carolina has said, "Why do they not test it?" Mr. President, when the analysis was made of this aircraft, and incidentally the aircraft was in a flyoff competition in 1971 for use in Southeast Asia, it was fully tested at that time, and it did not win the competition, the decision was made against it. And he says "Why do they not test it now?" You could concede everything that its inventors and its support-

ers claim that it will do, which it will not, but if you concede all that, still there is no Air Force requirement for it, and the Chairman of the Joint Chiefs of Staff has stated that they have no requirement for it. Furthermore, the Navy has absolutely no requirement for it, as the Senator from Arizona pointed out. So, you have an aircraft trying to be sold to the U.S. Government where none of the services have a requirement for it. The only person who has a requirement for it is the person who invented it and the person who would develop it and put it on the market if it won a competition, which would have to be held before they could go to a sole source. They could not go to a sole source on this aircraft.

Mr. President, I submit that the Enforcer has been flight tested, it has been thoroughly flight tested, and it has been decided against. It does not have a valid mission. We have authorized the mix of aircraft that the services are able to have, and if they were to buy this aircraft they would have to do away with something else in lieu of it. And this the services do not support. I submit, Mr. President, that we should support the military, certainly in this instance, instead of trying to force something on them that they have no use for.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. THURMOND. Mr. President, will the Senator from North Dakota yield me 2 minutes on the bill?

Mr. YOUNG. I yield 2 minutes.

Mr. THURMOND. Mr. President, the distinguished Senator from Nevada said the Air Force says there is no requirement. Of course, they say there is no requirement, because they are spending $4 million for a plane for which $1 million might answer the purpose if this plane is tested. That is all we are asking, just to test. If it does not do the job OK. But why spend $4 million for a plane if a $1 plane can do the job?

Mr. President, I asked General Slay in the testimony a number of questions which he could not even answer, and these are the questions and I ask unanimous consent that they be printed in the RECORD at this point in my remarks. It is page 5214 of the hearings held in March 1977, starting with "Pave Coin Test" down to "Enforcer Against High Performance Fighters."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PAVE COIN TEST

Senator THURMOND. Now, a few questions here on the Pave Coin test.

General Slay, I believe the Air Force has tested the Enforcer 1971 in the Pave Coin test. Is that true?

General SLAY. That is correct.

Senator THURMOND. What was the recorded maintenance hour per flight hour?

General SLAY. I can't answer that. I will have to provide it for the record.

Senator THURMOND. What was the rate of consumption of spares, fuel pumps, and propellers, and so forth?

General SLAY. Same, sir.

Senator THURMOND. What were the maximum numbers of sorties per day for four airplanes?

General SLAY. I don't have that data with me, Senator. I would have to provide that for the record.

Senator THURMOND. Why was the Enforcer limited to two sorties per day?

General SLAY. I can't answer that, Senator, I don't know.

Senator THURMOND. You don't have your tests with you?

General SLAY. No, sir; I do not. Does anyone here know the answer to that? I am sorry, Senator.

Senator THURMOND. Do you have that information?

General BOND. Yes. The tests covered the entire spectrum of the things you discussed. It has been some time since I read the Pave Coin results, but I can provide all of that for the record.

[The information follows:]

"The Pave Coin program was conducted by the Air Force in 1971 to identify and evaluate off-the-shelf forward air control and light strike aircraft (LSA) for possible subsequent procurement and delivery to military assistance program (MAP) countries.

The light strike aircraft portion of Pave Coin consisted of an evaluation of existing data on all candidate aircraft plus a flight evaluation of two of the candidate aircraft for which additional data were required. Evaluation data were obtained from Air Force sources for those aircraft already in Air Force or MAP inventories and from the contractors for the other aircraft. The flight evaluation phase was designed primarily to investigate aircraft handling qualities and obtain limited aerodynamic performance data for the "clean" aircraft configuration and various other typical light strike aircraft munitions configurations. Additionally, operational suitability, safety of carriage and general training requirements were assessed for the various aircraft configurations. Flight test missions were planned to check and correlate, insofar as possible, data provided by the contractor.

Pave Coin did not have as its objectives a quantitative determination of required maintenance man-hours per flying hour, rate of consumption of spares, fuel pumps, propellers, etc., nor was there any requirement to determine sortie rates for the candidate aircraft.

Senator THURMOND. My information is the tests did not cover that, but if you have information to the contrary——

General BOND. Senator Thurmond, the test was not designated to cover a total spectrum of maintenance man-hours per flying hour or sortie rates or those types of things. The test was designed to evaluate potential capability of those aircraft in certain roles.

In the portion of the test that the Enforcer was evaluated in it was in a light strike aircraft role, and to my knowledge we do not have any records that identify or show an intent to identify sortie rates. It was a planning factor on what the test organization felt would be attainable by those aircraft that were being evaluated.

Senator THURMOND. Would you feel it important to know the maximum number of sorties per day?

General BOND. No, sir, I would not.

Senator THURMOND. That is not important, number of sorties that would be made a day.

General BOND. In a combat environment. The number of sorties that it could do in a production or combat configuration, yes, sir, that would be important. In discussing it in the Pave Coin environment, it is my personal judgment that would not contribute to some evaluation of the aircraft in its production configuration.

Mr. THURMOND. These questions have never been answered. General Slay could not answer them. We ask that the test be held to answer these questions. The test should be held to validate the computer study made by the Air Force and Navy, though some validation was provided in the Pave Coin test, to see if performance justifies further consideration of the Enforcer for use in a high-low mix or by one of our military services. In the final analysis, it takes a man with a heart and brain to determine final performance and parameters. Any pilot will support that view.

Certainly improvements made to the Enforcer since 1971 have not been flight tested.

Mr. President, the Navy has no interest in this plane. They would not use the plane. The Air Force would only use the plane to support the Army. The Army would get the benefit of this plane. I can understand when they make the decision in the Defense Department that there all the services have to fall all over themselves to go right along in line; otherwise, they may lose their jobs. But I say that the American people have a requirement, the taxpayers have a requirement, and this plane should be tested.

The PRESIDING OFFICER. The Senator's time has expired.

LEGISLATIVE APPROPRIATIONS, 1978

AMENDMENT NO. 517

The PRESIDING OFFICER (Mr. BUMPERS). Under a previous order, the Senate will now resume the consideration of H.R. 7932, the legislative appropriation bill, and will proceed to vote on amendment No. 517 of the Senator from Nebraska (Mr. CURTIS), on which the yeas and nays have been ordered.

Mr. HELMS. Mr. President, a point of order.

The PRESIDING OFFICER. First, the bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 7932) making appropriations for the legislative branch for the fiscal year ending September 30, 1978, and for other purposes.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. HELMS. Mr. President, it is of no concern to the Senator from North Carolina when the Chair acts on this point of order, but I do raise a point of order against section 8439.

The PRESIDING OFFICER. To which bill is the Senator referring?

Mr. HELMS. Mr. President, I will withdraw that.

The PRESIDING OFFICER. The point of order has been withdrawn.

Mr. THURMOND. Mr. President, I ask unanimous consent that John Napier, of the Judiciary Committee staff, be accorded the privilege of the floor during the consideration and voting on this bill, and I also ask for the yeas and nays on the Enforcer amendment.

The PRESIDING OFFICER. That bill is no longer before the Senate. The unanimous-consent request for the presence of the staff member is agreed to, without objection.

ORDER FOR YEAS AND NAYS—ENFORCER AMENDMENT

Mr. THURMOND. Mr. President, I ask unanimous consent that it be in order at

this time to order the yeas and nays on the Enforcer amendment.

The PRESIDING OFFICER. Is there objection to the request of the Senator from South Carolina? Without objection, it is so ordered.

Mr. THURMOND. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Several Senators addressed the Chair.

Mr. HUDDLESTON. Mr. President, I move to table the pending amendment by the Senator from Nebraska, and ask for the yeas and nays.

The PRESIDING OFFICER. Before that will be in order, the amendment will be stated.

The legislative clerk read as follows:

On page 31, after line 24, insert the following new section:

SEC. 113. Notwithstanding any other provision of law, appropriated funds are available for payment to an individual of pay from more than one position, each of which is in the office of a Senator and the pay for which is disbursed by the Secretary of the Senate, if the aggregate gross pay from those positions does not exceed the amount specified in section 105(d)(2)(ii) of the Legislative Appropriations Act of 1968, as amended and modified.

Mr. GOLDWATER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GOLDWATER. Mr. President, could I have the attention of the majority leader? We have now reached the hour of 4 p.m., and there were to be no votes until after this hour. I wonder if we could have some kind of top-of-the-head idea as to when certain votes might occur, so that we could regulate our attendance accordingly.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to proceed for 1 minute.

The PRESIDING OFFICER (Mr. MOYNIHAN). Without objection, it is so ordered.

Mr. ROBERT C. BYRD. The votes in connection with the legislative appropriation bill are supposed to occur, under the order previously entered, without any further debate. There are going to be at least three rollcall votes. The manager of the bill may seek unanimous consent to have a couple of minutes before each vote, or two or three, or whatever he thinks necessary, so that Senators will know what they are voting on.

Upon the disposition of action on that bill, which, as I say, will constitute almost back-to-back voting, the Senate will resume the consideration of the Defense appropriation bill.

I ask unanimous consent to proceed for another minute, Mr. President.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. The Senate there is an order for 20 minutes for Defense appropriation bill, at which time there is an order for 20 minutes for debate on the B–1 amendment, and a rollcall vote has already been ordered on that amendment.

Following that vote will occur numerous votes in the order of sequence—that is, the votes will occur in the same order in which they were ordered.

ORDER OF VOTES—LEGISLATIVE APPROPRIATIONS

Mr. STENNIS. Mr. President, if the Senator will yield, could we put a unanimous-consent request in right now with reference to this Enforcer plane we have just debated here, that the vote on that amendment follow immediately after the vote on the B–1?

Mr. ROBERT C. BYRD. All right. Mr. President, I ask unanimous consent that the vote on the Enforcer amendment occur immediately after the vote on the B–1 amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HART. I offered an amendment to the pending legislation on Friday. It was my understanding that, according to the unanimous-consent agreement, it would be in order to ask for the yeas and nays on that amendment today; and, if it is now in order, I ask for the yeas and nays on that amendment.

The PRESIDING OFFICER. The Senator is correct. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, may I inquire what amendment the Senator is talking about?

The PRESIDING OFFICER. The Chair will state that it is an amendment to the legislative appropriation bill.

Mr. HUDDLESTON. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending question is on agreeing to the amendment (No. 517) of the Senator from Nebraska (Mr. CURTIS).

Mr. HUDDLESTON. Mr. President, I move that the amendment be laid on the table, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Kentucky (Mr. HUDDLESTON) to lay on the table the amendment (No. 517) of the Senator from Nebraska (Mr. CURTIS). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON of California. I announce that the Senator from Vermont (Mr. LEAHY) and the Senator from North Carolina (Mr. MORGAN) are necessarily absent.

I further announce that, if present and voting, the Senator from North Carolina (Mr. MORGAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Utah (Mr. HATCH), the Senator from Idaho (Mr. MCCLURE), and the Senator from Vermont (Mr. STAFFORD) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and voting, the Senator from Idaho (Mr. MCCLURE) would vote "nay."

The result was announced—yeas 34, nays 60, as follows:

[Rollcall Vote No. 294 Leg.]

YEAS—34

Abourezk	Durkin	Muskie
Anderson	Eagleton	Nelson
Bayh	Ford	Proxmire
Bentsen	Glenn	Randolph
Burdick	Hart	Ribicoff
Byrd, Robert C.	Haskell	Riegle
Cannon	Hollings	Sasser
Chiles	Huddleston	Stennis
Church	Humphrey	Stone
Clark	Johnston	Williams
Cranston	Kennedy	
DeConcini	McGovern	

NAYS—60

Allen	Hansen	Packwood
Baker	Hatfield	Pearson
Bartlett	Hathaway	Pell
Bellmon	Hayakawa	Percy
Biden	Heinz	Roth
Brooke	Helms	Sarbanes
Bumpers	Inouye	Schmitt
Byrd, Harry F., Jr.	Jackson	Schweiker
Case	Javits	Scott
Chafee	Laxalt	Sparkman
Culver	Long	Stevens
Curtis	Lugar	Stevenson
Danforth	Magnuson	Talmadge
Dole	Matsunaga	Thurmond
Domenici	McClellan	Tower
Eastland	McIntyre	Wallop
Garn	Melcher	Weicker
Goldwater	Metcalf	Young
Gravel	Metzenbaum	Zorinsky
Griffin	Moynihan	
	Nunn	

NOT VOTING—6

Hatch	Mathias	Morgan
Leahy	McClure	Stafford

So the motion to lay on the table was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment. The yeas and nays have been ordered.

Mr. CURTIS. Mr. President, I ask unanimous consent that the yeas and nays be dispensed with, that were previously ordered.

The PRESIDING OFFICER. Is there objection? Without objection, the yeas and nays on the amendment are vitiated.

The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR 10 MINUTES ROLLCALLS ON LEGISLATIVE APPROPRIATIONS MEASURE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a 10-minute limitation on all remaining rollcall votes in relation to the legislative appropriations measure today.

I have checked that with the leader.

Mr. BAKER. Mr. President, that is all right with me.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

AMENDMENT NO. 510

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to vote on the amendment of the Senator from California (Mr. CRANSTON), amendment No. 510.

The Senate is not in order. Will the Senators take their seats and those wishing to converse retire to the cloakrooms.

Mr. GOLDWATER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GOLDWATER. Are we considering legislative appropriations or military appropriations?

The PRESIDING OFFICER. The Senate is now considering the legislative appropriations bill.

Mr. GOLDWATER. I thank the Chair.

Mr. CRANSTON. Mr. President, I withdraw my pending amendment.

The amendment was withdrawn.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on amendments pending, the manager of the bill and the author of the amendments, in each case, have 2 minutes to explain the amendments so the Senators will know what they are voting on.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that my staff member, Caroline Randel, may have the privilege of the floor during debate and vote on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 518

The PRESIDING OFFICER. The amendment before the Senate now is the amendment of the Senator from Colorado (Mr. HART), No. 518.

Mr. HART. Mr. President, the Congress of the United States is attempting to tell the American people that we have to conserve energy, that we have to carpool, that we have to have less pollution in our urban areas, that we have to use mass transit. The pending amendment is an attempt to put the Congress of the United States and the Senate of the United States on record as favoring those positions. This is an opportunity for the Senate of the United States to demonstrate to the American people that we favor those proposals of things that we are trying to get the American people to do.

This proposal is not particularly to raise revenue, although it will do that. It is not particularly to punish anyone. It is not to demonstrate our self-sacrifice. It is to show the American people that we are serious about energy conservation, about carpooling, about mass transit, and about ending air pollution caused by automobiles. That would be the effect of this amendment, to send the American people that message, that we are willing to take the steps that we are trying to get them to take. That is what this amendment would do.

It would charge people to park on Capitol Hill, the same way that we are trying to get people to pay for parking in cities, and to accomplish those results that I am talking about. This is our chance to say we are serious about it.

There is no other way, Mr. President, to amend a legislative appropriations bill. Under the procedures that the Senate has, there is no authorizing legislation. Therefore, if we wish to amend a legislative appropriations bill, it must be done in this fashion. I hope that the manager of the bill will not make a point of order against the amendment for that reason.

I also hope, Mr. President, that, because of the seriousness of this issue, the manager of the bill will not attempt to table this amendment but will have Senators on record as to whether they favor carpooling, mass transit, less air pollution, and the Congress of the United States leading the way in all of these issues.

Mr. SCOTT. Will the Senator yield for a question?

Mr. HART Yes.

Mr. SCOTT Does this also repeal the pay raise for the Members of Congress?

Mr. HART. No, it does not. [Laughter.]

Mr. SCOTT I thank the Senator.

Mr. HUDDLESTON. Mr. President, I rise in opposition to the amendment by the distinguished Senator from Colorado. First of all, the amendment, as drawn, institutes a pay schedule for parking spaces provided for Members of Congress and employees of the legislative branch. There is a question of equity and fairness as to whether or not the particular schedule, based on the pay of the individuals, would be fair, even if we decided that the time had come to institute pay for parking privileges.

Second, there is a question as to how the legislative branch ought to be treated in relation to all Federal employees throughout the country. There is no uniformity as to the parking provisions for Federal employees, whether it is Denver, Colorado, Louisville, Kentucky, or Washington, D.C. There are 41,000 Federal parking spaces in this city. About 75 percent of those are free. Enough study has not been done to determine just what the proper way is to proceed if we were to accept the concept that the Senator from Colorado has proposed.

If the objective is to eliminate the pollution by eliminating the use of cars by Senate and congressional employees, then the simplest thing, and the only way to do it that would save money, would be just to eliminate parking spaces. That would be the most effective way to accomplish what the Senator has proposed.

As he has pointed out, it is very questionable whether or not there would be any revenue gain on the part of the Government if a parking fee provision were instituted.

My time is up.

Is all time yielded back on the amendment? I would like to offer a motion.

Mr. HUMPHREY. Is any time left?

The PRESIDING OFFICER. All time has expired.

ADDITIONAL STATEMENT SUBMITTED

Mr. PERCY. Mr. President, on April 7, 1977, I submitted for printing in the CONGRESSIONAL RECORD a letter I had written to President Carter which contained a list of proposals for energy conservation. One of these suggestions was the imposition of a parking fee on all Government employees who were permitted to park on Government property.

I am extremely pleased that Senator HART has taken the initiative, and a rather unpopular stand among our congressional employees, to introduce his amendment to the legislative appropriations bill requiring the collection of parking fees from Members of Congress and their employees for parking on the Hill.

We will very soon be debating the President's national energy plan on the floor of the Senate, and making decisions on the prices of gasoline and other fuels, taxes on fuel inefficient automobiles, and other energy-saving measures. We will be asking the American public to make changes in their daily lives, to make sacrifices in the name of energy conservation. But how can we expect them to cooperate in our programs and believe in our sincerity in this endeavor if we continue to subsidize the unrestricted use of private automobiles among our own ranks?

I believe that all parking facilities provided for the use of private industry or Government employees—if provided without charge, it is a form of untaxed compensation—should only be provided for an appropriate fee.

We would either charge a fee for the use of parking lots or consider subjecting its value to taxation. I prefer the former method, as it relates the cost directly to its purpose, and equates Federal employees' situation with that of thousands of private employees working in the city who must pay for their spaces in parking garages.

The Congress has, from time to time, been accused of various inconsistencies between its public pronouncements and policies and its own behavior.

For those who object that we should treat congressional employees differently than other Federal workers, I suggest that we pursue the parking fee issue further and consider applying it to them as well as ourselves.

At this time, however, I would like to see the Congress take the lead in sacrificing small luxuries for the much larger public interest, and institute a reasonable parking fee on the Hill.

My own suggestion would be a market-based rate for all Federal employees' parking facilities. Such a procedure would allow for separate rate determinations for individual buildings, commensurate with parking fees in public or private parking facilities in the immediate area.

Priority for parking spaces would still be determined along current guidelines, including car-pooling incentives and seniority considerations.

Different rates could also be computed for different kinds of facilities. On Capitol Hill, for example, we would all agree that spaces in inside garages are much preferable to outside lots, which are probably preferable to on-street parking. These differences could be accounted for by different rates for the different locations, and priority for the separate locations could still be guaranteed.

I understand that the Architect of the Capitol is currently engaged in a study

of the parking situation on the Hill, and the Office of Management and Budget is studying the policy in all the offices of the executive branch.

I will be watching these investigations with great interest, and hope that future efforts to address this issue will satisfy many of the objections we have heard on Senator HART's proposal today, which I do consider inequitable in certain respects.

Mr. HUDDLESTON. If all time is yielded back, Mr. President, I move to lay the amendment on the table.

I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table. The yeas and nays have been ordered. The clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Vermont (Mr. LEAHY), the Senator from North Carolina (Mr. MORGAN), and the Senator from Louisiana (Mr. JOHNSTON) are necessarily absent.

I further announce that, if present and voting, the Senator from North Carolina (Mr. MORGAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Utah (Mr. HATCH), the Senator from Idaho (Mr. MCCLURE), and the Senator from Vermont (Mr. STAFFORD) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The results was announced—yeas 64, nays 29, as follows:

[Rollcall Vote No. 295 Leg.]

YEAS—64

Anderson	Garn	Moynihan
Baker	Glenn	Muskie
Bartlett	Gravel	Nelson
Bayh	Griffin	Pearson
Bentsen	Hansen	Randolph

NOT VOTING—7

Hatch	Mathias	Stafford
Johnston	McClure	
Leahy	Morgan	

So the motion to lay on the table was agreed to.

Mr. HUDDLESTON. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. SCHWEIKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ADDITIONAL STATEMENT SUBMITTED

Mr. CRANSTON. Mr. President, regarding the matter of purchases by Senators from the stationery store or from other vendors, I want to ask the distinguished Senator from Kentucky one question. If a Senator wishes to do so, can he make purchases, for official purposes, from a vendor other than the stationery store, provided the cost is charged to the new 10 percent discretionary fund?

Mr. HUDDLESTON. Yes.

Mr. MUSKIE. Mr. President, the Senate has before it H.R. 7932, the legislative branch appropriation bill for fiscal 1978 which provides funds for the Congress, the Library of Congress, the General Accounting Office, the Government Printing Office, and other agencies.

I take this opportunity to comment on the relationship between this bill and the targets set out in the first budget resolution for fiscal 1978.

This bill provides $1.0 billion in budget authority and $1.1 billion in outlays for fiscal 1978, including $0.1 billion in outlays from prior year authority. The bill is consistent with the assumptions of the first budget resolution.

Under section 302(B) of the Budget Act, the Appropriations Act, the Appropriations Committee divides among its subcommittees the total budget authority and outlays allocated to it under the budget resolution.

The funds provided in this appropriation bill are within the totals allocated to the subcommittee on the legislative branch pursuant to section 302(B) of the Budget Act. That allocation is $1.0 billion in budget authority and $1.1 billion in outlays. This appropriation bill as reported is $9 million in budget authority and $45 million in outlays below the amounts allocated to the subcommittee.

Later requirements for items not provided in the bill are expected to be negligible. However, I would point out that on a comparable basis, the House bill is $99 million in budget authority and $45 million in outlays above the Senate bill. This is due to the inclusion by the House of funds for the extension of the West Front of the Capitol—which was not included by the Senate—and the changes by the Senate in the financial treatment of certain fee related services performed by the Library of Congress, the Copyright Office, and the Government Printing Office which were not made by the House. If the House position on both of these items were accepted in conference, there would be a potential breach of the subcommittee's section 302(b) allocation by $0.1 billion in budget authority. It is therefore particularly important to hold this appropriation bill to the level reported in the Senate, and to maintain the Senate position in the conference.

I wish to commend the distinguished chairman of the Subcommittee on the Legislative Branch. Senator HUDDLESTON, for his outstanding efforts in bringing in a bill with the allocation made to his subcommittee.

I wish also to commend the distinguished chairman of the Appropriations Committee, Senator MCCLELLAN, for his continuing efforts to assure that the discipline of the budget process is maintained and that the total of all regular and supplemental appropriation bills for fiscal 1978 remains within the first budget resolution targets.

Mr. THURMOND. Mr. President, even though I support a number of the provisions in H.R. 7932, I feel that I must vote against the bill since it contains $1.4 million over fiscal year 1977 to cover the increased costs for salary and related benefits from the recommendations of the Commission on Executive, Legislative, and Judicial salaries which went into effect on March 1, 1977.

Accordingly, Mr. President, I shall vote against H.R. 7932.

Mr. CANNON. I have a question for Senator HUDDLESTON, the floor manager of the bill, H.R. 7932, regarding the authority of the Committee on Rules and Administration. Is it the intent of the committee amendment regarding travel to set specific rates of per diem only and not vitiate the other travel responsibilities and regulations issued by the Committee on Rules and Administration? In other words, would all other procedural and other travel rules and responsibilities of the Committee on Rules and Administration remain undisturbed?

Mr. HUDDLESTON. The understanding of the distinguished chairman of the committee on Rules and Administration is correct.

The PRESIDING OFFICER. In accordance with the agreement, if there be no further amendments to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Louisiana (Mr. JOHNSTON), and the Senator from Vermont (Mr. LEAHY) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE), and the Senator from Vermont (Mr. STAFFORD) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The result was announced—yeas 85, nays 10, as follows:

[Rollcall Vote No. 296 Leg.]

NOT VOTING—5

Johnston	Mathias	Stafford
Leahy	McClure	

So the bill (H.R. 7932) was passed.

Mr. HUDDLESTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. SCHWEIKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that in the engrossment of the Senate amendments the Secretary of the Senate be authorized to make any technical and clerical corrections.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUDDLESTON. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer (Mr. MOYNIHAN) appointed Mr. HUDDLESTON, Mr. MCCLELLAN, Mr. SASSER, Mr. PROXMIRE, Mr. SCHWEIKER, Mr. WEICKER, and Mr. YOUNG conferees on the part of the Senate.

DEFENSE APPROPRIATIONS, 1978

The PRESIDING OFFICER. Under the previous order, the Senate will now resume consideration of H.R. 7933, which the clerk will report.

The assistant legislative clerk read as follows:

A bill (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

Mr. STENNIS addressed the Chair.

Mr. HUMPHREY. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. The pending question is on agreeing to the amendment offered by the Senator from Mississippi for the committee.

Mr. STENNIS. I thank the Chair.

The PRESIDING OFFICER. There are 20 minutes of debate, 10 minutes on each side.

Mr. ZORINSKY. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. STENNIS. Just a minute. I will take 1 minute, Mr. President. At this time I yield myself 1 minute.

I want to inform the Senate that we are right on the verge now of a vote on the B–1 which amounts to, in this case, on whether or not we are going to take out of the bill the $1.4 billion as recommended by President Carter.

There are 10 minutes to the side.

Now, some kind of a matter has arisen that is important to the Senator from Minnesota, and I ask unanimous consent that I may yield to him.

Mr. HUMPHREY. Mr. President, may I suggest that we not take this out of any time.

Mr. President, I ask unanimous consent that the Chair will permit that I may have not to exceed 3 minutes on a resolution.

The PRESIDING OFFICER. Is there objection?

Mr. STENNIS. I yield 3 minutes to the Senator, without the time being charged.

Mr. ZORINSKY. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. HUMPHREY. Yes.

Mr. ZORINSKY. I ask unanimous consent that a member of my staff Mr. Lew Ashley be accorded the privilege of the floor during the debate on the Department of Defense appropriation bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

INVESTIGATION OF ECONOMIC CHANGE

Mr. HUMPHREY. Mr. President, the House Concurrent Resolution 248 is being held at the desk. It was passed under the Suspension Calendar in the House on June 14, and is identical with Senate Concurrent Resolution 29 which I introduced on the same day.

I ask unanimous consent that House Concurrent Resolution 248 be taken from the desk and be given immediate consideration at this time. I might say this has been cleared on both sides of the aisle with all the appropriate Members.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will state the concurrent resolution by title.

The assistant legislative clerk read as follows:

House Concurrent Resolution 248 requiring an investigation by the Joint Economic Committee on certain economic changes.

There being no objection, the Senate proceeded to consider the resolution.

Mr. HUMPHREY. Mr. President, I have discussed this resolution with our distinguished majority leader, Mr. ROBERT C. BYRD, and with the minority and I understand that there will be no objection to its immediate consideration.

Mr. President, the concurrent resolution we are considering at this time directs the Joint Economic Committee to conduct an investigation of the tremendous economic changes that will confront public policy in the years immediately ahead. Our economy is far different than it was 10 or 15 years ago and it will have to meet unprecedented challenges in the years ahead.

Population growth has slowed down substantially, a fact that will produce a much older population with attendant problems for pension finance, education, manpower, and investment.

We have already seen the serious consequences of raw material limitations and there undoubtedly are more to come.

Demands on the public sector will continue to be troublesome.

Economic productivity is declining and we neglect this subject at our peril. Also there is uncertainty about availability of capital to sustain our growth.

I could list many other issues—industrial organization, research and development, international shifts, and a host of others.

These questions and others like them should be investigated and an effort made to assess their impact on future policy decisions in the Congress.

The Joint Economic Committee, on which I have the honor to serve as vice chairman, is well suited to conduct such studies. It has an outstanding record going back over many years and can perform these studies with the aid of outside experts for a very modest sum. We have gone over the question of funding most carefully to ascertain the minimum necessary amount to permit us to move into these troublesome questions while carrying out our other committee responsibilities. I can assure you that the investment will be returned many times over.

I ask the support of my colleagues in this effort to more fully carry out the mandate given to the Joint Economic Committee under the Employment Act of 1946.

Mr. President, I would like to express my personal thanks to Majority Leader BYRD and Senators PROXMIRE, BROOKE, SCHMITT, and LUGAR for their cooperation in expediting consideration of this resolution.

This resolution originated in our sister body, the House of Representatives, and passed unanimously.

I asked the Senate to approve this direction to the Joint Economic Committee.

Mr. ROBERT C. BYRD. Mr. President, just for the record might I ask the distinguished Senator, has the chairman of the Rules Committee (Mr. CANNON) been consulted?

Mr. HUMPHREY. All parties have been consulted.

Mr. ROBERT C. BYRD. And he has given his approval?

Mr. HUMPHREY. That is my understanding, all parties.

I also ask unanimous consent that certain materials with respect to the resolution be printed, along with a letter from a colleague.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AN INVESTIGATION OF ECONOMIC CHANGE

THE PREVAILING SITUATION

There are strong institutional pressures in Congress to look primarily at immediate problems and immediate solutions so that foresight is minimal, and the usual pattern is that of playing "catch up ball," with all the disadvantages of that posture. Recent changes in both House and Senate rules have mandated attention to foresight and future studies in standing legislative committees, but the task of looking at broad, complex problems that cross jurisdictional interests of several committees badly needs attention.

The Joint Economic Committee (JEC) as a non-legislative committee is in a unique position to contribute to congressional and public understanding of many of the central economic problems of the United States and the world, considered in the context of these broad interactions. This has been the traditional role of the JEC with the annual review of the President's Economic Report and its many other studies and hearings. These functions can be strengthened in the context of undertaking unifying inquiries into the interactions of these present and coming changes in the economy. The JEC in this regard can conduct investigations, hold hearings, assemble panels, and sponsor studies without threatening the legislative jurisdictions of standing committees of either body. If the Congress is to be more than merely a reactive institution, it needs the support of data and analyses which will give it warning of emerging trends. It needs to consider choices of alternative approaches, assembled with an eye to the interactions and consequences which in the normal situation either are not apparent, or are not yet thoroughly understood.

The JEC can do much more to help the Congress meet its legislative responsibilities by producing data and findings which individual standing committees with limited jurisdictions would be less likely to develop.

THE PROPOSED INVESTIGATION

The Joint Economic Committee recommends the prompt organization and undertaking of an investigation and analysis of the kinds of national and international economic issues just described. This effort would be built around use of a core of the regular JEC staff, supplemented by temporary additional staff and consultants to (1) identify the emerging economic issues; (2) map out the direction of analyses and strategies; (3) hold panel meetings and hearings; and then (4) issue studies and reports with regard to the foregoing. These latter would be based upon the detailed work which would illuminate the crucial structural changes occurring in the economy, to show their significance for public policymaking. Each study would contain information and analysis necessary for consideration of legislation by a number of the legislative standing committees of both bodies.

As far as practicable the work of the investigation would be coordinated and consolidated with the programs of the existing subcommittees of the JEC. The Executive Branch and the independent agencies would be used as sources of information and kept informed on progress, but not for the execution of the studies per se.

Should the necessary authority and support be obtained by mid-1977, it would be possible to launch the investigation for about $250,000 for the balance of calendar 1977 and $650,000 for calendar 1978 (the 95th Congress). This effort would lead to progress reports, detailed plans, and initial products to provide a basis for requesting additional funding for 1979 and 1980 (the 96th Congress). By the end of that time, there would be enough completed products to provide Congress with valuable information and analysis vital to its legislative responsibilities.

The basic time frame for the investigation would be from the present to 1980, to keep projections as realistic as possible. But some of the issues which will have crucial effects on near-term policymaking involve trends which may reach forward to the year 2000, and these would not be excluded from consideration.

REPRESENTATIVE ISSUES FOR INVESTIGATION

I. Economic Consequences of Demographic Trends—

Demographic trends are very fundamental to many of the problems requiring investigation. Projections covering 10 to 20 years are relatively easy to make because most of the people included are already born, and the death rates are fairly predictable. Longer term trends in population are harder to predict because social attitudes change, and even professional demographers are frequently fooled.

The decline in births in the United States since 1956 points toward a drastic slowdown in the growth of the labor force in the 1980's, a reversal of the rapid growth that occurred in the past two decades following the 1945–1955 baby boom. This possible coming decline in manpower growth will cause fundamental change in a wide array of economic and social problems. Labor markets could become chronically tight by 1985 as the unemployed are absorbed, possibly signaling a downward revision of unemployment targets. This could be good news for minorities and the less skilled, although such structural unemployment may persist. It could also relieve the Federal, State, and local governments of some of their financial burdens through reduced unemployment, education, and welfare costs.

On the other hand, several new problems are likely to emerge as labor becomes scarce and the old age population increases. Although capital needs will lessen with the slowdown in job expansion, a period of slow overall growth may ensue. The slowdown in new household formation will cut the growth of durable goods consumption, and therefore the present trend toward the service industries will probably accelerate as consumption shifts from goods to services. Productivity increases could depend on whether new technology or other forms of advances occur in the face of reduced capital investment. Labor scarcity can also have serious implications for military manpower requirements.

All of these perceived demographic changes can be looked at in terms of their consequences for typical types of family budgets. It is important to know what portions of available personal income are going to be needed for food, transportation, housing, fuel, health care, and taxes. Policymakers will need to take these changing proportions into account in proposing legislation, so that they are dealing with the effects on real people and not with generalized national averages.

The demographic changes studied need to include shifts of population between the Sunbelt and the Northeast and North Central States and between older central cities and suburbs or smaller communities.

Demographic changes beyond U.S. borders are also important. For example, current attention is focusing on the 2 to 12 million illegal aliens in this country. Many come from the countries to the south where populations are rising rapidly and poverty is endemic. Even if their labor rates fall, a momentum will carry those populations much higher, increasing the incentives to enter the United States. Orderly domestic demographic projections may be considerably altered by a continued, even larger northward flow. Hence, attention to these external demographic pressures conceivably might be crucial to modifying analysis on labor availability, education and welfare costs and housing needs.

II. Economic Impact of Materials Prices, Availability, and Shortages—

Studies of materials shortages go back many years, with only limited actions to implement recommendations. The influences of Government regulation on both energy and materials supplies have not always been appreciated. An awareness of these past studies and the effects of regulatory policies can illuminate the present situation where rising prices and threatened shortages of energy have already produced profound economic results throughout the world. Drastic price increases in many basic commodities have also already unleashed a chain reaction of cost-push inflation forces. Thus, it is highly probable that pressures, including price pressures, to conserve materials and natural resources will intensify.

On the other side of the coin, the domestic decline in population growth and the changing age structure of the U.S. population will tend to work automatically toward slower materials consumption growth. The same cannot be said for foreign demand. While Government encouragement of conservation will remain necessary, the consequences of a comprehensive conservation strategy, or lack of one, are not fully understood. Reduced demand for basic materials could have serious effects on the renewal and expansion of plant and equipment and by inference on productivity and innovation. Further, reduced investment in industrial sectors could significantly alter the balance between investment and consumption necessary to achieve full employment. At the very least, major adjustments will have to take place to achieve a smooth transition as the industrial structure changes.

Slower growth of the basic materials industries may be offset to some degree by expansion of the conservation industries. For example, the recycling, retrofitting, and repair industries could be expected to grow substantially. Also, research, development, and production of new materials and products with greater durability will be stimulated. Assuming the public desire for greater environmental protection remains strong, both capital outlays and materials investments might receive a boost. The shift in employment, however, from industries affected by reduced demand into other areas could become a major problem for workers, their families and communities. Consumer welfare, and the general standards of living could be impaired by both employment and product changes.

While at the moment highest visibility accompanies the potential shortages of oil and gas and the rising prices encouraged by OPEC, the next great shortage may be in fresh water, caused by changes in population, economic activity, and shifts in climate in some regions. Rising expectations in the rest of the world may produce demand and price consequences in a whole range of materials to obscure what trends domestic demographics otherwise would suggest. The shift from imported oil to coal, if accomplished, will have consequences for land, water, and air quality, and alter the picture in the field of labor relations.

III. Long-Range Trends in Public Sector Finances—

While Congress routinely deals with the issues of Federal revenues and expenditures, there are fiscal issues which more broadly involve also State and local needs. The latter two categories have shown a growth in needs in recent years even at a faster rate than Federal.

Especially acute are the economic consequences of the financial problems of the large cities. Major consequences flow from the imbalances of revenues and expenditures by regions, and of geographical shifts in industry from the traditional industrial heartlands to the Sunbelt and other regions.

Also of interest are the fiscal and cost implications of using municipal bonds or other local obligations to meet urban financial needs, versus using Federal funds and obligations. Questions involved are the effects of different interest rates and the tax exemptions associated with such alternatives.

The demographic trends referred to will have large economic consequences as pension plans at all levels of government face shortfalls in revenues compared with their current obligations. These difficulties will impact on the state of their finances, tax levels, credit ratings, and hence on interest rates, costs, and prices generally. Problems with pension plans in turn will affect welfare costs. Welfare

needs and costs are widely recognized as acute problems, but the full economic impacts remain to be understood.

While perhaps the distribution of payments by all levels of the Government are understood as to purpose and direct economic goals of services and income redistribution, there is less understanding of the economic consequences of different forms of revenue raising at all levels of government. Various kinds of tax burdens have profound secondary economic consequences for investment, employment, and prices, and for income redistribution that extend well beyond the original goal to raise revenue.

Macroeconomic goals as well as specific needs are met through changes in expenditures and revenue collections at various levels of government for countercyclical purposes, to provide employment and to stimulate business. Although the basic economic goals may be agreed upon, there are sufficient problems in execution that few countercyclical programs are carried through the whole cycle. Should policy consciously seek or accept a continuing inflation in prices instead of constant or falling prices, and can inflation be limited to a target amount? What devices can achieve these ends, with what economic prices and consequences attached?

IV. Capital Formation—

Most analysts agree that the poor business conditions since 1970 plus this decade's continuing rapid labor force growth leave this Nation and other nations as well with a backlog of investment requirements to provide jobs and exploit opportunities for productivity gains that are now available. Many authorities agree that the fraction of GNP going to business investment should increase by about 10 percent (from roughly 10.5 to 11.5 percent of GNP) for the next five years. Stronger business conditions are a precondition for obtaining this investment. Measures to achieve this goal should be tempered by the recognition that capacity expansion needs probably will decline after the mid-1980's due to demographic and other growth-retarding factors. Increasing labor scarcity at that time, however, will place a growing premium on technical advances to save labor and boost labor productivity. A farsighted public policy would begin now at the research level to develop potential innovations of this type.

While some large concerns find the capital needed for expansion partly from retained earnings and in money markets because their position is well established, solutions are less evident for small business. The special capital shortages of small business may require special attention because of all the aspects of economic opportunity and innovation which can flourish when small business enterprises maintain reasonable health. Small business may be paying substantially higher interest rates for their capital borrowings than do some larger concerns.

In the area of public capital formation, demographic factors have obviated further large spending on educational facilities, which have burdened municipal capital budgets for decades. The Federal highway program also has eased. Hospitals seem to be overbuilt, at least for a time. It is necessary to assess the need for public facilities in other areas—e.g., water purification, waste disposal, mass transit, energy conservation, housing, etc.—and to project what the overall outlook for public investment means for public finances at various levels and for the balance of the economy at large.

V. Research, Innovation and Productivity—

Several research and development (R&D) issues have already been raised in the discussion of demographic trends and conservation. As labor becomes more scarce and presumably more expensive, higher productivity will be necessary to maintain rising living standards and blunt cost-push inflation. Productivity gains could depend largely on new technology. Further, new technology will be required to achieve greater durability and recyclability of materials and products.

The relative amounts of research and innovation in different types of industries and different sizes of enterprises should be studied for clues to reasons for shortfalls which occur in this regard. The occasional opportunities for small businesses to form consortia or associations for research without violating antitrust laws may suggest ways of increasing productivity in additional industries.

The issue of compulsory licensing of patents and procedures to spread the benefits of innovation while still protecting the interests of the original developers should be examined.

A larger question also concerns the effects of R&D on innovation, productivity (which can also be defined as technical progress) and growth. The problem is that productivity gains in the past four decades have been modest compared with the explosion of research expenditures in this period, and these gains have become notably slower since 1966. Thus, while economic growth is tied to increased productivity, increases in R&D spending do not seem to guarantee increased productivity. Improvements in the efficiency of R&D and the transfer of new technology into useful innovations will be vital if growth is to be achieved in a future characterized by a slowdown in expansion of the labor force and the disruptions and dislocations that could be produced by large-scale conservation.

It will be important to establish why R&D seems not to have paid off proportionately as well as it used to. History is replete with cases where informed opinion was convinced the reasons were to be found in the fact that all significant discoveries had already been made, only to have these pronouncements overturned by events which were already in the making, but unrecognized. Hence, a degree of caution is called for today also in reaching conclusions.

For example, there are now several changes in the making which may have sweeping economic consequences. Before 1985, microprocessors may revolutionize some parts of industry and consumer goods, and also affect energy efficiency. Successful fusion power represents a plausible solution to the energy shortage, but may remain a will-o'-the-wisp. Solar power from space is a more straightforward engineering proposition, but probably depends upon the building of a single-stage-to-orbit shuttle craft whose operating costs will be more than an order of magnitude below those of the first generation shuttle now approaching flight test. But, this moves such power to the year 2000 timeframe, not 1985, and if pursued would require a heavy investment over many years to bring substantial results. Unless there are new legislative barriers, genetic engineering may have sweeping consequences by the year 2000. For example, there may be gasoline from the sap of desert bushes, with little processing required, and traditional food crops may fix their own nitrogen in the soil in place of using chemical fertilizers. Bacteria may break down many of the pollutants from industry.

In the end, rising productivity is the only continuing source of opportunity to offset shortages of materials, energy or labor, to provide the margins of resources to take care of unmet needs in goods or services, and to provide needed redistributions of income without the same stresses which come when the total pool of income is fixed.

VI. Changing Patterns of Industrial Organization—

Recent decades have witnessed an increase in vertical and horizontal concentration and the emergence of the conglomerate and multinational forms of industrial organization. Among the problems associated with these trends are inflexible pricing and the propensity of firms in the concentrated industries to raise prices regardless of business conditions. Indeed, in some industries where there is a notable absence of competitive conditions prices were increased sharply just prior to the 1972 recession and continued going up throughout the recession. The pervasive adherence to full cost pricing in the concentrated industries suggests that future declines in production will result in higher prices rather than price stabilization, a result that is inconsistent with competitive market behavior. Such pricing behavior also embodies fundamental implications for the efficacy of macroeconomic policy as traditionally conceived in combating inflation through demand curtailment.

Prevailing types of private industrial organizations range from small business enterprises to conglomerates and multinational combines. Each has found its place in the total structure, and our economy has become dependent upon all of these types. The sensitivity in many aspects of the economy to changes in these structures should be studied. Likewise, industrial organizations depend not on internal decisions alone, but develop and operate in the context of pervasive government regulations, affecting performance, efficiency, and incentives as well as their responsiveness to sought public goals.

VII. International Money Markets, Trade, and Investment—

The growing interdependence of the United States and foreign economies was highlighted by President Carter's decision to seek coordinated stimulation of the American, Japanese, and German economies. The impact of international interdependence has been felt in a dramatic way with the OPEC oil embargo and price increases, various demands for protectionist actions to keep out foreign goods such as steel, color TVs and shoes, and the employment effects of U.S. investment abroad and foreign investment in the United States.

The special problems of the lesser developed countries need review because any major economic crisis in these countries can spread through the banking systems and trading communities of the most developed and presumably stable countries with the most profound consequences.

The relative market size and degree of importance of all countries to U.S. trade, monetary, end economic policy should be assessed.

The fact that U.S. economic developments have pronounced effects on the rest of the world has been well acknowledged, although perhaps not as well appreciated here as abroad. Of growing importance is the way foreign economic changes influence our economy, a trend that will intensify as nations, including lesser developed countries with low labor costs, produce finished products for export. Whether the Government should furnish assistance to U.S. firms disrupted by imports or develop a strategy that would phase-out declining industries and foster new ones will be a continuing long-term problem. The prospect of dependence on foreign oil for the foreseeable future and permanent high energy prices should also cause us to question the likelihood of economic growth at rates to which we have become accustomed.

Meanwhile, perhaps the time has come to analyze the results of five years' experience with floating exchange rates among the world's currencies, the effects of clean float and dirty float. Have currencies futures markets developed sufficiently to permit trade in knowable prices?

VIII. Economic Consequences of Wars, Natural Disasters, and Other Disruptions—

Most of the preceding issues discussed above combine some extrapolation of known physical factors and their interactions with understood demographic and economic principles. The ability of experts to forecast is still limited in any area where there are multiple, complex factors at work. Yet, rational decisionmaking requires the assumption that some attempt to forecast and anticipate is better than none. (Making no forecast is in itself a decision.)

Both ancient and current history are replete with examples of change conditions or trends which were not properly anticipated by orderly and rational studies of human affairs. Some of these changes represent "aberrations" in human behavior which upset the previously anticipated conditions. Some represent an exaggerated "whip lash" of other actions. Finally, there are other events beyond human behavior or control which may be rationally understood and even anticipated in most respects except as to timing.

There is no insurance possible against all contingencies. But, any comprehensive economic policy should allow for the unexpected, the sporadic, the uncontrollable so that policies will not collapse completely, but some fallback position will already have been worked out to put into play when the unexpected or untimable event takes place.

Examples of such disturbing elements include the appearance of new technologies, the discovery of deleterious effects in products or processes which require their elimination, to say nothing of wars, earthquakes, and persistent droughts. It might be useful to catalogue with brief consideration of each element a reasonably comprehensive list of contingencies, so that the dimensions of these problems are recognized and possibly weighed both as to probabilities and severity of consequences.

Tentative budget, investigation of economic change

Category	July-Dec. 1977	Jan.-Dec. 1978	Total

U.S. SENATE,
Washington, D.C., July 11, 1977.

Hon. HUBERT H. HUMPHREY,
U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR SENATOR HUMPHREY: I appreciate your thoughtful letter of June 28, 1977, outlining your reasons for wishing to progress with a Joint Economic Committee study. During the recess, I have read the staff memorandum which you enclosed. It is an excellent outline, and I am persuaded that a study which covers the suggested areas of inquiry will be an important contribution to economic understanding.

I am aware of your desire to make certain that the new economic study proceeds in a non-partisan matter. I would hope that a very broad range of economists and academic specialists from other disciplines might be consulted and that a broad range of options for policy might result.

For example, the policies suggested by various Club of Rome reports would be substantially different from those suggested by Herman Kahn. In a single copy of a weekly news magazine, a lay reader can cover the interpretations of Paul Samuelson and Milton Friedman and a JEC report should do no less. Within the past two years, Martin Mayer has published an excellent book entitled "Today and Tomorrow in America" which illuminated, among other things, the importance of demographic changes and suggested that the volume of services offered in this country has not increased more rapidly than the volume of goods although the value of the former has increased sharply for reasons he described.

After visiting with various members of the Joint Economic Committee, I am convinced that each member of the Committee has approached the new economic study with a sincere desire for objectivity and a genuine desire to learn much more about the complexities of our economy and its interrelationships with economies of other countries.

The Committee may have wrestled with the problem of staff salaries and monies for consultants. The salary levels suggested appear, to me, to be on the generous side even for a project of such significance. I would hope that the study might be completed for $750,000 as opposed to the $900,000 suggested.

In any event, I am grateful for your personal attention to my concerns about the JEC economic study. This letter will indicate that I will agree to a unanimous consent request to take up the House passed resolution from the desk and thus expedite the initiation of the study.

Sincerely,

RICHARD G. LUGAR.

The PRESIDING OFFICER. The question is on agreeing to the resolution of the Senator from Minnesota.

The resolution (H. Con. Res. 248) was agreed to.

The preamble was agreed to.

Mr. HUMPHREY. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TRIBUTE TO JACKIE ROBINSON

Mr. HUMPHREY. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 223) to pay tribute to Jackie Robinson on the 30th anniversary of his entry into major league baseball.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. HUMPHREY. This resolution is introduced for the distinguished Senator from West Virginia (Mr. ROBERT C. BYRD), the distinguished Senator from Tennessee (Mr. BAKER), and myself.

Mr. President, tomorrow there will be the all-star game at Yankee Stadium, and the highlight of that game, outside of the contest itself, will be the anniversary activities that will take place on Tuesday evening with the pregame ceremony dedicating the all-star game of 1977 to the great Jackie Robinson.

I have a brief statement on behalf of the sponsors of this bill, Senator ROBERT C. BYRD of West Virginia, Senator BAKER, and myself.

I am sure that my colleagues will want to join in this resolution of commendation and tribute to Jackie Robinson and American baseball. This resolution indicates support of the U.S. Senate for the national celebration commemorating the 30th anniversary of Jackie Robinson's entry into major league baseball. The Commissioner of Baseball, Mr. Bowie Kuhn, the baseball owners and players, as well as civic and community leaders, are commemorating this milestone in the progress toward full civil rights and equal opportunity with a week of recognition, July 18–25, 1977. The highlight of the anniversary activities will take place on Tuesday evening, July 19, at Yankee Stadium with a pregame ceremony dedicating the all-star game of 1977 to the great Jackie Robinson.

Plans for this celebration call for activities during 1977 aimed at commemorating the anniversary and publicly announcing the Jackie Robinson Foundation.

I know that my colleagues in the Senate share my enthusiasm for Senate recognition of this great athlete and even greater human being. His struggles, his setbacks, and his triumphs were America's. The contributions he made to the game of baseball and the cause of all underprivileged Americans, who have encountered social and professional injustices, have been unmatched by any athlete of our time.

Mr. President, since the inception of baseball as the great American pastime,

the sport has become America's legacy to the world of amateur and professional athletics. It is, in the truest sense of the word, the all-American sport.

Baseball would mean much less than it does today to the American people, and particularly to our youngsters, were it not for the dedication and perseverance, despite the frustrating battles and blatant injustices, of Jackie Robinson. He never gave up on his dream of a major league baseball career and his success became an inspiration to millions of Americans regardless of the nature of their aspirations or the color of their skin. I cannot imagine the game of baseball over the past several decades without the names of Willie Mays, Monte Irvin, Don Newcombe, Roy Campanella, Maury Wills, Minnesota's own Tony Oliva, and Rod Carew as well as countless others too numerous to mention. The contribution to the quality of baseball of these athletes from many backgrounds is immeasurable.

Jackie Robinson, a native of Cairo, Ga., spent much of his life fighting for racial equality and human rights in all areas of life so that all underprivileged American minorities could achieve their objectives without encountering obstacles of a social and racial nature. Partially as a result of Jackie Robinson's efforts, this great Nation of ours has made great strides toward the assurance of constitutional equality for all as guaranteed by our Founding Fathers under the Bill of Rights.

I am proud to be able to introduce this resolution on behalf of one of the great Americans of our time. Mr. President, I hope that you and all of my colleagues will join me in this proposal to honor one of the best people our society has produced.

Mr. ROBERT C. BYRD. Mr. President, 30 years ago Jackie Robinson broke the color line in major league baseball, becoming the first of many outstanding black players to compete in the big leagues. Robinson's breakthrough was important not just for baseball; it was an event of far greater significance in our society.

I am pleased to join with the Senator from Minnesota (Mr. HUMPHREY) and the minority leader (Mr. BAKER) in introducing a resolution paying tribute to Jackie Robinson on the thirtieth anniversary of his entrance into the major leagues.

On Tuesday night the 48th baseball all-star game, to be played in Yankee Stadium in New York, will be dedicated to Jackie Robinson, who not only made baseball's Hall of Fame but is recognized for his contribution to the struggle for racial equality and human rights.

After starring in football at the University of California at Los Angeles and serving as a lieutenant in the U.S. Army, Robinson was signed by Branch Rickey, president of the Brooklyn Dodgers. In 1946, he played with the Montreal Royals, the Dodgers' farm team in the International League.

On April 13, 1947, he made his debut with the Dodgers. Fittingly, he scored the deciding run in a victory over the Boston Braves. He was named the National League's rookie of the year that season.

He played for Brooklyn for 10 seasons. In every one of those years the Dodgers either won the championship or were in a tight battle for the pennant. In 1949, he won the National League batting championship with a .342 average and was named the most valuable player in the league.

Jackie Robinson was known for his speed and daring on the bases and his fierce competitive spirit.

It is appropriate that he is being honored at the all-star game, because Robinson and his Brooklyn teammates, Roy Campanella and Don Newcombe, were the first black players to appear in an all-star game, being chosen for the 1949 contest. Robinson played in six all-star games and had a .333 batting average. He also appeared in six World Series.

When Jackie Robinson joined the Dodgers, it was not only a turning point in the history of baseball, it may not be stretching things to say it was a turning point in the history of this country.

Baseball, long referred to as the national pastime, is interwoven into the fabric of our society. As one of our leading sports writers, Red Smith, wrote:

> Baseball became an important area of influence in the Nation's uncertain groping toward real democracy.

Following Robinson's breakthrough, later in 1947, Larry Doby of the Cleveland Indians became the first black player in the American League. Since that time there have been a large number of outstanding black players in the major leagues.

By paying tribute to Jackie Robinson on this occasion, we can note how far we have progressed in 30 years. However, the fact that blacks still have a minimal role in managerial and executive positions in baseball is perhaps a reminder that we still have much to accomplish in achieving the goals that Jackie Robinson advocated.

This occasion also marks the beginning of a national campaign by the Jackie Robinson Foundation, which will focus its efforts on assisting needy children and young people.

With passage of this resolution, the Senate will recognize the important role played by a remarkable athlete who was dedicated to the American ideal of equal opportunity.

Mr. BAKER. Mr. President, this week the American sport spotlight focuses on the national pastime's "Midsummer Night's Classic," the all-star game, 30 years after Jackie Robinson became the first black to pierce the color barrier and play in the major leagues. Accordingly, this week is a most appropriate choice to commemorate that milestone and the man whose athletic career and lifetime have meant so much to America.

Many a youngster has heard the crack of the bat, the roar of the crowd, and dreamed of stepping up to the plate or toeing the rubber in the big leagues—truly an American dream. For Jackie Robinson, a black youth growing up in Pasadena, Calif., it was a dream that would not fade in spite of contemporary obstacles.

Combining superlative athletic prowess with undaunted personal courage, Jackie Robinson fulfilled his dream with a career that transcends individual accomplishment. It was a career that enabled Americans of all colors to recognize and participate in the greater American dream of racial equality, on and off the playing field as they had never done before.

The mind's eye will not soon forget the vision of Jackie Robinson, the ballplayer, the No. 42 Dodger uniform exploding down the third base line for a steal of home, the fierce and proud presence determined to succeed, the spikes flashing in the Ebbets Field arc lights.

The world will not soon forget the vision of Jackie Robinson, the man. Generations of Americans are in his debt. I am most privileged to cosponsor a deserving tribute this week to Jackie Robinson's unique contribution to the American dream.

The PRESIDING OFFICER (Mr. STONE). The question is on agreeing to the resolution.

The resolution (S. Res. 223) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 223

Whereas the Senate of the United States recognizes the thirtieth anniversary of Jackie Robinson's entry into major league baseball as an event of great significance for all who must overcome injustice;

Whereas the week of July 18, through 25, 1977 has been designated as a week of recognition of Jackie Robinson's contributions to the American ideal of equality for all;

Whereas Jackie Robinson was the first to break major league baseball's color barrier, thus paving the way for others to pursue their careers without hindrance;

Whereas Jackie Robinson's athletic career and much of his life was devoted to the struggle for racial equality and human rights; and

Whereas Jackie Robinson's contributions to equality for all Americans has had a meaningful and significant impact on our society: Now, therefore, be it

Resolved, that it is the sense of the Senate of the United States to commemorate the thirtieth anniversary of Jackie Robinson's entry into major league baseball, and to join in the celebration of the week of July 18 through 25, 1977 in paying tribute to Jackie Robinson and what he symbolized for so many Americans.

Sec. 2. The Secretary of the Senate shall transmit a copy of this resolution to Rachel A. Robinson, the wife of the late Jackie Robinson.

Mr. HUMPHREY. Mr. President, I thank my esteemed colleagues for their cooperation.

DEFENSE APPROPRIATIONS, 1978

The Senate continued with the consideration of H.R. 7933.

UP AMENDMENT NO. 676

Mr. STENNIS. Mr. President, if we may have quiet, I believe in just a few minutes we will conclude.

The PRESIDING OFFICER. The

Senator will suspend until the Chair obtains order in the Chamber.

The Senate will be in order.

Mr. STENNIS. Mr. President, I believe in just a few minutes the membership can get the facts presented to them on the situation on this committee amendment and be ready to dispose of it.

This concerns the B–1. This is a committee amendment proposed by the committee and sent to the floor following the bill which it already had voted out before President Carter's recent recommendation on the B–1.

This committee amendment, at the request of the President, is to delete a total of $1.4 billion on the B–1 program from this present bill, the 1978 budget.

The President forwarded his amendment to the fiscal year 1978 defense budget as a result of his decision not to initiate production of the B–1 strategic bomber and to accelerate the Cruise missile program.

The amendment, therefore, deletes $1.4 billion for the B–1 program, and it did not add anything in the bill. It just deletes $1.4 billion for the B–1 program.

So, the bill as presented now by this committee amendment would have taken from it under the B–1 item, and I will briefly itemize them: the weapons system B–1 for five planes totaling $1.1 billion, some spare parts $120 million, advance procurement, $138 million, subtotal procurement $1.4 billion, and then a relatively small matter of procurement on this SRAM missile $35 million that goes along with the picture.

As an aside matter, he did recommend $449 million to the strategic air-launched Cruise missile program. That is not in the bill. That has been referred to the Armed Services Committee for possible authorization. Hearings are being prepared. Witnesses are getting ready. That is the McIntyre subcommittee, the research and development program, and even though it is a new start they are making definite plans, as reported here today in the Chamber by the Senator from New Hampshire, to get into these matters in depth and have something to recommend definitely on it when the August recess is over, at the very latest, with the idea that anything that is authorized and if there is an appropriation it would have to follow in a supplemental bill.

Back to the real question, shall we delete this money for the B–1 program of $1.4 billion? The committee voted 10 to 5 in favor of deleting and taking out this money.

It seems to me, as a supporter of the B–1 program all the way down the line, certainly for this year we should adopt that program by taking this money out of this bill to the extent that I have said and consider his alternative. After all, he was mandated under the congressional branch to make a decision on this point, and he made it, and that is his recommendation.

The calendar and the legislative year are virtually gone but with what is left we are going to make a real start, if it is agreeable to the majority, on this cruise program.

So to leave money in the bill for planes that are not going to be built I strongly recommend against, as does the committee.

We are not giving away or giving up or abandoning anything we do not have, though, in the B–1 program. We now have, refreshing Senators' recollections, three planes that are already in being, and they are really in the inventory now as part of the R. & D., and then one plane that is now under construction which presumably would be finished and all really goes along with the R. & D. So we will be stopping only production and keeping on, though, the R. &. D. in the B–1 program.

The President does not touch that. This committee amendment leaves it untouched, That is the R. & D. money.

How much time do I have remaining?

The PRESIDING OFFICER. The Senator has 3 minutes remaining.

Mr. STENNIS. I reserve it.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. DOLE. Mr. President, will the Senator yield?

Mr. YOUNG. I yield 2 minutes to the Senator from Kansas.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

Mr. DOLE. Mr. President, the Senate has the weighty responsibility of determining today whether or not our Government should proceed with production of the B–1 bomber defense system. A decision so vital to the future defense of our great Nation should not be made without careful study and much thoughtfulness. The House of Representatives has already approved funding for a full-scale B–1 program during the coming year, and the Senate Appropriations Committee has endorsed the $1.9 billion in funding, as well. Both approvals, however, were made prior to the President's recommendation of June 30 that the B–1 program be scrapped in favor of greater reliance upon the cruise missile as a predominant defense system for the future.

So, much will depend upon the action the Senate takes today, in support or in opposition to production of the B–1 system. It is not a decision that I or my colleagues take lightly, given its bearing on the future strategic defense of the free world.

A NECESSARY DETERRENT

I supported the development and preliminary procurement of this weapons systems in the past. As recently as May of 1976, during consideration of authorizations for procurement, I expressed my judgment that the B–1 is a necessary element of our strategic deterrent that will help insure this Nation's essential second-strike capability. That judgment was reached after long and careful study of relevant materials on both sides of the issue.

Before arriving at today's opportunity for a Senate decision on full-scale production, I once again reviewed the variety of opinions, and the broad range of information bearing on the issue. Despite the President's opinions to the contrary, I found my earlier conclusion on the importance of the B–1 bomber system to be reconfirmed and strengthened.

I am of the unequivocal opinion that the B–1 manned bomber system is an effective and vital addition to our national deterrent strategy and defensive capability for the next two decades, and possibly beyond.

In order to support the vote I will cast today against striking B–1 funds from the defense appropriations bill, I want to briefly review the major reasons why I feel the manned bomber weapons system—and the B–1 in particular—is so important to the defense of the United States.

MAINTAINING THE TRIAD DEFENSE

As most of us realize, our Nation's deterrent strategy against attack is based upon the "Triad" concept, consisting of land-based ballistic missiles, sea-launched ballistic missiles, and manned strategic bombers. Each of these components supports and complements the others in an attempt to complicate an enemy's defense planning and reduce his ability to launch a successful strike against our country. If we diminish or eliminate any one "leg" of this three-pronged defense system, we place a greater burden on the other two, and increase our vulnerability.

In a letter I received last year from then-Secretary of the Air Force, Thomas C. Reed, this concept was clearly spelled out:

> Both the real and perceived capability of our nuclear deterrent is maintained by the diversified—but mutually supporting—elements of the Triad. This force mix of systems, each with unique qualities, provides the flexibility to deter all levels of nuclear conflict, presents an enemy with an insurmountable attack problem, severely compounds his defensive problems and provides a valuable hedge against an enemy technological breakthrough or an unexpected weakness in any element of the Triad.

Our strategic policy is designed to deter nuclear war, to discourage conventional attacks upon Western Europe or elsewhere, and to defend against coercive diplomacy. It is also designed, in the ultimate sense, to conclude any future war on terms acceptable to the United States. The Triad system is an essential basis for that policy, and the manned bomber, I am convinced, is an essential component of the Triad that must be developed to its strongest potential.

IMPORTANCE OF THE MANNED BOMBER

Far from being an "outmoded" weapons system, the manned bomber remains a vital, reliable component of our overall defense network. Of the three components of the Triad. the manned bomber remains the most flexible and controllable system. In a nuclear environment, these qualities are particularly important.

In fact, the manned bomber is a stabilizing force in a missile environment that could be highly unstable. It is the only element of the Triad that can be launched against its target and recalled short of nuclear exchange. Once a missile is launched, there is no recall. The result will be destruction of an enemy target and nuclear war. The length of time it takes a bomber to reach its target, on the

other hand, offers time for negotiation and the opportunity to recall the mission and prevent war. The bomber thus provides time for assessment and decision on both sides during a crisis. It reduces the potential for rapid, irreversible escalation. Most important, the manned bomber involves human judgment throughout its mission, as does no other component of the Triad.

In the final analysis, a manned bomber is the most accurate, proven delivery system. In fact, it is the only U.S. weapon system that has actually been used under combat conditions, where it demonstrated its effectiveness and capabilities. In order to maintain a proven, controllable, and flexible defense system, it is vital that the manned bomber be retained as a principal component.

Mr. President, I listened very carefully to the distinguished Senator from Mississippi and certainly have great respect and also understand, of course, what a difficult decision it must have been for President Carter.

B–1 SUPERIOR TO OTHER WEAPONS

Given the significance of the manned bomber to our Nation's overall defense, the question remains as to why the B–1 bomber in particular should be the best aircraft at the present time. After reviewing the essential data on this subject, I remain convinced that the B–1 outshines the immediate alternatives.

The B–52 bomber has served this Nation well and, I understand, can continue to remain in service for a few more years. But it is rapidly reaching the limits of its effectiveness. The B–1 will be able to overcome threats which would degrade the B–52 capability in the 1980's and beyond. It will take off faster to escape a surprise attack. It will be hardened against nuclear blasts and electromagnetic pulse. Its smaller radar cross-section, high speed, and low flight profile will aid its penetration of air defenses. That combination of characteristics, I understand, is the key to survival in the 1980's.

There was some discussion of the cost of beefing up the B–52 somewhere in the neighborhood of $40 million per plane.

A B–52 with improved engines would compare favorably with the B–1's capabilities in range and payload. However, it would be substantially deficient in speed and minimum altitude capabilities compared to the B–1. A continuous B–52 modernization program would be expensive—about $40 million per plane—and would require an additional 10 years to complete. B–52's are also more difficult to harden against nuclear effects.

In short, the B–1 is a better aircraft, and better designed to meet the challenges of military confrontation in the coming decades. It can take off faster than a B–52 on shorter runways, has a greater range, and is fully compatible with existing tankers for aerial refueling. It is the natural "next step" beyond the B–52.

Beyond this, the B–1 bomber has many advantages over the cruise missile, which is being touted by the administration as the logical alternative to the B–1. In fact, it is my understanding that the cruise missile was designed to supplement the B–1 bomber as a defensive system, and this aspect was very clearly laid out in a letter last month from the Secretary of the Air Force, John C. Stetson, to the House Armed Services Committee. At that time, the Secretary noted:

> The cruise missile is not a competitor to the B–1. It complements the manned bomber. When the cruise missile is employed as a complement to the penetrating bomber, concentration of defenses solely to counter cruise missiles is prevented.

Cruise missiles, then, are not a direct alternative to the B–1 because they cannot do the total job of the bomber. The Cruise missile once launched will follow its preplanned course regardless of any changes in a confrontation situation. It cannot adjust to unplanned contingencies, and does not have the flexibility of striking alternate plan targets or withholding unnecessary attacks. Furthermore, I understand that cruise missiles do not have the capability of the manned bomber in range, accuracy, or the ability to evade enemy defenses. The Secretary of the Air Force advises that the Soviets are developing a new strategic surface-to-air-missile which is believed to have significant capability against the cruise missile. The cruise missile is said to be particularly vulnerable in that it cannot avoid or destroy SAM's whose locations are unknown or which are well defended. The B–1, on the other hand, will have the ability to detect and avoid SAM sites, and to utilize short-range attack missiles to neutralize such sites as required.

Finally, I understand that the transports for the cruise missiles are slower than the B–1's in flying out to a safe distance and are difficult to harden against nuclear blasts. They would be especially vulnerable targets before their cruise missiles could be launched.

For all of these reasons, it appears to me that the B-1 bomber is far superior to the immediate alternatives—the "modernization" of existing B–52's or the cruise missile by itself.

PLANNING FOR NATIONAL DEFENSE

Mr. President, it is a difficult thing to plan for a nation's future security when there is such a variety of professional opinions about the nature and size of our defense needs. A nation's strategic weapons force is something you plan for, hoping never to have to utilize it. And the only real test of your planning success rests with the ultimate ability to stabilize peace, or to win a final victory in wartime. It is not a pleasant responsibility.

But it is a task that must be undertaken within the limits of our best analytic and deductive skills. I have examined the multitude of arguments, both pro and con, bearing on the B–1 bomber system. It is an issue that goes beyond simple considerations of cost or special interest.

Indeed, it is an issue that bears directly on national survival.

My own reasoning, and that of many of my colleagues, leads to the conclusion that our defense interests are best served by maintaining and updating our manned bomber system. For this reason, the Senator from Kansas feels the B–1 proposal is sound and will vote to oppose any effort to strike funding for the system from the bill.

The PRESIDING OFFICER. Who yields time?

Mr. YOUNG. Mr. President, I yield myself 2 minutes.

I am the one who offered the motion in the Appropriations Committee to provide the money for the construction of the B–1 bomber. The vote was 2 to 1 against my amendment.

I believe, and I believe most Members of the Senate believe, that the B–1 is an excellent plane, a plane that we need, but it is a question of money.

The Soviet Government does not have the problem of considering how much a weapon costs. If they need a weapon, they go ahead and build it and make the people pay for it.

Have we gone down the welfare road so far that we can no longer provide the weapons we need to be a nation superior to Russia?

I do not believe we have. We have already spent $4.3 billion on the B–1. These were my reasons for voting to keep the B–1 bomber.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, we covered the facts here this morning rather well. They are really not in contest. I shall be glad to answer any questions.

I yield 2 minutes now, Mr. President, to the Senator from Iowa (Mr. CULVER).

Mr. CULVER. I thank the chairman.

Mr. President, 14 months ago the Senate voted to defer procurement of the enormously expensive B–1 bomber in order not to make a premature commitment of funds. This deferral was also intended to allow the newly elected President——

The PRESIDING OFFICER. Will the Senator use his microphone?

Mr. CULVER. This would also allow the newly elected President to make a thorough review of the need for the B–1 in the light of the completed test results, which were not available when we acted last year, also to review his own budgetary priorities, and the diplomatic and strategic context at the start of his administration.

President Carter has now used this opportunity which Congress mandated upon him and which Congress provided to make his own review and his decision; and his choice, after careful analysis of all the arguments, confirms the views of many defense analysts and many Members of Congress that the B–1 is not a cost-effective answer to our defense requirements.

In fact, America will be stronger since we will not be building the B–1. We will not be squeezing more urgently military needs and requirements in order to provide funding for the B–1 bombers. We will not be committing ourselves to a $50 billion to $100 billion program, but at best will only add marginally to our strategic deterrent posture.

As Secretary Brown has said, it makes little sense to spend over $100 million for each plane, when the most important weapon on it, the cruise missile—the

highly effective cruise missile—can be launched from current and cheaper platforms.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. CULVER. May I have a half-minute?

Mr. STENNIS. I yield the Senator from Iowa a half-minute.

Mr. CULVER. Mr. President, I understand an amendment will be offered to strike R. & D. funds. I would oppose that amendment, because I believe we ought first to review the research and development program, to continue that work and derive such benefits as we can from it, and at the same time not act precipitously in that regard.

Mr. President, I think the Senate has an opportunity to support the President in a wise and courageous decision to cancel the B–1 program. We can take this step today, in my judgment, with confidence that our true national security interests will be strengthened by our action.

I thank the Chair.

Mr. STENNIS. Mr. President, we keep what we have now, the B–1 that we have built and the one we have almost completed. This bill will keep alive about a $400 million R. & D. program for this year, but it will lay aside any further construction of the B–1 bomber.

Mr. GOLDWATER. Mr. President, will the Senator yield me about 3 or 4 minutes?

The PRESIDING OFFICER. The time has expired.

Mr. GOLDWATER. All of it?

The PRESIDING OFFICER. No, the opponents have 7 minutes remaining.

Mr. YOUNG. I yield 4 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I propose to vote against the committee proposal to let my President know that I disapprove of his decision.

I think the basic trouble with the B–1 is cost; I do not think anyone can argue that; $100 million is a lot to pay for an airplane, just as $2 billion plus is a lot to pay for an aircraft carrier. This was a campaign promise, so I suppose we have to laud him for keeping his campaign promises, though, having run for office occasionally myself, I have made a promise or two that I later regretted, but found ways to get around.

What bothers me is the complete reliance on the cruise missile, when we are about 5 or 10 years away from having a cruise missile that will operate. My worry now is that this is all we have left, without the B–1, and I am afraid that we might find them expendable. We may find it wasted on the floors of the SALT talks, in a desperate effort to make the Soviets happy.

I would like, in closing, to answer those who want to continue to rely on B–52's. We have no new engines for the B–52. We can develop them, at terrific expense—$5 or $6 million apiece. It is my opinion, after having studied this subject for some time, that a modified B–52 will represent, in the long run, a total investment of about what a new B–1 would cost, and it will not perform up to the B–1, which has to fly at 8.5 mach at 200 feet above the ground. As to the B–52, it can fly at just in excess of 300 knots at low level, and is very vulnerable to the extreme turbulence encountered even at that speed at low levels.

So we are vulnerable. I pray to God Almighty that we are right, because we have been in four wars in my lifetime caused by mistakes made by Presidents, wrapped up in weapons systems. I hope that does not prove true this time.

Mr. BARTLETT. Mr. President, will the Senator yield me 1 minute?

Mr. YOUNG. I yield the Senator 1 minute.

Mr. BARTLETT. Mr. President, I have spoken on the B–1 bomber on many occasions during the last several years.

I think the real test of what we are doing here is wrapped up in the question of whether or not the alternate, the B–52, the 747, or the DC–10, as a platform for launching cruise missiles, is as good as or better than the B–1 as a platform for launching cruise missiles.

I asked this question of a very well-informed person in the Air Force, in classified hearings, and I found out that it was not as good, that there is a degradation that takes place in going the way we are going and the way the President wants to go.

For that reason, I shall vote against the committee amendment.

Mr. STENNIS. Mr. President, my time is up. I thank the Chair.

The PRESIDING OFFICER. The Senator from North Dakota has 2 minutes remaining. Who yields time?

Mr. RANDOLPH. Mr. President, will the Senator yield to me?

Mr. YOUNG. I yield.

Mr. RANDOLPH. Mr. President, many times in the Senate during my almost 19 years in this body, I have voted, as the able chairman of the Armed Services Committees knows, to cut the overall costs of our military programs. I recall that on one occasion over 13 years ago I joined with the Senator from South Dakota (Mr. McGOVERN) an amendment to cut the costs of our Military Establishment by 10 percent across the board. There were only two of us who voted for that proposition.

However, I want to say this evening that I supported the B–1, and I continue to support it. It is with reluctance that I shall vote against the amendment brought to the floor, as I understand it, from the committee. I will have to vote against this amendment. This is an issue I have studied very, very carefully. I believe a mistake was made in not having the B–1 continued in production at least at a limited level, but that is past. We would have continued the production line of the B–1 without jeopardizing the arms limitation talks. The decision to halt the program diminishes the flexibility and options of our defense posture, saving money in the short run, but leading, in my opinion, to an escalation of the arms race and much higher costs in the end. I will, therefore, have to vote against the amendment which is offered.

ADDITIONAL STATEMENTS SUBMITTED

Mr. TOWER. Mr. President, the cancellation of the B–1 is a decision with which I cannot agree. The President has embraced with an ardor that I cannot match, almost an infatuation, with the cruise missile as a substitute for the bomber leg of the Triad.

A wiser decision would have been to keep the B–1 option open, and this would have certainly been a less risky alternative. The cruise missile is, indeed, a promising technology but it was never designed as a substitute for the penetrating bomber and does not bring with it the long history that the bomber does.

But the President has buried forever the concept of the penetrating bomber. If his decision is not reversed in a few short months it would be more than 5 years before we could expect a penetrating bomber with B–1 capabilities to roll off the production line.

President Carter's decision to cancel the B–1 is a dramatic decision. The drama was not only in the startling and unexpected way in which he announced his decision but also in the future effect it will have on our strategic force posture. The effect of this decision is most uncertain as the Pentagon has not detailed what our strategic posture will be without the B–1. In short, the deliberate and cautious review that is required is not apparent. We are selling a system already in hand before we know with a surety what we must do to replace it.

In 1985, the Soviets can be expected to have deployed a response to the cruise missile carried on the B–52. This response will likely be a combination of early warning aircraft working in concert with long-range interceptors. The Soviet air defenses can also be expected to be greatly improved so as to acquire and track low flying targets such as the cruise missile. The proponents of the cruise missile as a substitute for the B–1 state that then new and improved cruise missiles would be developed to offset these Soviet defenses.

The defense planners in the Carter administration are then saying to the American people: "Gamble on unknown technological improvements on an unproven technology."

More plainly put, the cruise missile this year will be just beginning full-scale development but we are asked to bet our future, not just on that cruise missile technology, but on variations and upgrading to it not even thoroughly considered.

Now I have the highest confidence in U.S. technology, but do not think it a prudent course to put such faith in its development that we, in effect, bet the third leg of the Triad on it.

Let me say one other word.

The U.S. strategic force posture is not only vital to our existence, but is a deterrent to Soviet adventurism throughout the world.

The penetrating bomber because it is manned is inherently more stable and can be used to demonstrate rational resolve and intent. The cruise missile in some respects may erode this capability. The perceptions of our national resolve during periods of crisis are as important as our retaliatory capability itself.

It is hoped that by this decision of President Carter's that we are not signaling to the Soviets our disinterest in

expressing the American will and securing international peace.

We must remain even more vigilant in the days ahead. Weakness in our national security is too great a risk.

END OF AN AGE—THE B–1 BOMBER DECISION

Mr. PROXMIRE. Mr. President, I have the distinct feeling that we are witnessing the end of an age—the age of the manned penetrating bomber. The transition to nonmanned weapons, sophisticated devices with decisionmaking capabilities and computer brains, is upon us. The battlefield of the future may be won or lost not by numbers of men but numbers of low cost "smart" weapons. The counterpart to this in the strategic realm is the cruise missile. And it is the cruise missile that finally put the B–1 to rest.

Just as the wooden sailing ship gave way to steam and armor, just as the armor of the battleship gave way to aerial bombing, just as nonmobile defensive positions were made obsolete by the tank, so has technology provided us with a bridge to another period of warfare—remote warfare—warfare at distance, by proxy, the standoff weapon era.

It is difficult to judge if this new age will provide a sound base for arms control or another jumping off point for renewed arms races. That remains to be seen.

This bridge on which we stand provides a clear picture of the past but a murky view of the future. We know why the B–1 has been put aside. It is a question of economics, technology, and strategy. We know that our country will be stronger without the B–1. We know that our adversaries have more to fear from the cruise missile than any fleet of bombers no matter how sophisticated.

I enthusiastically support the President's decision to stop the B–1 program. Likewise I have consistently supported the Navy cruise missile program as the logical alternative in terms of cost and effectiveness. I will discuss these issues and the problems of the B–1 in a minute.

Before that, however, I offer just one thought. The trend in warfare is toward less human involvement in the actual combat. Our weapons are growing in individual killing power be it tactical or strategic. This killing power is more and more remote from the individuals making the critical decisions. Fewer soldiers will be required in the field if each is equipped with effective antiaircraft and antitank weapons. Or if weapons can be delivered to the battlefield from great distances away. We are moving toward wars by technological proxy.

This has great benefits and great dangers. The benefits are increasing deterrence if we can blunt aggressive military actions; less risk to a smaller number of soldiers actually on the battlefield; less dependence on extremely expensive and vulnerable weapon systems such as the B–1 or aircraft carriers. There may be some savings in cost and greater protection in redundancy.

But what of the dangers? Could it be that we are encouraging a new form of warfare based on gaming? Where decisions are made so rationally, so coldly, so without fear of great loss of life, that such decisions are easier to make? The more remote the decision the more likely the conclusion to take the risk?

I do not know the balance between these benefits and risks. Nor am I convinced that this is an inevitable trend. But I mention the issue since we now approach the doorstep of this new battlefield and it may prove prudent to look inside before we boldly step forward.

Returning, Mr. President to the B–1 program, I will distill the major issues which provide the logic behind the decision to cancel this bomber.

They are four in number and I have discussed each in much greater detail last April and May in a series of debates with my distinguished colleague the Senator from Arizona (Mr. GOLDWATER).

First is the cost spiral. When I wrote Director for Defense Research and Engineering John Foster in 1969 asking for a cost estimate of the B–1 program he wrote back that it would be about $30 million per bomber and maybe less. As of now the per unit costs are $117 million with a total program cost of about $24 billion in then year dollars—the dollars the taxpayers have to pay—not the fictitious constant dollars the Air Force likes to talk about. If only we could pay our taxes in those good old constant dollars!

Second is the performance slippages of the B–1. Contrary to much of what has been said about the B–1, this is not the aircraft the Air Force promised the Congress it would be. Its subsonic range is down 10 percent. Its supersonic range is down 9 percent. Its maximum speed at sea level is down from 1.2 mach to 0.95 mach. It no longer is a supersonic bomber at its pentration altitude. Its supersonic penetration speed has been reduced 27 percent.

Third is the mission of the aircraft. A penetrating bomber is the wrong tactic for the strategic age. Why? Because the Soviet Union is the most heavily defended airspace in the world with 6,500 surveillance radars, 2,540 interceptors and 10,000 surface-to-air launchers. This is going against the strength of the Soviet defenses—not a very wise strategy on our part. Furthermore the look-down, shoot-down missile and radar capability which will surely doom the mission of the B–1 is not far off in the future. By the time the B–1 would be deployed in the 1980's, the Soviets would be able to make its mission extremely vulnerable. Technology, after all, will not stand still for the B–1.

Fourth, there is the range of alternatives to the B–1 which are more attractive in terms of cost and effectiveness. In the near term, we can upgrade the effectiveness of the workhorse B–52 G's and H's by equipping them with cruise missiles, giving them new engines and defensive electronics. Over the longer run, the wide bodied jet cruise missile carrier promises to provide an enormous payload and multiplication of warheads at a greatly reduced cost.

Mr. President, the arguments against the B–1 are far more lengthy and complex than I have presented in this short time. Therefore, I ask unanimous consent that my series of six speeches be printed in the RECORD. They contain a more complete analysis of why the B–1 should not be funded.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

B–1 BOMBER, PART 1: COSTS RISE AND PERFORMANCE SLIPS

Mr. President, with $24 billion at stake, it is essential that the American public have a balanced view of the B–1 bomber program. Therefore, I will give a series of six speeches in the Senate on the B–1 and invite the Air Force to comment on each. I sent a copy of this speech to them 2 or 3 days ago. I have received a reply, and I will place their response in the RECORD following my speech.

Today begins the first on the subject of B–1 costs and performance slippage.

The goal is to have a public debate without recourse to exaggeration or distortion.

I expect the Air Force to disagree with my analysis. They favor the B–1. I oppose it.

The public is entitled to make up its own mind. I hope that in this exchange the American public will be presented with enough information to form independent conclusions and let the Congress know how to vote on this controversial weapons system.

Mr. Fresident, the materials for my speeches have been collected, analyzed, and prepared by a group of aerospace scientists and engineers who have working familiarity with the B–1 bomber program. I appreciate their cooperation in this effort.

I. B–1 COSTS AND PERFORMANCE SLIPPAGE

B–1 costs have shot up from an initial estimate of $35–40 million[1] per plane to a current estimate of $84.3 million.[2] And senior defense officials have told Congress that the bomber is expected to cost more than $100 million each.[3] This would put total B–1 program costs at more than $24 billion, nearly three times the original program estimates. The Air Force claims that simple inflation is responsible for almost all of this 300 percent cost growth. But simple inflation is not the only factor responsible for the B–1's sky-rocketing costs. Rather, the technological difficulty of producing such an unnecessarily sophisticated aircraft has been an important factor in pushing costs up. This cost of $84.3 million can be expected to increase before long, or the capabilities of the B–1 will be further degraded, as the problems that crop up during the test program force modifications in the plans for the production aircraft.

The high cost of the B–1 is disturbing enough. Yet these escalating costs have been accompanied by a stream of performance degradations in an attempt to hold down costs. These degradations make the B–1 much inferior to the bomber the Air Force discussed 6 years ago. If the Air Force had to build the B–1 to meet the specifications that seemed so necessary 6 years ago, the B–1 cost would jump far beyond $100 million per plane. Thus, the Air Force has sought to hide cost growth by tolerating a continuing decline in the performance of the B–1.

A partial list of these performance slippages is:

Reduced range and/or payload:
Increased weight;
Reduced maximum speed;
Longer required takeoff distance;
Lower refueled altitude;
Increased landing distance;
Increased dependency upon tankers;
Reduced number of R. & D. aircraft:
Elimination of infrared suppression devices;
Elimination of self-contained crew capsule;
Elimination of low light level TV;

Footnotes at end of article.

Reduced avionics; and

Reduced use of titanium.

These reductions in performance and structure detract from the B–1's ability to perform its basic mission. They also diminish whatever margin of advantage the B–1 has over other bomber alternatives. It is no wonder that the GAO found the B–1 to have incurred significant reduction in planned performance and was behind schedule 12 months or more.[4]

It is interesting to compare the B–1 as envisioned by the Air Force in 1969, when the sizeable funding requests began with the B–1 that is now likely to emerge:

"So all in all, we think that the airplane is very close to the airplane that we had in mind in 1970 when we began the program."*

B–1 PERFORMANCE SLIPPAGE

A. Range

How serious are these performance reductions? One of the most serious is the range reduction. According to the panel of experts assembled at the request of the Secretary of the Air Force, the subsonic range of the B–1 will most probably be reduced by 11 to 18 percent from its design specification and may even be reduced by 20 to 29 percent.[5]

A 29-percent range reduction amounts to reducing the B–1's range from 6,100 [6] to 4,330 nautical miles. This would almost make the B–1 a medium-range bomber. It should be noted that the range of the much-maligned FB–111 is 4,100 nautical miles.

The B–1's range reduction detracts from its target coverage ability, limits its evasive maneuvering capability, slashes its loiter time at the fail-safe point, makes the B–1 even more dependent upon potentially vulnerable tanker support, and virtually eliminates the ability of the B–1 to ever use its fuel-hungry supersonic capability. As this shows, range is a critically important parameter for a strategic bomber. Some of this range reduction can be restored, but only by sacrificing generous portions of its payload weight or by increasing its dependence upon substantial tanker support. And higher payload was supposed to have been one of the advantages of the B–1 over the B–52 that justified expending billions of dollars for the new bomber.

In contrast to the B–1's shrinking range, the B–52 as it currently exists is the world recordholder for unrefueled range, at 12,500 statute miles.[7] Of course, in a strategic mission its range would be less than this, but it is probably greater than that of the B–1. It is noteworthy that the Air Force does not claim that the B–1 range matches that of the B–52.

And this B–52 critical range superiority does not take into account the significant increase in B–52 range which the Air Force admits can be gained by fitting it with new jet engines.[8] The same kind of engines that contribute to the performance of the 747 and other wide-body transports can increase the range of the B–52 by 20 to 30 percent, judging from the improvement in thrust specific fuel consumption of the new engines. This would give the B–52 a maximum unrefueled range of 16,000 statute miles and a similar increase in mission range. This would not just reduce the B–52's need for tanker support, it would virtually eliminate it.

Thus a reengined B–52 would not require a new tanker at all, saving additional billions of dollars. The Air Force could thus use many of SAC's KC–135's for other important military uses. One such use could be to use the KC–135's or other wide-bodied jets as standoff bombers themselves. They are capable of carrying long-range cruise missiles and thus would provide a low-cost improvement to our strategic forces.

One might well ask how it is that, with a $20 billion program price tag, the B–1 will not have a significantly greater range than the B–52. There are several answers for this, but the primary reason is the B–1's unnecessary supersonic capability. By making the B–1 supersonic the Air Force was forced to compromise the B–1's all-important subsonic performance. Wing, fuselage, and especially engine design all suffered, since the design requirements of supersonic and subsonic flight differ substantially. The result was degraded range.

B. Takeoff weight

The B–1 takeoff weight has increased from a planned 360,000 pounds to a current 395,000 pounds.[9] This heavier weight reaches the design limit of the structure and landing gear of the plane for takeoff and taxi operations.[10] Thus, because the B–1 has reached its structural weight limitation, there is no potential for adding more avionics or weapons without further reductions in the presently planned range and payload capability or without increased tanker dependence.

In fact, the weight problem for the B–1 is already so critical that when it is fully loaded with 24 SRAM's—this would exceed the maximum takeoff gross weight if it is fully fueled.[10a] And the current M–1 avionics package, which is pushing up against this weight limit, has been described as austere.

C. Speed

The Air Force notified Congress in 1975 that the top speed of the B–1 was being dropped from 2.2 times the speed of sound—mach 2.2—to mach 1.6. This means that the Air Force is giving up exactly half of the B–1's supersonic capability. Unfortunately this change comes much too late in the program for the overall design requirements to be relaxed so as to significantly reduce program costs.

D. Increased takeoff distance

The 15-percent increase in takeoff distance of the B–1 reported by the Air Force [11] will reduce its dispersability and hence its prelaunch survivability. The B–1's takeoff distance of 7,500 feet is not appreciably less than the B–52's 9,580 feet.[12] Thus another supposed advantage of the B–1 over the B–52 appears to be melting away.

E. Increased tanker dependence

The decreasing range of the B–1 increases its need for refueling and thus its dependence on tanker support. Therefore the B–1's survivability will depend even more upon the survivability of the tanker fleet.

F. Avionics reduction

Mr. President, another B–1 capability that was slashed for cost reasons is much of its electronic countermeasures equipment—ECM included in the term "avionics." Avionics equipment is used to jam the enemy's radar, confuse their efforts to track and destroy the B–1, and improve its flight characteristics, especially "on the deck"; that is, flying close to the ground to avoid enemy radar.

On the importance of ECM to a penetrating bomber, the Air Force Joint Strategic Bomber Study concluded:

"The ECM suit for both the B–52 and the B–1 were shown to be effective, but the extreme sensitivity of the performance of the penetrating bomber to the quality of its ECM was manifest. This sensitivity is so crucial that continuous re-evaluation of ECM interactions are required over the long term." [13]

Back in 1970 the Air Force was still in the process of deciding how much avionics they could include in the proposed B–1 design without driving the cost of the B–1 up to even more embarrassing heights.

The ultimate decision was to use a potpourri of avionics equipment from existing aircraft rather than to develop new avionics based on the latest technological advancements. The bomber would be all new but its critically important avionics systems would be borrowed.

Relative to the B–1's avionics systems, it should be noted, that when the programme was first conceived, an ambitious parallel avionics development was envisaged to push the state of the art to match that of the high performance aircraft. This was abandoned because of soaring costs and the B–1 instead been/sic/ designed with "off the shelf" avionics systems, many of them from the FB–111, F–14 and A–7.[14]

Consequently, the B–1 will be built with only 60 percent of its potential avionics capacity and this will consist largely of off-the-shelf items.[15]

The Air Force has attempted to turn a deficiency into an advantage by arguing that this gives the B–1 reserve capacity for later weight growth in avionics. Certainly, growth potential is important, but in terms of avionics, the $100 million bomber as procured will offer little advantage over the current B–52. In view of the critical dependence of a bomber's penetration ability on its avionics, this raises some question as to how much better a penetrator the B–1 will be compared to the B–52.

G. Additional costs

The $84.3 million price tag on each B–1 is only part of the cost picture. The Air Force has defined the B–1 program cost to the Congress in such a way as to exclude several major cost elements which will be incurred if the B–1 is produced and flown. These additional life-cycle costs are addressed below, and total to the staggering sum of over $40 billion.

Full life-cycle costs, and not just simple procurement costs, need to be considered by the Congress. As the GAO reported to the Congress in 1974:

"The costs of additional pilots, navigators, mechanics, training, facilities, aircraft, operation, and maintenance are needed in order to have meaningful comparative costs of the (bomber) alternatives. Consideration also should be given to "full-force" life-cycle costing; i.e., including the cost of the tankers needed under each alternative and the cost of the missile payload." [16]

1. Weapons Payload Costs

The B–1 price does not include the cost of the weapons it will carry. Each B–1 will carry 24 SRAM's or ALCM's. At $500,000 each,[17] the B–1 weapons cost will be an additional $12 million per plane and $3 billion for a fleet of 243. For SRAM this includes the costs required to reopen the SRAM production line.

2. Operations and Maintenance

The B–1 will not be costless to operate and maintain. Assuming that B–1 direct O. & M. costs are 3 percent annually of program unit costs, * * the 10-year direct operating costs for the B–1 will be $26 million per plane and $6.3 billion for the program as a whole. This assumes that the B–52 is kept in the inventory even after the B–1 is procured, which Air Force officials have stated in the past will occur.[18]

There are indirect costs associated with the B–1, such as aircrew, and personnel training, depot operation, and personnel medical care. Estimating these at half the direct operating costs or 1.5 percent annually, the 10-year indirect operating costs for the B–1 will be $13 million per plane and $3.1 billion for the program as a whole. The above figures for direct and indirect operating costs are lower than those cited elsewhere.[19]

3. Tanker Costs

Another important aspect of the B–1 cost picture is the question of tanker costs. Since the B–52G/H will be retained in the SAC inventory through the 1990's, the introduction of the B–1 will require additional tanker support.

The Air Force often argues that the B–1 does not need a new tanker. What they really mean is that the B–1 is compatible with the

existing KC–135 tankers. However, the B–1 does need additional tanker support, and desperately so. In spite of the deletion of 75 B–52D/F's, the addition of 241 B–1's to SAC will result in our strategic bomber force requiring more tankers than is now the case. To get that additional tanker support we must procure new tankers and KC–135's are no longer in production. Hence, it is accurate to say that we will need a new tanker if the B–1 is purchased.

New tankers will be required at a bomber/tanker ratio of between 1:1 and 2:1. The type of new tanker usually discussed is a modified version of either the 747 or DC–10. At a unit cost of $45 million for the 747,[20] tanker procurement for the B–1 would run $10.8 billion for 240 tankers or $5.4 billion for 120 tankers. Assuming the same 3 percent and 1.5 percent of procurement price direct and indirect annual operation and maintenance costs for the tankers, adds another $2.4 to $4.9 billions for 10-year tanker O. & M. Taking the average of these figures gives tanker 10-year life-cycle costs of $11.7 billion.

If the B–1 is not procured, new tankers for SAC will not be required for another decade, thus avoiding a sizable cost. And if the B–52's are modified with new engines, as the Air Force proposes for the KC–135, many of SAC's existing tankers could be applied to tactical requirements, since the B–52 would then require little or no tanker support.

4. Future Cost Increases Due to Avionics

The B–1 as proposed will carry only 60 percent of its potential avionics payload, and this will consist of a collection of off-the-shelf items, rather than the best systems that current technology can provide the B–1.[21] It is inevitable that after the production decision is made the Air Force will need and request new avionics for the B–1, if it is to be effective until the end of its useful life, 2010.

If the full avionics payload is filled this will amount to an additional 4,000 pounds. A conservative estimate of avionics cost is $1,000 per pound.[22] At this rate the Air Force will need $4 million more per airplane or a total of about $1 billion in total program cost.

Mr. President, in my closing minutes I want to summarize the Air Force rebuttal to my speech.

First, the Air Force argues that the B–1 program is well-managed and that cost growth is within reasonable limits—11 percent since 1970 not counting inflation. Thus in constant dollars, the program has little cost increase.

Second, the Air Force disagrees with a number of the performance degradations cited in my speech. These are detailed in the accompanying letter from Secretary of the Air Force Thomas Reed, which I will include in the RECORD.

Mr. President, these arguments are very interesting but they do not dispel my primary concerns. Unfortunately, the Congress does not appropriate in constant dollars. And the taxpayers of this country do not pay taxes in constant dollars. If only we could. We have to pay in real year dollars. That means we have to pay for inflation—like it or not. And the B–1 has grown so inordinately expensive that it is draining resources away from other Air Force projects. The Air Force does not deny that the B–1 will cost over $21 billion or $84 million for each aircraft.

Likewise, the Air Force does not disagree that a number of performance indicators have been degraded since the original proposal was presented to Congress.

The Air Force Secretary then states that these particular performance criteria are not as important as the mission of the B–1 and how it is carried out. That seems to be a reasonable point and one that I will address in detail in the next B–1 bomber speech.

Mr. President, the Air Force reply raises a number of other questions. For example, they say that only some B–1 bomber characteristics have been degraded. My question is which ones had how much?

They argue that the official performance requirements are different than those cited in various aerospace magazines. In that case, let us have a chart with the original performance statistics with the current statistics side by side so we can see the differences.

They say that modifying the B–52's with new engines will somewhat improve its range. In that case, how much improvement and what would it cost? What studies have been done and are they publicly available?

They say that the KC–135 could not be used as a standoff bomber platform. If that is the case, then does the same argument hold for modified 747's or widebodied jets?

They argue that my life cycle costs are too high. In that case, I hope the Air Force will supply the exact life cycle costs of the B–1 including all of the specific items I mentioned.

Mr. President, I have a number of other questions about this statement including issues the Air Force has extracted without my qualifications. But I want to thank the Air Force Secretary for making it available to me. Perhaps in this exchange of questions and answers, point and counterpoint, the full B–1 bomber story will be made public.

Mr. President, I ask unanimous consent that certain footnotes be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A CLOSER LOOK AT THE B–1'S PERFORMANCE ADVANTAGES

Mr. President, of all the many defenses raised in behalf of the B–1 program, perhaps the most often heard is the significant improvement the B–1 will provide to U.S. strategic bombing capability. And clearly the B–1 does embody some noteworthy advances that make it desirable in certain respects. Certainly for more than $2 billion the American people should be getting something for their money. After all, this is $100 for every man, woman, and child in the country.

Some of the advantages cited for the B–1 over the B–52 are: Supersonic capability; greater hardening against thermal overpressure from nuclear effects; improved takeoff capabilities; higher penetration speeds; lower radar cross-section; and larger payload.

This list of major advantages has been steadily shrinking since the inception of the B–1 program. Forever lost to this list are greater range, lower infrared signature, and many others. And as will now be described even the still-existing advantages are open to question.

A. SUPERSONIC CAPABILITY

Of all the advantages cited for the B–1, supersonic capability is undoubtedly one of the most over-rated and least understood. The B–1's supersonic capability makes the plane suffer very severe penalties in terms of weight, cost, complexity, and subsonic performance. Yet in terms of any realistic strategic mission, the B–1's supersonic capability will simply not be used; thus, it should probably fall under a category headed "disadvantages."

The chief justification for making any strategic bomber supersonic is to enhance its penetration capability. Since bombers can never hope to outrun missiles, it makes little difference whether a bomber arrives at its target in 5 hours rather than 10. Spending less time over hostile airspace is desirable, however, if doing so does not jeopardize the bomber's mission. The issue is whether the reduction in time spent over hostile airspace is worth the increase in bomber vulnerability stemming from greater radar and infrared visibility, reduced range, and other factors that accompany supersonic flight, flight only at medium and high altitudes.

The B–1 will be capable of supersonic since its supersonic on-the-deck requirement was dropped many years ago. Because supersonic flight consumes so much fuel, the B–1 would only fly supersonically over or near Soviet airspace. Yet high altitude penetration for bombers was ruled out years ago, even for the supersonic FB–111 and the old B–58, because such a flight mode makes a bomber easily visible to radar. As a result, all the emphasis in recent years has been on low level penetration for bombers. In addition to radar vulnerability, a B–1 flying supersonically would be much more vulnerable to infrared-seeking weapons and tracking devices. This arises because at supersonic speeds, especially at Mach 1.6, the B–1 en-

gines will have their afterburners turned on. Under these conditions, the B–1 IR signature will light up like a Christmas tree, providing a much easier target for surface-to-air heat-seeking missiles.

RANGE REDUCTIONS

As if this were not bad enough, the range of the B–1, which is already seriously below its design goal will be sharply reduced by supersonic operation. The "fuel mileage"—specific fuel consumption—of jet engines typically deteriorates by a factor of anywhere from two to four during afterburner operation. For example, the FB–111's fuel mileage deteriorates by a factor of 4.3 at maximum supersonic capability over its normal subsonic operation.

Thus supersonic operation would slash the B–1's range still more; this would decrease the B–1's target coverage and evasive maneuvers capability while increasing its tanker dependence. Indeed, the combat mission requirements for the B–1 apparently do not include a supersonic, high altitude requirement: Should the need arise, the B–1 could also penetrate at supersonic speeds at high altitude. An extreme example of the impact of supersonic capability on B–1 range is seen by the fact that a B–1 operating supersonically for its whole mission would not be capable of reaching the Soviet Union and returning.

These performance costs are only the direct costs of the B–1's supersonic capability. Less direct but no less important are the penalties embedded in the B–1's design by its supersonic capability. An entirely subsonic B–1 could use more efficient jet engines—similar to those on the 747 and DC–10—that would extend the B–1's range and lower its infrared signature. Thus the B–1 is denied longer range, lower IR signature, greater target flexibility, heavier payload, greater evasive maneuver capability, shorter take-off distance, and thus overall higher survivability, all because of its supersonic capability. Additional subsonic compromises had to be made in the fuselage and wing design in order to give the B–1 a supersonic capability.

SWING-WING ISSUE

The Air Force claims that the cost of the supersonic capability is relatively low because even a subsonic-only B–1 would have to have the swing wing for acceptable flying qualities during on-the-deck penetration. While the swing wing does improve the B–1's penetration flying qualities at low altitude, there are other ways to do this. It is not clear that bomber designers would want to give a subsonic penetrator a swing wing, since that choice incurs a substantial weight, volume, and complexity penalty in the design. In fact, Boeing and General Dynamics, who competed with Rockwell for the B–1 contract submitted alternative fixed-wing designs to the Air Force along with their swing-wing proposals. And as late as 1 year ago in an effort to reduce costs, the Air Force was reexamining the need for a variable sweep wing.

In a letter on the feasibility of conducting a cost-effectiveness study on the B–1's supersonic capability the GAO said:

One of the important factors that must be considered when trying to determine whether the supersonic capability should be eliminated is that the design of the aircraft for the high subsonic speed mission gives it an inherent supersonic capability. (Letter of Dec. 24, 1975, from the Comptroller General of the U.S., B–163058, page 2.)

The GAO explains:

"The low-altitude, high subsonic speed and the fast-base escape requirements dictate a design with the swing-wing and high thrust engines. According to the Air Force, the additional flexibility of supersonic speed is worth the small additional cost. (Ibid)."

GAO appears correct in one regard—a swing-wing design possibly would be desirable for a subsonic bomber. There the similarity ends. For instance, a subsonic penetrating bomber would have engines far different from those on the B–1. High bypass ratio turbofans, such as those powering the 747 and DC–10, would give the subsonic bomber extremely high thrust at takeoff, without the need for a fuel guzzling afterburner such as that required by the B–1 engines. These ultra-high efficient turbofans simply cannot be used on supersonic aircraft. It is a certainty that a subsonic-only version of the B–1 would have radically different, and much more efficient, designs for the fuselage, the engines, and the wing itself.

The recent Air Force announcement that the B–1 top speed will be slashed from Mach 2.2 to Mach 1.6 offers insight into the real value of the much-vaunted supersonic capability. The Air Force adopted this modification in order to reduce the spiraling B–1 costs, but in fact, the program cost savings realized will only be $240 million.

In other words, the Air Force traded off half of the supersonic capability of the B–1 for a mere 1-percent savings in total program costs. If supersonic capability is such a critical necessity for our next strategic bomber, why did the Air Force sell half of it for such a pittance? The Air Force maintains that all features eliminated from the B–1 were done on the basis of cost-effectiveness. Senate Armed Services Committee hearings fiscal year 1977, part 10, page 5553. So if the cost savings of eliminating supersonic capability are that small, the effectiveness of supersonic capability must be miniscule.

It should also be noted that at Mach 1.6 the B–1 could not begin to outrun anything but the eldest current Soviet interceptors.

I. DOLLAR COST OF SUPERSONIC CAPABILITY

The dollar cost of supersonic capability should also not pass unnoticed. The Air Force claims that the cost is only 15 percent of the procurement cost. GAO letter report, December 24, 1975. This, of course, ignores the substantial performance cost just discussed. Even if one accepts the Air Force estimate, which others dispute as being too low, the cost of supersonic capability would amount to a cost of $3 billion. That amount would be more than enough to pay the $2.1 billion cost of reengining the B–52 fleet. Yet this $3 billion will be spent for a supersonic capability that is strategically useless and which degrades the vital subsonic performance of the plane.

And there are doubts over that 15 percent figure. As stated earlier, the present costly designs of the fuselage and airfoil are all made necessary by the supersonic requirement, and possibly that of the swing wing as well. Other Air Force officials a few years ago put the monetary cost of the supersonic capability at 20 to 30 percent, and other officials higher still. In 1968, the Defense Department estimated the cost to be as much as 30 percent higher than a subsonic bomber.

II. AIR FORCE JUSTIFICATION FOR SUPERSONIC CAPABILITY

In the face of all these cost mission and performance drawbacks to the B–1's supersonic capability, why does the Air Force want this expensive option? The following responses are usually heard:

First. It can be used to burst through a Soviet AWACS threat;

Second. It can be used once the Soviet air defense threat has been seriously degraded;

Third. It can be used in some parts of the world of potential U.S. interest where defenses against high altitude penetrations do not exist;

Fourth. Supersonic capability forces the Soviets to divert resources in order to defend against such a penetration mode; and

Fifth. Supersonic capability gives the B–1 added flexibility which a subsonic-only bomber would not have.

Each argument merits individual attention.

First. Subsonic capability can be used to enable the B–1 to burst through a Soviet AWACS—SUAWACS—threat. This argument is unconvincing, for the B–1 or any supersonic bomber. In order to fly supersonically, the B–1 will have to leave the safer environment of low-level penetration and climb to high altitude. In exchange for the higher penetration speed, the B–1 would be vastly more visible to the Soviet AWACS radar and ground-based radars. And the greatly increased infrared signature of the B–1 at these speeds would make it much more vulnerable to surface-to-air and air-to-air missiles. A cheaper and much more effective alternative for the SUAWACS threat would be an anti-SUAWACS missile. The Air Force started to work on the Hound Dog 2 as a SUAWACS killer, but for some reason halted its development. It should be pointed out that the Hound Dog 2 could be carried by the B–52 but not by the B–1.

The bomber defense missile, which is being studied by the Air Force and which will be compatible with both the B–52 and B–1, is a much more appropriate and cheaper method for countering a SUAWACS threat than is supersonic capability.

Second. Supersonic capability can be used once the Soviet air defense threat has been seriously degraded.

This argument is puzzling. If Soviet air defenses are degraded so much that supersonic high altitude penetration is feasible, why would not subsonic high altitude penetration be feasible as well? It is conceivable that a narrow set of circumstances could exist where supersonic but not subsonic high altitude penetration would be feasible. Yet it seems foolish to spend so much for such an unlikely event, especially considering the tremendous range penalty of supersonic flight.

Third. Supersonic capability can be used in some parts of the world of potential U.S. interest where defense against high altitude penetrators do not exist.

The same reasoning used in the second argument applies here as well. If defenses against high altitude penetrators do not exist, then there would be no reason to fly supersonically. Subsonic high altitude flight would be just as effective and would not reduce the plane's range and target flexibility as supersonic flight does.

Fourth. Supersonic capability forces the Soviets to divert resources in order to defend against such a penetration mode.

The basis for this argument is that defense against supersonic high altitude penetration requires a substantially different sort of hardware than defense against subsonic penetration. Whatever the merits of this resource diversion argument are, it ignores the fact that the Soviets must defend against a supersonic bomber threat anyway, no matter what Congress decides on the B–1. The Soviets must defend against our supersonic FB–111 and the French Mirage IV–A. Forward-based and carrier-deployed supersonic U.S. aircraft also have a nuclear strike potential against the U.S.S.R. Not knowing ahead of time to which targets these aircraft would be directed, the Soviets already have to defend many of their targets against the possibility of a supersonic aircraft attack. Admittedly the FB–111 cannot now reach all targets in the Soviet Union when it is based in the United States. But in their air defense planning the Soviets would have to hedge against the possibilities of: Substantial refueling; one-way missions; and forward deployment of the FB–111's in a crisis.

Fifth. Supersonic capability gives the B–1

added flexibility which a subsonic-only bomber would not have.

On the face of it this seems to be true: Since the B–1 can fly both supersonically and subsonically, it will be capable of performing a supersonic mission should the need ever arise. But this is a narrow and incorrect interpretation of flexibility. In return for a capabality that has been strategically obsolete for 15 years, the B–1 must sacrifice flexibility in range, payload, tanker dependency, evasive maneuver capability, and infrared signature, among others. It was precisely over this issue that there arose strong controversy within the Air Force, the Office of the Secretary of Defense, the National Security Council, and the Office of Management and Budget in 1969 and 1970. The White House and OMB made such strong arguments against the B–1's supersonic capability that it took the threat of resignation by the then-Deputy Secretary of Defense, David Packard, before the White House gave in and approved the supersonic capability.

And as shown earlier, this obsolete and unnecessary supersonic capability is costing the United States a minimum of $3 billion. This alone should give one pause about the B–1 program.

B. HARDENING AGAINST NUCLEAR EFFECTS

In any new strategic bomber, improving its survivability against the effects of nuclear blast is desirable. In times past it might have been conceded that this is a critically important advantage for the B–1, primarily for prelaunch survivability. However, recent statements by high Defense Department officials have almost completely discounted the value of this advantage in prelaunch survivability. In his 1975 testimony before the Senate Armed Services Committee, Dr. Malcolm Currie, Director of Defense Research and Engineering, stated that the joint strategic bomber study "has brought out that the hardness of the KC–135's can assure an adequate level of prelaunch survivability."

Since the B–52 is of the same generation as the KC–135 and has similar takeoff characteristics, this would seem to alleviate concern that the B–52 as it now exists would not have an adequate level of prelaunch survivability. Furthermore, the fact that the B–52 will be on active SAC duty through the 1990's offers assurance that the B–52 has an acceptable level of hardness against nuclear attack. And as will be discussed later, a B–52 with new engines will have improved takeoff performance. Thus, though the B–1 is superior to the B–52 in hardening against nuclear effects, this advantage is not of overriding importance.

C. IMPROVED TAKEOFF CAPABILITIES

This is another advantage that up until a few months ago seemed to be of measurable importance. The B–1 was to have a shorter takeoff capability and quicker reaction time than the B–52, enhancing its prelaunch survivability. But once again, Dr. Currie's statement on "the adequate level of prelaunch survivability" of the KC–135 calls this belief into question. The KC–135 is basically no more dispersable than the B–52, and cannot fly away any faster, so one must conclude that the B–52 even as it now exists is not unacceptably inferior to the B–1 in this respect. And as will be described later, a B–52 retrofitted with new engines will have nearly the same takeoff distance as the now-degraded takeoff distance of the B–1. Thus, the B–1 may have little better takeoff capabilities than a cheaply modified B–52.

D. HIGHER PENETRATION SPEED

Higher penetration speed is chiefly important because it reduces the time a bomber must spend over hostile territory. This then reduces the bomber's vulnerability to air defenses. Yet the Joint Strategic Bomber Study found that the performances of the B–1 and B–52 in penetration were extremely sensitive to the performance of their electronic countermeasure, ECM. This would indicate that, all things equal, higher penetrating speed is desirable, but that overall penetration success is much more dependent upon the ECM package contained in the bomber than on its penetration speed. This is reminiscent of what the Department of Defense was saying some years ago:

The most important factor in manned strategic weapons systems appears to be the weaponry and penetration aids carried; the characteristics of the carrier are a secondary consideration, except as they relate to penetration aid effectiveness. (Hearings on Military Posture, House Armed Services Committee, February–April 1967, pages 499–500.)

Furthermore, as will be discussed later, the penetration speed of the B–52 can be improved with new engines. One anonymous source within the industry has stated that a reengined B–52 with additional structural modifications could have the same penetration speed—mach 0.85—as the B–1.

E. LOWER RADAR CROSS SECTION

This is certainly a big advantage that the B–1 has over the B–52, though once again the Joint Strategic Bomber Study seems to indicate that ECM is the most important variable in assessing bomber penetrability. Furthermore, from the point of view of radar detectability, the B–1 is at a great disadvantage compared to the cruise missile. The cruise missile is practically invisible to radar, having the radar cross-section of a seagull.

F. LARGER PAYLOAD

Mr. President the so-called larger payload advantage is very puzzling, to say the least. Some B–1 enthusiasts go so far as to claim that the B–1 will carry three times the payload of the B–52. "Why the B–1?" North American Rockwell brochure. While it is true that the B–1 can carry three times the number of SRAM's internally than the B–52—24 versus 8—this is almost meaningless, as the B–52 carries an extra 12 SRAM's under its wings, and four additional conventional weapons—Mark–28 gravity nuclear bombs—in its forward bomb bay, making a total of 24 weapons per B–52, the same number as the B–1 carries. "Modernizing the Strategic Bomber Force," Quanbeck and Wood, the Brookings Institution, 1976, page 25. Thus B–1 payload advantage over the B–52 thus simply melts away.

Industry sources state that the B–1 will probably never carry any weapons externally because of the resulting range degradation which the B–1 can ill-afford. Maj. Gen. H. M. Darmstandler, special assistant for the B–1 to the Air Force Chief of Staff, told a group of congressional staffers that carrying the ALCM externally would result in "a 15 percent degradation of range." U.S. Senate staff briefing, May 15, 1975.

Furthermore, the total weapons capacity of the B–52 could be increased beyond that of the B–1 by relatively simple modifications. By extending the bomb bay aftward, the B–52 could be modified to carry two or even three SRAM rotary launchers internally. This should not require stretching the aircraft fuselage. Including the twelve missiles it can carry externally, the B–52 could thus carry a mix of 28 or possibly 36 SRAM's and cruise missiles. Again note that the B–1 can carry only 24.

DISAPPOINTMENT WITH AIR FORCE HANDLING OF B–1 DATA

Mr. President, I want to express my disappointment with the way the Air Force has handled this exchange of information. At the beginning of this series of speeches, I thought that the purpose would be to disseminate as much information about the B–1 as possible. In order to do this, I told the Air Force that I would put their replies to my speeches in the RECORD. I have done so and I will continue to do so.

In addition to this, as an experiment, I provided a full copy of my speech several days in advance to the Air Force. In turn, they promised to provide me with whatever response they might choose to make. This seemed to be a fair way of handling a complicated issue—even more than fair in that the Air Force would in effect have the last word on the day of my speech.

Well, several things have gone wrong. When the Air Force reply arrived in my office the morning of my first speech, my staff asked if this was the full response or was there more that had been provided to the press or other people. My staff was assured by two Air Force officials that indeed this was the full response. Only later did the Air Force admit that in addition to this reply to my office they had made available a different and much more extensive rebuttal to the Senator from Arizona (Mr. GOLDWATER).

I have no objection to the Senator from Arizona being the spokesman for the Air Force on the B–1 or for the Air Force to prepare a rebuttal for him. But it does seem that the Air Force was not honoring its original commitment. This makes me wonder whether the Air Force can really be objective in this issue. If you ask the fox to justify chicken stealing, you might expect an eloquent statement about social justice or survival of the fittest. But the fox is not exactly an impartial observer. His way of life is at stake. So it is with the Air Force.

Mr. President, I would now like to comment on portions of the rebuttal provided to the Senator from Arizona and to my office by the Secretary of the Air Force.

First, the Air Force goes to great lengths to discredit my example of the range of the B–52. Conveniently for the Air Force argument, they delete the following sentence in my remarks. That sentence reads:

"Of course, in a strategic mission its range would be less than this but it is probably greater than that of the B–1."

Thus I made the very point the Air Force objects to. And yet they spent so much energy trying to rebut this point that I wonder if they even read the speech. Surely it is selective perception of the worst type to conveniently drop out the very sentence of my speech which qualifies the range data on the B–52.

Second, the Air Force states that the additional life cycle costs of the B–1 are closer to $8 billion rather than the $40 billion figure I use. My figure was meant to include all program costs. Not just the life cycle costs but the basic procurement costs of $21 billion plus the uncounted associated costs which the Air Force admits will cost $8 billion and which I think will be much higher. Thus the real total program costs will be at least $30 billion and will be over $40 billion with a new tanker system. The Air Force says they will not require a new tanker, but all the evidence, including a recently disclosed OMB memorandum point to a new tanker program costing at least $10 billion.

Third, I note that the Air Force always compares the characteristics of the B–1 bomber with the B–52 G model, never the B–52 H model. Why? Because the B–52 H has turbojet engines which are more efficient than the turbofan engines of the B–52 G. Since about half the B–52 fleet consists of B–52 H's, it is obvious that the Air Force seeks to state the worst case and overlook the more favorable comparisons with the B–52 H's.

Fourth, the Air Force costs for the SRAM assume that the B–1 does not carry a full complement of SRAMs—only about one-half a load. Thus, the Air Force SRAM dollar figures understate full weapon payload costs. I used figures assuming a full SRAM load.

The Air Force should supply the costs of the other weapons on each B–1 for an accurate comparison.

Fifth, I still have not received the information I requested from the Air Force in the first speech. They criticized some of my data but neglected to provide the hard evidence to support their own case. Therefore, I again call upon the Air Force to provide that data. I am speaking of a full comparison of the original specification of the B–1 in 1969, when initially presented to Congress, compared to its degrated specifications today. I am referring to an itemization of the performance degrations in the B–1. And the costs of reengineering the B–52 and the studies that have been performed on this subject; and whether or not the 747 or other wire bodied jets could be used for stand-off bomber platform and what studies have been done on this subject, and the full life cycle costs of the B–1 coupled together with the full production cost of the B–1. Those are highly relevant statistics which are critical to the Air Force case. But so far they have been lacking.

THE ALTERNATIVES TO THE B–1

A. THE RE-ENGINED B–52

Mr. President, today, in my third speech on the B–1 bomber, I will discuss three alternatives to the B–1 that would save the taxpayers tens of billions of dollars and still provide the most formidable bomber force in the history of the world.

The first alternative is the reengined B–52.

The B–52, modified with only four modern turbofan jet engines and the necessary simple wing structures, is a very attractive bomber alternative that merits the serious attention of the Congress.

At a small fraction of the cost of the B–1, it will provide a substantial improvement in bomber performance and overall bomber capability. In fact, this B–52I is superior to the B–1 in several important respects. Furthermore, a Defense Department study has shown that most or all of the costs of this alternative will be compensated for by fuel savings. If one further adds the substantial reduction in the B–52I's tanker requirements, the savings increase even more dramatically.

It must be emphasized here that the B–52I is not a longrun alternative to a new bomber. Rather, it provides substantial strategic bomber capability for an additional 15 years at a very low cost. Furthermore, it gives added time for a follow-on bomber or a cruise missile platform to be developed. This postponement will furnish our defense planners a decade of reliable information about the nature of future Soviet air defenses. Thus the follow-on bomber or platform will be better designed to meet the challenge of the changing strategic environment, including Soviet air defenses, well into the 21st century.

Valid concern over the ability of the B–52 to physically survive into the 1990's has been expressed in several quarters. These concerns have been put to rest by the Air Force, which has stated in several places that the B–52's will be structurally sound into the 1990's—Lt. Gen. W. J. Evans, USAF, "Hearings Before the Committee on Armed Services," U.S. Senate, March 4, 1975, page 2007. Indeed, recent reports indicate that the Defense Department plans to keep the B–52 G and H models "in service through the 1980's and 1990's, according to Secretary Rumsfeld."

Furthermore, according to one report: "The Air Force is studying the possibility of refitting Strategic Air Command's fleet of 271 Boeing B–52 G/H bombers with an entirely new offensive avionics complement that could extend the effective life of the strategic bombers by 15 years."

Thus the B–52 is in no danger of falling apart, as some of the B–1's more ardent supporters have unfairly alleged.

A B–52 in which the eight existing engines are replaced by four modern turofan jet engines would at low cost provide a substantial increase in U.S. strategic bomber capability. Performance improvements include:

1. INCREASED RANGE

The Air Force concedes that a reengined B–52 would have a "significant increase in range"—Senate Armed Services Committee hearings, fiscal year 1976, page 5615.

A re-engined B–52 would, in fact, have a 20- to 30-percent increase in range over the B–52H and would far exceed the range of the B–1.* This would give the B–52: Greater target flexibility; higher penetration speed; ability to undertake more evasive maneuvers over hostile territory; ability to carry a heavier load of weapons, avionics, and so forth; a significant increase in ability to loiter at failsafe points before the decision must be made to commit the planes or recall them. In the context of a threatened nuclear war, this capability is greatly desired; and reduction in fleet maintenance costs.

2. SHORTER TAKE-OFF DISTANCE

A B–52I with its higher thrust engines will have 50 percent greater thrust at takeoff than the current B–52H and almost double the thrust at takeoff of the B–52G. As a result, the B–52I will have a shorter takeoff distance which will give it greater dispersability to shorter runways, thereby enhancing its prelaunch survivability. It is also worth noting that the B–52I will have a greater thrust-to-weight ratio at takeoff than the B–1.

3. REDUCED INFRARED SIGNATURE

The B–52's IR signature would be greatly decreased by virtue of the cooler exhaust of these engines. In fact, the IR signature may well be lower than that of the B–1.

4. QUICKER FLYAWAY TIMES

The higher thrust engines will accelerate the B–52I more quickly away from its air base than the current B–52's, thus further enhancing its survivability.

5. HIGHER ON-THE-DECK PENETRATION SPEEDS

The higher thrust engines would enable the B–52I to penetrate at faster speeds than the B–52's current Mach 0.55. This would reduce the B–52's time spent over hostile territory and hence enhance its survivability. In fact, a well-placed industry source said that the B–52I could penetrate at mach 0.60 on the deck. Further structural modifications would permit the B–52I to penetrate at mach 0.85, the same as the B–1.

Re-engining the B–52 is not a pie-in-the-sky proposition: Boeing proposed this option to the Air Force as long ago as 1969. The Air Force estimates the cost of reengining the B–52, including R.D.T. & E. plus the cost of associated modifications, to be only $7.66 million per plane—Senate Armed Services Committee Hearings for fiscal year 1976, page 5616. In fact, all the engines in use on today's wide-body transports—747, DC–10, L–1011 and Europe's A–300—were originally tested on an Air Force B–52. The fact that the Air Force examined the reengined B–52, redesignated the B–52I, in the joint strategic bomber study underscores the validity of the concept. Finally, a recent Rand study for the Air Force not only substantiates the feasibility of reengining, but it shows that about one-third of the cost of reengining the B–52G's will be paid for in fuel savings alone about 3 years after completion of the retrofit program—"Air Force Energy Problems: Potential Role of Technology and Alternative Fuels," Rand Corp., February 1975, pages 29–33.

---

* This arises because the new turbofans have a lower specific fuel consumption (higher "miles per gallon") than the engines currently on the B–52 G's and H's.

Indeed, the Defense Department is even now planning to reengine the KC–135 fleet with "new turbofan engines having better fuel consumption as well as better takeoff thrust and can pay for itself over time in reduced tanker sortie requirements"—statement by Malcolm R. Currie before the Senate Armed Services Committee, April 1975, page V–15.

The Defense Department should be applauded for undertaking this measure to save money and precious fuel. But the Defense Department should be urged to use this same logic and undertake immediate planning to reengine the B–52 as well. Rand found that the fuel consumption of the B–52G would be reduced by one-third if the aircraft is reengined—Op. Cit., Rand report, page 29. It should be noted that the Rand report indicated that reengining the B–52G is most cost-effective than reengining the KC–135—Op. Cit. Rand study, page 31.

The remaining costs of the engine retrofit program could be more than covered by the even larger savings in sharply reduced fuel, operations, and maintenance costs of the KC–135 tanker fleet devoted to the B–52. Assuming a 20 to 30 percent decrease in B–52I tanker requirements—a conservative assumption based on the range increase—and assuming that tanker direct and indirect costs are half those of the B–52, reengining the B–52 will produce additional cost savings over 10 years of $2.2 billion. This also assumes that KC–135's support B–52's at a ratio of 3 to 2. Thus the direct and indirect cost savings will more than pay for the cost of reengining, and the United States will be provided with tremendously important strategic benefits at little or no net cost.

Finally, the reengined B–52 will enable us to postpone for perhaps 15 years the need to purchase a follow-on bomber. The SALT environment will probably be much clearer at that time and not present such an uncertain element in our current deliberation on bombers. In the meantime, the $20 to $40 billion that the B–1 program would have required can be applied to the other pressing defense needs which this country faces.

B. EQUIP THE B–52 WITH LONG-RANGE CRUISE MISSILES

The second alternative course of action in place of building the B–1 bomber is to equip the reengined B–52's with cruise missiles having the maximum range that SALT permits. These nuclear-tipped missiles combine three extremely attractive features:

First. Their tiny radar image and ground-hugging capability make them nearly invulnerable to detection, let alone destruction by the enemy;

Second. They are so inexpensive that they can be launched by the thousands to saturate enemy defenses and to assure the destruction of any array of bomber targets; and

Third. They possess sufficient range to permit the bomber carrying it to minimize or avoid penetrating enemy airspace altogether. Consequently, the bomber need have little or no penetration capabilities, which of course reduces the cost and complexity of the requisite strategic bomber force.

The ideal strategic bomber would be one that the enemy could not detect with either radar or infrared techniques as it sped toward the target. Neither the B–52 nor the B–1 are so fortunate, although both fly close to the ground in an attempt to fly under the enemy radar net.

Given that the enemy is likely to detect their presence, both of these bombers are designed to carry extensive electronic countermeasure equipment—ECM—that attempts to hide the exact location of the bomber, even though its general presence is known.

However, the Air Force is not confident that the penetrating bomber, even the B–1,

can penetrate through the most advanced defenses that ring major Soviet targets. Consequently, the B–52 and the B–1, if built, will carry short-range attack missiles—SRAM—to deliver nuclear warheads on the enemy defenses or the target ahead of the bomber—"Study of Alternative Courses of Action for the Strategic Manner Bomber," GAO report, April 17, 1974, page 3. The B–1 will carry 24 such missiles in rotary launchers inside the aircraft's fuselage. Thus by its actions the Air Force acknowledges the validity of the stand-off concept.

When the first wing of B–52G's were equipped with SRAM's in 1972, Air Force General Keck was quoted at the ceremony as saying that it made the B–52 "almost a new airplane." His comments reflect the fact that bomber survivability is dramatically improved with the addition of stand-off missiles to the bomber's complement of penetration aids. They allow the bomber itself to stand off and to avoid the thickest defenses altogether while saturating them with dozens of nuclear warheads.

The invulnerability of the SRAM rests not only on saturating techniques but also on its infinitestimal radar cross-section, ground hugging capability, and its high speed. The one drawback to the SRAM is its short range: only about 120 miles. Thus, the B–52 and B–1 must penetrate all but the last 120 miles to the target.

Extension of the range of the standoff missile, such as the SRAM, offers obvious advantages to the bomber. The cruise missile was developed for this very purpose. Instead of being rocket powered as is the SRAM, it has a jet engine and wings.

CRUISE MISSILE OPTIONS

Two versions of cruise missiles are now in the research stage—one for the Navy and the other for the Air Force. The Navy's can be launched from torpedo tubes on submarines—SLCM—submarine launched cruise missile—or can be air launched from aircraft before they enter Soviet airspace. The Air Force version—ALCM—air launched cruise missile—has a much shorter range, for reasons to be discussed later. And it is considerably slower than the Navy version, and has a higher altitude profile.

Use of the Navy cruise missile could allow a bomber to avoid Soviet air defenses altogether. The issue is whether the cruise missile approaches the invulnerability of the SRAM, the B–1's primary weapon.

Tests show that the Navy cruise missile is a match for the SRAM in terms of survivability:

The Navy cruise missile has about the same radar cross-section as the SRAM but is harder to detect and track because of the lower profile (altitude) flown over Russia. ("Strategic Programs Scrutinized," Clarence A. Robinson, Jr. *Aviation Week and Space Technology*, March 31, 1975, page 13.)

The radar tests reveal that the SLCM (Navy version of the cruise missile, submarine-launched cruise missile) has a cross-section about the size of a sea gull with the radar beam at ±45 degrees from dead ahead. The side view of the missile is 10 sq. meters, but at its low altitude the only time the broad side of the missile is in the beam is as it pauses directly by the radar, and then data processing response time is too short to respond. (Ibid.)

Defense officials have said that actual tests demonstrate that neither the Russians or even ourselves have the capability to detect and destroy the cruise missile—

In testing the full-scale SLCM against both the Soviet and U.S. radar capability, the Navy has determined that neither side has the capability to track and shoot down the SLCM. And downing the missile is *approaching defiance of the laws of physics*, a Defense official said. (Ibid.) (Emphasis Added.)

Other Defense officials call the cruise missile the "ultimate deterrent"—

The cruise missiles are designed to travel at subsonic speed, and have radar and infrared signatures so small as to blend in with the background. Everyone seems to agree that this will make them equally difficult to shoot down. Hence, some Pentagon officials have nicknamed the strategic cruise missile "the ultimate deterrent." ("Cruise Missiles: Air Force, Navy Weapon Poses New Arms Issues," *Science*, February 7, 1975, page 417.)

Another defense official has described the cruise missile's capabilities against Soviet air defenses:

"The cruise missile's low altitude profile will drive them (the Soviets) crazy and that's what they fear most because this big air defense system of theirs can't handle the cruise missile threat." (*Aviation Week and Space Technology*, 16 February 1976, page 14.)

All of these statements establish the invulnerability of the cruise missile in the current time frame. To some, technological advances in air defense might seem to threaten the cruise missile in the future. To the contrary, technology advances should be on the side of the cruise missile.

Throughout the 1970's even the highly concentrated defenses surrounding actual targets—terminals defenses—will not credibly threaten the cruise missile. Technological developments in the 1980's might give the Soviets the capability to counter the present-day cruise missile. However, this would require a tremendous proliferation of defense sites at an astronomical cost that would seriously bleed the Soviet defense budget.

Yet the Air Force is already studying a second-generation cruise missile that would render those costly additional Soviet air defense expenditures wasted. This new cruise missile would be two-staged with the upper stage permitting supersonic penetration of terminal defenses, overwhelming them just as the short-range SRAM does now.

This two-stage concept should be well within the state of the art by the 1980's. It seems likely that the Soviet air defense network could not expand sufficiently through the mid-1980's to even necessitate our deploying this two-stage cruise missile. In fact, the Soviets' knowledge that we would have a ready and effective response to their very costly efforts to defend against our first generation cruise missile may discourage them from attempting such a defense at all.

Furthermore, even the first generation cruise missile itself could be an effective weapon against advanced air defenses, much as the SRAM is now against current air defenses. A first wave of cruise missiles could blast holes in the Soviet air defense through which later waves of cruise missiles could pass.

This view appears to be at least partially confirmed by the following exchange in a recent Senate hearing where Dr. Currie indicates that the Soviets cannot counter the cruise missile now, and that to do so in the future would require an enormous investment:

Senator MCINTYRE. How soon do you believe the Soviets could help develop and deploy a comprehensive and effective force of advanced terminal SAM's which would constitute a defense against a large multidirectional cruise missile attack.

Dr. CURRIE. I think it is well within their capability to do it (deleted) years, should they desire to invest the resources. That is precisely what we would like them to do. It would cost many, many billions of dollars to do that . . . (Senate Armed Services Committee Hearings, FY 76, Part 10, page 5151.)

CRUISE MISSILES AND THE JOINT BOMBER STUDY

The accolades for the Navy cruise missile are in stark contrast to the conclusion reached in the Department of Defense's Joint Strategic Bomber Study, which studied alternatives to the B–1 bomber. The study admitted that cruise missiles can overwhelm aircraft interceptor defenses by saturating them with sheer numbers of missiles. Statement of Malcolm R. Currie before the Senate Armed Services Committee, 1975.

To penetrate the surface-to-air missile defenses ringing key targets, the joint strategic bomber study implied that the cruise missile is inadequate—that we must have the B–1 and especially its complement of SRAM missiles.

And yet, Dr. Malcolm Currie, Director of Defense Research and Engineering for the Department of Defense, who summarized the results of the joint strategic bomber study in his testimony before a congressional committee recently said.

"As a major alternative approach to penetration of formidable Soviet air defenses, including tens of surveillance radars, hundreds of ground radar and thousands of interceptors and SAM's, we are continuing development of the strategic cruise missile. . . . And air-launched cruise missiles may be required to complement the pure penetrating bomber in advanced threat environments, but the extent of the need depends on how the threat evolves. (House Armed Services Comittee, 94–8, page 303, emphasis added.)

The extreme sensitivity of the performance of the penetrating bomber to the quality of its ECM was manifest . . . we believe viable alternatives to the penetrating bomber must be pursued. Our cruise missile programs which I will discuss later, constitute such an alternative, and we are searching for others. (House Armed Service Committee, 94–8, page 306.)

The joint bomber study seems to have only raised more questions about the penetration capability of the B–1 as compared to that of the cruise missile.

Another attraction of the cruise missile is the cost—about $500,000 apiece.

For the cost of a single B–1 carrying 24 SRAM warheads—about $100 million—we could buy 200 long-range cruise missiles. Thus, saturation of enemy defenses is economically feasible.

The cruise missile is still in its infancy, so many innovations can be expected to drive down the cost even further. For instance, the Air Force is investigating an advanced strategic air-launched missile which would be ramjet powered, although of somewhat shorter range than the cruise missile. One Air Force propulsion engineer has estimated a complete vehicle could be produced minus payload for as little as $5,000.

CRUISE MISSILE RANGE ISSUES

The question of the range of the Navy and Air Force versions of the cruise missile is a vital element in the debate over the B–1. In designing the B–1 the Air Force planned for it to carry the SRAM. A small rotary launcher which could carry eight SRAM's was developed so that three rotary launchers could fit inside the relatively small B–1 fuselage. The same launcher was placed in the B–52 to carry the SRAM. As the cruise missile program emerged, it soon became clear that the SRAM rotary launcher could not physically accommodate the longer body of longer range cruise missiles. So the Air Force forced its entire cruise missile program to work around the size constraints imposed by the SRAM launcher.

Consequently, the Navy version, which is not shackled by the rotary launcher, has a range of about 2,000 nautical miles, while the Air Force version has a range of about 650 miles.

The range difference is partially explained by the fact that the Navy missile is 4 feet longer than the Air Force's.

This disparity in range is of enormous consequence. A standoff bomber carrying the Navy missile could avoid penetrating Soviet

airspace altogether and still knock out virtually all major targets. However, the Air Force ALCM, constrained to fit the SRAM launcher, forces the bomber to penetrate well inside the Soviet Union before releasing its missiles. Not surprisingly, some senior Pentagon officials have questioned the wisdom of the Air Force constraining its ALCM to fit the SRAM launcher.

In addition, the Air Force crusie missile is slower than the Navy's version—mach 0.55 vs. 0.7—for most of the mission.

Furthermore, the Navy version can skim closer to the ground than the ALCM, making it more survivable.

The Air Force is fully aware of the range problems of its ALCM and currently is studying a longer range version. This longer range is attained by fitting a belly tank to the ALCM, enabling it to carry more fuel and thus to extend its range. However, this longer range version still can only go 1,000 miles and is no match for the Navy cruise missile. Also, his version cannot be carried internally by the B–1, though it can be carried by the B–52. Furthermore, the belly tank enlarges the radar cross-section of the ALCM.

Whatever the reasons behind the Air Force decision to design the ALCM around the SRAM rack, three consequences resulted:

1. Any new Air Force bomber carrying the Air Force cruise missile must be a penetrator and *not* a stand-off bomber;

2. The Air Force cruise missile will fit on the SRAM launcher inside the B–1. A cruise missile suitable for a fully stand-off bomber could *not* fit the rotary launcher inside the B–1; and

3. The superiority of the B–52 over the B–1 as a stand-off bomber is obscured by the diminished range of the resulting ALCM.

In short it would appear that the effectiveness of an entire strategic program of inestimable importance was sacrified on the altar of the B–1.

SRAM-CRUISE MISSILE MIXES

There is evidence that the B–1 can carry 4 SRAM missiles externally on each of its variable geometry wings.

This would imply that the B–1 can carry cruise missiles on its wings. However, the additional aerodynamic drag would impose a severe penalty on the range of the B–1, whose range is already marginal.

Carrying a full external load would decrease the B–1 range by about 15 percent due to increased aerodynamic drag—Maj. Gen. H. M. Darmstandler, USAF, Briefing of Congressional Staff Members, May 15, 1975. In fact, the external pylons, which would support the racks for cruise missiles, have been deleted from the B–1 design—Senate Armed Services Committee hearings, fiscal year 1976, part 10, page 5542.

Already the B–1 has reached the point that it cannot carry a full internal load of weapons and a full fuel load at the same time because of its weight problems—Senate Armed Services Committee hearings, February and March 1975, part 4, pages 2013–2014. Thus, the B–1 cannot carry additional missiles on its wings without sacrificing an equivalent weight of fuel or further increasing its dependence on tanker support.

The Defense Department was seriously considering consolidating the Navy and Air Force programs to conserve funds.

If the programs are merged, the single cruise missile that will eventually come forth will almost certainly not be compatible with the SRAM rotary launcher. It would more resemble the longer range Navy version.

The upshot would be that the B–1 could not carry the cruise missile internally at all. And external carriage may prove to be too costly in terms of the B–1's limited range.

The incompatibility of the B–1 with the long-range cruise missile will not be a problem for a while because the B–52's, which can carry the long-range cruise missile, will be kept through the 1990's.

Thus, the B–52 will serve as the long-range cruise missile carrier. It is significant that the Defense Department is requiring the Navy to make its cruise missile capable of being air launched from the B–52; no mention is made of the B–1—"The Case for the Cruise Missile," Dr. Malcolm R. Currie, Aviation Week and Space Technology, April 21, 1975, page 9.

Note that the B–52's long range would allow it to carry cruise missiles externally. And the mammoth bomb bay of the B–52 can accommodate the cruise missile as well. There is one SRAM rotary launcher fitted in the huge B–52 bomb bay although this launcher was designed for the B–1.

However, once the B–52 is retired by the end of the 1990's, there will be no carrier for these missiles. The question arises, will the Air Force come to the Congress 10 years from now and ask for funds for a new standoff bomber? One does not have to judge whether the standoff bomber carrying long-range cruise missiles is a superior option to the pure penetrator, such as the B–1. The fact is the long-range cruise missile may be emerging from the SALT negotiations as an extremely important strategic weapon.

Moreover, in light of the conclusions of the joint strategic bomber study and the B–1's present dependence on a short-range standoff missile—SRAM—to get through Soviet defenses, the superiority of the penetrating bomber can hardly be said to be clear.

As the foregoing comments demonstrate, the long-range cruise missile concept is highly appealing. Prudence would seem to dictate that we should not commit ourselves now to any bomber, the B–1 or any other, which is basically incompatible with the long-range cruise missile. The B–52 would be a far better standoff bomber than the B–1 and it can double as a penetrator as well, at least for another decade or two.

A very recent development is ironic to say the least.

It has been reported that the Air Force does not plan to place the ALCM on the B–1 at all, even though it was the B–1 constraint that kept the range of the ALCM down.

B. OTHER ALTERNATIVES FOR THE NEAR FUTURE

Reengining the B–52 or equipping it with cruise missiles for another decade is by no means the only alternative to the B–1. There is considerable support within the defense establishment for the concept of a standoff bomber which would not penetrate enemy airspace, but would standoff and launch long-range cruise missiles at targets inside enemy territory. If the Congress agrees that the cruise missile has obviated the need for a new penetrating bomber, then another alternative to the B–1 is available. We can build a fleet of wide-body transports and equip them with cruise missiles, assuming SALT does not eliminate the long-range cruise missile.

The Air Force is now in the process of selecting the advanced tanker cargo aircraft. The average unit procurement costs in 1975 dollars for the candidates are: Lockheed C–5B, $47 million; Boeing 747, $45 million; McDonnell-Douglas DC–10, $31 million; and the Lockheed L–1011, $31 million.

We could simply buy such aircraft to be used as standoff bombers. The average unit cost should be even lower than these figures if the same basic aircraft was used for all three roles—bomber, cargo and tanker. Any of these choices would be less expensive than the B–1. If we adhere to the Air Force philosophy of not including weapons costs in with the cost of a bomber, then the $84.3 million B–1 would be about twice as expensive as the very large standoff bomber—747, C–5B—almost three times as expensive as the other standoff bomber candidates—DC–10, L–1011.

For example, with weapons costs included, a 747 standoff bomber could carry at least 40 cruise missiles—up to 60 by Air Force testimony—at $500,000 per missile, for a total cost of $65 million (aircraft plus weapons) versus about $96 million for the B–1. The 747 would carry at least 67 percent more warheads than the B–1—40 vs. 24—and the cruise missiles on the 747 would have much longer range than those on the B–1. Furthermore, the range of the 747 itself would almost certainly be greater than that of the B–1, as would be the loiter time in air alerts. The McDonnell-Douglas DC–10 or Lockheed L–1011 could carry perhaps 24 long-range cruise missiles, which is equal to the same number of short-range missiles as the B–1 carries. However, these aircraft would cost about one-third the price of the B–1.

Among the many desirable features in the stand-off delivery system is the fact that the entire system is easily updated to take advantage of new technology or new Soviet defenses. One need only replace the first-generation cruise missiles with a more advanced version of cruise missile. The ample internal volume of these wide-body aircraft makes such a retrofit quite feasible. The offensive capability of the system is almost independent of the airplane that carries the missile, because only the missiles would enter enemy airspace.

Also, the stand-off bomber is a low-risk venture that would involve very well known technologies. Even the cruise missile, currently undergoing flight testing, embodies technologies that "are well in hand"—"The case for Cruise Missiles," Dr. Malcolm R. Currie, Aviation Week and Space Technology, April 21, 1975, page 9.

Because the 747 standoff bomber is so much less expensive than the B–1, we could afford to buy just as many standoff bombers as B–1's, carrying around 9700 warheads versus 5800 for the B–1, and still save $7.5 billion over the cost of the B–1 program.

As an alternative we could use the Lockheed L–1011 or the DC–10 which are about the same size as the B–1. If 243 of these aircraft are purchased, and assuming each could carry at least 24 long-range cruise missiles, then we would have an equal number of warheads as the B–1 but at about one-third the cost.

SOVIET MOBILE SAM CONTROVERSY

In response to a Brookings Institution study that recommended termination of the B–1 program and deployment of large cruise missile carrier standoff bombers, Dr. Malcolm R. Currie, Director of Defense Research and Engineering, criticized the study for failing to take into account Soviet mobile surface-to-air missiles.

While I do not conclude that the standoff bomber is absolutely the only way to meet U.S. bomber requirements, I cannot completely agree with Dr. Currie.

While posing a threat to the first-generation cruise missiles, the mobile SAM is also very much a threat to the B–1, or to any penetrating vehicles. In fact, because the B–1's radar cross-section is so much larger than the cruise missile's, the B–1 may be more vulnerable to the mobile SAM. Considering the likely reaction times of current Soviet SAM systems, neither the cruise missile nor the B–1 are currently threatened. As the Navy found, "neither side has the capability to track and shoot down the SLCM" since the SLCM has the frontal radar cross section of a seagull; when the side of the cruise missile is in the radar beam, the data processing response time of the SAM system is too short to respond.

The B–1 is threatened by mobile SAM's since it too will not know where they are. When a B–1 would pick up the radar signal of a mobile SAM, it would face a kind of "High Noon" situation: it would have to pinpoint the SAM site location, launch a SRAM and destroy the SAM radar before the SAM system could pinpoint the B–1's location,

launch a SAM and destroy the B–1. An advanced SAM would presumably have a shorter reaction time, threatening both the B–1 and ALCM. Furthermore, and most important with respect to the B–1, an advanced SAM might very well have a terminal active homing capability, such that the missile would be independent of the SAM site radar within a certain range of the B–1. The B–1 would then be very vulnerable to such a SAM.

Furthermore, it is worth asking whether the joint strategic bomber study considered mobile SAM's, if they indeed pose such a serious threat. In short, if an advanced mobile SAM is a serious threat to the first-generation cruise missile, it is also a serious threat to the B–1 as well.

Another criticism that is sometimes heard against converting wide-body jets into cruise missile carriers is that these aircraft do not possess sufficient quick takeoff capability nor hardness against thermal, overpressure, and radiation effects. Thus, wide-body jets are alleged to be deficient in prelaunch survivability.

How, the critical B–1 dependence on tanker support will insure that the advanced tanker cargo aircraft—ATCA—will have more than adequate prelaunch survivability. If this were not the case then the B–1's ability to perform its mission would be seriously jeopardized.

Mr. FINE. Regardless of tankers, the survivability of a tanker dictates the effectiveness of the utility for the B–1 or the B–52?

Secretary MCLUCAS. That is right.

(Senate Armed Services Committee hearings, fiscal year 1976, part 10, page 5595.)

A modified ATCA might therefore be suitable as a cruise missile carrier. Instead of carrying fuel for the B–1 to haul 24 short-range missiles to their launch points, the ATCA cruise missile carrier would itself deliver 40 long-range missiles to their launch points. Thus a cruise missile carrying version of existing airplanes also appears to be an attractive alternative to the B–1, and at lower cost.

THE B–1 BOMBER DEBATE, PART IV—THE B–1 BOMBER: CAN WE AFFORD TO WAIT?

Mr. President, throughout the justifications for the B–1 bomber program provided by the Air Force, there is a constant theme that we need a new bomber now. Great emphasis is placed on the age of the B–52 fleet, an emhpasis that is misleading as I have pointed out in several prior speeches.

Nonetheless there is a valid issue as to the necessity of replacing our bomber fleet with the most modern, effective, technologically advanced aircraft. Why should we not have the most modern bomber that money will buy? How could there be value in waiting 10 years or 20 years before proceeding with a new bomber or bomber alternative?

Well, there are good reasons why waiting is the best answer. And today I will discuss those reasons.

Although threat requirements may change radically in the future and it is impossible to predetermine if we will need a new bomber after the 1990's or what kind of bomber, nonetheless there is merit in examining the technological issues as observable now. This analysis will show that the B–1 is dated even by current standards, that the B–52 will last through the 1990's and that delaying a decision on a manned bomber makes good sense for technological as well as economic reasons.

Because the modified B–52 will provide an adequate strategic bomber capability through the 1990's, defense planners will be afforded about a decade to develop new bomber concepts. Senator MCINTYRE, chairman of the Subcommittee on Research and Development of the Senate Armed Services Committee, has proposed as part of an alternative course of action on the B–1 that the Defense Department consider "the desirability of developing an alternative bomber to meet a 1990 IOC date based upon lessons learned from the B–1, latest technology, and updated forecast of the future threat."—Senate Armed Services Committee Hearings, fiscal year 1976, page 5560, part 10. There are several reasons why this eminently sensible proposal would result in a strategic bomber which would be vastly superior to the B–1.

A. TECHNOLOGICAL ADVANCES

Advanced technologies are already available which would be extremely beneficial for any new bomber. Unfortunately, these recent advances are frozen out of the B–1, because its design is now essentially fixed. The next decade will no doubt result in further technological advances which could also be incorporated into a bomber built in the 1988–93 timeframe.

The most serious obsolescence inherent in the B–1 design is its inability to carry the forthcoming generation of longrange cruise missiles, such as the Navy Tomahawk missile. A new bomber for the 1990's and beyond would surely be capable of carrying these missiles, even if it were designed to penetrate as well as stand off and fire its missiles.

Another advance frozen out of the B–1 is NASA's heralded supercritical wing design, which is being incorporated into the next generation of air transports with the expectation of improving fuel efficiency by as much as 15 percent. The supercritical wing would offer the B–1 a means of improving its range, an area of performance in which the B–1 is glaringly deficient.

The appeal of the supercritical wing for the B–1 has not escaped the Air Force's attention. As far back as 1971, Maj. Gen. Douglas T. Nelson, B–1 program director, said that the Air Force is "looking very closely at that—the supercritical wing—with a great deal of interest." He said:

While the wing may not be 'timely' for the first three airplanes, observes Nelson, it will be considered as a 'possible' way to go in the later production program. ("B–1: Heavy Flak, But On Target," Robert P. Hudock, Astronautics and Aeronautics, June 1971, page 9).

Thus the design of the B–1's wing was technologically obsolete the day the B–1 first rolled out of the hangar. The program director's interest in switching to the supercritical wing during B–1 production presents a real dilemma. Such a changeover this late in the program on a variable geometry—swing wing—wing would only add to the burgeoning B–1 cost. To attempt to retrofit the supercritical wing to the B–1 later on would be cost prohibitive. Yet to do nothing shows the B–1 already suffers from an "aging" design.

Another important breakthrough has been control-configured vehicles—CCV—technology, which is the application of advanced flight control techniques to the aircraft while it is still in the design stage. What the B–1 loses out on, but a later bomber could capitalize on, is seen in this trade journal quote:

Another Air Force Study showed that if the required CCV technology were available during the design phase of the B–1, the bomber would look much different. A control-configured B–1 would have been 80,000 lbs lighter in take-off gross weight and could have performed the mission with two engines instead of the present four. (*"New Controls to Shape Future Aircraft,"* Michael L. Yaffee, *Aviation Week and Space Technology*, October 16, 1972).

We should recall that weight growth has been a severe problem for the B–1, as the Bisplinghoff report and recent congressional testimony amply demonstrate. Such an advanced bomber, being smaller and having one-half the number of engines as the B–1, would also have a lower radar cross-section and infrared signature, making it less vulnerable to enemy detection.

Another innovation that a follow-on bomber would certainly contain would be composite materials. These are extremely light-weight materials which have two to three times the strength of conventional metals.

The potential for cutting weight out of a bomber through the use of composites is acknowledged by the Air Force. The B–1 includes a limited use of composite materials, but overall the B–1 primary structure is "conservative" in design—Bisplinghoff report, page 7. The Air Force B–1 program director has called the B–1 a"fairly conventional, basically aluminum airplane."—Astronautics and Aeronautics, June 1971, page 9.

Unfortunately, composites technology is so new that it came too late to be incorporated into the aging B–1 design in any great quantity. Nevertheless, there are reports that the Air Force is exploring the possibility of a composite wing for the B–1. Needless to say, such a radical alteration in the B–1 design at this late date would necessitate sizable cost increases, if this step is indeed taken.

A bomber built 10 years from now would include much larger amounts of composites, especially in primary structures, which would lighten the total structure with no degradation in strength.

In addition, the engines of a bomber built a decade or more from now would surely be superior to those of the B–1 because of the constant infusion of new engine technology. Current trends all indicate that materials will be developed permitting higher turbine inlet temperature; composites will be employed to reduce the weight of the engines, and compressor pressure ratios will become even higher, improving engine performance capabilities.

As an example of the giant strides to be expected in aircraft design within the next 10 years, one should consider that NASA hopes to devote $670 million over the next decade in their new aircraft fuel efficiency program. NASA officials claim that by 1985 we will have the technology in hand to build jet transports with 50 percent better fuel economy than current aircraft and with no loss in performance—NASA's Task Force Report on Aircraft Fuel Conservation Technology, page v, vi, September 10, 1975. This program, prompted by a desire to counter the rising price of jet fuel for airlines, will have direct fallouts for bombers. Improved fuel economy in a bomber translates into increased range, longer loiter time capability, higher payload, and reduced dependence on tankers.

Thus, if production and deployment of a new bomber is postponed until 1990, technological improvements would result in a far superior aircraft compared to the current B–1. In fact, even if 10 years from now, defense planners think that the strategic bomber should be a swingwing, supersonic, low altitude penetrator, as is the B–1, the resulting aircraft would still be quite different than the current B–1 simply because of the enormous improvements in technology.

Some will say that waiting 10 years to build a new bomber will always result in a superior version and hence adherence to that logic would force us to wait forever. But this misses the point. If the current bomber force is adequate, then moving to a new system before it is really needed is unwise for two reasons.

First, the Nation would expend resources prematurely, which is wasteful. Second, the Nation is commited to a bomber which is frozen in design long before the bomber is really needed in our arsenal. Thus, technological advances are needlessly rendered unavailable to that bomber.

B. UNSETTLED ISSUES ABOUT BOMBERS

Another reason why the follow-on bomber of 1990 will be superior to the B–1 is that

the Air Force will have a decade to better assess and prepare for the Soviet air defense threat. There are several issues regarding the most effective kind of bomber to face the dawn of the 21st century which have not been settled at all, even within the Air Force. As new Soviet air defense systems emerge, some of these critically important issues probably will be resolved within the next decade, and this will affect our selection of a bomber concept.

1. SUPERSONIC CAPABILITY

For instance should the next bomber have a supersonic capability?

I have already noted the severe design constraints which are necessarily placed on the B–1 because of this capability. If 10 years of analysis convinces the Department of Defense that the next strategic bomber need not be supersonic, then the follow-on bomber would be enormously different from the B–1 and far more effective in carrying out what is, even now for the B–1, a subsonic mission.

2. STAND-OFF OR PENETRATION?

Should the next strategic bomber be a stand-off bomber which launches long-range cruise missiles at the target or should it be a penetrator which releases short-range missiles as does the B–1?

The Air Force can hardly claim that the issue is settled in favor of the penetrator option. One of the major observations of the joint strategic bomber study regarding the future viability of the penetrating bomber is nothing short of extraordinary:

The ECM [suites] for both the B–52 and the B–1 were shown to be effective, but the extreme sensitivity of the performance of the penetrating bombs to the quality of its ECM was manifest. This sensitivity is so crucial that continuous re-evaluation of ECM interactions are required over the long-term. Furthermore, we believe viable alternatives to the penetrating bomber must be pursued. Our cruise missile programs, which I will discuss later, constitute such an alternative and we are searching for others. (Emphasis added) (Statement of Dr. Malcolm Currie, Director of Defense Research and Engineering, regarding the Joint Strategic Bomber Study).

Here again it should be emphasized that the long-range stand-off missile is an area of intense DOD research; it offers a cheap, easily updated strategic weapon that is extraordinarily difficult to detect and defeat. If 10 years of further analysis convinces us to favor the stand-off bomber over the low-level penetrator, then the B–1 is an unwise choice as our next strategic bomber for at least two reasons: first, the B–1 physically cannot accommodate long-range stand-off missiles in any significant quantity, if at all; second, we will have committed ourselves until the year 2010—projected B–1 operational life—to an obsolete system—Aerospace Daily, "Clements Refutes Senator McIntyre's Objections to Joint Strategic Bomber Study," page 257, April 16, 1975.

Reengining the B–52 and fitting it with long-range cruise missiles will give us an effective strategic bomber force through the 1990's. This extra time will permit us to delay and buy a really new bomber later, if one required. The stand-off bomber platforms are another alternative.

If the strategic environment in that later day still calls for a manned bomber, Congress could approve production of the new bomber, secure in the knowledge that it had prudently postponed a costly program until it was truly needed. Clearly then, even from the standpoint of having the most modern bomber force, it is prudent to wait and not commit the Nation to a $21 billion mistake.

Let me summarize.

Mr. President, since the B–52 fleet will last until the 1990's, permaturely settling on a new bomber design results in an out-of-date aircraft. The B–1 will be technologically obsolete by the time it is deployed.

Even assuming that the Air Force is correct in arguing that we need a new manned penetrating bomber—which I do not—settling on a bomber now unnecessarily freezes that aircraft into an obsolete design.

The reasoning is simple. The B–52 fleet, by Air Force testimony, will last into the 1990's. The B–1 bomber will be in operation in 1982. Thus there will be an ovelap between the two systems, not a replacement of one for the other.

This overlap means we are starting on a replacement bomber too soon. If we timed new production to coincide with phase out time of the B–52's, the next penetrating bomber, if required, could take advantage of new technologies that would dramatically improve its performance. To move ahead with the B–1 now rules out taking advantage of these new technologies such as—

Use of long-range missiles. The B–1 cannot now carry a long-range cruise missile.

Use of a supercritical wing design. The supercritical wing being designed by NASA would dramatically improve the fuel efficiency of a new bomber and increase its range, a characteristic where the B–1 shows weaknesses.

Use of control configured vehicle technology. This is an entirely new and greatly improved method of flight control which could reduce B–1 weight and reduce the number of engines required from the present four to two. With one-half the number of engines, the plane would have a lower radar cross-section and lower infrared image.

Use of composite materials in construction. These are extremely light-weight materials with two to three times the strength of conventional metals. This would cut back on bomber weight, increase range and payload capacity.

THE B–1 BOMBER DEBATE—PART V

Mr. President, it is my conclusion that the Defense Department study justifying the $21 billion B–1 bomber compared to cheaper alternatives is so biased and flawed that it is virtually useless.

The Air Force justifies the $21 billion B–1 program on the basis of a highly classified study completed in 1975 called the "Joint Strategic Bomber Study." Since this is a secret report, the Air Force controls the information about it and uses it to its own advantage; however, judging entirely by public accounts of this study, it appears seriously flawed in six respects. In each case, the biases make the B–1 look more attractive than cheaper alternatives.

First, although the study considered seven different alternatives, not one of these alternatives was a force composed solely of reengined B–52's. Since the B–52 G and H aircraft can be reengined for $2.1 billion or one-tenth of the program costs of the B–1, to exclude this cheap alternative is tantamount to rigging the results.

To compound the mistake, the study misrepresented the penetration speed of the reengined B–25. Further, the B–52I was not given the capability for standoff cruise missiles.

Thus, all the advantages of the reengined B–25 were artificially denied before the analysis began.

Mr. President, my speech today, the fifth in a series of six or more, is devoted to the issue of the joint strategic bomber study. This study is the basis for the Air Force contention that the B–1 is the most cost effective alternative for the Nation. As this speech will demonstrate, there is every reason to question the validity of that conclusion.

I would like to add a note of caution, however. This study is a highly classified document according to the Air Force. I have not seen it. My staff has not. My analysis is based solely on unclassified references to that study by the Air Force or documents in the public realm. I want to argue my case on the same footing as any U.S. citizen.

The Air Force holds all the cards in the sense that only they can declassify this report or use statistics from it at will; therefore, my speech will raise as many questions as it answers. I have drawn my own conclusions, and they are clearly stated. The reader is entitled to know, however, that the factual basis for these remarks is controlled exclusively by what information the Air Force chooses to make public, whether complete, incomplete, factual or misleading.

Second, the study downgraded the cruise missile capability of the stand-off bomber by choosing the Air Force cruise missile which already is low in performance. If the Navy version of the cruise missile had been analyzed with its greater range, lower flight capability and smaller radar cross section, the entire cruise missile concept would have fared better.

For example, the shorter range of the Air Force cruise missile dictated that the carrying aircraft would be subject to greater attrition from enemy forces than would a long-range cruise missile like the Navy Tomahawk. Further, it seems that the cruise missile was not given the capability for evasive action, again shortchanging the cruise missile alternative.

Third, the joint strategic bomber study used a biased economic methodology. Their equal cost approach was based on the assumption that we must spend as much as what the B–1 would cost. Thus, trade-offs at lower levels of expenditures were not considered in the main body of the study and supplemental analyses showing lower level expenditure have not been made public.

Further methodological questions center on the discount rate used and the issue of current versus constant dollars.

Fourth, the study conveniently neglects to consider the effect of the other two legs of the Triad—submarine missiles and land based missiles. The bomber fleet does not exist in a vacuum, and to forget the contribution of other systems is to overlook the obvious.

Fifth, the study assumed that there would be a Soviet attack without any strategic warning, an "unlikely" circumstance according to the 1977 posture statement of Secretary of Defense Rumsfeld. The result is too narrow an analysis.

For all of these reasons, Air Force justifications of the B–1 based on the joint strategic bomber study must be viewed with a great deal of skepticism.

SHORTCOMINGS IN THE JOINT STRATEGIC BOMBER STUDY

In considering whether or not to authorize production of the B–1, we must address an issue that is fundamental to the strategic bomber question: Is the B–1 worth the price it will cost relative to the costs of other alternatives? The Senate Armed Services Committee wisely sought information of this sort from the Department of Defense and directed them to conduct a comparative study of the B–1 and its alternatives. The Defense Department response was the joint strategic bomber study, which concluded that the B–1 was the most cost-effective alternative. However, the study suffers from such major shortcomings that its conclusions are subject to doubt.

Mr. President, let us take a closer look at these arguments.

FIRST SHORTCOMINGS: MISREPRESENTATION OF THE MODIFIED B–52

From the information on the joint strategic bomber study made public, it appears that

the Defense Department misrepresented the reengined B–52, designated the B–52I, in the study. For example, it appears that a force consisting only of B–52I's was not considered in the study even though a pure B–52I force would cost only $2.1 billion to acquire, according to Air Force figures—$7.66 million per plane to reengine by 274 B–52 G/H equal $2.1 billion.[1] This is one-tenth the program cost of the B–1. Indeed Dr. Malcolm Currie, Director of Defense Research and Engineering has said that mixes of aircraft types rather than pure forces were considered.[2] Thus, a pure force of B–52I's at a low acquisition cost was not compared to the B–1, FB–111G, and stand-off bomber.

Another misrepresentation in the study was its portrayal of the B–52I's penetration speed. The current B–52 can achieve a penetration speed of mach 0.55. With higher thrust new engines, such as the General Electric CF6–50E—a higher thrust version of the engine powering the DC–10—the B–52 is capable of flying faster than its current mach 0.55 on the deck and with some structural modifications possibly as fast as the B–1.[3] Yet the Secretary of the Air Force has stated that the B–52I portrayed in the study was assumed to be "penetrating at a much lower speed" than the B–1, which was mach 0.85.[4] Since mach 0.85 is 50 percent more than the current speed of the B–52, if a higher penetration speed were used in the study for the B–52I, it would have fared better.

This apparent misrepresentation and other recent Air Force testimony raise three more questions with respect to the reengined B–52's characterization in the study:

First, did it assume that the B–52I would have a shorter take-off distance and hence greater dispersability and prelaunch survivability than the regular B–52 G or H due to its higher thrust engines?

Second, did it assume that the B–52I would have a faster escape speed from the runways than the regular B–52's, again due to the higher thrust engines?

Third, did it assume that the B–52I would carry long-range cruise missiles?

The only positive items that the Defense Department addressed about the B–52I in Senate testimony was that the new engines improved the B–52's range-payload performance. But this is only part of the story. As stated above, the study seems to have ignored the B–52I's higher penetration speed. The Secretary of the Air Force stated that the B–52:

"Does not look good in prelaunch equivability. It is a soft airplane. It does not depart from the runways as rapidly as either the FB–III or the B–1." [5]

One wonders if any improvement over the existing B–52 was assumed. A B–52I with four modern jet engines such as the General Electric CF6–50E engine or the equivalent engine by Pratt & Whitney would have vastly improved takeoff distance and airfield escape performance over the B–52 G and H because of its higher thrust-to-weight ratio. Airplane acceleration heavily depends on this ratio, and, as soon in table I, the B–52I has a better thrust-to-weight ratio than the B–1. The B–1 has a lower drag design than the B–52, but the table suggests that the B–52I could very well rival the B–1 in simple airfield escape capability, and hence in launch survivability. The table further shows that the B–52I could rival the B–1 in takeoff distance and hence in dispersability.

Mr. President, I ask unanimous consent that a table of thrust-to-weight ratio be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Footnotes at end of article.

TABLE I.—STRATEGIC BOMBER THRUST-TO-WEIGHT AND TAKEOFF DISTANCE COMPARISON

Bomber	Total thrust at takeoff (pounds)	Bomber weight (pounds)	Thrust-to-weight ratio	Takeoff distance (to clear 50 ft) (feet)
FB–111A	42,000 (2 P. & W. JTF 10A–27D at 21,000).	100,000	0.42	Unknown
B–52G	110,000 (8 P. & W. J57–P–43WB at 13,750).	488,000	.23	10,400
B–52H	136,000 (8 P. & W. JT3D–2 at 17,000).	488,000	.28	9,580
B–52I	210 (4 GE CF6–50E at 52,500).	488,000	.43	[1]~8,000
B–1	120,000 (4 F101–GE– at 30,000).	395,000	.30	7,500

[1] Estimated.

Source: "Aircraft Engines of the World: 1970,". P. H. Wilkinson. "Aviation Week & Space Technology," Mar. 17, 1975. "Standard Aircraft Characteristics: B–52G and B–52H," Air Force, June 1969.

Published descriptions of the joint strategic bomber study also leave the impression that in the analysis, the B–52I was not equipped with cruise missiles, although the B–52 G's and H's and wide-body transports were so equipped:

"Forces subjected to detailed examination included several levels of B–1's, re-engined B–52's, stretched FB–111's, B–52 G's and H's (both as penetrating bombers and stand-off cruise missile carriers), and wide-bodied transports, such as the Boeing 747, as stand-off cruise missile carriers exclusively." [6]

If the B–52I was not coupled with the cruise missile, either as a standoff bomber or as a penetrator in the analysis, then the joint strategic bomber study never analyzed the most logical and inexpensive alternative to the B–1.

Dr. Malcolm Currie, Director of Research and Engineering, told a Senate committee [7]:

"They (cruise missiles) stress the air defenses in a different way than our penetrating bomber forces—that is, they are effective against advanced fighters and countering them requires extensive advanced-capability SAM's."

It would logically follow that to avoid using cruise missiles at all on an airplane equipped to carry them would be a poor test of that option.

The Air Force may respond that the bomber study did evaluate the cruise missile, although it was launched from aircraft other than the B–52I. The study found that the cruise missile suffered attrition because of terminal defenses.

Thus the Air Force could argue that using the B–52I as the missile carrier would not change the outcome. As the next point will explain, the cruise missile selected for the study was inferior in range, radar cross section, minimum altitude, and speed in comparison to the missile that should have been selected. The performance of the cruise missile would necessarily have been better had the proper missile been examined.

The fact that the Air Force refers to the penetration performance of the B–52I and not to its stand-off performance [8] suggests that they did not consider an all stand-off bomber version of the B–52I. Yet a B–52I in a pure stand-off mode would require much less tanker support than a B–1 as well as having a much lower investment cost, and hence would be much cheaper.

Thus the joint strategic bomber study appears to have shortchanged the lower cost B–52I in several important respects which undoubtedly biased the study's conclusions.

SECOND SHORTCOMING: MISREPRESENTATION OF THE STAND-OFF BOMBER CRUISE MISSILE

The performance of the stand-off bomber concept was adversely affected in the study by the choice of the cruise missile that it carried. The study assumed that the Air Force ALCM carried by both the stand-off bomber and the B–52 was the longer range Air Force version with a belly tank for extra fuel.[9] But as a respected trade journal has pointed out, the Air Force's limited ALCM, to go to its maximum range:

Would require flying a high altitude profile at a reduced air speed, making the missile vulnerable to radar detection and the Soviet's surface-to-air missile network.[10]

There is a better cruise missile that should have been used in the study, the Navy's cruise missile, Tomahawk. The Navy's missile has "greater range—than the ALCM—lower altitude flight capability and precision accuracy," a Defense Department official has said. The Navy's missile also will have a "radar cross section smaller than the air-launched cruise missile with the fuel tank," he added.

Furthermore, the shorter range of the ALCM than the Navy Tomahawk forces the stand-off bomber to go closer to Soviet air defenses than it otherwise would. And its shorter range keeps it from being able to attack the targets deeper inside the Soviet Union. Since the figure of merit in the basic study was number of targets destroyed, it is not too surprising that the stand-off bomber did not finish so well. Had it used the Navy's Tomahawk, its performance would have been better.

Indeed, one of the more surprising results of the joint strategic bomber study was the poor showing of the cruise missile carrier relative to the B–1 and upgraded B–52. According to the Air Force, this poor showing was not because the carrier aircraft themselves were subjected to attack.[11] Thus, if the carrier aircraft were not themselves attacked, the poor showing of the cruise missile carrier concept must have been because of the vulnerability in the study of the cruise missile itself.

This result does not seem realistic in view of the heralded invulnerability and effectiveness of the cruise missile as cited by the Navy and other Defense Department officials.

This result could only come about if some important characteristics of the cruise missile and/or the air defenses it faced were improperly specified in the study. There is reason to believe that this was done. The open literature contains enough references to the study to permit informed assessment of the study's misrepresentation of the cruise missile.

Possible explanations for the poor showing of the cruise missile are:

Overstatement of cruise missile radar cross section.

Understatement of cruise missile range.

Overstatement of air defense level assumed to confront the cruise missile.

Understatement of cruise missile evasive maneuver capability.

Understatement of cruise missile speed.

Overstatement of infrared signature.

Understatement of the number of cruise missiles capable of being carried by the standoff bomber.

Let us examine each one of these possible causes. It is unlikely that misrepresentation of the cruise missile speed is the major reason for the poor showing, although it probably is one factor. By using the ALCM and not the Navy SLCM, the JSBS reduced the penetration speed of the cruise missile by as much as 20 percent, from mach 0.7 to mach 0.55.[12]

Overstatement of the cruise missile's infrared signature is unlikely to be responsible for the cruise missile carrier's poor showing. The IR signature of the cruise missile, with its small turbofan jet engine, is very

Footnotes at end of article.

small and is really not a factor in cruise missile vulnerability, present or future. Thus, IR signature is eliminated as a possibility.

Overstatement of the cruise missile's radar cross section is a possibility, although this is very much related to the assumed levels of Soviet air defenses. If a vastly improved SAM system is assumed, then radar cross section can be a factor. It would be interesting to know whether the radar cross section used for the cruise missile in the study was the same as the SRAM cross section, or whether it was larger. The Navy believes that its cruise missile will have a radar cross section equal to that of the SRAM [13] which the Defense Department regards as being invulnerable after it is launched. Use of a larger radar cross section would make the cruise missile much more vulnerable in the study. It is possible that this was a major factor.

According to the Air Force,[14] the stand-off bomber, a 747F type transport, would carry 60 ALCM's each. Thus, numbers of cruise missiles carried by the stand-off bomber does not seem to have been a problem in the study.

It thus seems likely that a combination of the three remaining factors—

Level of Soviet air defense assumed to confront the cruise missile:

Understatement of cruise missile evasive maneuver capability; and

Understatement of cruise missile range are primarily responsible for the poor showing of the stand-off bomber/cruise missile system in the joint strategic bomber study. A very heavy level of Soviet air defense, much greater than today's substantial level, could have an adverse effect on the performance of the cruise missile.

This could particularly affect the cruise missile's rating in the study if that same very high level of air defense were not assumed for the other alternatives.

One very important feature of the cruise missile that could have been omitted from the study is its capability to perform evasive maneuvers. If the study assumed that the cruise missile flies in a straight path from the bomber to the target, the cruise missile would then be much more vulnerable to interception by SAM missiles. There are two reasons for this. First, even though the first SAM site that a cruise missile encounters could not react quickly enough to engage a low-flying cruise missile during its short period of visibility, the SAM site radar could transmit the information on the cruise missile's flight path to the next SAM site that the cruise missile, on its straight line flight path, would encounter. This assumes that these SAM sites are "netted." This next SAM site would thus be alerted and have a much better chance of intercepting the cruise missile.

However, the Air Force ALCM as currently configured is capable of executing preprogramed course changes [15] precisely in order both to avoid most SAM sites and to frustrate the transmission of accurate information on its direction and speed from those SAM sites it does encounter to other SAM sites. Thus, if the study did not include the ability of the cruise missile to execute these preprogramed turns, the performance of the stand-off bomber cruise missile concept would be seriously degraded.

There are indications that the ALCM was not given any preprogramed turn capability in the study. Air Force Secretary McLucas stated that a problem of the ALCM in the joint strategic bomber study was that it does "not have the ability to know what is going on around them, and therefore they are very vulnerable to SAM's. This means that you have got to make provisions to program around the SAM, or you need some way of attacking the SAM's. And, of course, the cruise missile does not have that type of capability. So compared to a B–1, which can evade or fly around defenses, we think that the cruise missile is relatively less attractive.[16]

Yet the cruise missile does appear to have such a capability. With the ability to execute many preprogramed turns because of its large computer memory, the cruise missile can be programed to fly around many SAM sites and thus minimize the number it might otherwise encounter, as the following quote indicates:

With the space available in the cruise missile's computer, an infinite number of targets and routes can be prestored and selected just before a mission (Aviation Week and Space Technology 16 February 1976, page 14).

If the study did not include this capability, as Secretary McLucas' testimony seems to indicate, then both the cruise missile carrier and the B–52 were shortchanged in the study.

These three factors may well be responsible for the relatively poor showing of the stand-off bomber concept in the joint strategic bomber study, a showing that is surprising in view of the praise of the cruise missile's invulnerability from a wide spectrum of high defense officials.

THIRD SHORTCOMING: BIASED ECONOMIC METHODOLOGY

The joint strategic bomber study analyzed the life-cycle costs of various force alternatives over the period fiscal year 1975–89.[17] Unclassified sources indicate that the initial study used an equal-cost approach and that the level of spending selected was that to procure and maintain the full B–1 force.[18] The merits of much less expensive alternatives which offer nearly equal effectiveness were thus obscured. Selection of much lower expenditure levels would have been more damaging to the B–1's cost-effectiveness.

No one has proposed that the B–52 be kept in the fleet for another 30 years, the projected lifetime of the B–1. Reengining the B–52 and equipping it with cruise missiles is a very inexpensive way to postpone the need for a follow-on bomber for only another decade or so.

By forcing such a high expenditure level on all the alternatives, the study effectively obscured the value of the tide over B–52 option.

The Air Force has replied in Senate testimony to this criticism by noting that "supplemental analyses" of the joint strategic bomber study did consider three lower cost, equal-effectiveness levels.

However, no indication was given as to how "low" those expenditure levels were. The question remains, did the study consider alternatives at cost levels similar to what it would cost to merely reengine the B–52 and equip it with cruise missiles? And that is $2.1 billion plus missiles.

Furthermore, in all the testimony given concerning the study, no mention is made of the discount rate used in the study. If the discount rate was less than 10 percent, the standard rate required of all Federal agencies by OMB, then the study would be seriously biased in favor of high acquisition cost systems, that is, the B–1—and FB–111H—and against low acquisition cost alternatives, that is, the B–52I.

Another important part of the methodolgy in such comparisons of systems is whether current or constant dollars are used. If current dollars are employed in the study, then inflation works unfairly against those alternatives which have low acquisition costs and high total operation and maintenance costs relative to acquisition costs, such as the B–52I. Use of current dollars would thus bias the report toward the B–1. The correct economic approach is to use constant dollars throughout the analysis, since while inflation drives up the costs of weapons, it also drives up the tax revenues used to pay for those systems.

We need to be sure therefore that the joint strategic bomber study used a 10 percent discount rate and constant dollar costs.

FOURTH SHORTCOMING: FA'LURE TO TAKE INTO ACCOUNT THE OTHER ELEMENTS OF THE TRIAD

Senator THOMAS J. MCINTYRE, chairman of the Senate Armed Services Subcommittee on Research and Development, has pointed out that the joint strategic bomber study biased its conclusions by assuming that alternative bomber forces should be evaluated independently of other elements of the triad. Yet just several hundred Poesidon and Trident reentry vehicles, of about 7,400 now planned, may be able to destroy enough SAM sites to enable easy penetration by cruise missiles.

Mr. President, I ask unanimous consent that a portion of Senator MCINTYRE's letter to the Secretary of Defense on March 14, 1975, be printed in the RECORD at this point.

There being no objection, the excerpt from the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., March 14, 1975.

HON. JAMES R. SCHLESINGER,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: [Deleted.]

Despite this unmistakably, clear Congressional interest in having a full and objective evaluation of the B–1 and its alternatives, I am writing you now to express my deep disappointment that the Joint Strategic Bomber Study failed to meet these standards of completeness and objectivity and, therefore, is a most inadequate tool in informing a Congressional decision about the B–1.

The Study's failure was not in its execution, but in its conception. Its basic premises were flawed and the Study was consequently biased toward the B–1.

1. The Joint Strategic Bomber Study biases its conclusions regarding the B-1 versus an air launch-cruise missile force by assuming that alternative bomber forces should be evaluated independently of other elements of the TRIAD.

You told the Congress in this year's Posture statement:

"Missiles, for example, could help clear the way for bomber penetration, and bombers, in turn, could help to fill the gap of those important targets missed by missiles * * * Consequently, we must emphasize the mutually supporting characteristics of the TRIAD, rather than just the independent capabilities of each of the companies."

Nevertheless, the study rejects your quite reasonable premise when it states: "The synergistic effects of the TRIAD are not tested. At entry the bomber forces are assumed to face undergraded defenses." (Page 2. Volume 1).

By insisting that our bomber force be evaluated independent of the other arms of the TRIAD, the Study fundamentally biases its results in favor of the B–1, because only the B–1, armed with its SRAMS, could penetrate undegraded terminal SAAM defenses efficiently.

But if the Study had assumed, as you do, the use of our ICBM's or SLBM's to suppress dedicated Soviet terminal SAM defenses, over 1500 more cruise missiles (in the Study's Force V) would have penetrated to the target. Therefore, the cruise missile force would be the most effective force by far since it would deliver some 400 weapons on these most difficult targets than any of the B–1 forces.

This is a critical flaw in the Study. I am particularly distressed that the Study proceeded with this bias even though the GAO forcefully exposed the fallacy of doing so in its letter to you dated September 4, 1974.

2. The Joint Strategic Bomber Study

Footnotes at end of article.

bases its conclusions in favor of the B–1 by unrealistically excluding from consideration strategic warning, force generation, and airborne alert as with regard to a Soviet surprise attack.

In excluding these considerations (see Volume I, page 4), the Study contradicts your own discussions of B–52 alert rates in this year's Posture statement:

"Inasmuch as we consider a Soviet surprise attack 'out of the blue' to be quite unlikely under the current circumstances, we believe that a further modest reduction in the proportion of the force to be maintained on day-to-day ground alert would be acceptable. A nuclear attack on the United States, even one which is limited to our strategic offensive forces, would most likely be preceded by a series of crises, and certainly by a sharp deterioration in our relations with the Soviet Union. Under these circumstances, we would have the time to place virtually the entire force on ground alert." (Page 11–35, Annual Defense Department Report, FY 1976 and 197T).

If the Study had assumed, as you apparently do, that we can rely on strategic warning to aid the survival of our bomber force, the B–1, at best, has no advantage over B–52's or cruise missile carriers and in certain cases may well be inferior to these alternatives. If we rely on ground alert we can place a larger portion of the force on alert and in a higher state of readiness than the Study assumed. We can even use rocket-assisted take-off to speed their departure. In these cases, the B–52's and cruise missile carriers, would have about the same pre-launch survivability as the B–1, so the advantage to the B–1, which the Study built in its initial assumptions, would evaporate.

The Study also consciously ignored airborne alert even though this is a more survivable mode, given strategic warning, even though we have used such an alert in the past during crises, and even though such an alert has the added advantage of its being able to survive a surprise Soviet submarine-launched cruise missile attack which may be at least as plausible as a Soviet depressed trajectory SLBM threat. Since the B–1 (with its high wing loading and high rate of fuel consumption) is not a good vehicle for airborne alert, both the B–52 and cruise missile carriers would be vastly superior for this purpose. [Deleted.]

"Long range interceptors specifically developed to attack ALCM carriers were not used because the command control network capable of directing employment of such a system well outside AWACS and ground based radar coverage could not be defined." (Page 8, Joint Strategic Bomber Study, Volume I).

Nevertheless, Dr. Currie incorrectly stated in summarizing the major observations of this Study:

"An all-stand-off cruise missile force (using wide bodied transport) is not promising because it invites attack on the relatively few weapons carriers before their cruise missiles can be launched."

If the decision for the B–1 depends, as Dr. Currie suggests, partly on its presumed special capability to escape a long range interceptor, then the Study should have detailed specifically how it compares with other alternatives in this regard. In fact, the B–1 might well be equally, if not more susceptible to long range interceptor threat because the B–1's could be potentially more vulnerable when they take their last fueling close to the Soviet homeland, and yet the number of B–1 aircraft would not be appreciably greater than that of the cruise missile carrier.

The Study also argues that the high penetration probability of the B–1 through a Soviet AWACS/high performance interceptor threat was critically dependent upon the success of the B–1's ECM. Yet, in your evaluation of the American AWACS you conclude that our best offense could not defeat the U.S. AWACS which you are proposing. When advocating the B–1, a high performance AWACS is vulnerable to ECM. Yet when advocating your AWACS program, it becomes invulnerable to ECM. Surely, you cannot have it both ways.

5. The Joint Strategic Bomber Study's most fundamental bias in favor of the B–1 was its design and evaluation of alternative bomber forces on the basis of the cost of the B–1 rather than designing a precise military mission and comparing each alternative bomber force's capability to fulfill that mission.

The Study assumed at its center that as a Nation we wished to spend the cost of a B–1 force and that indeed we needed full range of its military capability.

Mr. PROXMIRE. In 1975, Secretary of Defense Schlesinger testified that:

Each leg of the triad is not required to retain independently a capacity to inflict in a second strike unacceptable damage upon an attacker. Instead, the three legs of the triad are designed to be mutually supporting.[19]

Thus, while a comparison of bomber alternatives assuming no contribution from the other parts of the Triad is a useful option to analyze, it is by no means sufficient. The alternatives should also be analyzed for cost-effectiveness assuming at least one and preferably several levels of contribution from SLMB's and ICBM's. By failing to do so, the study's results become far less meaningful.

FIFTH MISREPRESENTATION: FAILURE TO ACCOUNT FOR STRATEGIC WARNING

Senator MCINTYRE has also correctly criticized the joint strategic bomber study for assuming a Soviet attack without any strategic warning. While it is a useful exercise to examine such a possibility, it is poor planning to examine only that case. Additional options assuming various levels of strategic warning are clearly called for.

The result of examining only the "out of the blue" attack option is to favor those aircraft that are kept on higher peacetime alert rates. B–1 peacetime alert rates are expected to be much higher than those for the B–52, primarily because keeping a B–52 on alert over an extended period of time costs more than for a B–1. Under crisis conditions, higher levels of all bombers could be kept on alert. Thus, assuming only an out-of-the-blue attacks biases the study against the B–52 and in favor of the B–1.

The incorrectness of examining only this type of attack is underscored by Defense Secretary Rumsfeld, who in his 1977 posture statement states that "a Soviet surprise attack 'out of the blue' is unlikely under current circumstances." Unless the Department of Defense believes that its Secretary is mistaken on this fundamental point, it should go back and redo the joint strategic bomber study taking strategic warning into account.

SIXTH MISREPRESENTATION: MISSTATEMENT OF PROJECTED B–1 PERFORMANCE CHARACTERISTIC

As incredible as it may seem, the joint strategic bomber study used projected performance data for the B–1 that exceeded what an Air Force convened panel of experts considered would be "most probable" for the B–1. This panel, organized by then-Secretary of the Air Force John McLucas to review the B–1 program, made three estimates for each of several critical design and performance characteristics for the B–1. These three estimates, the "possible"—optimistic—"most probable"—likely—and "reasonably adverse"—pessimistic—values for B–1 characteristics were an attempt to show a range of outcomes. One would reasonably assume that the bomber study would use what this panel of nationally recognized, Air Force appointed experts, chaired by Dr. Raymond Bisplinghoff, believed to be the "most probable" values for the B–1. Yet the Air Force admits that the performance data:

Used in the Joint Strategic Bomber Study falls between the "Possible" and "Most Probable" estimates discussed in the Bisplinghoff report.[20]

In contrast the Assistant Secretary of the Air Force for Research and Development, Dr. Walter LaBerge, has openly stated to the Senate that B–1 performance:

Probably will be very close to the most probable category of the middle column on the Bisplinghoff Report in weight, engine thrust, drag, range, and things of that sort.[21]

That is, the Air Force assumed B–1 performance capabilities higher than what their own panel of experts and their own Chief of Research and Development believed to be most probable. This naturally would help to make the B–1 look better than its alternatives in the study.

The end result of this series of misrepresentations in the joint strategic bomber study is to cast grave doubts on the validity of its conclusion that the B–1 is the most cost-effective bomber alternative. I believe that the Department of Defense should go back and redo their study, taking the other legs of the TRIAD and strategic warning into account and use more reasonable characterizations of the bomber and cruise missile alternatives under economically sound assumptions.

Mr. President, I ask unanimous consent that table II from the Management Review Committee on the B–1 be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II.—ESTIMATED PERCENT VARIATIONS IN PERFORMANCE PARAMETERS FROM AIR FORCE DEVELOPMENT ESTIMATES

Performance parameter	Possible status	Most probable status	Reasonably adverse
Takeoff weight	+10	+10	+10
Empty weight	+15	+19	+26
Maximum refueled weight	+8	+9	+11
Range:			
Subsonic-variable	−4	−11	−20
Subsonic-constant	−6	−18	−29
Supersonic-variable	−4	−9	−14
Takeoff distance:			
Standard day	+15	+15	+15
Hot day	+13	+13	+13
Landing distance	+6	+6	+6
Thrust margin	+6	−9	−14
Refueled altitude	−12	−15	−21

THE B-1: A LOOK AT THE FACTS—PART VI

Mr. President, I have noticed that in his rebuttals to my prior five speeches on the B-1 bomber, my friend and colleague from Arizona (Mr. GOLDWATER) has expressed some perplexity as to my position. Today, therefore, I will summarize the conclusions I have reached during this debate and point out the facts that support those conclusions.

Let me be as clear as possible at the beginning. I am completely opposed to the B-1 bomber. I will vote for the McGovern amendment to delete all production funding for the aircraft.

Why? Because I have concluded that the $21 billion B-1 is a national disaster. It will rob funding from other essential defense programs and squander it on an obsolete military concept. Instead of the B-1, we should re-engine the B-52 fleet as an interim measure and proceed with plans for a stand-off bomber platform. Surely there can be no confusion about this position.

Now, what are the facts, the evidence that backs up this stance? I hope my worthy adversary from Arizona will examine the following six critical points of fact.

1. COST

The most dramatic issue is that of cost. The Selected Acquisition Reports from the Department of Defense place the cost of the B-1 program at $21.6 billion. As a matter of fact, it went up $200 million just in the last 3 years. That represents $88.6 million each for 244 airplanes. You can think of each plane as a flying Rayburn Office Building in terms of cost. And there is every indication that each plane eventually will cost $100 million each.

When Congress first was briefed on the B-1 bomber and its planning estimate was set forth in June of 1969, the total program costs were $8.8 billion. No provision was made for inflation or logistic support and additional procurement costs. The quantity was 246 for a program unit price of $35.8 million and a procurement unit price of $29 million.

By June of 1971, the development estimate for the B-1 program, including inflation, had risen to $12 billion with the quantity staying the same. This made for a procurement unit cost of $35.4 million and a program unit cost of $45.6 million. At the present time, the B-1 program is estimated to cost $21.6 billion for 244 aircraft and a program unit cost of $88.6 million.

Mr. President, I ask unanimous consent that a table of B-1 costs be printed in the RECORD at this point.

There being no objection, the table of costs was ordered to be printed in the RECORD, as follows:

TABLE 1.—B-1 SAR COST ESTIMATES

[Dollar amounts in millions of dollars]

Description	Planning estimate, June 1969 [1]	Development estimate, June 1971 [2]	Current estimate [2] September 1974	Current estimate [2] September 1975	Net change
Development	$1,800.0	$2,685.0	$3,615.6	$3,884.0	+$268.4
Procurement	7,000.0	8,533.8	15,017.0	17,312.0	+2,295.0
Subtotal	8,000.0	11.218.8	18,632.6	[3] 21,196.0	+2,563.4
Logistic support and additional procurement costs	(4)	829.5	388.7	(4)	−388.7
Total	8,800.0	12,048.3	19,021.3	21,196.0	+2,174.7
Escalation included above	0	1,499.9	6,422.8	10,172.4	+3,749.6

Description	Planning estimate, June 1969 [1]	Development estimate, June 1971 [2]	Current estimate [2] September 1974	Current estimate [2] September 1975	Net change
Quantity:					
Development	5	5	5	4	−1
Production	241	241	239	240	+1
Total	246	246	244	244	0
Procurement unit cost	$29.0	$35.4	$62.8	$72.1	+$9.3
Procurement unit cost (development and procurement)	35.8	45.6	76.4	86.9	+10.5

[1] Stated in 1968 dollars.
[2] Estimates are in then year dollars.
[3] As of Dec. 31, 1975, program costs had increased to $21,419,000,000 and the Air Force advised us that it is expected to increase an additional $200,000,000. They stated these increases were due to reductions in requested funding.
[4] Not reported.

Of course this $21.6 billion does not include the full costs of the B-1 program. Additional costs such as weapons payloads, operation and maintenance, tankers, if necessary, and upgraded avionics. Examining the full life cycle costs of the B-1 results in a $91 billion total in current dollars by the Brookings Institution and a similar figure by the Center for Defense Analysis. The Air Force has not provided as its own life cycle costs in this debate although I have asked for it in two prior speeches. I think the Senate is entitled to know what we are buying when we move ahead with this program, and I think the Air Force has an obligation to provide it.

Mr. President, I ask unanimous consent that various tables from the Brookings Institution study called Modernizing the Strategic Bomber Force be printed in the RECORD at this point as tables II, III, and IV.

There being no objection, the tables were ordered to be printed in the RECORD as follows:

TABLE II.—PROJECTED COSTS OF THE BOMBER AND TANKER PROGRAM, FISCAL YEARS 1976-85

Category	Fiscal year — 1976	197T [1]	1977	1978	1979	1980	1981	1982	1983	1984	1985
	Millions of constant 1976 dollars										
Major system acquisition:											
B-1	750	200	1,650	2,020	2,170	2,370	2,040	1,850	1,100	0	0
Advanced tanker	5	2	50	100	570	520	1,040	1,040	1,040	1,040	1,040
SRAM	3	2	35	210	210	210	210	420	420	420	420
ALCM	50	10	75	100	100	210	210	210	210	210	210
Other investment	1,260	320	1,260	1,260	1,260	1,260	1,260	1,260	1,260	1,260	1,260
Direct operating	1,600	400	1,600	1,600	1,600	1,600	1,610	1,640	1,700	1,780	1,940
Indirect operating	1,790	450	1,790	1,790	1,790	1,790	1,800	1,820	1,840	1,890	1,980
Total	5,460	1,380	6,460	7,080	7,700	7,960	8,170	8,240	7,570	6,600	6,850
	Millions of current dollars										
Total [2]	5,460	1,380	6,910	7,950	9,100	9,740	10,360	10,840	10,330	9,340	10,050

[1] 197T is the designation for the 3-month transition period from the end of fiscal 1976 on June 30, 1976, to the start of fiscal 1977 on Oct. 1, 1976.
[2] Figures are rounded.

Sources: Authors' estimates based on data in various Department of Defense publications, in "The Budget of the United States Government, Fiscal Year 1976" (1975), and in testimony from hearings on the fiscal 1975 Defense Department budget before the Senate Armed Services and Appropriations Committees. (See app. A for a description of the costing methods.)

TABLE III.—PROJECTED SYSTEMS AND COSTS, FORCE 2, FISCAL YEARS 1976–85

[Total obligational authority in millions of fiscal 1976 dollars]

Category	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985	Average annual costs

TABLE IV.—ESTIMATED PROCUREMENT COSTS FOR THE B–1 BOMBER, 1976–83

[Total obligational authority in millions of fiscal 1976 dollars]

Item	1976	1977	1978	1979	1980	1981	1982	1983
Number procured	0	8	22	31	48	48	48	34
Cost of procurement	150	1,200	1,800	2,000	2,250	1,980	1,850	1,100

Source: "Fiscal Year 1975 Authorization for Military Procurement, Research and Development, and Active Duty, Selected Reserve and Civilian Personnel Strengths," Hearings before the Senate Armed Services Committee, 93 Cong. 2d sess. (1974), pt. 7, p. 4000.

Consider what we could purchase with the same amount of money. For the $21 billion direct costs of the B–1 program, the Nation could fund 10 invulnerable Trident submarines which would carry about 2,000 warheads. It would also pay for reengining the B–52 fleet and pay for the annual costs of an Army armored division for 5 years.

Looking at the problem from the perspective of this year's request for the B–1 program of $1.5 billion, the same amount of money would build 1 Trident submarine with almost 200 warheads or over 100 F–15 fighters or 10 destroyers of the DD–963 class or 6 attack submarines of the SSN–688 class.

Or for the price of the B–1 this year alone the United States could pay the annual recurring costs of five Army armored divisions including procurement, military pay, and operation and maintenance.

At a time when there is a national debate about defense programs there should be a different method of judging relative need. Each program should be measured against competing programs from the other services. Only with this type of internal competition will the most efficient alternatives be selected.

2. PERFORMANCE

By any standard, the B–1 is not the plane the Air Force told Congress it wanted in 1969. In almost every major category of performance, B–1 characteristics have slipped.

In 1969, its takeoff distance was estimated to be 6,000 feet. By the development estimate in June 1970, it had slipped to 6,500 feet. And now, based on the September 1975 estimate, it is 7,500 feet. This means that the takeoff distance has degraded by 15 percent under the development estimate and 25 percent under the planning estimate.

The takeoff gross weight has increased 11 percent over the development estimate from 356,000 pounds to 395,000 pounds. The number of short range attack missiles carried by the B–1 was estimated to be 32 in the planning estimate. The development estimate dropped that number to 24, the current figure.

Supersonic penetration speed has been cut drastically even though the B–1 has been sold to Congress on its supersonic capability. The planning and development estimate for supersonic penetration speed was mach 2.2. Now the Air Force has reduced that capability to mach 1.6.

In my speeches I have challenged the Air Force to declassify the data about other performance characteristics. Their answers have strongly suggested that the B–1's subsonic range, supersonic range, and maximum speed at sea level also have been degraded. Mr. President, I ask unanimous consent that table V showing changes in the estimate of B–1 bomber performance be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V.—CHANGES IN ESTIMATES FOR SELECTED B–1 PERFORMANCE OR TECHNICAL CHARACTERISTICS

	Nautical miles		Maximum speed, sealevel (mach)	Supersonic penetration speed (mach)	Payload-internal SRAM'S (number)	Takeoff gross weight (pounds)	Takeoff distance (feet)
	Subsonic range	Supersonic range					
Planning estimate June 1969	Deleted			2.2	32	358,000	6,000
Development estimate June 1970				2.2	24	356,000	6,500
June 1971 estimate				2.2	24	360,000	6,500
June 1972 estimate				2.2	24	368,600	6,760
June 1973 estimate				2.1	24	389,772	6,950
June 1974 estimate				2.1	24	395,000	7,500
September 1975 estimate				1.6	24	395,000	7,500
Degradation—development estimate to September 1975 estimate				.6	0	39,000	1,000
Percent				(27)		(11)	(15)

3. DELIVERY SCHEDULES HAVE SLIPPED

In addition to the degradation in performance of the B–1, the entire program is behind schedule. Delivery of the first B–1 has been delayed 6 months until late 1979. The initial operational capability of the aircraft has been delayed 14 months until mid-1982. These delays are an economic impact in that generally they represent increased costs to the Government. Mr. President, I ask unanimous consent that table VI be printed in the RECORD at this point showing the B–1 schedule slippages.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE VI.—B–1 SCHEDULE, PLANNING ESTIMATE, DEVELOPMENT ESTIMATE, AND RECENT ESTIMATES

	Planning estimate, June 1969	Development estimate, June 1970	Current estimates		Delay (months)
			September 1974	September 1975	
Production decision	April 1972	September 1974	November 1976	November 1976	0
Complete product verification tests of engine [1]	February 1974	December 1974	do	do	0
Delivery of the first production aircraft	April 1974	February 1977	February 1979	August 1979	6
Initial operational capability (IOC) [2]	May 1976	March 1979	March 1981	May 1982	14

[1] The product verification test replaced the originally planned qualification test.

[2] The program schedule defines IOC as delivery of 65 aircraft to SAC.

4. FLY-BEFORE YOU-BUY VIOLATED

The B–1 program is violating the fly-before-you-buy philosophy. The B–1 go ahead decision in November of 1976 will be made without testing of a number of critical capabilities of that aircraft including all weather capability, weapons delivery and defensive avionics. The Senator from Arizona (Mr. GOLDWATER) has indicated that he does not have full faith in the missile fleet because it has not been tested with a live warhead. It should be pointed out that the B–1 weapons delivery will not be tested before the approval decision is given to the Department of Defense.

The failure to have a rigid and thorough testing program before a production decision is made by the Congress encourages concurrency—the simultaneous production and testing of equipment. In the past this has led to cost overruns since production models have to be refitted or modified to adapt to changes required by the testing program.

The most important argument here is that Congress should not give its approval to a $21 billion program that has not been adequately tested first. We have been told that, Mr. President, over and over again and we should pay attention to it. For example the automatic terrain-following radar in the B–1 is its most critical navigational component. Without the ability to hug the ground while it penetrates Soviet airspace, the B–1 would be a sitting duck. The General Accounting Office has noted that the terrain-following radar has only been installed in aircraft No. 3 and that 400 feet is the lowest clearance altitude to be tested before the production decision. In other words, the B–1 will not have a test of this system at its operational altitude before November. Furthermore, the production decision will be made without testing of the automatic terrain-following radar at night, in bad weather, or in extremely mountainous terrain.

The GAO also points out that the entire airplane will not undergo electromagnetic pulse testing before the production decision. This type of testing is designed to see how well the aircraft survives in a nuclear blast environment. Although various components will be tested, if the entire aircraft is in any way deficient, there could be large redesign costs associated with any required fix. It would be much wiser to have the results of the full test before moving to production.

5. AIRCRAFT DEFICIENCIES

Testing to date has revealed a number of problems with the B–1. Power sources to start the engines have failed in cold weather. According to the GAO, there is a mechanical breakdown in the coupling of gearboxes and auxiliary power units at a rate of 25 percent. Furthermore starting the engines takes longer than estimated. This is a particularly crucial failure since it makes the B–1 more vulnerable on the ground. The GAO states that the Air Force and Rockwell agree that this problem will not be fixed before a production decision is made.

Reference also needs to be made to the unexpected buffeting and vibration of the B–1 test aircraft. Severe buffeting could interfere with the operation of offensive avionics equipment. The severity of the current problem is difficult to assess at present.

6. THE SUPERSONIC SPEED ISSUE

Although it may be startling to most Americans who have heard about the supersonic capabilities of the B–1 bomber, this speed is not likely to be used on many missions. Although a supersonic capability has been built into the B–1 at a cost of $3 billion, there are very few situations where it can be used.

The B–1 flies to and from the U.S.S.R. at high altitudes and subsonic speeds to conserve fuel. Before it penetrates hostile airspace, it dips down close to the Earth to avoid identification by radar. However, since the B–1 cannot fly at supersonic speeds at low altitudes, again this capability will not be used.

Only immediately before or after bombing run would the plane use its supersonic speed to any extent and then it is severly limited for two reasons. First, using the afterburners on the B–1 will create an observable heat source that could bring destruction from heat seeking missiles. Second, supersonic speed consumes so much fuel that it cannot be used for long periods of time.

The lack of importance of supersonic speed is indicated by the Air Force decision to cut it in half from mach 2 2 to mach 1.6. This means that at the lower speed of mach 1.6, the B–1 could not outrun many of the Soviet Union's modern fighters.

If the Air Force had recognized the lack of value in supersonic capability earlier, they could have avoided building the B–1 around that requirement. The result would have been an aircraft designed with better range and payload capacity than the existing B–1.

The Air Force argues that the supersonic capability should be retained for the high altitude, high speed penetration option—exactly the same mission that was the death of the B–70 program. High-speed, high-altitude penetration of the U.S.S.R. would be a military catastrophe.

Mr. President, the irony in the B–1 debate this year is that we can safely afford to wait before committing the Nation to a $21 billion program. Alternatives are available at far less cost. For example:

Reengining the B–52G and H fleet at a cost of $2.1 billion, which will give them longer life, improved range, takeoff distance, and payload capacity

Equip the newly engined B–52's with long-range cruise missiles. This would allow the B–52 to stand off, away from the U.S.S.R. air defenses—the best in the world with 10,000 SAM sites, 2,600 interceptors and 5,500 radars—and launch thousands of cruise missiles toward Soviet targets.

Purchase new wide-bodied jets for use as stand-off bombers. This alternative could cost one-half to one-third the cost of the B–1. Carrying up to 60 cruise missiles each, these bomber platforms could circle above friendly or neutral territory and still be in range of most all Soviet targets. Cruise missiles offer accuracy, numbers, and low cost.

Since the B–1 bomber force will be an addition to rather than a replacement for the B–52 fleet, there is ample time to wait before making a major new bomber decision. The B–1 will overlap the B–52's by 10 to 15 years. In the meantime, there are promising new technologies that could be incorporated into a new bomber design later if necessary.

The age of the manned strategic penetrating bomber is over. Flying missions into the heart of the U.S.S.R. with gravity bombs is virtually a suicidal flight.

Think of it. The Soviet Union has devoted more resources for defensive purposes than any nation in the history of the world. Our B–1's would have to take off from U.S. bases, where they are observable to Soviet satellites; fly toward the U S.S.R. where they could be picked up by Soviet over-the-horizon radar and long-range acquisition radar; then find a hole in the Soviet radar net consisting of 5,500 radar sites; fly around the 10,000 surface-to-air missiles deployed on the perimeter of the U.S.S.R. and clustered around specific targets; avoid being detected and shot down by the 2,600 Soviet interceptors; elude conventional ground-to-air munitions around terminally defended targets; blast entrance and escape paths with SRAM missiles without giving away its position; bomb the targets; escape the nuclear blast; and find a way home through the hundreds if not thousands of other nuclear blasts going off in the atmosphere. That is about as close to a suicide kamikaze mission as I can envision.

It may be a glamorous mission but it is an unnecessary cne. Modern technology can supply us with enough cruise missiles to saturate any known Soviet targets on the bomber target list. And this can be accomplished without risking the lives of the pilots by dashing inside the U.S.S.R.

But just as the Navy could not give up its battleships, the Air Force refuses to recognize the end of the World War II bomber mission. It almost makes me think that if the Air Force had a ground force mission, we still would be breeding cavalry horses.

(This concludes additional statements submitted.)

SEVERAL SENATORS. Vote! Vote!

Mr. STENNIS. The yeas and nays have been ordered, as I understand it, Mr. President.

The PRESIDING OFFICER. That is correct. All time has expired. The question is on agreeing to the amendment. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Louisiana (Mr. JOHNSTON), and the Senator from Vermont (Mr. LEAHY), are necessarily absent.

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE), and the Senator from Vermont (Mr. STAFFORD), are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The result was announced—yeas 59, nays 36, as follows:

[Rollcall Vote No. 297 Leg.]

YEAS—59

Abourezk	Ford	Morgan
Anderson	Gravel	Moynihan
Bayh	Hart	Muskie
Biden	Haskell	Nelson
Brooke	Hatfield	Nunn
Bumpers	Hathaway	Packwood

NOT VOTING—5

Johnston	Mathias	Stafford
Leahy	McClure	

So the amendment was agreed to.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BROOKE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ADDITIONAL STATEMENT SUBMITTED ON THE ENFORCER AIRCRAFT

Mr. PROXMIRE. Mr. President, we are faced with a very simple proposition on this issue of the Enforcer aircraft. It is called "sorry—not invented here." That is the catch phrase for the Department of Defense when it comes to any idea, any concept that they have not requested or funded. It just cannot be any good. If its not invented here—we do not want it.

That is what has faced the question of whether or not to field test the Enforcer aircraft from the very beginning. That and the threat that if the Enforcer tests out well, it might make the Air Force look bad for pressing forward with a different close support aircraft at five times the cost.

Let me make my position clear. I support a thorough test of this aircraft. I do not know if the Government should purchase it even given a successful test. I do not know if it needs to be opened up to full competitive procurement at that time. As a firm believer in competition I think the aircraft will rise or fall on its own merits.

Here is an aircraft that can fly more sorties than its competition, is one-half the size, one-half the radar signature, and one-quarter the infrared signature. It will have about one-third the probability of being hit. Twenty percent of the Enforcers weight empty is armor while only 6.5 percent of the A–10 is armored. As for tank killing, there is evidence that the Enforcer, equipped with the NATO Aden Defa 30 millimeter pod—two per aircraft—will be twice as effective as the A–10. Using this new data, it can be seen that only 252 Enforcers would have the same tank kill capability as 504 A–10's. Furthermore one must consider that the A–10 may have a greatly degraded capability to land on unimproved or nonpaved fields. If this is so, the A–10 will have less usefulness in Europe during conventional war but the versatile Enforcer could be a real work horse. And the Enforcer would only use one-fifth as much fuel as the A–10—a critical factor in a war-torn environment where transportation and fuel are scarce. All of this at a price of between four and five Enforcers for every A–10.

Now, Mr. President, I cite these comparisons with the A–10 not because I do not think it is a good plane but because it demonstrates the need to fully test the Enforcer. I supported the A–10 even before the Air Force did, back in the days when it was the A–X and the Air Force was not sure they even wanted it. I support the A–10 today. It is a fine aircraft and we badly need close air support for our ground troops.

But I am concerned about the vulnerability, cost, and effectiveness figures I just presented. Under these conditions, given the facts as presented in testimony before the Tactical Air Subcommittee of Senate Armed Services, considering the tie vote in that subcommittee and the overwhelming vote in the Defense Appropriations Subcommittee, I believe the Enforcer should be tested. Beyond that—who can tell what course of action would be prudent. But for now let us get the facts on which to make this later judgment.

UP AMENDMENT NO. 679

Mr. STENNIS. Mr. President, we have one matter here that we have had what I think was a full debate on. We have several amendments that we can go on and vote on, I think; the Enforcer in particular.

The PRESIDING OFFICER. If the Senator will suspend, according to the previous order, there is an agreement to vote immediately on unprinted amendment No. 679 by the Senator from Nevada (Mr. CANNON).

The yeas and nays have been ordered.

The question is on agreeing to the amendment of the Senator from Nevada (Mr. CANNON).

The clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Louisiana (Mr. JOHNSTON) and the Senator from Vermont (Mr. LEAHY) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE) and the Senator from Vermont (Mr. STAFFORD) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The result was announced—yeas 68, nays 27, as follows:

[Rollcall Vote No. 298 Leg.]

YEAS—68

Abourezk	Domenici	McGovern
Allen	Durkin	McIntyre

NOT VOTING—5

Johnston	Mathias	Stafford
Leahy	McClure	

So Mr. CANNON's amendment was agreed to.

Mr. CANNON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HELMS. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator from North Carolina is recognized.

Mr. HELMS. Mr. President, I raise the point of order that the amendment comprising section 843(g)——

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

POINT OF ORDER

Mr. HELMS. Mr. President, I raise a point of order that the amendment comprising section 843(g) of H.R. 7933 is general legislation and not in order to a general appropriations bill under rule XVI.

I ask for a ruling that section 843(g) constitutes legislating on an appropriations bill. That subsection changes hospital payments from charges to cost reimbursement for services to CHAMPUS beneficiaries. By requiring hospitals to accept substantially reduced CHAMPUS payments as payment in full, the appropriations bill clearly charges existing CHAMPUS authorizing legislation which originated in the Armed Services Committee. The Appropriations Committee has the power to propose restrictions on and reduction in funding, but it cannot change the substance of the authorizing statute.

Section 843(g) provides that no funds may be used to pay hospital charges in excess of costs as determined under medicare. That provision will reduce CHAMPUS payments to hospital by approximately $33 million or about 5 percent.

Under current law, hospitals are not required to accept CHAMPUS payments as payment in full for services rendered. In practice they have done so because CHAMPUS has paid current hospital charges. Since acceptance of reduced CHAMPUS reimbursement as payment in full is a new legislative proposal changing the substance of authorizing legislation, it is not a proper amendment on an appropriations bill.

The PRESIDING OFFICER. The point of order has been raised by the Senator from North Carolina that the language on page 53, beginning with line 11, is legislation on an appropriations bill. Under paragraph 4 of rule XVI, the point of order is well taken. The language objected to is legislation on an appropriation bill, and therefore the amendment is not in order.

Mr. STENNIS. Mr. President, the Chair is ruling now with reference to language in the House bill, to which certain language was added by the Senate committee. I raise the issue of germaneness—that the additional language added by the Senate committee is germane to that House language.

Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. The Chair must hear the point being made.

Mr. STENNIS. Mr. President, I know this is raised in good faith, but in all fairness to all involved, we should get down

to section 843, on page 52, which is language in the appropriations bill put there by the House; and it is subject to a point of order if originally raised here as Senate language. But it is already in the bill, and we are not permitted to modify it in any way, except on the ground of germaneness, and it is germane to the language of the House bill.

Mr. HELMS. Mr. President, I ask for the yeas and nays.

Mr. STENNIS. It is in order, notwithstanding the point made.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ROBERT C. BYRD. Mr. President, no debate is in order once a point of germaneness has been raised. I ask unanimous consent that the rollcall vote which I understand Mr. HELMS will request go over until tomorrow. Senators on both sides have been told that there will be no more rollcall votes tonight.

The PRESIDING OFFICER. Under the precedents of the Senate, the point raised by the Senator from Mississippi regarding germaneness comes too late, because the point of order raised by the Senator from North Carolina had been sustained. Once sustained, the question of germaneness is moot.

Mr. STENNIS. Mr. President, that is all right. I do not mind that. But there seem to be some lessons taught to the Senate here. This matter of germaneness is raised many times, and the membership are all the time telling what they are voting on and how to interpret the issue, and many of them have come to me about it. I am not complaining.

Mr. HELMS. Mr. President, will the Senator yield?

Mr. STENNIS. Yes.

Mr. HELMS. Mr. President, I ask unanimous consent that it be in order for the Senator from North Carolina to request that there be a rollcall vote notwithstanding the ruling of the Chair with respect to the point of order.

Mr. STENNIS. Mr. President, if the Senator will yield, there will have to be some discussion of this matter.

Mr. HELMS. I understand.

Mr. STENNIS. On each side, a short discussion.

Mr. HELMS. I did not want the Senator to be shut off.

Mr. STENNIS. That is mighty nice, mighty fine. I was not complaining. I just say we ought to do something about these rules.

Mr. ROBERT C. BYRD. Mr. President, the point of order has been made and the issue has been settled. I did not understand that the Chair had ruled when the Senator from Mississippi raised the question of germaneness, but the matter is settled.

Mr. HELMS. From my point of view that is satisfactory, but I did not want the Senator from Mississippi to be cut off, and I am perfectly willing to have a vote.

Mr. STENNIS. I am advised, Mr. President, if the Senator will yield, you can withdraw it and redo the thing tomorrow, and we will get a vote in that way.

The PRESIDING OFFICER. It would take unanimous consent.

Mr. HELMS. I will be glad to do that. I ask unanimous consent to be permitted to withdraw it, with the understanding that I will raise the point of order tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STENNIS. I certainly thank the Senator, and we will try to reduce this down to the real issue and have a very short discussion.

Mr. HELMS. I thank the Senator.

Mr. STENNIS. Thank you very much.

Now, Mr. President, there is a matter here—if we may have quiet—the Senator from Maine has been ready here all afternoon, and we have gotten to him now.

Does the Senator want to go into this matter now? I thought, Mr. President, a little informally here we might get down to the issue very quickly. I invite the attention of the Senator from Texas to this matter.

UP AMENDMENT NO. 678

The PRESIDING OFFICER (Mr. ZORINSKY). Could the Senator suspend for just one moment? The question recurs on the unprinted amendment No. 678 by the Senator from Maine.

Mr. HATHAWAY. Very well.

The PRESIDING OFFICER. There are 4 minutes remaining to the proponents and 30 minutes to the opponents. Who yields time?

Mr. HATHAWAY. Mr. President, I yield myself 5 minutes.

Mr. President, as explained earlier, this amendment would modify section 855 so that ROTC could be continued at maritime academies which have had ROTC, Navy ROTC, programs ongoing even though they do not conform with the precise requirements contained in 855. This will protect the ongoing programs both in the Maine Maritime Academy and the Academy in New York.

However, I understand the Senator from Texas has a broader amendment which would knock out all of 855 and, if that would be acceptable to the floor manager, then I would be happy to withdraw my floor amendment.

Mr. TOWER. Mr. President, if the Senator will yield?

Mr. HATHAWAY. I would be happy to yield.

Mr. TOWER. The amendment (No. 516) the Senator from Texas proposes, does protect units at some 727 colleges and universities, including the Maine Maritime Academy, and I would do so simply by deleting the language of section 855 and, therefore, the concern of the Senator from Maine would be taken care of by my amendment.

Mr. STENNIS. If the Senators will yield to me, could the Senator from Texas explain his amendment now, and we will get the picture here before the Senate?

Mr. TOWER. Mr. President, if the Senator will yield to me——

Mr. STENNIS. I yield such time as the Senator desires.

Mr. TOWER. Section 855 would impose by law certain minimum enrollment standards for senior reserve officer training corps units. That section provides that funds would be cut off for any unit having less than 17 students enrolled in the third year of a military or naval science course over the 4 preceding academic years.

The DOD opposes this section because DOD does not want to use numbers as the sole criterion for maintaining the establishment of these ROTC units. In other words, the matter cannot just be quantified, it has to be qualified as well.

In a letter addressed to the chairman of the Appropriations Committee, the Assistant Secretary of Defense, Mr. John White, has stated:

> The Defense Department uses several criteria in evaluating the effectiveness of an ROTC unit. This does include enrollment levels, but it also includes program and academic quality, cost, and other factors.

I would like to quote a brief portion of that letter. Mr. White says:

> The Department is particularly concerned that section 855, as currently written, may force the closure of ROTC units at a number of the Nation's finest institutions and in universities whose current freshman and/or sophomore enrollments in ROTC indicate they will meet the enrollment standards in either amademic year 1977–78 or 1978–79. Among these institutions are MIT, Illinois Institute of Technology, Rice, Carnegie Mellon.
>
> The provision to close units based solely on enrollment will result in degradation of quality and jeopardize the present capability to produce sufficient numbers of officers with the academic backgrounds needed to meet Department of Defense manning requirements.

That is the statement from Mr. White. Mr. President, I do not think we should legislate specific management criteria concerning the ROTC program. I think DOD should be given the flexibility to regulate this very important source of military officers by considering all relevant criteria.

Therefore, I would hope that this amendment would be adopted.

Mr. STENNIS. Well, Mr. President, if I understand now the Senator from New Hampshire's amendment applies to the one institution, one situation, yes, Maine. But if the Senator from Texas should have his amendment prevail, that would meet the situation the Senator from Maine has in mind and would cover the entire situation.

Mr. TOWER. That is correct.

Mr. STENNIS. Mr. President, this matter was called to my attention, at least for the first time, today or maybe a few minutes Saturday morning, and I have gone over this matter with our valuable professional staff member.

It just seems clear to me that in an appropriations bill we ought not to just lower the hatchet here and cut off a great number of these units scattered throughout the Nation at different kinds of institutions in a field of officer training that I think produces some of the very finest men we have, excellent and outstanding, and I would like to see it given more attention. I do not have a remedy in mind that I could offer, but I believe, at least in conference, and before we actually meet in conference, we could get some preliminary work done on it and maybe work out something that would meet the

situation that is better fitted to the results, the realities, than does this language.

With that spirit and with that attitude, I think it would be well for this amendment to be accepted and go to conference with it.

AMENDMENT NO. 516

Mr. TOWER. I thank the distinguished chairman.

I think probably the orderly way to proceed, Mr. President, would be for me to call up my amendment No. 516 and offer it as a substitute to the amendment of the Senator from Maine.

Mr. STENNIS. I would like for the Senator to respond to that, please.

Mr. HATHAWAY. If the Senator will yield, Mr. President, I would be happy to proceed that way, and I would be glad to endorse the substitute.

Mr. TOWER. Mr. President, I call up my amendment 516 in the nature of a substitute to the amendment of the Senator from Maine.

The PRESIDING OFFICER. The amendment is not in order until the time has expired or been yielded back.

Mr. HATHAWAY. I would be happy to yield back the remainder of my time.

Mr. STENNIS. I yield back the time I had, Mr. President.

Mr. TOWER. Then I renew my request, Mr. President.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Texas (Mr. TOWER) proposes amendment No. 516 as a substitute for the amendment of the Senator from Maine (Mr. HATHAWAY) numbered 678.

The amendment is as follows:

On page 60, beginning with line 10, strike out all down through line 22.

Renumber sections 856 through 860 as sections 855 through 859, respectively.

Mr. TOWER. Mr. President, we have had enough discussion on this. I am prepared to yield back my time unless the Senator from Maine has something further to add.

Mr. HATHAWAY. I am happy to yield back the remainder of my time and happy to endorse the substitute of the Senator from Texas.

Mr. STENNIS. Mr. President, I do not need to say anything more, I do not think. I already expressed myself and gave the spirit in which this is being accepted in which the Senator from North Dakota, the minority ranking members, joins.

Mr. TOWER. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The Chair has to point out, though, this amendment is not properly drafted as a substitute.

Mr. TOWER. Then might I ask my distinguished colleague from Maine if he will withdraw his substitute.

Mr. HATHAWAY. Mr. President, I ask unanimous consent to withdraw my amendment.

The PRESIDING OFFICER. The Senator has a right to withdraw his amendment, and it is withdrawn.

Will the Senator from Texas now offer his amendment?

AMENDMENT NO. 516

Mr. TOWER. Mr. President, I call up my amendment No. 516 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Texas (Mr. TOWER) proposes amendment No. 516.

Mr. BENTSEN. Mr. President, the history of our ROTC units shows they provide a valuable service to the country and to the participating student. However, the bill presently before the Senate would unjustifiably force closure of many of these units at many outstanding institutions. The provision to close units based solely on enrollment could result in less qualified officers and jeopardize the present capability to produce sufficient numbers of officers with the needed academic backgrounds. For this reason, I am cosponsoring the Tower amendment, which would mandate the establishment of fair criteria to determine which units should remain active.

The bill as reported prevents the expenditure of any money for units whose junior class members have numbered below 17 students during the last 4 years as part of a 4-year ROTC program. A 2-year program must maintain 12 students to keep its unit active. As with many decisions, numbers do not tell the whole story. The Department of Defense currently uses a number of criteria in addition to numbers in identifying closure candidates. These criteria include the quality of the program and the cost of closure. I believe this is sound policy.

On the other hand, if we adopt the committee language we will be tied down to just one criteria when selecting units to be closed. In Texas alone this could mean the closure of ROTC units at Tarleton State College, Wheaton College, Rice University, Texas Christian University and the University of Texas. Nationwide, schools like MIT, the Illinois Institute of Technology and Carnegie Mellon would lose their ROTC units.

Such closures would be unfair and unwise. For instance, Rice University offers an excellent engineering school that provides an excellent opportunity to train officers of the highest caliber. One unit at Rice has had a 58-percent increase in enrollment last year, showing that interest among new students is growing. It would be wrong to deny this unit funding just at a time when the ROTC program is growing in popularity.

The amendment which I am cosponsoring would give us the flexibility to judge all aspects of an ROTC program. In this way schools that offer unique opportunities or that are capable of rebuilding their programs would be allowed to continue.

Mr. TOWER. Mr. President, I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. TOWER. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HATHAWAY. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, there are a number of other amendments. The Senator from Massachusetts (Mr. KENNEDY) was here and he has an amendment. We could present that quickly. I suppose he has had to leave the Chamber and is off on some other business.

Mr. ROBERT C. BYRD. Mr. President, we will try to locate him if he is here.

Mr. STENNIS. Mr. President, if the Chair will indulge us just a minute here?

Mr. ROBERT C. BYRD. Mr. President, while efforts are being made to locate Senator KENNEDY, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

ORDER FOR RECOGNITION OF SENATOR BAYH TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders have been recognized under the standing order, Mr. BAYH be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RESUMPTION OF CONSIDERATION OF H.R. 7933

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that upon the conclusion of the special order for the recognition of Mr. BAYH tomorrow the Senate resume consideration of the defense appropriations bill, H.R. 7933.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSIDERATION OF CERTAIN MEASURES ON THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the following calendar orders: Calendar Order Nos. 150, 314, and 315.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I simply want to advise the majority leader that all through the calendar items I see indications that identifies them as cleared for passage.

Mr. ROBERT C. BYRD. Mr. President, I thank the minority leader.

MARINE MAMMAL PROTECTION ACT AUTHORIZATION, 1978

The bill (S. 1522) to increase the appropriations authorization for fiscal years 1977 and 1978 and to authorize appropriations for fiscal year 1978 to carry out the Marine Mammal Protection Act of 1972, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1522

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 110(c) of the Marine Mammal Protec-

tion Act of 1972 (16 U.S.C. 1380(c)) is amended to read as follows:

"(e) There are authorized to be appropriated, for the purposes of carrying out this section, not to exceed the following sums for the following fiscal years:

"(1) $2,500,000 for each of the fiscal years ending June 30, 1973, June 30, 1974, June 30, 1975, September 30, 1976, and September 30, 1977, of which one-third of the sum appropriated for any such fiscal year shall be available to the Secretary of the Interior and two-thirds of any such sum shall be available to the Secretary of Commerce.

"(2) $1,100,000, all of which shall be available to the Secretary of the Interior, for the fiscal year ending September 30, 1978.". Act of 1972 (16 U.S.C. 1384) is amended—

(1) by amending subsection (a)—

(A) by striking out "four" and inserting in lieu thereof "three", and

(B) by inserting ", not to exceed $8,000,000 for the fiscal year ending September 30, 1977, and not to exceed $11,500,000 for the fiscal year ending September 30, 1978," immediately after "fiscal years"; and

(2) by amending subsection (b)—

(A) by striking out "and" immediately after "June 30, 1973,", and

(B) by inserting ", and not to exceed $700,000 for the fiscal year ending September 30, 1978" immediately after "thereafter".

SEC. 3. Section 207 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1407) is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 207. There are authorized to be appropriated for the fiscal year in which this title is enacted and for the next five fiscal years thereafter such sums as may be necessary to carry out this title, but the sums appropriated for any fiscal year other than the fiscal year ending September 30, 1978, shall not exceed $1,000,000, and the sum appropriated for the fiscal year ending September 30, 1978, shall not exceed $2,000,000.".

SEC. 4. Section 102 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1372) is amended by adding at the end thereof the following new subsection:

"(f) It is unlawful for any person or vessel or other conveyance to take any species of whale in the fishery conservation zone of the United States as defined in section 3(8) of the Fishery Conservation and Management Act (16 U.S.C. 1802(8)).".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–177), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to extend the authorization period for the Marine Mammal Protection Act of 1972 through fiscal year 1978 and to increase the authorization level under the act. The bill would also prohibit the taking of any species of whale in the fishery conservation zone established by the Fishery Conservation and Management Act.

DESCRIPTION OF THE BILL

The original bill of the committee reauthorizes the provisions of the Marine Mammal Protection Act for an additional 1 year (through 1978) at the following levels:

Section 110.—$1.1 million to the Department of Interior.

Section 114(a).—$8 million for the Department of Commerce for fiscal year 1977, and $11.5 million for fiscal year 1978.

Section 114(b).—$700,000 to the Department of the Interior for fiscal year 1978.

Section 207.—$1 million for the Marine Mammal Commission for fiscal year 1977, and $2 million for fiscal year 1978.

Section 4 of the bill would amend the Marine Mammal Protection Act to make it unlawful for any person or vessel to take any species of whale in the fishery conservation zone of the United States, the so-called 200-mile limit.

BACKGROUND AND NEED

The Marine Mammal Protection Act was enacted in 1972 to provide increased protection to marine mammals found within U.S. jurisdiction; to restrict the importation and taking of marine mammals; and to create the Marine Mammal Commission to do research and review agency actions under the act. In passing the act, Congress responded to the growing concern about man's impact on marine mammals which include whales, porpoises, seals, sea otters, polar bears, and manatees.

The act gave to the Secretaries of Interior and Commerce the authority and direction to establish general limitations upon the taking of all marine mammals, and within those limitations, to issue permits for their taking. Criminal and civil penalties are prescribed for violations of the act, and the importation of marine mammals and their products is subject to regulation. The act created a three member Marine Mammal Commission which is charged with responsibility for monitoring the implementation of the act, recommending policies to the two Secretaries, and undertaking such research as is deemed appropriate.

Since the passage of the act the agencies have engaged in a wide variety of research and management activities dealing with marine mammals. The Department of Commerce is currently engaged in research on fur seals and their ecosystems, whales and related species, and the population status of several species of porpoises.

The Department of the Interior is currently engaged in a number of research projects designed to provide information on the species under their jurisdiction. These projects hopefully will obtain background information which serves as basic information for further studies on the marine mammal environment. Current studies of community interactions and ecosystem functions of marine mammals will expand into modeling approaches that will allow us to predict what will happen to given population segments under expected circumstances. As an example, the Department of Interior is engaged in an analysis of the population status of polar bears, biological and reproductive studies, and the effects of environmental pollution on the animals. This research has concentrated on studies of distribution and general movements as well as den ecology and location. Cooperative studies with Canada and the U.S.S.R. have been utilized to avoid duplicative efforts.

A large part of the time, money and effort of the Marine Mammal Commission and the Department of Commerce has been spent in an attempt to find a solution to the tuna-porpoise problem. The tuna-porpoise controversy results from fishing practices which make use of the little understood relationship between yellowfin tuna and certain species of porpoise. Commercial tuna purse-seiners herd yellowfin tuna which swim beneath and behind them. Thousands of porpoise, incidentally taken in order to catch the tuna are killed when they become entangled in the nets.

A great deal of effort has gone into accumulating and analyzing data on the status of porpoise populations in order to establish a permissible quota of animals to be taken by the tuna fishermen. The Marine Mammal Commission and the Department of Commerce are extensively involved in developing fishing gear and techniques which reduce the incidental kill of porpoise.

The bill would permit the agencies to continue and accelerate these various research and management programs. The bill provides a total authorization to the Department of Interior of $1.8 million, of which $1.1 million will be spent on research under section 110. The bill authorizes appropriations of up to $11.5 million for the Department of Commerce under section 114 for all activities. The Marine Mammal Commission is authorized to be appropriated up to $2 million in fiscal year 1978.

A major portion of the funds authorized for the Department of Commerce would go, if appropriated, to fund a 100 percent observer program on all large tuna purse-seine vessels. The Department of Commerce has indicated to the committee that $5 million would adequately fund a full observer program. The committee feels that the institution of a full observer program is vitally necessary to collect much-needed data on porpoise mortality and porpoise population levels.

WILLFUL DESTRUCTION OF ANY INTERSTATE PIPELINE SYSTEM

The bill (S. 1502) to amend title 18, United States Code, to make a crime the willful destruction of any interstate pipeline system, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) title 18, United State Code, is amended by adding immediately after chapter 67 the following new chapter:

"Chapter 68.—INTERSTATE PIPELINE SYSTEMS

"Sec.
"1401. Definition.
"1402. Destruction of interstate pipeline system.

"§ 1401. Definition

"As used in this chapter, the term 'interstate pipeline system' means any pipeline system used in the transportation of gas or oil in interstate commerce.

"§ 1402. Destruction of interstate pipeline system

"Whoever willfully injures or destroys, or attempts to injure or destroy, any interstate pipeline system shall be fined not more than $5,000 or imprisoned not more than fifteen years, or both.".

(b) The table of chapters of part I of title 18, United States Code, is amended by inserting immediately after the item relating to chapter 67 the following:

"68. Interstate pipeline systems..... 1401".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–339), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The proposed bill, as reported, will provide Federal criminal jurisdiction over willful acts which damage, or attempt to damage, any pipeline system used in the transportation of gas or oil in interstate commerce.

LEGISLATIVE NEED

By resolution adopted on March 9, 1976, in accordance with its oversight responsibilities in the field of internal security, the then-Subcommittee on Internal Security committed itself to an investigation and study of the problems affecting the security of the trans-Alaska pipeline system.

In its study, the subcommittee sought solutions to the problems which emerged through the testimony of witnesses appearing before the subcommittee. The subcommittee sought not to lose sight of the fact that one of the thorny issues to be resolved stemmed from the fact that they were dealing simultaneously with private property, a national need and a concomitant compelling Federal interest in insuring the protection of the private property in question.

The subcommittee's hearings disclosed that the general welfare and the common defense of the American people require that the oil and gas resources need to be protected for the purpose of insuring the reliability of use for present and future generations; and that the trans-Alaska pipeline is of paramount interest to the Nation's well-being and that any threat to this pipeline would result in a major threat to the national security of the United States.

Witnesses before the subcommittee representing law enforcement, as well as the security officials of the Alyeska Pipeline Co. agreed in their testimony that there was a need for Federal legislation which would make it a Federal crime to damage or interfere with the operation of the trans-Alaska pipeline system. These witnesses believed that if they could post placards along the pipeline advertising the fact that any attack on the line or in its operation is a Federal offense, that this would serve to discourage unmotivated vandalism, such as shooting at the pipeline, and it might also serve to discourage discharged employees, disgruntled employees, from venting their anger and damaging the pipeline.

EXISTING JURISDICTION

The jurisdiction relating to the TAP is unclear. In part, the confusion about jurisdiction stems from the fact that the pipeline traverses a patchwork of lands that are differently owned and differently administered, i.e., land owned by the Federal Government, land owned by the State of Alaska, privately owned land and land administered by the Department of Defense. Correspondence between Senator Thurmond and Mr. Clarence Kelley, Director of the FBI, disclosed that the Department of Justice has determined that—

"Federal jurisdiction is exclusive in any part of the pipeline corridor passing over a Defense withdrawal area and concurrent with the State in any part of the pipeline corridor passing over land owned by the United States and held for use by the military at the time Alaska became a State."

Further inquiry concerning jurisdiction provided by the Solicitor's Office for the U.S. Department of the Interior, disclosed that though the FBI does have jurisdiction over defense withdrawal areas in Alaska, this jurisdiction thus far remains a purely theoretical one because the President has never established such areas. Moreover, the territory subject to concurrent jurisdiction between the State of Alaska and the United States includes only 50 miles of pipeline.

In his testimony before the subcommittee, Senator Stevens also expressed doubt that the Alaska State Police will be able to cope with the problem of safeguarding the pipeline against terrorist or other criminal elements: "I want to assure you," he said:

"We have an extremely dedicated police organization and our Commissioner of Public Safety, Richard Burton, has asked me to inform the Committee that he would like to cooperate with the Committee * * * But there again, we believe that because of the area that our State police must cover, an area one-fifth the size of the United States—we have some 450,000 people; we are annually visited by at least 5 times that many—they are extremely busy. In other words, at particular times of the year they just cannot maintain in force a total surveillance of any kind * * *."

STATEMENT

On May 12, 1977, Senator Stevens introduced the instant bill, S. 1502, as a complementary measure to S. 1496, the bill regarding the Trans-Alaska Pipeline System. S. 1502 expands the coverage of S. 1496 to include any interstate pipeline system.

In introducing S. 1502, Senator Stevens pointed out that the Congress later this year will consider the recommendation of the President concerning the route chosen to transport natural gas from the North Slope of Alaska to the south 48. This bill, S. 1502, would cover that pipeline for the distance which it is located within the United States, the Trans-Alaska Pipeline System, and all other interstate pipeline systems located within the United States.

Since there has been some questions raised that the TAPS line is an intrastate pipeline, although it is solely within the State of Alaska, there may be an implication that only Alaskans may tamper with that pipeline system. Thus, S. 1502 is intended to clarify the situation involving the TAPS and expand the scope of this legislation to cover all interstate pipeline systems. S. 1502 complements S. 1496 and should be considered as appropriate for consideration by the Senate as a combined legislative package to cover all willful acts of destruction or attempts to interfere with any interstate or intrastate pipeline system.

COST OF LEGISLATION

The Department of Justice advised that the passage of S. 1502 would not require any new programs and that the cost of investigating and prosecuting violations of the criminal provisions should be borne by their normal budget.

DESTRUCTION OF THE TRANS-ALASKA PIPELINE SYSTEM

The Senate proceeded to consider the bill (S. 1496) to amend title 18, United States Code, to make a crime the willful destruction or interference with the trans-Alaska pipeline system, which had been reported from the Committee on the Judiciary with an amendment to strike all after the enacting clause and insert the following:

That chapter 65 of title 18, United States Code, is amended by adding a new section as follows:

"§ 1365. Destruction of the trans-Alaska pipeline system

"Whoever willfully injures or destroys, or attempts to injure or detroy, the tran-Alaska pipeline system (as defined in section 203 (b) of the Trans-Alaska Pipeline Authorization Act (87 Stat. 584)) shall be fined not more than $15,000 or imprisoned not more than fifteen years, or both.".

SEC. 2. The analysis of chapter 65 of title 18 of the United States Code is amended by inserting after item 1364 the following new item:

"1365. Destruction of the trans-Alaska pipeline system.".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read:

A bill to amend title 18, United States Code, to make a crime the willful destruction or attempts to destroy the trans-Alaska pipeline system.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-340), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL, AS AMENDED

The proposed bill, as reported, will provide Federal criminal jurisdiction over willful acts which damage, or which attempt to damage, the trans-Alaska pipeline system.

LEGISLATIVE NEED

By resolution adopted on March 9, 1976, in accordance with its oversight responsibilities in the field of internal security, the then Subcommittee on Internal Security committed itself to an investigation and study of the problems affecting the security of the trans-Alaska pipeline system.

In its study, the subcommittee sought solutions to the problems which emerged through the testimony of witnesses appearing before the subcommittee. The subcommittee sought not to lose sight of the fact that one of the thorny issues to be resolved stemmed from the fact that they were dealing simultaneously with private property, a national need and a concomitant compelling Federal interest in insuring the protection of the private property in question. A substantial body of testimony and evidence (which has been published) was presented to the subcommittee by the following witnesses:

Senator Ted Stevens of Alaska.

Quinn O'Connell, Connole & O'Connell, Washington Counsel for Alyeska.

Earl Ellerbrake, Chief, Transportation Section, Office of Oil and Gas, Federal Energy Administration.

John E. Latz, Technical Assistant to the Under Secretary of the Interior, and Chairman, Technical Advisory Board, Federal Task Force on Alaskan Oil Development.

Leonard A. LeSchack, president, Development & Resources Transportation Co.

Brooks McClure, International Securty Affairs, Department of Defense.

Lt. Col. James F. Kelley, Lt. Col. Joseph E. Naftzinger and Lt. Col. Jerry V. Witt, representing the Joint Chiefs of Staff.

James Goodwin, manager of administration for the Operations Division of the trans-Alaska Pipeline, Alyeska Pipeline Service Co.

James O. Ingram, Deputy Assistant Director, General Investigative Division, FBI.

Richard L. Burton, Commissioner, Department of Public Safety, State of Alaska.

Dr. Maynard M. Stephens, principal energy scientist, Gulf South Research Institute, Baton Rouge and New Orleans, La.

The subcommittee's hearings disclosed that the general welfare and the common defense of the American people require that

the oil and gas resources need to be protected for the purpose of insuring the reliability of use for present and future generations; and that the trans-Alaska pipeline is of paramount interest to the Nation's well-being and that any threat to this pipeline would result in a major threat to the national security of the United States.

Witnesses before the subcommittee representing law enforcement, as well as the security officials of the Alyeska Pipeline Co. agreed in their testimony that there was a need for Federal legislation which would make it a Federal crime to damage or interfere with the operation of the trans-Alaska pipeline system. These witnesses believed that if they could post placards along the pipeline advertising the fact that any attack on the line or in its operation is a Federal offense, that this would serve to discourage unmotivated vandalism, such as shooting at the pipeline, and it might also serve to discourage discharged employees, disgruntled employees, from venting their anger and damaging the pipeline.

EXISTING JURISDICTION

The jurisdiction relating to the TAP is unclear. In part, the confusion about jurisdiction stems from the fact that the pipeline traverses a patchwork of lands that are differently owned and differently administered, i.e., land owned by the Federal Government, land owned by the State of Alaska, privately owned land and land administered by the Department of Defense. Correspondence between Senator Thurmond and Mr. Clarence Kelley, Director of the FBI, disclosed that the Department of Justice has determined that—

"Federal jurisdiction is exclusive in any part of the pipeline corridor passing over a Defense withdrawal area and concurrent with the State in any part of the pipeline corridor passing over land owned by the United States and held for use by the military at the time Alaska became a State.

Further inquiry concerning jurisdiction provided by the Solicitor's Office for the U.S. Department of the Interior, disclosed that though the FBI does have jurisdiction over defense withdrawal areas in Alaska, this jurisdiction thus far remains a purely theoretical one because the President has never established such areas. Moreover, the territory subject to concurrent jurisdiction between the State of Alaska and the United States include only 50 miles of pipeline.

In his testimony before the subcommittee, Senator Stevens also expressed doubt that the Alaska State Police will be able to cope with the problem of safeguarding the pipeline against terrorist or other criminal elements: "I want to assure you," he said:

"We have an extremely dedicated police organization and our Commissioner of Public Safety, Richard Burton, has asked me to inform the Committee that he would like to cooperate with the Committee * * * But there again, we believe that because of the area that our State police must cover, an area one-fifth the size of the United States—we have some 450,000 people; we are annually visited by at least 5 times that many—they are extremely busy. In other words, at particular times of the year they just cannot maintain in force a total surveillance of any kind * * *."

TRANSFER OF MEASURE TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is one measure on the Calendar which has been cleared for transfer to the Unanimous Consent Calendar. It is Calendar Order No. 322, Senate Resolution 203, a resolution to provide for additional copies of "Protective Services for the Elderly."

I ask that the clerk so transfer it.

The PRESIDING OFFICER. The measure will be transferred.

EXECUTIVE K, 95TH CONGRESS, 1ST SESSION—REMOVAL OF INJUNCTION OF SECRECY

Mr. ROBERT C. BYRD. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the Convention with the Union of Soviet Socialist Republics Concerning the Conservation of Migratory Birds and Their Environment, signed at Moscow on November 19, 1976—Executive K, 95th Congress, first session—transmitted to the Senate today by the President of the United States, and that the treaty with accompanying papers be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The message of the President is as follows:

To the Senate of the United States:

I transmit herewith, for Senate advice and consent to ratification, the Convention between the United States of America and the Union of Soviet Socialist Republics Concerning the Conservation of Migratory Birds and Their Environment, signed at Moscow on November 19, 1976.

In the same manner as other Migratory Bird Conventions which the United States has with Canada, Japan and Mexico, this Convention provides for international cooperation in the protection and preservation of migratory birds. A fundamental function of this Convention is the identification of species of birds which migrate between the United States and the Soviet Union and species of birds which, while not actually migratory between the United States and the Soviet Union, have populations in both States and share common flyways or common breeding, wintering or feeding areas. With respect to these species of birds the Parties undertake certain strict management procedures as well as an ongoing interchange of information regarding the protection of these species.

In addition, as I mentioned in my May 23 Message to Congress on the Environment, this Convention and the legislation which will be submitted to implement it will establish new authority to conserve the habitats necessary to the survival of migratory birds. The Convention contains an undertaking by the Parties to list in an Appendix to the Convention, those Migratory Bird Habitats of special importance within the areas under their jurisdiction and, by mutual agreement, those which are outside the areas under their jurisdiction.

There are many species of birds which will benefit from the provisions of this Convention, which fills a major gap in the protection of the species of migratory birds which exist in the United States. I urge the Senate to act favorably on this Convention at an early date by giving its advice and consent to ratification.

JIMMY CARTER.

THE WHITE HOUSE, *July 18, 1977.*

MINE SAFETY

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. WILLIAMS I ask the Chair to lay before the Senate a message from the House of Representatives insisting upon its amendment to the bill (S. 717) to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ROBERT C. BYRD. I move that the Senate disagree to the amendment of the House and agree to the request of the House for a conference, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. WILLIAMS, Mr. RANDOLPH, Mr. PELL, Mr. NELSON, Mr. RIEGLE, Mr. JAVITS, Mr. SCHWEIKER, and Mr. STAFFORD conferees on the part of the Senate.

DEFENSE APPROPRIATIONS, 1978

The Senate resumed the consideration of H.R. 7933.

TIME-LIMITATION DISCUSSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that final vote occur on the military appropriations bill not later than 6:30 p.m. tomorrow with paragraph 3 of rule XII waived, with the proviso that there be a 2-hour limitation on the amendment dealing with the——

Mr. ALLEN. Helicopter consolidation.

Mr. ROBERT C. BYRD. Helicopter consolidation and amendments thereto.

Mr. STENNIS. Two hours?

Mr. ROBERT C. BYRD. Yes. The time is to be divided between Mr. STENNIS and Mr. ALLEN.

Mr. ALLEN. Yes. That is 2 hours.

Mr. BAKER. Mr. President, I reserve the right to object.

Mr. ALLEN. Two hours for the amendment and amendments thereto with amendments being allowed at any time?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, I reserve the right to object.

The PRESIDING OFFICER. The Senator from Tennessee.

Mr. BAKER. I am advised there are three amendments that are proposed to be offered by the distinguished Senator from Alaska (Mr. STEVENS) on which he has requested or is now requesting an hour each. I also understand that Senator STEVENS is agreeable to calling those up as the first order of business when we return to consideration of this measure as the first three amendments.

I, therefore, ask the majority leader if he would consider modifying his requests so that Mr. STEVENS could be permitted to call up any or all of those

three amendments at the beginning of our consideration of this measure on tomorrow.

Mr. ROBERT C. BYRD. I include that in my request if it is agreeable with the manager of the bill.

Mr. STENNIS. Mr. President, I reserve the right to object. If the Senator will yield to me, this, of course, is an important bill, and we have had a very busy day and have made a lot of progress on it. But the effort now to finish tomorrow is going to be accomplished only by really moving the bill along all day, disposing of one amendment right after the other. I really do not think it is hardly fair after everyone has mostly gone to give certain ones preference here in order, and sign away a lot of the time here on amendments that are important, but they are not overwhelmingly important compared to all the others.

The only way I have ever seen a bill move fast is for Senators to be here competing for time to get up their amendments, get them up, discuss them briefly, and pass on them.

I think that with as much as we have here—I can go over them if you want to, by name, or some of them—we are planning a 2-day effort here, to finish this measure, and if we go to assigning time now, assigning 3 hours of perhaps a 12-hour session tomorrow to one Senator to start with——

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from Alaska is here. He could call up his amendment right now and be assured it would be first tomorrow. That would assure, may I say to the distinguished manager of the bill, that we will not waste time in the morning waiting for Senators to come to the floor.

Mr. STEVENS. Mr. President, I might say to the Senator, I am not sure it would take an hour on each one; but the last experience I had with calling up amendments, waiting and being patient, was that we ended up not having any time. I am not prepared to agree to a time limitation on these three amendments that will not give us an opportunity to debate them. I have several cosponsors. But I am willing to take them up bright and early, get here as early as the Senator wishes to start, and do our best to finish them in less than an hour.

Mr. BAKER. Mr. President, reserving the right to object, I very much hope the Senator from Mississippi will not object to that provision.

I might say, not by way of compulsion, but just for information, that we have gone to some considerable length to try to get this agreement, particularly the part dealing with the final vote at 6:30. I simply cannot agree to that 6:30 time unless we can reach an agreement on the sequence of these amendments we have discussed. I regret to say that, but it is simply so, and I would hope the Senator from Mississippi would not object.

Mr. STEVENS. Mr. President, if it will help, I would be happy to limit the time on two amendments to 20 minutes on a side, with 30 minutes on a side on the commissary amendment.

Mr. STENNIS. You are certainly getting down to more reasonable times now than an hour on a side.

Mr. STEVENS. Oh, no, I never asked for an hour on a side.

Mr. STENNIS. What are you willing to agree to, then? Thirty minutes each on the blue collar amendment and the commissary amendment, and the retired personnel?

We are going to have a lot of amendments here tomorrow. Pilot training, certainly that is a reasonable time for that. That was not given a place on the docket; but an hour to a side, was it not?

Mr. STEVENS. On the Wage Board amendment, the Senator from Alabama, I do not know whether he wishes to speak. Senator DURKIN wishes to speak on it. On the dual compensation, Senator TOWER, Senator HATCH, and Senator GRAVEL have indicated they wish to speak; and on the other one, the commissaries, Senator HATCH and myself have been involved.

I think the commissary one—as I say, I would be willing to agree to reduce the time on the Wage Board and the dual compensation amendments to 40 minutes, with 20 minutes on a side.

Mr. STENNIS. That is what you call the retired personnel, I believe it is listed as here?

Mr. STEVENS. Yes.

Mr. STENNIS. How much is that time?

Mr. STEVENS. I am talking about amendment No. 500, which we call the Wage Board amendment, and amendment No. 501, which is the dual compensation or retired persons amendment.

Mr. STENNIS. Yes.

Mr. STEVENS. Forty minutes equally divided, and on the commissary amendment, No. 499, it would be an hour equally divided. Again, we would be happy to try to shorten that time, but others have asked for time.

Mr. STENNIS. Well, it will take 2 days. It will if you give them all what they want. If we expect to finish tomorrow, now, letting everybody have time, we had just as well face it now.

Mr. STEVENS. The agreement in effect right now gives us half an hour on each one.

Mr. STENNIS. The blue collar, what did you say on that one? If we are going to condense the time, I can stay here as long as any Senators desire. We have to give time for consideration of the bill, and we may have to reduce the time for the consideration of amendments.

Mr. STEVENS. Yes, sir; I am trying to do that.

Mr. STENNIS. You plan to finish this tomorrow, is that right, Senator BYRD?

Mr. ROBERT C. BYRD. Yes, I hope to do that.

If the floor manager will allow me, I think the Senator from Alaska has been very cooperative and understanding, and has agreed to cut his time to 40 minutes on each of two amendments.

Mr. STENNIS. You do not have to defend the Senator from Alaska. He is one of my favorites.

I tell you, you fix it the way you want to. I will be around.

Mr. ALLEN. Mr. President, reserving the right to object——

Mr. ROBERT C. BYRD. Mr. President, I withdraw the request.

Mr. BAKER. Mr. President, what is the arrangement under the existing unanimous-consent order with regard to limitation of time for debate on amendments, if any?

The PRESIDING OFFICER. It is 1 hour on each amendment in the first degree except on the B–1 amendment, on which there were 2 hours, and the CFR amendment, 2 hours.

Then there are the two committee amendments remaining, on which there is no time limitation.

Mr. BAKER. I thank the Chair. My only point is that I do not think there is any possibility of finishing this bill tomorrow if we go by the existing limitations.

I would hope, Mr. President, that we could arrive at a time certain to vote tomorrow, and not too late in the evening. May I ask the majority leader, under these circumstances, if he would consider making his unanimous-consent request again in the morning?

Mr. ROBERT C. BYRD. I will make it tonight. I would like to say to the Senator from Mississippi, it is not a matter of pleasing myself.

Mr. STENNIS. I know that.

Mr. ROBERT C. BYRD. I am trying to accommodate the Senate, and, along with that, the manager of the bill, and be as helpful as I can.

Mr. STEVENS. I say to the Senator, if it will help the Senator, I want that agreement, and if we can get this bill finished and move on to the next one, I will be happy to make it 30 minutes each on those two amendments, and divide them halfway, and take 40 minutes on the commissary amendment.

That is giving an hour and a half, Senator, from what we are entitled to now. I think you ought to give us the agreement to vote by a time certain tomorrow night.

Mr. STENNIS. Mr. President, I am not begging for any quarry, particularly, but here is a bill we have been holding hearings on since January. Some 3,300-odd line items were examined in those hearings. I do not know how many printed pages of the report there are, as put together by two master craftsmen, the Senator from Arkansas and the Senator from North Dakota, with the others on the committee.

But as far as managing the whole bill, you know, I was called in here this morning at 10 o'clock, or something like that, and honored to try to step into the place of the chairman of the committee. We have all this mass of amendments here, much of which is legislation on an appropriation bill, trying to put across policies, writing legislation, not just DOD, but other committees, and I cannot honestly say, "Well, it doesn't matter, take them all."

We have to have time to go into them. That is why I was saying let us be careful, let us go slowly.

Just go ahead and we will do the best we can. We can double up in our efforts to get through. I do not object to that. I see the point of the Senator.

Some of these amendments are old. They have been proposed over and over again. It will not take long to get into them. But if we have to wait for a Senator to finish presiding over a committee meeting to get here, and then he has to send back for his material, we cannot do it all in 1 day.

Mr. BAKER. Will the Senator yield?

Mr. STENNIS. If I may finish, then I will.

If we call one amendment and the Senator is not here, I hope we will go to the next one and not wait for a Senator to arrive, unless there are extraordinary circumstances. On rollcall votes we will have a lot of trouble.

Mr. ROBERT C. BYRD. Mr. President, I thought I had cleared the request with the distinguished Senator and the ranking member. I would attempt to get an agreement for a final vote by no later than 6:30 tomorrow night. Unless I misunderstood the chairman, I thought he had given his assent.

Mr. STENNIS. I did not realize that. We will all try. We will get there. I like the idea of finishing as soon as we can.

Mr. ROBERT C. BYRD. Then, Mr. President, I renew my request.

Mr. BAKER. Mr. President, reserving the right to object——

Mr. ALLEN. Mr. President, reserving the right to object, I really hate to see this more or less forced on the distinguished manager of the bill.

Mr. ROBERT C. BYRD. This is not being forced on the manager of the bill.

Mr. ALLEN. It seems to me he is reluctant to make this agreement.

Mr. ROBERT C. BYRD. I thought I had cleared this with the manager of the bill earlier, otherwise I would not have presented it. I am trying to be considerate of the manager of the bill. He has been called in on short notice to manage a bill which, under certain circumstances, makes it rather strenuous. That was my understanding. I hope if the manager of the bill is in agreement, my friend from Alabama will not object.

Mr. ALLEN. Further reserving the right to object, I understand that the situation is on the helicopter amendment, there will be a 2-hour time limitation on the amendment and amendments thereto, which amendments would be offered at any time, and that this time would be allowed irrespective of the 6:30 deadline. Is that correct?

Mr. ROBERT C. BYRD. That was the understanding that I had with the distinguished Senator from Alabama.

Mr. ALLEN. I understood that.

Mr. ROBERT C. BYRD. That proviso should be clearly stated in the agreement.

Mr. BAKER. Mr. President, I am not sure I understand that.

The helicopter amendment, so-called, can be offered at any time, regardless of the 6:30 final passage time. Does that mean we can extend beyond 6:30 for a final passage vote?

Mr. ALLEN. Yes, because even though this amendment and another amendment were committee amendments, the Senator from Alabama has been requested to withhold his amendments until later on in the consideration of the bill. I have acceded to that request. I am willing to offer them at any time, or to have committee amendments called up at any time. I rather believe it is in keeping with the wishes of the managers of the bill as they come toward the end. I will be on the alert to handle the matter before 6:30. I am not trying to extend it beyond 6:30. I merely want to be guaranteed that we will have an opportunity to be heard on these amendments.

Mr. BAKER. Mr. President, I do not object, but I want to make sure that we clearly understand what we are about. That consent request in that form would not necessarily, then, guarantee final passage at 6:30.

Mr. ALLEN. No, but I would certainly be working toward that end. I assure the Senator of that. Obviously, if I am crowded in offering my amendments, I want the opportunity to have the time. At this time there is no limit on these amendments.

Mr. STENNIS. Mr. President, there is one point I want to call attention to. On these amendments that we do not know anything about, and a Senator can just write out an amendment to add $300 million, or anything else, if there is anything which has not been filed by now they could come in tomorrow and pile them up where it would be impossible to research them out or get the facts for the Senate, or finish.

The PRESIDING OFFICER. The Chair would like a clarification from the majority leader. Is the understanding of 30 minutes on each of the first two amendments and 40 minutes on the third amendment?

Mr. BAKER. The 40-minute amendment is the commissary amendment.

Mr. ROBERT C. BYRD. That is correct.

The PRESIDING OFFICER. Would the Senator be recognized first?

Mr. ROBERT C. BYRD. Yes. That would be commencing at 9:30. I believe the Senator from Mississippi said it would be agreeable to start at 9:30.

Mr. STENNIS. What about the idea of any amendment which is brought up tomorrow, which has not been filed by the time we recess, will have a minimum of 30 minutes anyway.

Mr. ROBERT C. BYRD. Yes.

Mr. STENNIS. If we do not get through by 6:30, we are just not through. The Senator cannot help it and neither can I.

Mr. BAKER. Mr. President, is it so that the present unanimous-consent order provides for a 1-hour limitation on any amendment as described by the Senator from Mississippi, all amendments other than those identified in the order previously?

Mr. ROBERT C. BYRD. But that term would be vitiated unless we included a similar proviso in this agreement.

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. Will the Chair repeat himself?

The PRESIDING OFFICER. Yes, in answer to the question, except at 6:30 there would be a vote.

Mr. ROBERT C. BYRD. But this is a new agreement.

The PRESIDING OFFICER. Unless that provision obtains.

Mr. BAKER. It is the intention of the majority leader to vitiate the present unanimous-consent order and substitute this one in its place?

Mr. ROBERT C. BYRD. Yes, and we could add a proviso with regard to the time on each amendment. I believe the Senator from Mississippi is right in requiring a 30-minute limitation on any amendment which is not at the desk at this time. Do I understand the Senator correctly?

Mr. STENNIS. Yes.

Mr. BAKER. What about the 6:30 time to vote? Would that be extended, may I ask the Senator from Mississippi?

Mr. STENNIS. To do what?

Mr. BAKER. Suppose at 6:15 an unprinted amendment is presented. Is it the position of the distinguished Senator from Mississippi that the full 30 minutes contemplated by this colloquy would be available and extend the time to vote to, say, 6:45?

Mr. STENNIS. It could well be that it would be needed very badly. There should be some kind of protection. I just came on duty this morning with an agreement made last week. I thought of that last year and we made some kind of proviso, but I have forgoteen what it was. That was a proviso to take care of late amendments.

Mr. ROBERT C. BYRD. Mr. STENNIS is going to call up his three amendments early and Mr. ALLEN has assured the Senate that he anticipates getting his amendments up in time so that they will not impinge on the 6:30 deadline.

I would include in the request that there be a 30-minute time limitation on my amendment which is not at the desk now. There should be a time limitation on any amendments so that we can proceed in some kind of orderly fashion. I would include, Mr. President, the request that there be a time limitation on any other amendment which has not been mentioned of 30 minutes to be equally divided in accordance with the usual form, and, of course, I think there should be a proviso for 2 hours on the bill so that the managers of the bill may yield therefrom in accordance with the usual form.

Mr. BAKER. Mr. President, reserving the right to object, what is the status of the limitation of time on the bill itself within the contemplation of this agreement?

The PRESIDING OFFICER. Two hours.

Mr. STENNIS. We yielded some of that today.

Mr. BAKER. I ask the Chair, then, what time remains on the bill and would it be available under this unanimous-consent formulation so the manager and the ranking Member could yield some time off the bill in assistance of debate on this amendment?

The PRESIDING OFFICER. Sixty-five minutes remain for the Senator from Mississippi and 94 minutes for the Senator from North Dakota, exclusive of the last 15 minutes.

Mr. BAKER. Mr. President, if the distinguished majority leader would advise

me, then, is it his intention that that time thus remaining under the previous order be carried over in the same form as the new order and available for yielding by the managers?

Mr. ROBERT C. BYRD. No. In accordance with the request I have just promulgated, the old agreement would be entirely vitiated. Under the new agreement, there would be an hour for Mr. STENNIS and an hour for Mr. YOUNG, which they could yield.

Mr. BAKER. Two fresh hours?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, in further explanation of my reservation under the unanimous-consent agreement, I advise the majority leader that I have a tabulation here of amendments to be offered on this side as follows: Senator STEVENS has three amendments, which we are proposing to deal with under this agreement. Senator DOLE has an amendment; Senator HELMS has a point of order; Senator BELLMON has an amendment. Senator HELMS has an amendment in addition to the point of order. Senator GOLDWATER, according to this notation, has two amendments.

Mr. President, I advise the majority leader that I cannot agree to this unanimous-consent request at the moment until I try to check with three people on this tabulation. I, therefore, ask the majority leader to withhold his request or, if he prefers, I shall suggest the absence of a quorum so we can continue.

Mr. ROBERT C. BYRD. I shall be glad to withhold my request.

Mr. GRIFFIN. Mr. President, will the Senator yield? I have a matter that will take about 2 or 3 minutes.

Mr. BAKER. I yield.

INACTION ON CLEAN AIR: FLIRTATION WITH DISASTER

Mr. GRIFFIN. Mr. President, over the weekend, I was pleased to learn that a meeting of the conferees on the Clean Air Act Amendments of 1977 was finally scheduled for this afternoon—53 days after passage of the bill by the House and 38 days after the Senate approved its version of the legislation.

I do not wish to appear frivolous—but when I note the breakneck speed with which the clean air conferees have proceeded so far, I can only hope that their headlong rush to the conference table will not foreshadow any rash and precipitate judgments on this critical legislation.

Seriously, there can be no doubt at all that this, indeed, is very critical legislation.

It is critical in its substance—and in its impact on major industries throughout the country.

It is critical as well in its timing—for an unconscionable, inordinate delay in achieving final enactment of the Clean Air Act amendments poses a real threat to our entire economy.

The simple fact is that, if it takes the conferees so long to reach agreement as it took them to begin conferring, we are likely to witness a shutdown of the entire automobile industry—and with it one-sixth of our Nation's economic structure.

Failure by Congress to act would deal a severe blow to millions of American workers and their families whose livelihoods depend on automobile-related jobs.

Everyone agrees that technology is not available to meet the emission standards which were written into the law for 1978 models. Both the House and the Senate have recognized the necessity for extending 1977 standards for another year if 1978 model production is to begin in August as scheduled.

Ironically, however, it is differences between the two Houses with respect to future model years—not 1978—that may shut down production of 1978 model cars. Unless this and other differences are resolved before Congress adjourns for August recess, 3 weeks from now, we may return after the recess to find that inaction has triggered economic chaos.

The Nation simply cannot afford this flirtation with disaster.

The Detroit News accurately pointed out the gravity of the situation in an editorial last week:

> Congress' tardiness in dealing with this issue—and there is no excuse for its slowness—may be intended as torment for the auto executives. But the result is far more widespread than that.
>
> The auto worker and his family also suffer uncertainty caused by this brinksmanship. Thousands of hourly-paid workers do not know whether they will be working in August. This time the auto barons are not the bogey men responsible for the anxiety. This is a summer's gift from the elected members of Congress. . . .

I submit, Mr. President, that a "gift" from Congress of uncertainty, anxiety, and suffering is one that American auto workers can do without. The best gift we can give them is assurance that their jobs will continue.

We can do that if there is prompt agreement and adoption of an amendments conference report.

I urge my colleagues who are associated with the conference to negotiate constantly—around the clock, if necessary—and quickly to adopt a conference report. I urge them to get on with this job of reaching agreement on the Clean Air Act, a job that has, too long, been delayed.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEFENSE APPROPRIATIONS 1978

The Senate continued with the consideration of H.R. 7933.

Mr. CRANSTON. Mr. President, I ask unanimous consent that Bill Jackson of my staff may have the privilege of the floor during consideration of the Defense appropriation measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. I ask unanimous consent that Bruce Van Voorst of my staff have the privilege of the floor during consideration and votes on this measure.

Mr. GRIFFIN. I make a similar request with respect to Robert Turner of my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, Senator GOLDWATER introduced an amendment to this bill which pertains to language on page 8. It has no number yet, that I know of. I ask unanimous consent that Senator BENTSEN be added as an original cosponsor of that amendment, along with Senator GOLDWATER.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT—H.R. 7933

Mr. BAKER. Mr. President, I still hope we can get a unanimous-consent agreement to dispose of this bill tomorrow. I should like to report to my colleagues, for the information of the majority leader and the managers of the bill, that this is my tabulation now of the business we still must transact on this side: Three amendments by Senator STEVENS, which have already been identified, and there is already a proposal for a modified time limitation; one amendment by Senator DOLE, on which, I am advised, he will require an hour; one amendment by Senator HELMS, on which he is agreeable to 30 minutes; one point of order by Senator HELMS, on which there will be a limitation of 30 minutes; one amendment by Senator BELLMON, on which he would require a time limitation of 1 hour; two amendments by Senator GOLDWATER, on which we can agree to 30 minutes each, equally divided.

I am advised, as well, Mr. President, that there are either two or three Allen amendments, plus one Kennedy amendment, so there are other amendments that will likely originate on the majority side of the aisle. That will carry us for some time.

I might also add, Mr. President, that I am concerned about the 6:30 deadline. I wonder if the majority leader would consider some modification of that provision, in view of this tabulation of circumstances.

Mr. ROBERT C. BYRD. Yes.

I talked with the distinguished manager of the bill and I believe that it would be more agreeable with him if it were made not later than 8 o'clock, rather than 6:30 p.m. I would change it.

Mr. STENNIS. I think that would be a good suggestion and would help a lot.

Mr. BAKER. Mr. President, I think that would be.

Mr. STENNIS. I am willing to take up more amendments tonight, to get some more here.

Mr. ROBERT C. BYRD. If Senator STEVENS is here——

Mr. BAKER. Mr. President, I understand he is not. As the distinguished majority leader knows, we have advised Senators there would be more votes tonight. They tend to evaporate pretty fast.

I do not believe there would be much effect in doing that on this side.

Mr. STENNIS. All right, make it 8 o'clock tomorrow.

Mr. BAKER. I think that would be a great help and give everybody additional protection.

I understand the unanimous-consent order would provide as well for 2 hours on the bill and would provide 30 minutes on unprinted amendments.

Mr. ROBERT C. BYRD. And 30 minutes on any amendment that has not been mentioned here. I suppose we should include debatable motions, appeals and points of order, because otherwise we might be caught without having that.

I would suggest 20 minutes on debatable motions, appeals, and points of order.

Mr. BAKER. Mr. President, if I can make two remarks under my reservation.

First, if we can shorten rollcalls tomorrow, I will try to do that. I cannot agree to that at this moment, but I will try.

Second, I would urge all of our colleagues to offer their amendments, to call them up as soon as possible, because, inevitably, with a particular hour for final passage, almost always we get caught with amendments not disposed of and it has the effect of further reducing the time available.

So, Members on this side of the aisle, I would urge them to offer their amendments tomorrow as soon as possible.

Mr. ROBERT C. BYRD. And Senator STEVENS is already on record stating he would call up his three first, in sequence.

Mr. BAKER. Yes. And I understand the unanimous-consent request would provide for that?

Mr. ROBERT C. BYRD. Yes.

The PRESIDING OFFICER. Is there objection to the modified unanimous-consent request?

Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

Ordered, That on Tuesday, July 19, 1977, when the Senate resumes consideration of H.R. 7933 (Order No. 304), the Department of Defense Appropriation Bill, debate on any amendment (except amendment No. 499) by the Senator from Alaska (Mr. STEVENS), on which there shall be 40 minutes, an amendment relating to helicopter consolidation, and any amendments thereto, on which there shall be 2 hours; an amendment by the Senator from Kansas (Mr. DOLE), on which there shall be 1 hour; and an amendment by the Senator from Oklahoma (Mr. BELLMON), on which there shall be 1 hour) shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill, and debate on any debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: *Provided further*, That at any time during the debate on the helicopter consolidation amendment, amendments thereto be in order: *Provided further*, That the 30 minutes shall be guaranteed, notwithstanding any other provisions of this agreement, on any amendment which had not been presented to the Desk prior to the Senate recessing last evening, July 18, 1977.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 2 hours, to be equally divided and controlled, respectively, by the Senator from Mississippi (Mr. STENNIS) and the Senator from North Dakota (Mr. YOUNG): *Provided*, That the said Senator, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

Ordered further, That the vote on final passage shall occur no later than 8:00 p.m. Tuesday, July 19, 1977.

Mr. ROBERT C. BYRD. Mr. President, I thank the manager of the bill (Mr. STENNIS), the ranking Member (Mr. YOUNG), the minority leader, (Mr. ALLEN), and all of the Senators here who cooperated.

Mr. STENNIS. I appreciate what the Senators are doing. If we have a little luck tomorrow we could drop out some of these without having to take them up.

UNANIMOUS-CONSENT AGREEMENT—EXECUTIVE F

Mr. ROBERT C. BYRD. Mr. President, as in executive session, I ask unanimous consent that when the Senate considers the resolution of ratification on Executive F (95th Cong., 1st sess.), Calendar No. 2, debate on the resolution of ratification be limited to 2 hours, to be equally divided and controlled by the Senator from New Jersey (Mr. CASE) and the Senator from Alabama (Mr. SPARKMAN), that debate on any amendment, reservation, understanding, or declaration thereto be limited to 1 hour, to be equally divided and controlled by the mover of such and the manager of the resolution, that debate on any amendment in the second degree or amendment to a reservation, understanding, or declaration be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution, and that debate on any debatable motion, appeal from the ruling of the Chair, or point of order in connection with the resolution of ratification be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution.

Mr. ALLEN. Reserving the right to object, is this the pipeline?

Mr. ROBERT C. BYRD. Yes.

Mr. ALLEN. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT—H.R. 2

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on the conference report on H.R. 2, the surface mining bill, there be an agreement as follows: That one motion to recommit by Mr. BUMPERS be in order, that there be a time limitation of 4 hours on that to be equally divided between Mr. BUMPERS and Mr. METCALF, that no tabling motion be in order with respect to that recommittal motion.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, will the Senator yield to me on this question?

Mr. ROBERT C. BYRD. I yield.

Mr. STENNIS. What time does the majority leader expect to take up this bill tomorrow?

Mr. ROBERT C. BYRD. 9:30.

ORDER FOR RECESS UNTIL 9 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 9 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF H.R. 7933 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at 9:30 tomorrow morning the Senate resume consideration of the pending measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEFENSE APPROPRIATIONS, 1978

The Senate continued with the consideration of H.R. 7933.

Mr. ROBERT C. BYRD. Mr. President, I thank all Senators for their forbearance and consideration and cooperation and understanding in reaching the new agreement on the bill. I think it will save the Senate a day's work, in reality.

Mr. BAKER. Mr. President, if the Senator will yield, I also feel that it will save us a day's debate on this measure. After all is said and done, with the adjustments that were made in the unanimous-consent order, I think everyone is protected within reasonable limits, so far as we can ascertain their interests.

I think it is a good agreement, and I commend the majority leader for his efforts and his perseverance.

Mr. ROBERT C. BYRD. I thank the minority leader for his helpfulness.

Mr. President, I yield the floor

Mr. CLARK. Mr. President, I ask unanimous consent that Charles Stevenson, of Senator CULVER's staff, have the privilege of the floor during the consideration of the Defense appropriation measure.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, and I shall not object, I intended to do that myself. I thank the distinguished Senator, Mr. CLARK, for having made the request.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ROUTINE MORNING BUSINESS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, if there is any time remaining following the conclusion of the special order and the hour of 9:30 a.m., there be a brief period for the transaction of routine morning business, with no resolutions coming down under the rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 9 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9 o'clock tomorrow morning.

The motion was agreed to; and at 6:59 p.m. the Senate recessed until tomorrow, Tuesday, July 19, 1977, at 9 a.m.

NOMINATIONS

Executive nominations received by the Senate July 18, 1977:

DEPARTMENT OF JUSTICE

William H. Shaheen, of New Hampshire, to be U.S. attorney for the district of New Hampshire for the term of 4 years, vice William J. Deachman III, term expired.

Edward F. Harrington, of Massachusetts, to be U.S. attorney for the district of Massachusetts for the term of 4 years, vice James N. Gabriel, term expired.

Hubert H. Bryant, of Oklahoma, to be U.S. attorney for the northern district of Oklahoma for the term of 4 years, vice Nathan G. Graham, resigned.

William B. Gray, of Vermont, to be U.S. attorney for the district of Vermont for the term of 4 years, vice George W. F. Cook.

Wesley David Lane, of Minnesota, to be U.S. marshal for the district of Minnesota for the term of 4 years, vice Harry D. Berglund.

William J. Evins, Jr., of Tennessee, to be U.S. marshal for the middle district of Tennessee for the term of 4 years, vice Leon T. Campbell.

Earle B. McLaughlin, of Vermont, to be U.S. marshal for the district of Vermont for the term of 4 years, vice Christian Hansen, Jr.

IN THE ARMY

The following officer for appointment in the Army National Guard of the United States under the provisions of title 10, United States Code, sections 593(a) and 3385:

To be brigadier general

Col. James Clifford Good, [redacted].

IN THE AIR FORCE

The following Air Force officers for appointment in the Regular Air Force, in the grades indicated, under the provisions of section 8284, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated, with the dates of rank to be determined by the Secretary of the Air Force:

MEDICAL CORPS

To be major

Payne, James E., [redacted].

To be first lieutenant

Muehlberger, Gerald L., [redacted].
Kalosis, John J., Jr., [redacted].

DENTAL CORPS

To be captain

Kyle, Frank A., Jr., [redacted].

To be first lieutenant

Parrott, Gerald E., [redacted].

The following persons for appointment as reserve of the Air Force, in the grade indicated, under the provisions of section 593, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated:

MEDICAL CORPS

To be lieutenant colonel

Bisgard, Jay C., [redacted].
Blattman, John, [redacted].
Cortez, Joseph A., [redacted].
Day, Ralph W., [redacted].
Ellenbogen, Charles, [redacted].
Froelicher, Victor F., Jr., [redacted].
Gams, Richard A., [redacted].
Goff, Terry H., [redacted].
Hale, Robert, [redacted].
Hansen, Paul T., [redacted].
Hooker, John P., [redacted].
Merrill, Robert C., [redacted].
Pietrzak, Julius, [redacted].
Sheffer, Thomas F., [redacted].
Siegel, Donald, [redacted].
Thorshov, Jon R., [redacted].
Zimmerman, Alfred M., [redacted].

The following persons for appointment as temporary officers in the U.S. Air Force, in the grade indicated, under the provisions of sections 8444 and 8447, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated:

MEDICAL CORPS

To be lieutenant colonel

Church, McGregor L., [redacted].
Cortez, Joseph A., [redacted].
Dehnel, Luther L., [redacted].
Goff, Terry H., [redacted].
Hooker, John P., [redacted].
Merrill, Robert C., [redacted].
Pietrzak, Julius, [redacted].
Sheffer, Thomas F., [redacted].
Zimmerman, Alfred M., [redacted].

The following officers for promotion in the Air Force Reserve, under the provisions of sections 8376 and 593, title 10, United States Code:

LINE OF THE AIR FORCE

Major to lieutenant colonel

Anderson, Stokes W., Jr., [redacted].
Arnold, Gary D., [redacted].
Bawcum, Robert W., [redacted].
Fordham, Lawrence C., [redacted].
Frazier, Thomas E., [redacted].
Fuller, William T., Jr., [redacted].
Jordan, Fred N., Jr., [redacted].
McAfee, James L., [redacted].
Murphy, Walter D., [redacted].
Sher, Bernard S., [redacted].
Watson, Joe N., [redacted].

CHAPLAIN CORPS

Tolbert, I. V., [redacted].

MEDICAL CORPS

Dewitt, Dexter D., [redacted].
Eaton, Wyley E., [redacted].
Hovick, Jack H., [redacted].
Liest, Edward J., [redacted].
Northington, Floyd C., [redacted].
Rodrigueztellez, Jaime, [redacted].
Wright, George D., [redacted].

NURSE CORPS

Lehman, William W., [redacted].

IN THE ARMY

The following-named distinguished military students for appointment in the Regular Army of the United States in the grade of second lieutenant under the provisions of title 10, United States Code, sections 2106, 3283, 3284, 3286, 3287, 3288, 3290, and 3311:

Allison, William J. [redacted].
Ashley, Vincent E., [redacted].
Athanaseas, Nicholas A., [redacted].
Bitto, Joseph P., [redacted].
Boucher, Robert S., [redacted].
Box, Michael, [redacted].
Brinson, Robert K., [redacted].
Broach, Donald H., [redacted].
Butler, Bruce E., [redacted].
Christiansen, Jeffery T., [redacted].
Covert, Deana M., [redacted].
Dearborn, Michael C., [redacted].
Desosa, Maximo T., [redacted].
Douglas, Robert E., [redacted].
Ezzo, Michael R., [redacted].
Farley, Barbara S., [redacted].
Frink, William D., Jr., [redacted].
Gibbons, Donald L., [redacted].
Guenther, Robert F., III, [redacted].
Hollar, Richard B., Jr., [redacted].
Lawson, Roy E., [redacted].
Matos, Richard U., [redacted].
McCabe, Richard L., [redacted].
Miles, Francis G., [redacted].
Morrell, John W., [redacted].
Mosby, Faye W., [redacted].
Perkins, David G., [redacted].
Petrone, Robert F., [redacted].
Piccirilli, George J., [redacted].
Pointon, David W., [redacted].
Roma, Susan, [redacted].
Russell, Kathy A., [redacted].
Ruud, William N., [redacted].
Sullivan, Michael H., [redacted].
Sutherland, Greg V., [redacted].
West, Timothy W., [redacted].
Young, Anna L., [redacted].

The following-named scholarship students for appointment in the Regular Army of the United States in the grade of second lieutenant, under the provisions of title 10, United States Code, sections 2107, 3283, 3284, 3286, 3287, 3288, 3290, and 3311:

Bedey, David F., [redacted].

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with bills and joint resolutions introduced today are as follows:)

By Mr. HELMS (for himself and Mr. MORGAN):

S. 1876. A bill to amend the Internal Revenue Code of 1954 with respect to the net operating loss deduction allowable in the case of certain taxpayers; to the Committee on Finance.

Mr. HELMS. Mr. President, today I am introducing, on behalf of myself and my distinguished colleague from North Carolina (Mr. MORGAN), a bill to amend section 172(b) of the Internal Revenue Code of 1954. This section deals with the net operating loss deduction—NOL. This legislation is designed to liberalize the NOL rules so as to provide fair and equitable tax relief to many depressed American industries. Whatever revenue loss that may occur as a result of liberalizing section 172(b), which, in any case will be slight, will be more than offset by a renewed vibrancy that will be accorded these depressed industries. After all, bankrupt companies pay no taxes—nor do unemployed workers.

The concept of a net operating loss deduction was first enacted as section 204 of the Revenue Act of 1918. The basic purpose was to mitigate the harsh results often arising from the arbitrary, but practical and necessary, use of the 1-year accounting period for determining tax liability. Basically the NOL permits taxpayers to recover taxes previously paid by offsetting tax losses against taxable income spread over a designated period of time.

The original NOL provided only a 1-year carryback and a 1-year carryover. Between the date of first enactment, however, and the introduction of the Internal Revenue Code of 1954—the code—the carryback-carryover period was either expanded or restricted on eight different occasions. When the code became law the carryback period was 2 years and the carryover period was 5 years. Since adoption of the code, Congress has provided two additional amendments by first extending the carryback provision to 3 years and later extending the carryover period to 7 years.

In addition to the various amendments indicated above, Congress has further amended the code from time to time to permit certain groups of taxpayers to enjoy an even greater spreading of their NOL's. Six such exceptions are presently set forth in section 172(b)(1)(A)(ii) and in section 172(b)(1)(C)–(G) of the code. These exceptions generally apply to classes of taxpayers such as financial institutions or regulated transportation companies and in certain cases provide carrybacks of as much as 10 years coupled with carryover periods of 5 years. See especially section 172(b)(1)(F) and (G) of the code. One particular amendment which is now deleted from the code provided a special 5-year carryback period to domestic corporations which met certain prescribed qualifications. The qualifications were so narrowly drawn that the amendment has generally been identified as the "American Motors" exception in honor of the only company known to have benefited from it.

In tracing the background of the American Motors exception, an important reference is the conference committee report in which the House conferees expressed a desire to consider a broader version of the 5-year carryback. The Senate conferees concurred and stated that in their opinion it would be appropriate in the future to consider the broadening of the types of cases to which the carryback is available.

The bill I am introducing retains the present 11-year period but provides taxpayers with an election whereby they can choose a 5-year carryback period provided they are willing to shorten their carryforward period from 7 to 5 years and are able to satisfy certain conditions. Specifically, the changes are as follows:

First. Sectior 172(b)(1)(H) will permit taxpayers which meet the requirements of new paragraph (3)(F) to carry back their NOL's occurring in taxable years ending after December 31, 1973, for a period of 5 years and to carry them forward for a period of 5 years.

Second. The conditions for satisfying subparagraph (H) are contained in new section of 172(b)(3)(F) which are:

First. Taxpayers must make an irrevocable election in accordance with the Commissioner's regulations to spread their NOL's under subparagraph (H); and

Second. The electing taxpayer's aggregate NOL's for any consecutive 4-year period ending after December 31, 1973, exceeds its aggregate taxable income for the 3-year period preceding such 4-year period; and

Third. The electing taxpayer's aggregate investment in new plant, property, and equipment at cost during each year of the 4-year period must exceed 10 percent of its gross sales for such years, and its average amount of acquisition for the 4-year period must exceed 15 percent of its average gross sales for such period; and

Fourth. During each year of the 4-year period, together with each of the preceding 3 taxable years, the taxpayer employed at least 4,000 persons and recorded gross sales in excess of $100,000,000.

This legislation contemplates that a special 5-year carryback be available to corporations which have achieved a position of substance and have committed themselves to future growth through investment in both equipment and people. Thus, in order to qualify for the special elective relief, a taxpayer must demonstrate that its average acquisitions of plant and equipment during the immediately preceding 4-year period exceed 15 percent of its gross sales for such period. For example, for a company with annual sales of approximately $200 million, a $120 million investment would be a requisite to qualification. A further demonstration of substance required of electing taxpayers is the requirement that for each year of the most recent 7-year period, the taxpayer's sales must have exceeded $100 million and it must have employed more than 4,000 persons.

Under normal business conditions, it is logical to assume that a taxpayer which satisfies the above conditions will be able to mitigate 1 or 2 years of operating losses by utilizing the existing 3-year carryback period. Under abnormal business conditions, however, or in the case of industries which are periodically subjected to recurring cycles of depressed prices, the existing 3-year period does not suffice. For example, the double-knit industry, a segment of the textile industry, is one which has experienced both afflictions and is only now showing signs of recovery. This period of depression to which I refer is one which has exceeded 3 years. In order to demonstrate this contention, and to illustrate the problems faced by just one industry in the United States, I will set forth certain data pertaining to the doubleknit industry which has been selected from a variety of sources.

Beginning in 1973, the knitting business began to fall noticeably behind other component segments within the textile industry. By the end of 1973, this entire subindustry was in a loss position where it has remained for the last 3½ years. Recently, the 1977 Annual Performance Profile of Textile Companies published by Kurt Salmon Associates, Inc., indicated that of all the reporting segments of the textile industry, only knits show an aggregate net loss for both 1975 and 1976.

In large part, the present malaise in the knitting industry may be attributed to the abnormally rapid growth in the doubleknit business which occurred between 1964 and 1973. Since doubleknit fabrics were nearly all constructed of synthetic fibers during this period, one gauge of this growth phenomenon may be found in U.S. Government statistics dealing with total fiber consumption by U.S. textile mills. According to the U.S. Department of Agriculture, the total consumption of man-made fiber in 1964 was 3.1 billion pounds versus a total cotton consumption of 4.3 billion pounds. Ten years later, however, the total consumption of man-made fibers had climbed to 8.7 billion pounds for an increase of over 280 percent whereas cotton consumption actually decreased to 3.3 billion pounds. During this same 10-year period, the capacity to produce doubleknit fabrics grew at a rate which was even more impressive. For example, in 1968, according to the National Knitted Outerwear Association, the number of operable doubleknit machines in the United States was only 4,500, and these machines produced 150 million pounds of fabric. Five years later, the number of machines had grown to 23,000, a 510-percent increase and their actual production was 970 million pounds, a 650-percent increase. The decline of the doubleknit business following 1973 parallels the experience of the knit industry reported above, and has been characterized by falling prices, severe cutbacks in production, withdrawals by some companies and the complete termination of business by other companies whose production was wholly or predominantly based upon doubleknits. These years have been excruciatingly frustrating for knitters who have worked feverishly to reduce their costs only to see the decline in their unit selling prices more than offset their savings. The U.S. Department of Commerce reports that as of the fourth quarter of 1976, there were only 11,489 machines which produced on an annualized basis 535 million pounds of fabric, or 55 percent of the 1973 total. The National Knitted Outerwear Association supports these statistics by reporting that as of December 1976, over 200

companies withdrew altogether from the doubleknit business.

The type of problems being experienced by the doubleknit industry are by no means peculiar to that industry. For instance, there are at least 20 major companies operating in different parts of the country which share the dubious distinction of carrying unabsorbed net losses in 1976. What follows is a schedule which lists the companies by name and the location of the principal executive offices. Opposite the name of each company, there is listed a reported net income or loss for the years 1972 through 1975. At the far right of this columnar presentation, there is set forth the cumulative net loss for each company.

	1975	1974	1973	1972	Net loss
Singer (New York)	(451, 900)	10, 100	94, 500	87, 500	259, 800
White Motors (Cleveland)	(69, 374)	22, 564	23, 685	8, 610	14, 515
Commonwealth Oil	(24, 197)	10, 726	36, 526	3, 113	
American Beef (Ontario)	(32, 828)	4, 861	3, 378	1, 099	23, 490
Rath Packing (Waterloo, Iowa)	(6, 554)	608	191	4, 616	1, 139

National Homes (Indiana)	(15, 523)	(20, 022)	(12, 684)	(3, 281)	51, 510

It is true, of course, that losses can be carried forward against future profits, but in terms of cash shortages which arise after prolonged periods of economic famine, the need for relief is now. The experiences of the double-knit industry and other industries similarly situated have occurred before and are likely to occur in the future. Accordingly, it is my view that some form of elective tax relief such as I have proposed is necessary in order to avoid the demise of some of our most vital industries. This is especially true in this era of relatively free trade, when a sudden spurt of foreign competition can result in unanticipated and sudden losses which may continue for a period of several years until such time as the affected industry can adjust to the new circumstances by adopting new methods or diversifying its products.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1876

Be it enacted by the Senate and House of Representatives of the United States of America in Congress amended, That (a) subsection (b) of section 172 of the Internal Revenue Code of 1954 (relating to net operating loss of carrybacks and carryovers) is amended—

(1) by striking out "(F), and (G)" in clause (i) of paragraph (1)(A) and inserting in lieu thereof "(F), (G), and (H)",

(2) by striking out "(D), and (E)" and "(E), and (F)," in subparagraph (B) of paragraph (1) and inserting in lieu thereof "(D), (E), and (H)" and "(E), (F), and (H),", respectively,

(3) by adding at the end of paragraph (1) the following new subparagraph:

"(H) In the case of a taxpayer meeting the requirements of paragraph (3)(F), a net operating loss for any taxable year ending after December 31, 1973, shall be a net operating loss carryback to each of the five taxable years preceding the taxable year of such loss and shall be a net operating loss carryover to each of the five taxable years following the taxable year of such loss.", and

(4) by adding at the end of paragraph (3) the following new subparagraph:

"(F) A taxpayer does not meet the requirements of this subparagraph unless—

"(i) the taxpayer elects to have the provisions of paragraph (1)(H) apply at such time and in such manner as the Secretary may prescribe and such election is irrevocable for all taxable years designated in the election,

"(ii) the sum of the net operating losses of the taxpayer for any consecutive period of four taxable years ending after December 31, 1973, exceeds the sum of its taxable income (computed under paragraph (2)) for the three taxable year period ending immediately prior to the beginning of such four taxable year period,

"(iii) during such four taxable year period, the taxpayer acquired in each such year section 1245 property (as defined in section 1245(a)(3)) or section 1250 property (as defined in section 1250(c)), or both, the unadjusted basis of which exceeded 10 percent of the gross sales of the taxpayer for such year, and the average amount of such acquisitions for each taxable year within such period exceeded 15 percent of the average gross sales of the taxpayer for each taxable year during the four year period, and

"(iv) during each taxable year of the seven taxable year period ending on the last day of the fourth taxable year of the four taxable year period, the taxpayer employed more than 4,000 employees and had gross sales in excess of $100,000,000.".

SEC. 2. The amendments made by the first section of this Act shall apply with respect to taxable years beginning after December 31, 1973.

By Mr. BENTSEN (for himself, Mr. TALMADGE, and Mr. DOLE):

S. 1877. A bill to amend title XVIII of the Social Security Act to provide payment for rural health clinic services; to the Committee on Finance.

Mr. BENTSEN. Mr. President, today I am introducing an alternative version of S. 708, a bill I cosponsored which expands medicare coverage to pay for services performed by physician extenders providing services in rural health clinics.

Hearings on this and other similar proposals are scheduled for July 21 before the Health Subcommittee of the Finance Committee.

The proposal which I am introducing today along with Senators TALMADGE and DOLE was introduced on the House side by Congressman ROSTENKOWSKI, chairman of the Health Subcommittee of the Ways and Means Committee. I feel that all the proposals aimed at improving the health care of rural Americans should be available for consideration by the Health Subcommittee of the Finance Committee when it holds hearings on the issue later this week.

Mr. President, I cannot overemphasize the importance of revising the Federal insurance programs to cover the problems of health care delivery in rural areas. These Federal insurance programs actively discriminate against the rural areas: Nationally, rural physicians receive fees that average 60 percent of the amount paid to their urban counterparts while data shows that the cost of practice in rural areas is often higher than the cost of urban practice due to the inaccessibility of needed support services and supplies.

Twenty-nine percent of part A medicare funds and 28 percent of part B, medicare funds are spent in rural areas while 38 percent of the medicare population resides in rural areas.

In 1972, the average medicare payment for an elderly person living in a metropolitan area was $425 compared to $296 for the rural counterpart.

These national figures show the disparity in Federal spending but they do not reveal the desparate need that rural areas have for these health care dollars. In my State of Texas the aged and disabled can expect very little in terms of available health care as the following statistics illustrate:

Twenty-three countries in Texas were wholly without a physician as of the last count on December 31, 1973. No other State in the country has as many countries without physicians.

Of the 957 counties in nonmetropolitan areas of this country with the highest incidence of infant mortality, 172 are in Texas. Again, Texas has more counties with this kind of high infant mortality rate than any other State.

Of the 971 counties in the Nation that have been designated by the Department of Health, Education, and Welfare as "critical health manpower shortage areas," 49 are in Texas. Only Kentucky has more counties so designated.

Of the 2,300 or more "medically underserved" areas in the United States, over 200 are in Texas. These areas are designated based on four criteria:

The number of poor families in the area;

The percentage of the population that is 65 years of age or older;

The infant mortality rate; and

The ratio of primary care physicians to the population.

Clearly, then, a medically underserved areas has a population that requires

more care because the people are both old and poor yet receives less medical care than the average community in this country.

Mr. President, although rural problems are more evident in my State of Texas, a recent article in the New York Times pointed out that 10 percent of New York's rural population—at the last census count—were living in poverty and were suffering from the same kinds of deprivations that I just described for south Texas.

I want to add—at this point—my appreciation of Senator TALMADGE. His willingness to hold hearings on these issues at such short notice indicates his sensitivity to the problems faced by residents of rural areas both in his State and in the Nation.

Mr. DOLE. Mr. President, today I am pleased to join my colleagues, Senator BENTSEN and Senator TALMADGE in introducing an alternative version of S. 708, which expands medicare coverage to pay for services performed by nurse practitioners and physician assistants in rural health clinics.

While a number of diverse factors contribute to the difficulties experienced by rural Americans in obtaining adequate levels of health care, the manpower shortage is one which is receiving an increasing amount of well deserved attention. Our emphasis today is upon the potential benefits which might result from recognition and more efficient use of nurse practitioner and physician assistants in rural clinics in an effort to meet the need of providing health care to areas experiencing a health manpower shortage. Hearings on this legislation and similar proposals are scheduled for July 21 before the Health Subcommittee of the Finance Committee.

In my own State of Kansas, the delivery of health care to those who reside in rural areas is an issue of vital importance. The type of clinics eligible for this reimbursement is an aspect of the legislation in which I am particularly interested and feel needs more consideration. While I do not wholly support all aspects of this legislation, it is my belief along with Senator TALMADGE and Senator BENTSON that this bill, originally introduced by Representative ROSTENKOWSKI contains important perspectives dealing with medicine payments to rural clinics which should be formally available for subcommittee consideration. I feel there are still many issues to be resolved in terms of the best means to utilize the talents and skills of nurse practitioners and physician assistants. I welcome the opportunity for discussion.

By Mr. SCHWEIKER (for himself, Mr. MCINTYRE, Mr. CHAFEE, and Mr. LAXALT):

S. 1878. A bill to encourage the States to establish cost and quality standards, and to provide incentives to contain inflationary rises in hospital costs, and for other purposes; to the Committee on Finance.

THE SCHWEIKER-MCINTYRE STATE COST CONTROL PLAN FOR HOSPITALS ACT OF 1977

Mr. SCHWEIKER. Mr. President, Senator MCINTYRE and I are today introducing S. 1878 emphasizing State control of hospital costs as an alternative to the Carter administration Federal control plan. Senators CHAFEE and LAXALT are joining as cosponsors.

As the ranking Republican on the Senate Health Subcommittee, I have devoted weeks of study and hearings to the administration's hospital cost containment proposal. The only conclusion I can reach on the Carter plan is that it is an overly centralized, temporary measure which falls far short of what this Nation needs. Therefore, I have joined in formulating this legislation, which is significantly different from the President's plan. I believe the emphasis our bill places on State control of hospital costs, the positive incentives it provides to hospitals to control costs, the 18-month moratorium it imposes on capital expenditures, and the broad new authority it provides to the developing health systems agencies in local areas—all of which are lacking in the President's plan—will spell the difference between success and failure in our efforts to contain hospital costs.

Under the Schweiker-McIntyre "State cost control plan for hospitals," each State would establish a hospital review commission to review in advance the proposed budgets and rates of hospitals within the State. In its prospective review, the commission would approve routinely any proposed budgets and rates falling within limits it would define. But rates and budgets exceeding those limits would be subjected to detailed examination and those found to be excessive could not be put into effect. This emphasis on State control contrasts sharply with the virtually exclusive Federal control embodied in the Carter plan.

Mr. President, I believe we must encourage the States to attack the skyrocketing costs of health care rather than use an already bloated Federal bureaucracy to impose purely Federal controls. State and local officials are more in tune with the unique health care needs of their communities and with the specific steps which would be most effective in curbing sharply rising costs.

The Schweiker-McIntyre plan would not allow the Secretary of Health, Education and Welfare to exercise Federal control in any State which established a hospital review commission, unless the commission failed to hold hospital costs at or below the Federal lid. And, unlike the Carter plan, our legislation would provide start-up money to the States for establishment of the commissions.

In addition, the Schweiker-McIntyre plan will offer positive incentives to hospitals to control costs. If during the year, a hospital remains within the budget approved prospectively by the commission, it could retain its achieved savings up to a certain level or use its cost savings for experiments in administrative efficiency. Prospective review of budgets and rates, and the provision of incentives for remaining within those budgets gives hospitals a clear goal toward which to strive. I believe this approach would be much more effective than the "after-the-fact" audits and penalties involved in the Carter plan.

Under the Schweiker-McIntyre proposal there would be an 18-month moratorium on hospital capital expenditures. These expenditures currently account for a major part of rising hospital costs. This moratorium is necessary to allow the developing health systems agencies within the States to become more fully established and develop the capacity to exercise the authority for decertification which is provided to them under our plan. The bill would authorize the HSA's to decertify unneeded beds and services and would establish a Federal pool to finance the costs of decertification. It is not enough to prevent hospital expansion and the addition of unneeded services. We must review the whole system and direct the local health systems agencies to move actively to eliminate duplication and waste. Only in this way can we effectively control costs.

In addition, the Schweiker-McIntyre bill, unlike the President's proposal, would cover Government hospitals. For too long Congress has exempted Government institutions from the controls it applies to the private sector. We always have a double standard—a tight one for the private sector and none for the Federal Government. I believe we must force the Government to live up to the standards it establishes for others.

Other key elements of our proposal not included in the Carter plan are as follows:

The hospital review commissions in each State would be required to use a system of uniform chart of accounts and uniform reporting of costs for all hospitals.

The hospital review commissions in each State would be able to develop classifications of hospitals according to such factors as bed size, type of hospital, and diagnostic case mix, for purposes of rate determination.

Hospitals would be required to disclose potential conflicts of interest among administrative personnel.

Authority of existing professional standards review organizations to review the level of care provided to hospital patients would be extended to cover all patients, not just medicare and medicaid patients, as under present law.

The skyrocketing costs of health care affect not only persons who are hospitalized but virtually all taxpayers through higher health insurance premiums and the higher taxes needed to finance the $27.7 billion in tax dollars spend each year for medicare and medicaid. Clearly there is a need to put a stop to this inflationary spiral. It is unfair to the American people for Congress to explore only short-term remedies as proposed by the administration. We must pursue right now long-range solutions involving permanent reforms.

Mr. President, I ask unanimous consent that a summary of the key elements of the Schweiker-McIntyre plan and then the text of the bill itself be printed in the RECORD following Senator MCINTYRE's remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MCINTYRE. Mr. President, today I was proud to join with my distin-

guished colleague from Pennsylvania, Senator SCHWEIKER, in introducing the Schweiker-McIntyre State cost control program for hospitals.

This bill is our response to the challenge of how best to bring escalating hospital costs under control.

I like to think our proposal offers an equitable, long-term solution to the problem without undue imposition of the Federal will.

When the President unveiled his proposal to put a 9-percent ceiling on hospital revenues, I saluted his courage in facing up to a difficult issue of great political sensitivity. But I also said there was a better, fairer way to control the single most inflationary factor in the health care picture, a way that I have been urging since I first introduced the McIntyre-Burleson National Health Care Act back in 1969.

There are a number of health care cost control proposals in the National Health Care Act, some of which are embodied in the legislation Senator SCHWEIKER and I are introducing today.

Among them is the proposal that hospital prospective budget review systems be established in and operated by every State in the Union.

I have had confidence in this particular proposal since the day I first introduced the National Healthcare Act. Today I am more confident than ever because of the performance record of prospective budget review systems in two States where the concept has been tested.

For the period from July 1, 1974, to June 30, 1976, the Maryland Health Services Cost Review Commission was able to hold the rate of increase in Maryland hospital costs well below the national average. Before the prospective budget review system was developed, Maryland hospital costs were increasing at or above the national average.

It has been estimated that the system has saved Maryland residents more than $55 million in hospital costs in that 2-year period. In Connecticut, the estimate is that prospective budget review has saved the residents of that State more than $30 million.

In my own State of New Hampshire, more than 50 percent of the hospitals are now using prospective budgeting in the negotiation of contracts with the State's major carriers.

Not long ago, the President of the New Hampshire Hospital Association told me this approach has benefited the hospitals, the insurance companies, and, most importantly, the consumers in our State.

Now considering New Hampshire's experience and the success prospective budget review systems have had in Connecticut and Maryland. I cannot help but wonder what the hospital cost situation would be today if the National Healthcare Act had been enacted in 1969 and those systems had been established in every State.

But the bill has not been passed, the systems are not in place, and hospital costs continue to soar.

Better late than never, the legislation Senator SCHWEIKER and I are introducing today would encourage every State to bring those costs under equitable, long-term control by establishing prospective budget review systems.

THE SCHWEIKER-MCINTYRE STATE COST CONTROL PROGRAM FOR HOSPITALS

1. Each state would establish a Hospital Review Commission which would implement a permanent program to control hospital costs through prospective rate and budget review and approval. The start-up costs for the Commissions would be paid for by the Federal government. Hospital Review Commissions would require:

a. use of a uniform chart of accounts and uniform reporting system;

b. prospective (advance) review and approval or disapproval of hospital budgets;

c. rate determination encouraged on the basis of a classification of hospitals, where appropriate;

d. equal reimbursement rates for all payers with provision that Medicare and Medicaid costs will be controlled;

e. the state commissions would have the option to implement a wage "pass through" for non-supervisory employees;

f. the use of positive incentives to encourage administrative efficiency and cost savings;

g. provisions for the disclosure of salaries and potential conflicts of interest;

h. funding for the commission by an assessment of institutional providers;

i. establishment of a review board in each state to monitor activities of the commission;

j. establishment of administrative and judicial authority within the state to adopt regulations and process appeals;

2. Provide for coordination with existing health planning mechanisms by:

a. giving certificate of need agencies (the state or local HSA) the authority and responsibility to decertify beds and services;

b. establishing a federal pool to finance costs of decertification;

c. providing that where the commission and state certificate of need agencies (HSA's) are separate the state must adopt a program to ensure coordination between rates and the certification process;

d. requiring extension of PSRO activity to all patient care;

3. Capital Expenditure Controls: An 18-month moratorium on hospital capital expenditures would be imposed to give the HSA's time to become fully established and to prepare and implement decertification programs.

a. Exemptions: Projects necessary to ensure public safety and to maintain quality shall be exempt. Specific exemptions include:

(1) projects previously approved by certificate of need agencies;

(2) projects required by Federal, state and local health and safety requirements;

4. Establish Federal Standards which would include:

a. Limit on Federal authority to pre-empt the state program—those states not adequately controlling hospital costs would be subject to the Federal ceiling. However, no state program in states where increases in hospital costs were equal to, or below, the Federal guideline could be pre-empted by the Federal government.

b. Authorization to impose immediately in a national revenue ceiling using a rate index similar to that proposed by the Administration.

S. 1878

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "State Cost Control Plan for Hospitals Act of 1977".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds and declares that—

(1) America confronts a critical testing of its capacity to meet for all of its citizens one of the most basic of human needs, that of protecting and maintaining personal health;

(2) every citizen of the United States of America should have access to quality health care, but too many Americans are unable to secure such care at prices they can afford;

(3) health care costs have been rising at rates which exceed twice the national rate of inflation; and

(4) cost escalation of this magnitude adversely affects the availability of quality health care and severely disrupts the equitable delivery of health care to the American people.

(b) The purpose of this Act is to encourage the States to establish cost and quality standards, and to provide incentives to contain the inflationary rises in hospital costs until State plans are implemented.

TITLE I—STATE HOSPITAL COST CONTROL PLAN

APPLICABILITY

SEC. 101. (a) The provisions of this title shall apply in lieu of the provisions of title III in any State which has established a plan, in accordance with section 102, which has been approved by the Secretary and which assures the Secretary that hospital costs subject to such plan shall not exceed the costs established under title III.

(b) Notwithstanding any other provision of this title, inpatient reimbursement under titles V, XVIII, and XIX of the Social Security Act under this title shall not exceed the rate for inpatient reimbursement determined in title III.

(c) Notwithstanding any other provision of this title, no State shall be required to make inpatient reimbursement to any hospital at rates which exceed the rates for inpatient reimbursement established under title III.

STATE PLAN

SEC. 102. (a) Each State desiring to conduct a hospital cost containment plan shall submit a State hospital cost control plan for approval. The Secretary shall approve a State plan if such plan—

(1) establishes a hospital review commission (as described in subsection (b)) which shall have the authority to supervise the administration of the plan;

(2) establishes an advisory council (as described in subsection (c)) appointed by the chief executive officer of the State;

(3) provides that the commission shall review budgets and proposed charges for health care institutions in the State in order to establish prospectively approved charges which shall be applicable, without discrimination, to all purchasers of services and supplies from health care institutions;

(4) provides that once each year, each health care institution (or category of institutions if the State has a classification plan) shall file its budget and proposed charges with the commission;

(5) provides that filed charges shall be deemed approved unless disapproved by the commission within 90 days after filing;

(6) provides if the budget and rates submitted by a health care institution reveals significant operating inefficiencies or if the proposed charges otherwise appear to be unjustifiably high, the commission shall disapprove the proposed charges and such budget and rates shall not be put into effect;

(7) provides for adequate enforcement procedures;

(8) provides for the disclosure by health care institutions covered by a State plan of—

(A) salaries of hospital administrators, and

(B) potential financial conflicts of interest of hospital administrators, trustees, or directors;

(9) provides that certain cost increases described in subsection (d) may be excluded from determination of budget and rate consideration;

(10) (A) provides that each health care institution subject to a State plan established under this title may apply any surplus funds (the difference between the prospectively approved budget and actual expenditures) for administrative improvements approved by the commission.

(B) provides that no health care institution subject to a State plan under this title shall be required to establish a prospective budget at a level which is less than the preceding fiscal period as a result of surplus funds, to the extent that such funds are applied as required by subparagraph (A).

(11) provides for the development of uniform definitions of all costs; and

(12) provides for the evaluation of standards of institutional performance

(b) The hospital review commission established under paragraph (1) of subsection (a) shall be composed of not less than three full-time commissioners appointed for a specific term of office. While serving in office a commissioner may not be otherwise employed by a State or local government, health care institution, or by a health care financing entity. The commission shall have a full time professional staff adequate in size to carry out its duties. The commission shall not be subject to or associated with the State Medicaid Administrator.

(c) (1) The advisory council established under paragraph (2) of subsection (a) shall be composed of not less than seven members, two of whom shall be representative of providers of health care services, two of whom shall be representative of third-party payors, and three of whom shall be representative of consumers of health care services.

(2) It shall be the duty of the advisory council to review and comment on the operation of the commission and to act on appeals of commission decisions. The council shall report not less than annually to the governor and to the public on the operation of the commission.

(d) For the purposes of this title, the commission may disregard in approving a proposed budget the direct costs associated with any increase in wages or benefits if such increased wages or benefits resulted from a collectively bargained agreement.

(e) Each State review commission may establish classifications of health care institutions subject to the State plan for the purpose of establishing a basis for the approval of rates.

START-UP GRANTS

SEC. 103. (a) The Secretary shall pay to any State which has a qualified State cost control plan an amount equal to 100 percent of the reasonable amounts expended by the State for the proper and efficient administration of the State's hospital review commission and its advisory council. There shall be no reimbursement by the Secretary for the cost of any institutional audits that may be conducted by the commission. No State shall be eligible for more than one grant under this section.

(b) (1) Except as provided in paragraph (2), the amount of a grant made under this section shall be determined on a graduated per capita scale equal to $0.70 for each of the first 500,000 of the State's population; $0.50 for the second 500,000; $0 30 for the third 500,000; and $0.10 for each of the balance of the State's population. The minimum grant per State shall be $500,000.

(2) Any State which on July 1, 1977, has in effect a plan to control hospital costs (which plan satisfies the requirements of this title) shall not be eligible for a grant under this section.

(c) There are authorized to be appropriated such sums as necessary to carry out the purposes of this section.

REVIEW OF LEVELS OF INSTITUTIONAL RATES OF REIMBURSEMENT BY SECRETARY OF HEALTH, EDUCATION, AND WELFARE

SEC. 104. (a) (1) Except as provided in paragraph (2), annually on a date specified by the Secretary, each State hospital review commission shall file with the Secretary, on a form prescribed by him, a report of the level of rates of institutional reimbursement approved by the commission for such categories of health care institutions under the State plan.

(2) The Secretary shall not disapprove a State plan which does not provide levels of rates by category of health care institutions, if the commission provides such information as may be required for individual institutions.

(3) The Secretary in reviewing the levels of rates contained in a State plan, shall disregard from the statewide average of rates, any direct costs associated with any increase in wages or benefits if such increased wages or benefits resulted from a collectively bargained agreement.

(b) In the event the Secretary determines that the level of rates, on a statewide average, for a State exceeds rates established under title III, he shall rescind the State's exemption from the application of title III. The State may appeal the Secretary's decision, and upon receipt of an appeal, the Secretary shall appoint a hearing board of three members which shall hold a hearing at which the interested parties may appear to present the facts which support the Secretary's decision and the facts which support the appellant State's position. Each member of the hearing board shall be knowledgeable with respect to the costs of operating health care institutions and may not be an employee or an owner of any of the health care institutions concerned. Following such hearing the hearing board shall advise the Secretary of its recommendation, and the Secretary shall thereupon render a final decision. If the State, whose exemption from title I has been rescinded, takes action to correct the situation which produced the unjustifiably high level of rates for the health care institutions, it may so notify the Secretary and request restoration of the exemption from title I. If the Secretary is satisfied that corrective action has been taken, he shall restore the exemption as of the date he deems the corrective action to have eliminated the unjustifiably high level of rates.

COMMISSION FUNDING

SEC. 105. Each State commission shall establish a schedule of fees to be charged to each health care institution covered by this title. The fee schedule established shall—

(1) be adequate to cover the expenses of the commission, and

(2) be established as a percentage of the gross revenues of the health care institution.

TITLE II—COORDINATION WITH HEALTH PLANNING AND PEER REVIEW ACTIVITIES

SEC. 201. (a) Each hospital review commission in a State, or the Secretary (in a State which does not have an approved plan under title II) shall review the portion of an institution's charges which results from financing costs and depreciation relating to prior capital expenditures. The commission shall accept the determination, if any, of the appropriate health systems agency that the construction of such facility was consistent with the health needs of the area, but in no event shall the commission approve charges that would finance services, equipment, or facilities which required but were denied a certificate-of-need pursuant to section 1523 (a) of the Public Health Service Act or section 1122 of the Social Security Act.

(b) Each health systems agency shall retain authority over health care institutions with regard to the appropriateness of expenditures, except that expenditures which would have an impact on rates must be approved by the hospital review commission (or the Secretary if a State does not have an approved plan under title II).

EXTENDING SCOPE OF REVIEW

SEC. 202. (a) Section 1155(a) (1) of the Social Security Act is amended by striking "the" immediately preceding "professional activities", and substituting "all", and striking "for which payment may be made (in whole or in part) under this Act.".

(b) Section 1155(f) (2) of the Social Security Act is amended to read as follows:

"(2) The reasonable and necessary expenses of the Professional Standards Review Organizations in making determinations pursuant to this part shall be passed on to the providers whose services are reviewed and shall be considered an appropriate expense of such providers in determining or approving their charges.".

TITLE III—FEDERAL HOSPITAL COST CONTAINMENT PROGRAM

DEFINITIONS

SEC. 301. For the purposes of this Act the term—

(a) (1) "hospital", with respect to any accounting year, means an institution (including a distinct part of an institution participating in the program established under title XVIII of the Social Security Act) which—

(A) satisfies paragraphs (1) and (7) of section 1861(e) of the Social Security Act, and

(B) had an average duration of stay of 30 days or less in the preceding accounting year.

(2) such term shall not include an institution which during any part of a period subject to this Act if with respect to such period it—

(A) has met the conditions specified in subsection (a) (under present and previous ownership) for less than two years before such period; or

(B) derived more than 75 percent of its inpatient care revenues on a capitation basis, disregarding revenues received under title XVIII of the Social Security Act, from one or more health maintenance organizations (as defined in section 1301 (a) of the Public Health Service Act);

(b) "accounting year" with respect to any period means—

(1) in the case of a hospital participating in the program established by title XVIII of the Social Security Act, a period of 12 consecutive full calendar months including the same months as the last full reporting period allowed for reimbursement purposes under such title:

(2) in the case of a hospital not participating in the program established by title XVIII of the Social Security Act, a period of 12 consecutive full calendar months including the same months as the last full accounting period used by such other cost payer as the Secretary may designate; and

(3) in the case of a hospital which is not participating in the program established by title XVIII of the Social Security Act and for which the Secretary does not designate an accounting year under paragraph (2), a calendar year;

(c) "inpatient hospital services" has the meaning given it by section 1861(b) of the Social Security Act (including in addition the services otherwise excluded by paragraph (5) thereof);

(d) "inpatient charges" means regular rates, applied to all inpatient hospital services, that meet the requirements of section 405.542(d) (4) of the Federal regulations applicable to title XVII of the Social Security Act;

(e) "admission" means the formul acceptance of an inpatient by a hospital, excluding newborn children (unless retained after discharge of the mother) and transfers within inpatient units of the same institution;

(f) "cost payer" means—

(1) a program established by or under title V, XVIII, or XIX of the Social Security Act, and

(2) any organization which (i) meets the definition contained in section 1842(f)(i) of the Social Security Act, and (ii) reimburses a hospital (subject to the provisions of this Act) for inpatient hospital services on the basis of cost as defined for purposes of such reimbursement;

(g) "Secretary" means the Secretary of Health, Education, and Welfare;

(h) "State" means the several States, the District of Columbia, the Commonwealth of Puerto Rico;

LIMITATION ON INCREASES

SEC. 302. (a) The average reimbursement paid to a hospital for inpatient services under title XVIII of the Social Security Act, under a State plan approved under title V or title XIX of such Act, or by any cost payer, and the average charges imposed by a hospital for inpatient services, in any accounting year any part of which falls within a period subject to this Act, may not (except as provided in subsection (b)) exceed the base inpatient hospital revenue per inpatient admission (as established under section 305) by a percentage greater than the sum of—

(1) the percentage by which the costs involved would have increased in the period elapsing after the close of the hospital's base accounting year and prior to October 1, 1977, if such costs had increased (during that period) at the average annual rate actually experienced by the hospital during the two-year period ending with the close of such base accounting year, except that such percentage as applied for purposes of this section shall not be more than 15 percent nor less than 6 percent,

(2) the percentage by which such costs would have increased in the period elapsing after September 30, 1977, and prior to the first day of the accounting year for which the limit is being imposed if such costs had increased (during such period) at an annual rate consistent with the inpatient hospital revenue increase limit determined and promulgated under section 303(b), and

(3) the percentage by which such costs would have increased in the accounting year for which the limit is being imposed if such costs had increased (during such year) at an annual rate consistent with the adjusted inpatient hospital revenue increase limit applicable to the hospital under section 303(a).

(b) Where less than a full accounting year falls within a 12-month period subject to this Act, the limit set forth in subsection (a) of this section, and the limit established under section 303(a), shall apply with respect to reimbursement due or charges imposed for the part of such accounting year which falls within such period in the same proportion as the number of days in such accounting year that fall within such period bears to the total number of days in such accounting year.

DETERMINATION OF ADJUSTED INPATIENT HOSPITAL REVENUE INCREASED LIMIT

SEC. 303. (a) The "adjusted inpatient hospital revenue increase limit" which is applicable to any hospital for purposes of section 302(a)(3) with respect to any accounting year shall (subject to section 302(b)) be equal to the inpatient hospital revenue increase limit determined and promulgated under subsection (b) of this section for the 12-month period in which such accounting year or any part thereof falls, modified by the application of the "admission load formula" which is promulgated under section 104 and applied to that hospital.

(b)(1) Between July 1 and October 1 of each calendar year beginning with 1977, the Secretary shall promulgate a figure which (subject to paragraph (2)) shall be the "inpatient hospital revenue increase limit" applicable to the 12-month period beginning October 1 in such year (with each such 12-month period being referred to in this Act as a "period" or a "period subject to this title"). Such figure shall be the sum of—

(A) the implicit price deflator of the gross national product as calculated by the Bureau of Economic Analysis of the Department of Commerce and published in the Survey of Current Business (hereinafter in this Act referred to as the "gross national product deflator") for the 12-month period ending June 30 of such year, and

(B) one-third of the difference between—

(i) the average annual rate of increase in total hospital expenditures which is found by the Secretary to have occurred during the 24-month period ending on the day preceding January 1 of such calendar year, and

(ii) the annual rate of increase in the gross national product deflator for the 24-month period ending on the day preceding January 1 of such calendar year.

(2) If the Secretary finds during any period subject to this Act that the gross national product deflator with respect to such period is expected to exceed by more than one percentage point the gross national product deflator which was used in making the determination under paragraph (1) (or in making a prior adjustment under this paragraph), the Secretary shall increase (or further increase) the gross national product deflator so used by the amount of such excess; except that no adjustment made under this paragraph shall be effective with respect to any accounting year ending prior to the calendar quarter preceding the calendar quarter in which such adjustment is made.

PROMULGATION OF ADMISSION LOAD FORMULA

SEC. 304. The "admission load formula" shall be promulgated by the Secretary by October 1, 1977, and shall be such that—

(1) a hospital will be allowed an increase in total revenue from inpatient services in any accounting year to the extent (and only to the extent) consistent with the inpatient hospital revenue increase limit promulgated under section 303(b), for the period in which such accounting year or any part thereof falls if admissions in such accounting year have increased by less than 2 percent or declined by less than 6 percent as compared to the base accounting year (in the case of a hospital with no more than 4,000 admissions in the base accounting year such admissions limits shall be 2 percent and 10 percent, respectively);

(2) in the case of a hospital whose admissions in any accounting year are beyond the applicable range set forth in paragraph (1), the amount of total revenue from inpatient services in such year which is otherwise allowed under paragraph (1) shall be further increased for each admission above such range by one-half of the average revenue per admission that would have been allowed under paragraph (1) if the actual percentage change in admissions (as compared to the base accounting year) had been zero, or shall be reduced for each admission below such range by one-half of the average revenue per admission that would have been so allowed, except as provided in paragraph (3); and

(3) in the case of a hospital which had more than 4,000 admissions in the base accounting year, no additional revenue will be allowed for increased admissions (with respect to any accounting year) beyond 15 percent above those in the base accounting year, but the revenue otherwise permitted such a hospital under paragraphs (1) and (2) shall be reduced (dollar for dollar) for decreased admissions (in that year) beyond 15 percent below those in the base accounting year.

BASE INPATIENT HOSPITAL REVENUE

SEC. 305. (a)(1) The revenue base for application of the adjusted inpatient hospital revenue increase limit with respect to any hospital in any accounting year shall (subject to subsection (b)) be the revenue from reimbursement due and inpatient charges imposed for inpatient hospital services provided in the hospital's base accounting year (as defined in paragraph (2)).

(2) For purposes of this title, a hospital's "base accounting year" is its accounting year which ended in 1976, or, in the case of a hospital which did not meet the definition contained in section 301 for at least one full accounting year prior to an accounting year ending in 1976 in which it met such definition, the accounting period immediately prior to the first accounting year in which it satisfied such definition.

(b) The base revenue established for any hospital by subsection (a) shall (except as provided in subsection (c)) be reduced by an amount equal to any inpatient charges in such base accounting year for elements of inpatient services for which payment is not made to the hospital in an accounting year any part of which falls within a period subject to this Act.

(c) Subsection (b) shall not apply with respect to revenue for inpatient services which have been found inappropriate under section 1523(a)(6) of the Public Health Service Act by the State health planning and development agency designated under section 1521 of such Act for the State in which the hospital involved is located.

EXCEPTIONS

SEC. 306. (a) The Secretary shall have authority to grant exceptions from the limits established under this Act to individual hospitals for particular periods, but in any case only to the extent that the hospital requesting the exception provides evidence satisfactory to the Secretary—

(1) of the extent to which costs of providing inpatient hospital services in an accounting year any part of which falls within a period subject to this Act exceed such costs in the base accounting year as the result of—

(A) changes in admissions beyond the range specified in section 304(3), or

(B) changes in capacity or in the character of inpatient services available in the hospital or major renovation or replacement of physical plant, but only if such changes have increased inpatient costs per admission by more than one-third of the difference specified in section 303(b)(1)(B) over inpatient care costs per admission in the previous accounting year;

(2) that the revenue otherwise allowable (taking into account all other available resources) is insufficient to assure the solvency of the hospital as indicated by the existence of a current ratio of assets to liabilities (determined in accordance with the last sentence of this subsection) of less than the ratio which the Secretary estimates is being experienced by 25 percent or less of the hospitals subject to this Act; and

(3) that the changes in admissions, capacity, plant, or services available generating the excess costs described in paragraph (1) have been found to be needed under section 1523(a)(5) of the Public Health Service Act or appropriate under section 1523(a)(6) of the Public Health Service Act by the State health planning and development agency, designated under section 1521 of such Act for the State in which the hospital involved is located.

For purposes of paragraph (2), the term "current ratio of assets to liabilities", with respect to any hospital, means the sum of the cash, notes and accounts receivable (less reserves for bad debts), marketable securities, and inventories held by such hospital divided by the sum of all liabilities of such hospital falling due in an accounting year for which the exception is requested under this section.

(b) The Secretary shall either approve any request for an exception made by a hospital under subsection (a), or deny such request, within a period not to exceed 90 days after the hospital has filed such claim. Any such request not denied within such 90-day period shall be deemed approved.

(c) Any hospital granted an exception under this section shall be subject to an operational review by the Secretary. Any such hospital shall provide the Secretary with any and all information and access to records that may reasonably be required to conduct such operational review. The findings from any such review shall be made public, and continuance of the exception shall be contingent on implementation of any recommendations which may be made (as a result of such operational review) for improvements to increase efficiency and economy.

(d)(1) If the Secretary grants an exception with respect to any accounting year to a hospital which had 4,000 or more admissions in the base accounting year on the grounds set forth in subsection (a)(1)(A), such hospital shall be allowed increased revenue for purposes of this Act as though it were a hospital with fewer than 4,000 admissions in such base year under section 304.

(2) If the Secretary grants an exception with respect to any accounting year to a hospital on the grounds set forth in subsection (a)(1)(B), such hospital shall be allowed increased total revenue for purposes of this Act for such accounting year and all subsequent accounting years (and the limit on its allowable rate of increase in inpatient hospital revenues shall be adjusted upward accordingly) in an amount no greater than the amount necessary to maintain the current ratio of its assets to liabilities (determined in accordance with the last sentence of subsection (a)) at the level specified in subsection (a)(2).

(e)(1) Any hospital which is adversely affected by a determination of the Secretary under this section may obtain a hearing before the Provider Reimbursement Review Board established under section 1878 of the Social Security Act, if the amount in controversy is $25,000 or more and the request for such hearing is filed within 180 days after receipt of the Secretary's determination.

(2) For purposes of paragraph (1), the Secretary (notwithstanding section 1878(h) of the Social Security Act) shall appoint five additional members to the Provider Reimbursement Review Board, following the specifications for expertise applicable to the existing five members. Such five additional members shall constitute the Board for purposes of reviewing appeals under this Act. All the other provisions of section 1878 of the Social Security Act shall apply except that the Board as so constituted shall be considered as reviewing decisions of the Secretary rather than of a fiscal intermediary, and subsection (b) of such section shall not apply.

ENFORCEMENT

SEC. 307. (a) Notwithstanding any provision of title XVIII of the Social Security Act, reimbursement for inpatient hospital services under the program established by that title shall not be payable, on an interim basis or in final settlement, to the extent that it exceeds the applicable limits established under this Act.

(b) Notwithstanding any provision of title V or XIX of the Social Security Act, payment shall not be required to be made by any State under either such title with respect to any amount paid for inpatient hospital services in excess of the applicable limits established under this Act; nor shall payment be made to any State under either such title with respect to any amount paid for inpatient hospital services in excess of such limits.

(c) Notwithstanding any other provision of law, receipt by any hospital of payment for inpatient hospital services in excess of the applicable limits established under this Act, or payment by any cost payer (as defined in section 301(6)(B)) for inpatient hospital services on a cost basis in excess of such limits, shall subject such hospital or cost payer—

(1) to the Federal excise tax imposed by section 4991 of the Internal Revenue Code of 1954 (as added by section 311 of this Act), and

(2) to exclusion, at the discretion of the Secretary, from participation in any or all of the programs established by titles V, XVIII, and XIX of the Social Security Act.

(d)(1) Where the Secretary determines that average charges per admission billed for inpatient services by a hospital during an accounting year any part of which is included in a period subject to this Act exceed the applicable limits established under this Act, he shall promulgate (or shall require the hospital to promulgate in such manner as he may prescribe) the percentage by which the average charge per admission billed in that accounting year by the hospital exceeded the applicable limitation on average charges per admission established under this Act.

(2) Any hospital described in paragraph (1) shall be exempt from the penalties set forth in subsection (c) if it holds in escrow an amount equal to the percentage promulgated under such paragraph multipled by the hospital's total inpatient charges less its inpatient charges applicable to cost payers (as defined in section 301), imposed on the accounting year referred to in such paragraph, until such time as charges below the applicable limits established under this Act, equal in aggregate to such amount, are experienced; but any such hospital which fails to do so shall be subject to such penalties.

DETERMINATION OF INPATIENT REIMBURSEMENT

SEC. 308. For purposes of section 302, inpatient reimbursement under the programs established by title V, XVIII, and XIX of the Social Security Act shall be determined without regard to adjustments resulting from the application of section 405.460(g), 405.455(d), 405.415(f), or 405.415(d)(3) of the Federal regulations applicable to such title XVIII.

IMPROPER CHANGES IN ADMISSION PRACTICES

SEC. 309. Upon written complaint by any institution meeting the conditions set forth in paragraphs (1) and (7) of section 1861(e) of the Social Security Act that one or more hospitals subject to this title in a health service area for which a health systems agency has been designated under section 1515 of the Public Health Service Act has changed its admission practices in a manner that would tend to reduce the proportion of inpatients of such hospital or hospitals for whom reimbursement at less than the inpatient charges (as defined in section 301 of this Act) applicable to such inpatients is anticipated, such health systems agency shall investigate the complaint and, upon a finding by such agency that the complaint is justified, the Secretary may impose the sanction set forth in section 307(c)(2) of this Act.

REVIEW OF CERTAIN DETERMINATIONS

SEC. 310. Any determinations made on behalf of the Secretary under this Act with respect to the application of its provisions to individual hospitals shall be subject to the provisions of section 1878 of the Social Security Act in the same manner as determinations with respect to the amount of reimbursement due a provider of services under title XVIII of such Act.

EXCISE TAX ON EXCESSIVE PAYMENTS FOR INPATIENT HOSPITAL SERVICES

SEC. 311. (a) Subtitle D of the Internal Revenue Code of 1954 (relating to miscellaneous excise taxes) is amended by adding at the end thereof the following new chapter:

"CHAPTER 45—TAX ON CERTAIN EXCESSIVE PAYMENTS FOR INPATIENT HOSPITAL SERVICES

"Sec. 4991. Imposition of tax.

"SEC. 4991. IMPOSITION OF TAX.

"(a) IN GENERAL.—There is hereby imposed, with respect to the receipt by any hospital of payment for inpatient hospital services in excess of the applicable limits established by title III of the State Cost Control Plan for Hospitals Act of 1977, and with respect to any payment made by any cost payer as defined in section 301 of such Act for inpatient hospital services on a cost basis in excess of such limits, a tax equal to 90 percent of the amount of such excess. The tax imposed by this subsection shall be paid by the hospital or cost payer.

"(b) EXCEPTION.—The tax imposed by subsection (a) shall not apply with respect to any hospital so long as it is determined by the Secretary of Health, Education, and Welfare to be taking the corrective action described in section 307(d)(2) of the State Cost Control Plan for Hospitals Act of 1977.

"(c) DEFINITIONS.—Terms used in subsections (a) and (b) have the meanings given them by title III of the State Cost Control Plan for Hospitals Act of 1977.

"(d) ADMINISTRATION.—Under and to the extent provided by regulations of the Secretary, the appropriate provisions of subtitle F (relating to procedure and administration) shall be made applicable with respect to the tax imposed by subsection (a) of this section."

(b) The table of chapters for subtitle D of such Code is amended by adding at the end thereof the following new item:

"Chapter 45. Tax on Certain Excessive Payments for Inpatient Hospital Services.".

EXEMPTION FOR DEMONSTRATION PROGRAMS

SEC. 312. A hospital may be excluded from the application of this Act if the Secretary determines that—

(1) such exclusion is necessary to facilitate an experiment or demonstration entered into under section 402 of the Social Security Amendments of 1967, or section 222 of the Social Security Amendments of 1972, and

(2) such experiment or demonstration is consistent with the purposes of this Act.

UNIFORM REPORTING SYSTEMS FOR HEALTH SERVICES FACILITIES AND ORGANIZATIONS

SEC. 313. (a) For the purposes of reporting the cost of services provided by, of planning, and of measuring and comparing the efficiency of and effective use of services in, hospitals, skilled nursing facilities, intermediate care facilities, home health agencies, health maintenance organizations, and other types of health services facilities and organizations to which payment may be made under titles V, XVIII, or XIX of the Social Security Act or the Public Health Service Act, the Secretary shall establish by regulation, for each such type of health services facility or organization, a uniform system for the reporting by a facility or organization of that type of the following information:

(1) The aggregate cost of operation and the aggregate volume of services.

(2) The costs and volume of services for various functional accounts and subaccounts.

(3) Rates, by category of patient and class of purchaser.

(4) Capital assets, as defined by the Secretary, including (as appropriate) capital funds, debt service, lease agreements used in lieu of capital funds, and the value of land facilities, and equipment.

(5) Discharge and bill data.

The uniform reporting system for a type of health services facility or organization shall provide for appropriate variation in the application of the system to different classes of facilities or organizations within that type and shall be established, to the extent practicable, consistent with the cooperative system for producing comparable and uniform health information and statistics described in section 306(e)(1) of the Public Health Service Act.

(b) The Secretary shall—

(1) monitor the operation of the systems established under subsection (a); and

(2) periodically revise such systems to improve their effectiveness and diminish their cost.

TITLE IV—LIMITATION ON HOSPITAL CAPITAL EXPENDITURES

SEC. 401. (a) Section 1122(a) of the Social Security Act is amended to read as follows:

"(a) The purpose of this section is to assure that Federal funds appropriated under titles V, XVIII, and XIX are not used to support capital expenditures for inpatient hospital services made by or on behalf of health care facilities which are reimbursed under any of such titles, and are used only to support such expenditures for other health services which are determined to be necessary through the health services and facilities planning activities in the various States.".

(b) Paragraphs (1) and (2) of section 1122 (b) of the Social Security Act are amended by inserting "(other than those for inpatient hospital services)" after "expenditures" each time it appears.

(c) Section 1122(d)(1)(B)(ii)(I) is amended to read as follows:

"(I) consulted with, and taken into consideration the findings and recommendations of, the designated health systems agency, or, if there is no such agency, such other public or nonprofit private agency or organization (if any) as performs, as determined in accordance with criteria included in regulations, similar functions, and".

(d) The matter following subclause (II) of section 1122(d)(1)(B)(ii) of such Act is amended by striking "or other expenses related to such capital expenditure." and substituting "other expenses related to the capital expenditure, or for direct operating costs associated with the capital expenditure.".

(e) Section 1122(d)(2) of such Act is amended by striking "any capital expenditure" and substituting "a capital expenditure (other than for inpatient hospital services)".

(f) Section 1122 of such Act is further amended by—

(1) redesignating subsection (e) as subsection (i);

(2) redesignating subsections (f), (g), and (h) as subsections (e), (f), and (g) respectively;

(3) redesignating subsection (i) as subsection (j); and

(4) inserting after subsection (g) as redesignated by this subsection the following:

"(h)(1) Without regard to agreements made under subsection (b), and except as provided in paragraph (2), in determining Federal payments under titles V, XVIII, and XIX for inpatient hospital services (except those inpatient hospital services provided by a health maintenance organization) with respect to which a capital expenditure is made, the Secretary shall not include any amount attributable to depreciation, interest on borrowed funds, a return on equity capital (in the case of proprietary facilities), other expenses related to the capital expenditure, or for direct operating costs associated with use of the capital expenditure for inpatient hospital services.

"(2) The Secretary shall not exclude such expenses from Federal payments pursuant to paragraph (1) for inpatient hospital services with respect to which a capital expenditure is made by any health care facility—

"(A) in a State with which he has made an agreement under subsection (b)—

"(i) if the capital expenditure was approved prior to October 1, 1977, by the designated planning agency pursuant to this section, or

"(ii) only in the case of existing hospitals, if the designated planning agency determines that the capital expenditure is necessary to avoid noncompliance with Federal, State, or local fire, building, or life safety codes, or State or vountary licensure or accreditation requirements, and that the inpatient hospital services for which the capital expenditure is proposed are needed;

"(B) in a State with which he has not made an agreement under subsection (b)—

"(i) if the capital expenditure was approved under a State certificate-of-need statute, if applicable, prior to October 1, 1977, or

"(ii) only in the case of existing hospitals, if the Secretary or his designee determines that the capital expenditure is necessary to avoid noncompliance with Federal, State, or local fire, building, or life safety codes, or State or voluntary licensure or accreditation requirements, and that the inpatient hospital services for which the capital expenditure is proposed are needed.".

REPEALER

SEC. 402. Effective 18 months after the date of enactment of this title, the amendments made by this title are repealed.

TITLE V—REVISIONS OF TITLE XV OF THE PUBLIC HEALTH SERVICE ACT

DESIGNATION OF SURPLUS SERVICES

SEC. 501. (a) Section 1513(g)(1) of the Public Health Service Act is amended by striking the period, and substituting a comma, and the following "including its recommendations as to which services should be designated as surplus.".

(b) Section 1523(a)(6) of the Public Health Service Act is amended by adding at the end thereof the following new sentence: "Any institutional health service found to be unneeded according to the standards applied in determining whether a proposed new service shall be granted a certificate-of-need shall be declared surplus. In making a determination that a service is unneeded, the State agency shall take into consideration any recommendations made by the appropriate health systems agency and shall indicate the date on which its designation of the service as surplus shall become effective."

(c) Section 1523 of the Public Health Act is amended by adding after subsection (c) the following new subsection:

"(d) When a State agency's designation of an institutional health service as surplus under the terms of section 1523(a)(6) becomes effective, such service shall, for purposes of the State certificate-of-need program and for purposes of section 1122 of the Social Security Act, be considered as though it had been denied a certificate-of-need.".

COMPENSATION FOR SERVICES DECLARED SURPLUS

SEC. 502. The Public Health Service Act is amended by adding after section 1526 the following new section:

"GRANTS FOR SERVICES DECLARED SURPLUS

"SEC. 1527. (a) The Secretary shall, upon proper application, make grants to institutions which have discontinued health services pursuant to a determination by a State agency that such services are surplus as provided in section 1523(a)(6).

"(b) The amount of any grant under subsection (a) shall not exceed the amount of the debt incurred by the institution in developing the service declared surplus which remains outstanding at the earlier of (1) the time the institution discontinues the service pursuant to the State agency's determination that it is unneeded, or (2) the effective date of the State agency's designation of the service as surplus. Such grant shall be used by the institution receiving it to retire such outstanding indebtedness.

"(c) There are authorized to be appropriated to make payments under grants under subsection (a) for the fiscal year ending September 30, 1979, such sums as may be necessary.

By Mr. HASKELL:

S. 1879. A bill relating to the authority of the Secretary of the Interior to grant rights-of-way for pipelines under the Mineral Leasing Act, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. HASKELL. Mr. President, the bill I introduce today is identical to a bill I introduced June 26, 1973. It would separate the ownership of pipelines from production.

I reintroduce the bill at this time since it appears that the current Justice Department has now joined earlier ones—under Attorneys General Rogers and Clark—in finding the ownership of pipelines by major oil companies to be anticompetitive.

By Mr. HELMS (for himself, Mr. GOLDWATER, and Mr. SCHWEIKER):

S. 1880. A bill to provide procedures for calling constitutional conventions for proposing amendments to the Constitution of the United States, on application of the legislatures of two-thirds of the States, pursuant to article V of the Constitution; to the Committee on the Judiciary.

FEDERAL CONSTITUTIONAL CONVENTION PROCEDURE ACT

Mr. HELMS. Mr. President, article V of the U.S. Constitution provides that upon the application of the legislatures of two-thirds of the States, Congress shall call a convention to propose amendments to the Constitution. The legislation which I am introducing today implements article V by establishing procedures for such a convention.

This legislation, with the exception of a few technical changes, is identical to that which was introduced by my friend and distinguished former Senator from North Carolina, the Honorable Sam J. Ervin, Jr. This bill was passed by the Senate with slight modification by a vote of 84 to 0 in 1971 and by voice vote in 1973.

In 1971, the Senate Judiciary Committee reported that it was the responsibility of Congress "to enact legislation which make Article V meaningful" and not to make the constitutional convention "a dead letter."

In 1973, the American Bar Association resolved that it was "desirable" for Congress to establish procedures for such a convention. The ABA report on the resolution concluded that "so long as the convention method of proposing amendments is part of our Constitution, it is proper to establish procedures for its implementation and improper to place unnecessary and unintended obstacles in the way of its use."

This legislation provides an even-handed, nonpartisan, and fair resolution of the problems inherent in calling a convention under article V. It provides these procedures now, in the absence of a constitutional crisis in which a dispassionate resolution of the problems may not be possible.

The procedures which this legislation establishes do not favor or assist any particular call for a constitutional convention. Support of this proposal should not be viewed as support or opposition to any presently proposed constitutional amendment or convention call.

Mr. President, perhaps the best analysis of the problems involved in proposing

amendments through a constitutional convention was written by former Senator Ervin for the March 1968, issue of the Michigan Law Review. That article, entitled "The Convention Method of Amending the Constitution," was recently reprinted in the spring 1977, issue of the Human Life Review.

Mr. President, I ask unanimous consent that the following excerpts from former Senator Ervin's article be printed at this point in the RECORD, to be followed by the text of the Federal Constitutional Convention Procedures Act.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE CONVENTION METHOD OF AMENDING THE CONSTITUTION

(By Sam J. Ervin, Jr.)

Article V of the Constitution of the United States [1] provides that constitutional amendments may be proposed in either of two ways—by two-thirds of both houses of the Congress or by a convention called by the Congress in response to the applications of two-thirds of the state legislatures. Although the framers of the Constitution evidently contemplated that the two methods of initiating amendments would operate as parallel procedures, neither superior to the other, this has not been the case historically. Each of the twenty-five constitutional amendments ratified to date was proposed by the Congress under the first alternative. As a result, although the mechanics and limitations of congressional power under the first alternative are generally understood, very little exists in the way of precedent or learning relating to the unused alternative method in article V. This became distressingly clear recently, following the disclosure that thirty-two state legislatures had, in one form or another, petitioned the Congress to call a convention to propose a constitutional amendment permitting states to apportion their legislatures on the basis of some standard other than the Supreme Court's "one man-one vote" requirement. The scant information and considerable misinformation and even outright ignorance displayed on the subject of constitutional amendment, both within the Congress and outside of it—and particularly the dangerous precedents threatened by acceptance of some of the constitutional misconceptions put forth—prompted me to introduce in the Senate a legislative proposal designed to implement the convention amendment provision in article V . . .

III. QUESTIONS RAISED BY THE BILL

Before going to specific issues and matters of detail, it seems appropriate to discuss briefly two threshold problems posed by the bill: whether the Congress has the power to enact such legislation, and, if it does, what policy considerations should guide it in exercising such power.

I have no doubt that the Congress has the power to legislate about the process of amendment by convention. The Congress is made the agency for calling the convention, and it is hard to see why the Congress should have been involved in this alternative method of proposal at all unless it was expected to determine such questions as when sufficient appropriate applications had been received and to provide for the membership and procedures of the convention and for review and ratification of its proposals. Obviously the fifty state legislatures cannot themselves legislate on this subject. The constitutional convention cannot do so for it must first be brought into being. All that is left, therefore, is the Congress, which, in respect to this and other issues not specifically settled by the Constitution, has the residual power to legislate on matters that require uniform settlement. Add to this the weight of such decisions as *Coleman v. Miller*,[9] to the effect that questions arising in the amending process are nonjusticiable political questions exclusively in the congressional domain, and the conclusion seems inescapable that the Congress has plenary power to legislate on the subject by amendment by convention and to settle every point not actually settled by article V of the Constitution itself.

With respect to the second problem, within what general policy limitations that power should be exercised, I think the Congress should be extremely careful to close as few doors as possible. Any legislation on this subject will be what might be called "quasi-organic" legislation; in England it would be recognized as a constitutional statute. When dealing with such a measure, it is wise to bear in mind Marshall's well-worn aphorism that it is a Constitution we are expounding and not get involved in "an unwise attempt to provide, by immutable rules, for exigencies which, if foreseen at all, must [be] seen dimly, and which can best be provided for as they occur." [10] This approach is reflected at several points in the bill, notably in its failure to try to anticipate and enumerate the various grounds on which Congress might justifiably rule a state petition invalid, and its failure to prescribe rigid rules of procedure for the convention. In addition, I think the Congress, in exercising its power under article V, should bear in mind that the Framers meant the convention method of amendment to be an attainable means of constitutional change. This legislation can be drawn so as to place as many hurdles as possible in the way of effective use of the process; or it can be drawn in a manner that will make such a process a possible, however improbable, method of amendment. The first alternative would be a flagrant disavowal of the clear language and intended function of article V. I have assumed that the Congress will wish to take the second road, and the bill is drawn with that principle in mind.

OPEN OR LIMITED CONVENTION?

Perhaps the most important issue raised by the bill is the question of the power of the Congress to limit the scope and authority of a convention convened under article V in accordance with the desires of the states as set forth in their applications. This was, as I have noted, one of the issues that most troubled me when I first heard of the efforts by the states to call a convention.

It has been argued that the subject matter of a convention convened under article V cannot be limited, since a constitutional convention is a premier assembly of the people, exercising all the power that the people themselves possess, and therefore supreme to all other governmental branches or agencies. Certainly, according to this argument, the states may not themselves, in their applications, dictate limitations on the convention's deliberations. They may not require the Congress to submit to the convention a given text of an amendment, nor even a single subject or idea. For the convention must be free to "propose" amendments, which suggests the freedom to canvass matters afresh and to weigh all possibilities and alternatives rather than ratify a single text or idea. The states may in their applications specify the amendment or amendments they would hope the convention would propose. But once the Congress calls the convention, those specifications would not control its deliberations. The convention could not be restricted to the consideration of certain topics and forbidden to consider certain other topics, nor could it be forbidden to write a new constitution if it should choose to do so.

I will concede that such an interpretation can be wrenched from article V—but only through a mechanical and literal reading of the words of the article, totally removed from the context of their promulgation and history. My reading of the debates on article V at the Philadelphia Convention and the other historical materials bearing on the intended function of the amendment process [11] leads me to the opposite conclusion. As I understand the debates, the Founders were concerned, first, that they not place the new government in the same straightjacket that inhibited the Confederation, unable to change fundamental law without the consent of every state.

The amendment process, rather a novelty for the time, was therefore included in the Constitution itself. Second, the final form of article V was dictated by a major compromise between those delegates who would utilize the state legislatures as the sole means of initiating amendments and those who would lodge that power exclusively in the national legislature. The forces at the convention that sought to limit the power of originating amendments to the states were at first dominant. The original Virginia Plan, first approved by the convention, excluded the national legislature from participation in the amendment process. On reconsideration, the forces that would limit the power of origination of amendments to the national legislature became prevalent. The arguments on both sides were persuasive: the improprieties or excess of power in the national government would not likely be corrected except by state initiative, while improprieties by the state governments or deficiencies in national initiative. In the spirit that typified power would not likely be corrected except by the 1787 Convention, the result was acceptance of a Madison compromise proposal which read, as the final article was to read, in terms of alternative methods.

It is clear that neither of the two methods of amendment was expected by the Framers to be superior to the other or easier of accomplishment. There is certainly no indication that the national legislature was intended to promote individual amendments while the state legislatures were to be concerned with more extensive revisions. On the contrary, there is strong evidence that what the members of the convention were concerned with in both cases was the power to make specific amendments. They did not appear to anticipate a need for a general revision of the Constitution. And certainly this was understandable, in light of the difficulties that they had in finding the compromises to satisfy the divergent interests needed for ratification of their efforts.

Provision in article V for two exceptions to the amendment power underlines the notion that the convention anticipated specific amendment or amendments rather than general revision. For it is doubtful that these exceptions could have been expected to control a later general revision.

This construction is supported by references to the amendment process in the *Federalist Papers*. In *Federalist No. 43*, James Madison explained the need and function of article V as follows:

That useful alterations will be suggested by experience, could not but be foreseen. It was requisite therefore that a mode for introducing them should be provided. The mode preferred by the Convention seems to be stamped with every mark of propriety. It guards equally against that extreme facility which would render the Constitution too mutable; and that extreme difficulty which might perpetuate its discovered faults. It moreover equally enables the general and the state governments to originate the amendment of errors as they may be pointed out by the experience on one side or on the other . . .

Apart from being inconsistent with the language and history of article V, the contention that any constitutional convention must be a wide open one is neither a practicable nor a desirable one. If the subject matter of amendments were left entirely

Footnotes at end of article.

to the convention, it would be hard to expect the states to call for a convention in the absence of a general discontent with the existing constitutional system. This construction would effectively destroy the power of the states to originate the amendment of errors pointed out by experience, as Madison expected them to do. Alternatively, under that construction, applications for a limited convention deriving in some states from a dissatisfaction with the school desegregation cases, in others because of the school prayer cases, and in still others by reason of objection to the *Miranda* rule, could all be combined to make up the requsite two-thirds of the states needed to meet the requirements of article V. I find it hard to believe that this is the type of consensus that was thought to be appropriate to calling for a convention.

The bill provides that state petitions to the Congress which request the calling of a convention under article V shall state the nature of the amendment or amendments to be proposed by such convention. Upon receipt of valid applications from two-thirds or more of the states requesting a convention on the same subject or subjects, the Congress is required to call a convention by concurrent resolution, specifying in the resolution the nature of the amendment or amendments for the consideration of which the convention is being called. The convention may not propose amendments on other subjects and if it does, the Congress may refuse to submit them to the states for ratifications. . . .

MAY CONGRESS REFUSE TO CALL A CONVENTION?

Perhaps the next most important question raised by the bill is whether the Congress has any discretion to refuse to call a convention in the face of appropriate applications from a sufficient number of states.

Article V states that Congress "shall" call a convention upon the applications of the legislatures of two-thirds of the states. I have absolutely no doubt that the article is peremptory and that the duty is mandatory, leaving no discretion to the Congress to review the wisdom of the state applications. Certainly this is the more desirable construction, consonant with the intended arrangement of article V as described in the preceding section of this article. The founders included the convention alternative in the amending article to enable the states to initiate constitutional reform in the event the national legislature refused to do so. To concede to the Congress any discretion to consider the wisdom and necessity of a particular convention call would in effect destroy the role of the states.

The comments of both Madison and Hamilton, subsequent to the 1787 Convention, sustain this construction. In a letter on the subject, Madison observed that the question concerning the calling of a convention "will not belong to the Federal Legislature. If two-thirds of the states apply for one, Congress cannot refuse to call it: if not, the other mode of amendments must be pursued."[13] Hamilton, in the *Federalist No. 85*, stated:

By the fifth article of the plan the congress will be *obliged*, "on the application of the legislatures of two-thirds of the states, (which at present amounts to nine) to call a convention for proposing amendments, which *shall be valid* to all intents and purposes, as part of the constitution, when ratified by the legislatures of three-fourths of the states, or by conventions in three-fourths thereof." The words of this article are peremptory. The congress *"shall* call a convention." Nothing in this particular is left to the discretion. . . .

SUFFICIENCY OF STATE APPLICATIONS

Assuming the Congress may not weigh the wisdom and necessity of state applications requesting the calling of a constitutional convention, does it have the power to judge the validity of state applications and state legislative procedures adopting such applications? Clearly the Congress has some such power. The fact alone that Congress is made the agency for convening the convention upon the receipt of the requisite number of state applications suggests that it must exercise some power to judge the validity of those applications. The impotence or withdrawal of the courts underlines the necessity for lodging some such power in the Congress. The relevant question, then, concerns the extent of that power.

It has been contended that Congress must have broad powers to judge the validity of state applications and that such power must include the authority to look beyond the content of an application, and its formal compliance with article V, to the legislative procedures followed in adopting the application. The counterargument is that to grant Congress the power to reject applications particularly if that power is not carefully circumscribed, would be to supply it with a means of avoiding altogether the obligation to call a convention. The result would be that the Congress could arbitrarily reject all applications on subjects it did not consider appropriate for amendment, leaving us in effect with only one amendment process. . . .

One further important point should be mentioned. Most of the states obviously do not now understand their role in designating subjects or problems for resolution by amendment, and many of them do not even know where to send their applications. By setting forth the formal requirements with respect to content of state applications and designating the congressional officers to whom they must be transmitted, the bill furnishes guidance to the states on these questions and promises to avert in the future some of the problems that have arisen in the current effort to convene a convention. The bill also requires that all applications received by the Congress be printed in the *Congressional Record* and that copies be sent to all members of Congress and to the legislature of each of the other states. In this way, the element of congressional surprise can be eliminated, and each state can be given prompt and full opportunity to join in any call for a convention in which it concurs.

THE ROLE OF STATE GOVERNORS

The argument has been made that a state application for a constitutional convention must be approved by both the legislature and the governor of the state to be effective. This argument rests on the claim that article V intended state participation in the process to involve the whole legislative process of the state as defined in the state constitution. I do not agree with that argument. We do not have here any question about the exercise of the lawmaking process by a state legislature in combination with whatever executive participation might be called for by state law. We have rather a question of heeding the voice of the people of a state in expressing the possible need for a change in the fundamental document.

Closely analogous court decisions support this interpretation. The Supreme Court in *Hawks* v. *Smith, No. 1*[14] interpreted the term "legislatures" in the ratification clause of article V to mean the representative lawmaking bodies of the states, since ratification of a constitutional amendment "is not an act of legislation within the proper sense of the word."[15] Certainly the term "legislature" should have the same meaning in both the application clause and the ratification clause of article V. Further support is found in the decision in *Hollingsworth* v. *Virginia*,[16] in which the Court held that a constitutional amendment approved for proposal to the states by a two-thirds vote of Congress need not be submitted to the President for his signature or veto.

The bill therefore provides specifically that a state application need not be approved by the state's governor in order to be effective.

MAY A STATE RESCIND ITS APPLICATIONS?

The question of whether a state should be allowed to rescind an application previously forwarded to the Congress is another of the political questions to which the courts have not supplied answers and presumably cannot. The Supreme Court has held that questions concerning the rescission of prior ratifications or rejections of amendments proposed by the Congress are determined solely by Congress.[17] Presumably, then, the question of rescission of an application for a convention is also political and nonjusticiable. Although the Congress has previously taken the position that a state may not rescind its prior ratification of an amendment, it has taken no position concerning rescission of applications. My strong conviction is that rescission should be permitted. Since a two-thirds consensus among the states at some point in time is necessary in order for the Congress to call a convention, the Congress should consider whether there has been a change of mind among some states that have earlier applied. Moreover, an application is not a final action, since it serves merely to initiate a convention, and does not commit even the applicant state to any substantive amendment that might eventually be proposed.

The bill therefore provides that a state may rescind at any time before its application is included among an accumulation of applications from two-thirds of the states, at which the obligation of the Congress to call a convention becomes fixed. Incidentally, the bill also provides that a state may rescind its prior ratification of an amendment proposed by the convention up until the time there are existing valid ratifications by three-fourths of the states, and that a state may change its mind and ratify a proposed amendment that it previously has rejected . . .

The Congress and the courts have agreed that constitutional amendments proposed by the Congress and submitted to the states for ratification can properly remain valid for ratification for a period of seven years. It has been felt that there should be a "reasonably contemporaneous" expression by three-fourths of the states that an amendment is acceptable in order for the Congress to conclude that a consensus in favor of the amendment exists among the people, and that ratification within a seven-year period satisfies this requirement.[18] Presumably, the same principle should govern the application stage of the constitutional amendment process . . .

CALLING THE CONVENTION

The bill provides that the Secretary of the Senate and the Clerk of the House of Representatives shall keep a record of the number of state applications received, according to subject matter. Whenever two-thirds of the states have submitted applications on the same subject or subjects, the presiding officer of each house shall be notified and shall announce the same on the floor. Each house is left free to adopt its own rules for determining the validity of the applicants, presumably by reference to a committee followed by floor action. Once a determination has been made that there are valid applications from two-thirds or more of the state legislatures on the same subject or subjects, each house must agree to a concurrent resolution providing for the convening of a constitutional convention on such subject or subjects. The concurrent resolution would designate the place and time of meeting of the convention, set forth the nature of the amendment or amendments the convention is empowered to consider and propose, and provide for such other things as the provision of funds to pay the expenses of the convention and to compensate the delegates. The convention would be required to be con-

Footnotes at end of article.

vened not later than one year after adoption of the resolution.

. . . the bill has been amended to require that delegates be elected—not appointed—and that they be elected by the same constituency that elects the states' representatives in Congress. Under the amended bill, each state will be entitled to as many delegates as it is entitled to Senators and Representatives in Congress. Two delegates in each state will be elected at large and one delegate will be elected from each congressional district in the manner provided by state law. Vacancies in a state's delegation will be filled by appointment of the governor.

CONVENTION PROCEDURE AND VOTING

The bill provides that the Vice President of the United States shall convene the constitutional convention, administer the oath of office of the delegates and preside until a presiding officer is elected. The presiding officer will then preside over the election of other officers and thereafter. Further proceedings of the convention will be in accordance with rules adopted by the convention. A daily record of all convention proceedings, including the votes of delegates, shall be kept, and shall be transmitted to the Archivist of the United States within thirty days after the convention terminates. The convention must terminate its proceedings within one year of its opening unless the period is extended by the Congress by concurrent resolution.

Finally, the bill provides that amendments may be proposed by the convention by a vote of a majority of the total number of delegates to the convention. The alternative would be to impose a two-thirds voting requirement analogous to the requirement for congressional proposal of amendments. However, article V does not call for this, and I think that such a requirement would place an undue and unnecessary obstacle in the way of effective utilization of the convention amendment process.

RATIFICATION OF PROPOSED AMENDMENTS

The bill provides that any amendment proposed by the convention must be transmitted to the Congress within the thirty days after the convention terminates its proceedings. The Congress must then transmit the proposed amendment to the Administrator of General Services for submission to the states. However, the Congress may, by concurrent resolution, refuse to approve an amendment for submission to the states for ratification, on the grounds of procedural irregularities in the convention or failure of the amendment to conform to the limitations on subject matter imposed by the Congress in the concurrent resolution calling the convention. The intent is to provide a means of remedying a refusal by the convention to abide by the limitations on its authority to amend the Constitution. Of course, unlimited power in the Congress to refuse to submit proposed amendments for ratification would destroy the independence of the second alternative amending process. Therefore, the Congress is explicitly forbidden to refuse to submit a proposed amendment for ratification because of doubts about the merits of its substantive provisions. The power is reserved for use only with respect to amendments outside the scope of the convention's authority or in the case of serious procedural irregularities.

Ratification by the states must be by state legislative action or convention, as the Congress may direct, and within the time period specified by the Congress. The Congress retains the power to review the validity of ratification procedures. As noted earlier, any state may rescind its prior ratification of an amendment by the same processes by which it ratified it, except that no state may rescind after that amendment has been validly ratified by three-fourths of the states. When three-fourths of the states have ratified a proposed amendment, the Administrator of General Services shall issue a proclamation that the amendment is a part of the Constitution, effective from the date of the last necessary ratification.

IV. CONCLUSION

There is some evidence that the current effort to require the Congress to call a convention to propose a reapportionment amendment has failed and that the danger of a constitutional crisis has passed. The two additional applications needed to bring the total to thirty-four have not been received and there is a strong likelihood that some applicant states will rescind their applications. Even if this is the case, however, the need for legislation to implement article V remains. There may well be other attempts to utilize the convention amendment process and, in the absence of legislation, the same unanswered questions will return to plague us. The legislation therefore is still timely, and the Congress may now have the opportunity to deal with the sensitive constitutional issues objectively, uninfluenced by competing views on state apportionment or any other substantive issue.

Some have argued that the convention method of amendment is an anomaly in the law, out of step with modern notions of majority rule and the relationship between the states and the federal government. If so, that part of article V should be stricken from the Constitution by the appropriate amendment process. It should not, however, be undermined by erecting every possible barrier in the way of its effective use. Such a course would be a disavowal of the clear language and history of article V. The Constitution made the amendment process difficult, and properly so. It certainly was not the intention of the original Convention to make it impossible. Nor is it possible to conclude that the Founders intended that amendments originating in the states should have so much harder a time of it than those proposed by Congress. As I have pointed out, that issue was fought out in 1787 Convention and resolved in favor of two originating sources, both difficult of achievement, but neither impossible and neither more difficult than the other. My bill seeks to preserve the symmetry of article V by implementing the convention alternative so as to make it a practicable but not easy method of constitutional amendment.

FOOTNOTES

[1] The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate, *U.S. Const. Art. V.*

S. 1880

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Constitutional Convention Procedures Act."

APPLICATIONS FOR CONSTITUTIONAL CONVENTION

SEC. 2. The legislature of a State, in making application to the Congress for a constitutional convention under article V of the Constitution of the United States, shall adopt a resolution pursuant to this Act stating, in substance, that the legislature requests the calling of a convention for the purpose of proposing one or more amendments to the Constitution of the United States and stating the nature of the amendment or amendments to be proposed.

APPLICATION PROCEDURE

SEC. 3. (a) For the purpose of adopting or rescinding a resolution pursuant to section 2 or section 5 of this Act, the State legislature shall follow the rules of procedure that govern the enactment of a statute by that legislature, but without the need for approval of the legislature's action by the Governor of the State.

(b) Questions concerning the adoption of a State resolution cognizable under this Act shall be determinable by the Congress of the United States and its decisions thereon shall be binding on all others, including State and Federal courts.

TRANSMITTAL OF APPLICATIONS

SEC. 4. (a) Within thirty days after the adoption by the legislature of a State of a resolution to apply for the calling of a constitutional convention, the secretary of state of the State, or if there be no such officer, the person who is charged by the State law with such function, shall transmit to the Congress of the United States two copies of the application, one addressed to the President of the Senate; and one to the Speaker of the House of Representatives.

(b) Each copy of the application so made by any State shall contain—

(1) the title of the resolution;

(2) the exact text of the resolution signed by the presiding officer of each house of the State legislature; and

(3) the date on which the legislature adopted the resolution; and shall be accompanied by a certificate of the secretary of state of the State, or such other person as is charged by the State law with such function, certifying that the application accurately sets forth the text of the resolution.

(c) Within ten days after receipt of a copy of any such application, the President of the Senate and Speaker of the House of Representatives shall report to the House of which he is presiding officer, identifying the State making application, the subject of the application, and the number of States then having made application on such subject. The President of the Senate and Speaker of the House of Representatives shall jointly cause copies of such application to be sent to the presiding officer of each house of the legislature of every other State and to each

Member of the Senate and House of Representatives of the Congress of the United States.

EFFECTIVE PERIOD OF APPLICATION

SEC. 5. (a) An application submitted to the Congress by a State, unless sooner rescinded by the State legislature, shall remain effective for seven calendar years after the date it is received by the Congress, except that whenever within a period of seven calendar years two-thirds or more of the several States have each submitted an application calling for a constitutional convention on the same subject all such applications shall remain in effect until the Congress has taken action on a concurrent resolution, pursuant to section 6 of this Act, calling for a constitutional convention.

(b) A State may rescind its application calling for a constitutional convention by adopting and transmitting to the Congress a resolution of rescission in conformity with the procedure specified in sections 3 and 4 of this Act, except that no such rescission shall be effective as to any valid application made for a constitutional convention upon any subject after the date on which two-thirds or more of the State legislatures have valid applications pending before the Congress seeking amendments on the same subject.

(c) Questions concerning the rescission of a State's application shall be determined solely by the Congress of the United States and its decisions shall be binding on all others, including State and Federal courts.

CALLING OF A CONSTITUTIONAL CONVENTION

SEC. 6. (a) It shall be the duty of the Secretary of the Senate and the Clerk of the House of Representatives to maintain a record of all applications received by the President of the Senate and Speaker of the House of Representatives from States for the calling of a constitutional convention upon each subject. Whenever applications made by two-thirds or more of the States with respect to the same subject have been received, the Secretary and the Clerk shall so report in writing to the officer to whom those applications were transmitted, and such officer thereupon shall announce on the floor of the House of which he is an officer the substance of such report. It shall be the duty of such House to determine that there are in effect valid applications made by two-thirds of the States with respect to the same subject. If either House of the Congress determines, upon a consideration of any such report or of a concurrent resolution agreed to by the other House of the Congress, that there are in effect valid applications made by two-thirds or more of the States for the calling of a constitutional convention upon the same subject, it shall be the duty of that House to agree to a concurrent resolution calling for the convening of a Federal constitutional convention upon that subject. Each such concurrent resolution shall (1) designate the place and time of meeting of the convention, and (2) set forth the nature of the amendment or amendments for the consideration of which the convention is called. A copy of each such concurrent resolution agreed to by both Houses of the Congress shall be transmitted forthwith to the Governor and to the presiding officer of each house of the legislature of each State.

(b) The convention shall be convened not later than one year after adoption of the resolution.

DELEGATES

SEC. 7. (a) A convention called under this Act shall be composed of as many delegates from each State as it is entitled to Senators and Representatives in Congress. In each State two delegates shall be elected at large and one delegate shall be elected from each congressional district in the manner provided by law. Any vacancy occurring in a State delegation shall be filled by appointment of the Governor of that State.

(b) The secretary of state of each State, or, if there be no such officer, the person charged by State law to perform such function shall certify to the Vice President of the United States the name of each delegate elected or appointed by the Governor pursuant to this section.

(c) Delegates shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at a session of the convention, and in going to and returning from the same; and for any speech or debate in the convention they shall not be questioned in any other place.

(d) Each delegate shall receive compensation for each day of service and shall be compensated for traveling and related expenses. Provision shall be made therefor in the concurrent resolution calling the convention. The convention shall fix the compensation of employees of the convention.

CONVENING THE CONVENTION

SEC. 8. (a) The Vice President of the United States shall convene the constitutional convention. He shall administer the oath of office of the delegates to the convention and shall preside until the delegates elect a presiding officer who shall preside thereafter. Before taking his seat each delegate shall subscribe to an oath by which he shall be committed during the conduct of the convention to refrain from proposing or casting his vote in favor of any proposed amendment to the Constitution of the United States relating to any subject which is not named or described in the concurrent resolution of the Congress by which the convention was called. Upon the election of permanent officers of the convention, the names of such officers shall be transmitted to the President of the Senate and the Speaker of the House of Representatives by the elected presiding officer of the convention. Further proceedings of the convention shall be conducted in accordance with such rules, not inconsistent with this Act, as the convention may adopt.

(b) There is hereby authorized to be appropriated such sums as may be necessary for the payment of the expenses of the convention.

(c) The Administrator of the General Services shall provide such facilities, and the Congress and each executive department, agency, or authority of the United States, including the Legislative Branch and the Judicial Branch, except that no declaratory judgment may be required, shall provide such information and assistance, as the convention may require, upon written request made by the elected presiding officer of the convention.

PROCEDURES OF THE CONVENTION

SEC. 9. (a) In voting on any question before the convention, including the proposal of amendments, each delegate shall have one vote.

(b) The convention shall keep a daily verbatim record of its proceedings and publish the same. The vote of the delegates on any question shall be entered on the record.

(c) The convention shall terminate its proceedings within one year after the date of its first meeting unless the period is extended by the Congress by concurrent resolution.

(d) Within thirty days after the termination of the proceedings of the convention, the presiding officer shall transmit to the Archivist of the United States all records of official proceedings of the convention.

PROPOSAL OF AMENDMENTS

SEC. 10. (a) Except as provided in subsection (b) of this section, a convention called under this Act may propose amendments to the Constitution by a vote of a majority of the total number of delegates to the convention.

(b) No convention called under this Act may propose any amendment or amendments of a nature different from that stated in the concurrent resolution calling the convention. Questions arising under this subsection shall be determined solely by the Congress of the United States and its decisions shall be binding on all others, including State and Federal courts.

APPROVAL BY THE CONGRESS AND TRANSMITTAL TO THE STATES FOR RATIFICATION

SEC. 11. (a) The presiding officer of the convention shall, within thirty days after the termination of its proceedings, submit to the Congress the exact text of any amendment or amendments agreed upon by the convention.

(b) (1) Whenever a constitutional convention called under this Act has transmitted to the Congress a proposed amendment to the Constitution, the President of the Senate and the Speaker of the House of Representatives, acting jointly, shall transmit such amendment to the Administrator of General Services upon the expiration of the first period of ninety days of continuous session of the Congress following the date of receipt of such amendment unless within that period both Houses of the Congress have agreed to (A) a concurrent resolution directing the earlier transmission of such amendments to the Administrator of General Services and specifying in accordance with article V of the Constitution the manner in which such amendment shall be ratified, or (B) a concurrent resolution stating that the Congress disapproves the submission of such proposed amendment to the States because such proposed amendment relates to or includes a subject which differs from or was not included among the subjects named or described in the concurrent resolution of the Congress by which the convention was called, or because the procedures followed by the convention in proposing the amendment were not in substantial conformity with the provisions of this Act. No measure agreed to by the Congress which expresses disapproval of any such proposed amendment for any other reason, or without a statement of any reason, shall relieve the President of the Senate and the Speaker of the House of Representatives of the obligation imposed upon them by the first sentence of this paragraph.

(2) For the purposes of paragraph (1) of this subsection, (A) the continuity of a session of the Congress shall be broken only by an adjournment of the Congress sine die, and (B) the days on which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the period of ninety days.

(c) Upon receipt of any such proposed amendment to the Constitution, the Administrator shall transmit forthwith to each of the several States a duly certified copy thereof, a copy of any concurrent resolution agreed to by both Houses of the Congress which prescribes the time within which and the manner in which such amendment shall be ratified, and a copy of this Act.

RATIFICATION OF PROPOSED AMENDMENTS

SEC. 12. (a) Any amendment proposed by the convention and submitted to the States in accordance with the provisions of this Act shall be valid for all intents and purposes as part of the Constitution of the United States when duly ratified by three-fourths of the States in the manner and within the time specified.

(b) Acts of ratification shall be by convention or by State legislative action as

the Congress may direct or as specified in subsection (c) of this section. For the purpose of ratifying proposed amendments transmitted to the States pursuant to this Act the State legislatures shall adopt their own rules of procedure. Any State action ratifying a proposed amendment to the Constitution shall be valid without the assent of the Governor of the State.

(c) Except as otherwise prescribed by concurrent resolution of the Congress, any proposed amendment to the Constitution shall become valid when ratified by the legislatures of three-fourths of the several States within seven years from the date of the submission thereof to the States, or within such other period of time as may be prescribed by such proposed amendment.

(d) The secretary of state of the State, or if there be no such officer, the person who is charged by State law with such function, shall transmit a certified copy of the State action ratifying any proposed amendment to the Administrator of General Services.

RESCISSION OF RATIFICATIONS

SEC. 13. (a) Any State may rescind its ratification of a proposed amendment by the same processes by which it ratified the proposed amendment, except that no State may rescind when there are existing valid ratifications of such amendment by three-fourths of the States.

(b) Any State may ratify a proposed amendment even though it previously may have rejected the same proposal.

(c) Questions concerning State ratification or rejection of amendments proposed to the Constitution of the United States, shall be determined solely by the Congress of the United States, and its decisions shall be binding on all others, including State and Federal courts.

PROCLAMATION OF CONSTITUTIONAL AMENDMENTS

SEC. 14. The Administrator of General Services, when three-fourths of the several States have ratified a proposed amendment to the Constitution of the United States, shall issue a proclamation that the amendment is a part of the Constitution of the United States.

EFFECTIVE DATE OF AMENDMENTS

SEC. 15. An amendment proposed to the Constitution of the United States shall be effective from the date specified therein or, if no date is specified, then on the date on which the last State necessary to constitute three-fourths of the States of the United States, as provided for in article V, has ratified the same.

By Mr. JAVITS (for himself, Mr. HUMPHREY, Mr. MOYNIHAN, Mr. MATHIAS, Mr. CLARK, Mr. RIEGLE, Mr. BAYH, Mr. MCGOVERN, Mr. WILLIAMS, Mr. KENNEDY, Mr. BROOKE, and Mr. CHAFEE):

S. 1881. A bill to amend title 38 of the United States Code to provide for the payment of supplemental tuition allowances for certain veterans pursuing educational programs; to the Committee on Veterans' Affairs.

GI SUPPLEMENTAL TUITION BILL

Mr. JAVITS. Mr. President, with Senators HUMPHREY, MOYNIHAN, MATHIAS, CLARK, RIEGLE, BAYH, MCGOVERN, WILLIAMS, KENNEDY, BROOKE, CHAFEE, and other sponsors, I propose on Wednesday, July 20, to introduce the GI supplemental tuition bill of 1977 the text of which is appended. It is hoped that other Senators will join in cosponsorship.

By Mr. GLENN (for himself and Mr. BAYH):

Senate Joint Resolution 71. A joint resolution to authorize and request the President to issue annually a proclamation designating September of each year as "National Sickle Cell Month"; to the Committee on the Judiciary.

Mr. GLENN. Mr. President, last August 31 I joined with the National Association for Sickle Cell Disease in bringing to the public's attention the fact that last September was National Sickle Cell Month. Today, with Senator BAYH, I am introducing Senate Joint Resolution 71 which would empower the President to designate September as National Sickle Cell Month annually.

It is important that this disease be periodically brought to the public's attention. Sickle cell anemia is an inherited blood disease which primarily affects blacks. One out of ten black persons has been estimated to possess the sickle cell trait. Roughly 1 of every 400 blacks has sickle cell anemia. The majority of adults who have sickle cell traits are not aware that they are carriers of the sickle cell gene. Thus, it is particularly important that there be ongoing screening and testing programs at early ages followed by appropriate education and counseling. Of course, there must also be continuing long-term research as well as quality medical care and treatment in this area.

Unfortunately, we at the national level have too often allowed the shining light of media attention to dictate priorities of interest and funding for vital programs. When the camera leaves, the problem remains, but interest and concern often disappears. We simply cannot allow this to happen with respect to sickle cell disease.

So I urge my colleagues to act on Senate Joint Resolution 71 so that President Carter can take this small step that will help assure that the American Government and its people do not forget or ignore this debilitating illness that afflicts so many of our citizens.

Mr. BAYH. Mr. President, as a member of the National Advisory Board for the National Association for Sickle Cell Disease—NASCD—it gives me a great deal of pleasure to cosponsor this resolution which proclaims the month of September as National Sickle Cell Month. Mr. President, I feel it is only fitting and proper that the Congress act on this matter quickly and without delay. Certainly, this is the kind of issue with which most, if not all Americans, are in agreement—that agreement being the eradication through prevention of sickle cell disease. For too many years, our black citizens have suffered from this crippling disease, and this resolution will be an important step in heightening public awareness of this terrible affliction.

Let me further state that time is of the utmost importance. NASCD is requesting September be proclaimed as the month to concentrate on fighting sickle cell anemia. I need not tell you that we have very little time in which to pass this proclamation. We have only 3 weeks until recess, and when we return, it will be the first of September. Therefore, if we plan to make the entire month Sickle Cell Prevention Month, we must act before we adjourn.

Finally, let me state that a great deal of attention and publicity has been given to sickle cell prevention over the past 6 to 7 years. However, there is still a great need for public education and the dissemination of accurate medical information about sickle cell trait and sickle cell anemia. This can only be accomplished through the combined efforts of all the American people. The leadership in this effort can begin right here in the U.S. Senate with the immediate passage of this resolution proclaiming September as National Sickle Cell Month.

ADDITIONAL STATEMENTS

THE PRICE OF PREPAREDNESS

Mr. GOLDWATER. Mr. President, now that the defense appropriation bill, has come to the floor, we will all be asked to discuss it, consider it, and vote our own conclusions on it. The defense appropriations bill is not an easily understood thing. To begin with, it is a very large amount of money. It will total this year in excess of $110.5 billion which is roughly 25 percent of our total Federal budget and about 5 to 6 percent of the gross national product. By the way, the relationship to the gross national product has been running at a very steady rate over a number of years so that while the actual amount of money being spent for military purposes goes up, its relationship to the total business of the country remains about the same. The American Enterprise Institute has published a paper entitled, "The Price of Preparedness," written by Lawrence J. Korb. Mr. Korb is professor of management at the U.S. Naval War College and an adjunct scholar of the American Enterprise Institute. While this paper is probably a little longer than one usually places in the RECORD, I feel it is of such importance that I ask unanimous consent that it be printed in the RECORD so that my colleagues will have the opportunity of becoming better acquainted with defense outlays before we get into the actual business of discussing them.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

[AEI Defense Review]

THE PRICE OF PREPAREDNESS: THE FISCAL YEAR 1978–82 DEFENSE PROGRAM

(By Lawrence J. Korb)

For five reasons, the defense budget for any particular year is one of the most important

documents produced within the American political system.

(1) The defense budget accounts for a sizable portion of federal expenditures.[1] Of fifteen major functions performed by the federal government the national defense function consumes the second largest amount of funds; only income security costs more. Similarly, of the twelve major agencies in the federal government, the Department of Defense (DOD) is the second most expensive; only the Department of Health, Education, and Welfare (HEW) spends more. Consequently, the size and distribution of the defense budget have vast implications for the health of the U.S economy.

(2) The defense budget for fiscal year (FY) 1978 represents 56 percent of the realistically controllable or discretionary funds within the entire federal budget. In contrast, almost none of the funds for HEW, the Veterans Administration, or other agencies are controllable. These agencies must play the claims of individuals who establish eligibility for programs like social security or the GI bill. Therefore, defense is the primary area in the federal budget in which national priorities can be established.

(3) The defense budget is the linchpin of any national security policy. Plans are basically irrelevant and operations virtually impossible until the forces and weapons to support them have been purchased. If the force structure that is procured cannot support the policy, disaster may result.

(4) Decisions reflected in a particular defense budget have long-term consequences. A naval surface combatant funded in the FY 1978 budget will go to sea in the mid 1980s and will remain in an operational status until about 2015. Approximately 36 percent of the funds appropriated in FY 1978 will be spent in future fiscal years

(5) The size and composition of the defense budget send signals to our allies and adversaries about our intentions. Other nations scan this document annually to discern the trends and shifts in our national security policy.

Thus, it is not surprising that the defense budget is produced laboriously by the executive branch, scrutinized thoroughly by the Congress, analyzed extensively by the research institutes, and debated vigorously in presidential campaigns. It takes the executive branch about twenty months of planning, programming, bargaining, negotiating, and compromising to produce a single defense budget. The Congress listens to some 1,700 witnesses and takes over 1,400 hours of testimony, over a twelve-month period before it authorizes and appropriates funds for each budget.[2] Groups like the American Enterprise Institute, the Brookings Institution, the Center for Defense Information, and the National Urban Coalition analyze, criticize, and propose alternatives to each defense budget.

In every post-World War II presidential election the defense budget has been a major campaign issue. In 1952, the Republicans claimed that the Truman administration was spending defense funds wastefully and promised to give the American people "more bang for the buck." Eight years later, John Kennedy argued that the low levels of defense spending in the Eisenhower administration had permitted the Soviet Union to gain the initiative in the crucial area of strategic missiles. During the 1972 campaign, Democratic candidate George McGovern promised to reorder national priorities by slashing defense spending by nearly 40 percent to $52 billion.[3] In 1976, Jimmy Carter argued that 5 to 6 percent of the funds expended by the Pentagon were being wasted and pledged to reduce the defense budget by $5 to $7 billion.

In the post-World War II period, each new administration has moved quickly to reshape the defense budget drawn up by the outgoing administration. In 1953, President Eisenhower slashed $4.9 billion, or 12 percent, off of President Truman's proposed $40.7 billion defense budget for FY 1954. Eight years later, President Kennedy added $5.2 billion, or 12.2 percent, to President Eisenhower's proposed $42.9 billion FY 1962 budget. In 1969, President Nixon cut $1.5 billion, or 1.8 percent, from President Johnson's proposed FY 1970 budget of $83.2 billion. Within one month of taking office, President Carter reduced the Ford administration's FY 1978 budget by $2.8 billion, or 2.3 percent.

Comparatively speaking, the changes made by the Carter administration were minor. Not only were the reductions below the level promised in the campaign and less substantial than those of most previous new administrations, but they were much less substantial than the cuts already made by the Ford administration. The outgoing administration's budget total was $12 billion below the level requested by the military departments'[4] and $5 billion below the total initially supported by Secretary of Defense Donald Rumsfeld. Therefore, the FY 1978 budget is essentially a Ford budget, and our analysis will begin by focusing on the policy assumptions, size, and distribution of expenditures proposed by the Ford administration.

POLICY ASSUMPTIONS

In theory, policy and force structure should be interdependent. The force structure ought to be configured to support the prescribed policy. On the other hand, the policy is not created in a vacuum. At any given time, it should be constrained by the forces in existence or the forces which the nation is able and willing to develop. In practice, the fit between policy and structure is rarely perfect. However, they are usually connected albeit loosely. With this caveat in mind, let us analyze the policy under which the FY 1978 budget appears to have been developed.[5]

The military forces supported by this budget are configured for both deterrence and war fighting. These forces are designed to deter four specific situations: nuclear attacks on the United States and its allies, principally by the U.S.S.R.; conventional attacks by the Warsaw Pact nations on Western Europe or by North Korea on South Korea; a smaller contingency which might precede a major attack and thereby preclude the early use of some U.S. forces in a major contingency; and disruption of the main sea and air lines of communication to our allies in Europe and northern Asia.

If deterrence should fail, our strategic nuclear and conventional forces are equipped to conduct certain kinds of operations. Our strategic nuclear forces are designed for two roles. First, the forces must be able to withstand a large-scale attack by the Soviet Union and then launch a major retaliatory strike. The purpose of this second strike is to inflict so much damage on the Soviet Union that it would be prevented from recovering militarily, politically, and economically. Second, our nuclear forces are configured to engage in a limited nuclear conflict against Soviet military targets should the Soviet Union launch a counterforce damage-limiting nuclear strike against the United States (that is, attack only a small number of military targets that are located away from population centers).

Our conventional or general-purpose forces are designed to handle two types of operations. First, our nonnuclear forces must be able to conduct, along with the forces of our allies, a large-scale or worldwide war against the Soviet Union and its allies. Defense planners feel that this conflict will be conducted primarily in central Europe and secondarily in Northeast Asia. Second, our conventional forces must be capable of handling simultaneously some minor contingency not involving the U.S.S.R. or its allies. This minor contingency must be conducted without impairing our ability to fight the major war. It is assumed that if our general-purpose forces are equipped to handle those two situations—that is, "one and one-half wars"—they will necessarily be adequate for any other uses to which the United States might wish to put them.

The nonnuclear policies supported by the FY 1978 defense budget are a continuation of initiatives developed over the last decade. However, the strategic nuclear policies are of much more recent origin. The "one and one-half war" strategy, with the emphasis on the NATO or European scenario, was developed in the early days of the first Nixon administration. The FY 1978 budget continues the trend of equipping our forces to fight primarily an intensive battle in central Europe. DOD does not claim that by the end of FY 1978 our forces will be fully capable of handling a blitzkreig by the Warsaw Pact nations. However, it does argue that the FY 1978 budget will lay the foundation for a program that will have our conventional forces so equipped that they will be reasonably capable of dealing with the likely European contingencies by the mid 1980s.

The strategic nuclear policies supported by this budget evolved during the 1973–1975 period while James Schlesinger was secretary of defense. Prior to Schlesinger's tenure, our strategic policy had been assured destruction through the deployment of massive countervalue capabilities directed against Soviet population and industrial capacity. The fact that DOD was developing the limited nuclear war option was first made public in early 1974. However, the fact that the administration had broadened the meaning of assured destruction to include preventing the Soviet Union from recovering its national power and influence did not come to light until January 1977. These innovations in strategic doctrine have been accompanied by increases in the number, yield, and accuracy of our nuclear weapons.

SIZE

The size of the defense budget can be measured in three distinct ways. First, it can be viewed in terms of either outlays or obligational authority. Second, the defense budget can be measured in current or constant dollars. Third, defense spending can be looked at in either relative or absolute terms. All of these perspectives are useful and each presents different insights into the significance of the size of a particular defense budget.

Table 1 contains the Total Obligational Authority (TOA) and outlay projections. It also shows the relationship between outlays and obligational authority. Outlays are a measure of the funds to be spent in a given fiscal year. During FY 1978, DOD is estimating that it will spend $110.1 billion. As indicated in Table 1, $30.8 billion (or 28 percent), of this amount is a result of authority remaining from previous years. The remaining $79.3 billion (or 72 percent) comes from authority requested in FY 1978.

TABLE 1.—DEPARTMENT OF DEFENSE TOA AND OUTLAY PROJECTIONS, FISCAL YEAR 1976–82

[In billions of dollars]

Program year	TOA	Projected outlays								
		1976	Transition	1977	1978	1979	1980	1981	1982	After 1982
Prior balance [1]		20.4	2.8	8.0	3.7	2.0	1.4	.7	.3	.5
1976	97.5	68.2	6.5	12.4	5.9	2.1	1.2	.5	.3	.4
Transition [2]	22.5		12.8	5.7	2.2	1.0	.4	.2	.1	.1
1977	110.2			72 2	19.0	9.8	3.9	2.2	.8	2.3
1978	123.1				79.3	22.6	11.2	4.6	2.7	2.7
1979	134.5					83.8	26.3	13.9	5.9	5.5
1980	145.8						89.4	28.4	14.8	13.2
1981	156.7							95.1	30.7	30.9
1982	166.8								100.8	66.0
Grand total of outlays		88.5	22.1	98.3	110.1	121.3	133.8	145.6	156.4	121.6

[1] Money available from years prior to 1976.
[2] The period from July 1, 1976, to Sept. 30, 1976. Beginning with fiscal year 1977 the fiscal year started on Oct. 1, rather than July 1.

Note: TOA stands for total obligational authority, that is all of the funds which are available to the Department of Defense. Columns may not add to totals because of rounding.

Source: Assistant Secretary of Defense (Comptroller) (ASD) (C), National Defense Budget Estimates for fiscal year 1978, p. 24.

Conversely, TOA includes funds that will be spent not only in FY 1978, but throughout the next several years. For FY 1978, the Pentagon is requesting $123.1 billion in TOA. Only 65 percent, or $79.3 billion, of this money will actually be spent in FY 1978. The remaining $43 billion can be expended through FY 1985, with most of it being spent in FY 1979 and FY 1980. Thus, in regard to fiscal policy in the short term, outlays are the most significant indicator. However, in terms of future impact, TOA is the more important figure. The TOA figure for a particular year is almost an exact predictor of the outlays for the following year. For example, TOA of $110.2 billion in FY 1977 led to projected outlays of $110.1 billion in FY 1978.

Table 2 contains the defense projections for FY 1977–1982 in both current and constant dollars. Current dollars measure the cost of the defense budget in terms of the year in which the funds are actually spent, while constant dollars present the cost in terms of a base year. As indicated in Table 2, in current dollars TOA for FY 1978 is $123.1 billion. This is 11.7 percent above the level of FY 1977. On the other hand, outlays for FY 1978 are $11.8 billion, or 12.2 percent, higher than the FY 1977 totals. However, in terms of constant FY 1978 dollars the increase is only $6.4 billion, or 5.5 percent, for TOA, and $5.6 billion, or 5.4 percent, for outlays. The contrast between current and constant dollars can be exemplified by looking at the defense budgets for FY 1945 and FY 1968. In current or "then-year" dollars, the budgets were quite similar, the FY 1945 budget was $80.8 billion and the FY 1968 budget was $75.6 billion. However, measured in constant FY 1978 dollars, the FY 1945 budget would have been $382.7 billion and the FY 1968 budget $154.7 billion.

TABLE 2.—THE DEFENSE BUDGET FISCAL YEAR 1977–82 IN CURRENT AND CONSTANT DOLLARS

[In billions of dollars]

Budget category	Fiscal year—						Total increase, fiscal year 1977–82		Average annual increase, fiscal year 1977–82	
	1977	1978	1979	1980	1981	1982	Amount	Percent	Amount	Percent
TOA:										
Current dollars	110.2	123.1	135.4	145.8	156.7	166.8	56.6	(51.4)	11.3	(10.3)
Fiscal year 1978 dollars	116.7	123.1	128.8	132.3	135.7	138.6	21.9	(18.8)	4.4	(3.8)
Outlays:										
Current dollars	98.3	110.1	121.2	133.7	145.5	156.3	58.0	(59.0)	11.6	(11.8)
Fiscal year 1978 dollars	104.5	110.1	115.2	120.9	125.6	129.0	24.7	(23.6)	4.9	(4.7)

Source: Donald Rumsfeld, Annual Defense Department Report, fiscal year 1978, Jan. 17, 1977, p. 8.

As is indicated in Table 2, the FY 1978 budget will lay the foundation for a period of sustained real growth in the defense budget. This continues the trend begun two years ago when the first defense budget of the Ford administration (FY 1976) reversed the downward spiral which had begun in FY 1968. Between FY 1968 and FY 1975 defense authority declined by 44 percent in real terms. In current dollars, the FY 1978 budget seeks to provide for an increase in TOA of $56.6 billion, or 51.4 percent, over the next five years, and a $58 billion, or 59 percent, increase in outlays. This translates into a real increase of $21.9 billion, or 18.8 percent, in TOA, and a $24.7 billion, or 23.6 percent, increase in outlays, for an average annual real increase of 4 to 5 percent.

For purposes of comparison, the DOD budget outlay is usually related to the GNP and to the total federal budget. These two bench marks aid in measuring the impact of defense spending on the economy and serve to highlight the priority given to defense programs within the government. As indicated in Table 3, defense outlays in FY 1978 are estimated to consume 5.4 percent of the GNP and 25 percent of the total federal buget. Defense's share of these two indicators nas remained virtually unchanged since the turnaround of FY 1976. Prior to that time, the defense portion of both of these bench marks had dropped dramatically. A decade ago, defense spending accounted for almost 10 percent of our GNP and nearly half of the entire federal budget.

TABLE 3.—DEFENSE AND THE ECONOMY, FISCAL YEAR 1978–82

[Dollar amounts in billions]

	Fiscal year—					
	1978	1979	1980	1981	1982	Average
Defense outlays	$110.1	$121.2	$133.7	$145.5	$156.3	$133.4
GNP	2,038	2,268	2,522	2,736	2,919	2,496.6
Defense outlays as a percentage of GNP	(5.4)	(5.3)	(5.3)	(5.3)	(5.4)	(5.3)
Federal budget	$440.1	$466.0	$496.6	$527.0	$558.7	$497.7
Defense outlays as a percentage of Federal budget	(25.0)	(26.0)	(26.9)	(27.6)	(28.0)	(26.8)

Source: The Budget for Fiscal Year 1978, pp. 24, 51, and 53.

According to the assumptions contained in the FY 1978 budget, defense outlays will receive a fairly constant share of the GNP over the next five years. Thus, in its last defense budget the Ford administration attempted to let defense spending grow along with the economy. However, the share of the federal budget devoted to defense will rise slightly to 28 percent by FY 1982, bringing the defense portion of that indicator back to the levels of the early 1970s.

It must be emphasized that the projections for the period FY 1978–1982 can in no way be considered predictions. Even if the Ford administration had remained in power, it is by no means certain that the projected levels of defense spending would have become a reality (see Table 4). In January 1975, when President Ford first decided to reverse the downward trend in the level of defense spending, he projected that by FY 1978 the

defense budget would be $129.5 billion. The following year, at the start of the presidential campaign, the former President began to move toward a balanced budget in FY 1979. Consequently, he proposed a decrease in defense spending of $7.1 billion, or 5.5 percent, below his projections of the previous year. His actual proposal for FY 1978 was some $6.4 billion, or 4.9 percent, below the January 1975 projection and $0.7 billion above the January 1976 figure. As indicated in Table 4, the five-year projections have also fluctuated markedly. In January 1975, the Ford administration estimated that it would spend $975.1 billion between FY 1976 and FY 1982. A year later this figure was reduced by nearly $50 billion, or 5.7 percent. In January 1977, the outgoing administration increased the total by $14.3 billion, or 1.3 percent, to $940.1 billion.

Budget projections are also sensitive to congressional actions, which have varied markedly in recent years. Two years ago the Congress cut TOA in the FY 1976 defense budget by nearly $7 billion, but last year it reduced TOA for FY 1977 by only $2.8 billion. In its deliberations on a preliminary target for the FY 1978 defense total, the House approved several different figures before settling on $118.5 billion for TOA and $111 billion in outlays.

DISTRIBUTION

Essentially, the Pentagon spends its money on five major items: personnel, operations and maintenance, procurement, research and development, and construction. These items are grouped in three different ways within the defense budget: by program, budget title, and component. Much of the confusion about the actual distribution of the DOD budget arises from the mixing of these three categories. Unfortunately, some mixing is almost inevitable because the executive branch formulates the budget in program categories, while the legislative branch appropriates defense funds to the individual components or agencies by budget title. Beginning in FY 1979, at the request of Congress, a fourth category will be added: agency mission. It is difficult to see how a mission-oriented budget would enhance the rationality of the legislative phase of the budget process. The Congress does not yet make use of the program areas which were developed over fifteen years ago. If anything, the new category will only confuse the subject further.

In this section, we will begin by examining present and future cost trends for each of these five major items and then aggregate these items into the three traditional budget categories. This should give us a reasonably accurate presentation of the distribution of the defense dollar.

Personnel. Personnel expenditures consist of wages and allowances for active-duty military personnel, retired military people, civil service employees of the department, and reservists, and the costs of building government housing for military people. Table 5 breaks down the actual cost of these five items during FY 1968, 1976, and 1977 and projects their estimated costs through FY 1982.

During FY 1978, DOD will spend $25.6 billion for pay and allowances for 2,090,000 active-duty personnel. Of this amount, $19.7 billion will be alocated for saaries, $2.3 billion for housing allowances, $1.8 billion for moving expenses, $0.6 billion for subsistence, $0.3 billion for enlisted clothing, and $0.6 billion for miscellaneous. This is an increase of $1.1 billion, or 4.5 percent, over FY 1977 and reflects primariy the 4.83 percent cost-of-living raise granted on October 1, 1976. The average cost of each active-duty person during FY 1978 will be $12,100, an increase of $6,700 per person, or 124 percent, over the levels of FY 1968, when 3.5 million people cost $19 billion. For FY 1978, this will break down to approximately $22,000 for each officer and $9,300 for each enlisted person.

TABLE 5.—PERSONNEL COSTS IN THE DEFENSE BUDGET, SELECTED FISCAL YEARS

[Dollar amounts in billions]

Personnel costs	Fiscal year— 1968	1976	1977	1978	1979	1980	1981	1982	Total change, fiscal years 1977–82 Amount	Percent	Average annual change, fiscal years 1977–82 Amount	Percent
Military personnel	$19.0	$23.3	$24.5	$25.6	$26.9	$28.3	$29.7	$31.0	6.5	26.5	1.3	5.3

Source: Fiscal year 1978 Defense Report, p. 287, and fiscal year 1978 Budget, pp. 53–54.

Between FY 1968 and FY 1976, the number of people on active duty declined by about 1.4 million, or 40 percent. Since that time, manpower levels have remained constant at about 2.1 million. Our projections assume that this number will remain approximately the same through FY 1982. Thus, over the next five years the military payroll will climb by $6.5 billion, or 26.5 percent, to $31 billion. This represents an average annual increase of $1.3 billion, or 5.3 percent, and reflects only the annual cost-of-living increases granted to all government employees each October. These raises are projected to average 5.95 percent during the FY 1978–1982 period.[6] No real increases in compensation for military personnel are programmed during the next five years. Moreover, there have been none since 1972, when the pay of junior enlisted men was raised by 67 percent and the pay of junior officers by 9 percent.

During FY 1978, DOD will spend $9.1 billion for the 1.1 million military people on its retired rolls. In FY 1968 the cost of military retirees was only $2.1 billion. Since there is no trust fund to which either the government or the military man has contributed, the Pentagon must pay the entire amount out of its current budget.[7] If no changes are made to the present retirement system,[8] the cost of paying the 1.3 million people on the retired rolls in FY 1982 will rise to $11.8 billion, or approximately $9,000 per person. This represents a total increase of 43.9 percent over FY 1977 levels and an average annual raise of almost 9 percent.

There are basically three reasons why the retired-pay account will increase so rapidly over the next few years.

(1) The number of people on the retired rolls will jump by over 200,000.

(2) Retired pay will be adjusted to reflect changes in the consumer price index (CPI). The Office of Management and Budget (OMB) projects twelve CPI adjustments over the next five years. Each adjustment will involve a raise of, on average, 2.4 percent.

(3) Those joining the retired rolls over the next five years will draw significantly larger payments than those of comparable rank who retired before the massive pay raises of the late 1960s and early 1970s.

Footnotes at end of article.

During the upcoming fiscal year, the Pentagon will spend $18.6 billion for 1,031,000 general schedule (white-collar) and blue-collar civilian employees. This represents an outlay of $18,000 for each civil servant, an increase of $10,300, or 136 percent, over the levels of a decade ago when DOD paid $10.6 billion for 1.4 million civilians.

Over the past decade the number of civilians employed by the Department of Defense has been reduced by 362,000, or 25.9 percent. Our projections assume that the number of civilians will remain fairly constant at about 1.0 million through FY 1982. If this assumption is correct, civilian payroll costs will rise to $22.2 billion by the end of the five-year period. This will represent a total increase of $4.6 billion, or 26.1 percent, and an average annual increase of $0.9 billion, or 5.2 percent. This amount will be necessary to cover the general schedule pay raises and Wage Board blue-collar increases projected by OMB. White-collar increases will average 5.95 percent annually, while those for blue-collar workers will average 4.7 percent.

The payroll for the 881,000 reservists and national guardsmen in a drill status in FY 1978 will come to $2.1 billion, or about $2,300 per reservist, one-fifth the cost of a person on active duty. Because of the implementation of the Total Force Concept, which integrates the reserves with active-duty components into Department of Defense War Plans, the number of reservists has remained fixed at about 900,000 throughout the post-Vietnam period, and our assumptions are based on a continuation of this trend.[9] This will increase the level of reserve pay by $0.4 billion to $2.5 billion by FY 1982.

Expenditures for family housing in FY 1978 are projected to be $1.4 billion. This is more than triple the level of FY 1968, and 40 percent above the level of just two years ago. Our analysis projects an average annual increase of 10 percent over the next five years. These high expenditures will be necessary to maintain government housing units of the quality necessary to attract and maintain an all-volunteer force. Surveys have shown that adequate housing is a necessary ingredient for recruiting and retaining volunteers and that there are still several military installations—such as the Trident submarine base in Bangor, Washington—near which adequate housing does not exist.

In the post-Vietnam period, personnel costs rose dramatically both in monetary terms and as a portion of the defense budget. This rapid rise was brought on by four factors. First, the pay of all federal employees was made comparable to that of their counterparts in the private sector. Since the Pentagon employs nearly 80 percent of the individuals who work for the federal government, it was substantially affected by this move. Second, the post-Vietnam period has seen record high inflation rates. Since the pay of all DOD active and retired personnel is tied to the inflation rate, personnel costs were driven up even further. Third, the switch from conscription to the all-volunteer force in 1973 necessitated pay increases and the establishment of many kinds of incentives and cash bonuses for initial and subsequent enlistments. Fourth, the number of people on the retired rolls swelled as the veterans of World War II and Korea began reaching retirement age en masse.

This rapid rise in personnel costs was the driving force behind the increases in the defense budget for nearly a decade. As indicated in Table 5, personnel costs jumped from $33 billion in FY 1968 to nearly $50 billion in FY 1976, while the defense establishment was reducing the number of people in its employ by nearly 2 million, or 40 percent. The share of the defense budget devoted to personnel climbed from 42 percent in FY 1968 to 55 percent in FY 1976. However, in the last two years this picture has begun to change significantly. For the first time in nearly a decade, personnel costs have leveled off in real terms and have begun to decline as a portion of the defense budget. Moreover, during the FY 1978–1982 period, personnel costs will increase at an average annual rate of 6 percent, that is, at the same rate as inflation. Most of the factors which drove up the cost of personnel have disappeared. If anything, the pay of government workers now is more than comparable to that of workers in the private sector holding similar types of jobs. The days of double-digit inflation appear to be behind us; the level of pay, bonuses, and special payments is sufficiently high that compensation is no longer the dominant variable in attracting and maintaining qualified volunteers,[10] and the rapid growth in the retired rolls has slowed down. The impetus for the projected rise in defense spending is to be found in the other areas of the defense budget.

Procurement. Procurement expenditures may be divided into two categories: system and nonsystem or routine procurements. System procurement expenditures are made for new weapon programs, while nonsystem or routine procurement outlays cover the cost of such items as spare and repair parts for older systems. About 65 percent of the total procurement budget normally goes for new system acquisition.

Source: Department of Defense, "Program Acquisition Costs by Weapon System, Fiscal Year 1978."

For FY 1978, DOD is requesting $35.1 billion for procurement, an increase of $7.2 billion, or 25.8 percent, over the level of the previous year. This is the largest proposed single-year increase in this area since the height of the American involvement in the war in Southeast Asia and represents a continuation of the trend begun two years ago. In FY 1976, procurement authority jumped by $4 billion, or 23 percent, over the FY 1975 level, and in FY 1977 it increased by another $6.5 billion, or 30.1 percent. In constant dollars, procurement authority in FY 1975 was actually $2.5 billion, or 12.6 percent, lower than the level of FY 1970. This represented a real decline of 52 percent in this area.

The FY 1978 procurement budget will contain authority for the actual purchase of 26 ships, nearly 700 aircraft, 3,000 tanks and other combat tracked vehicles, and 45,000 missiles. As is indicated in Table 6, the Pentagon has 104 different systems in various stages of production and another 31 in a research and development stage. The Pentagon is seeking authority to spend $23 billion on the procurement costs of 29 separate aircraft programs, 29 different missile programs, 15 distinct types of ships, 10 separate combat vehicles, and 21 different miscellaneous programs like torpedoes and satellite communications systems.

Forty-seven of these new weapon systems can be classified as major programs (that is, quarterly reports on their status must be furnished to the Congress). Table 7 lists these programs and the cost data by service. As the table shows, these forty-seven programs will consume $17.1 billion, or about half of the entire procurement budget for FY 1978. The total cost of these programs is presently estimated to be nearly $200 billion. Through FY 1977, DOD has received only $78.8 billion, or 39.8 percent, of the total cost of these systems. About $71 billion of the remainder for these programs will be funded over the FY 1979–1982 period, while the remaining $30.6 billion will be requested in the years beyond. If anything, the present estimate for these programs is conservative. The cost of these forty-seven weapon systems is already more than double their original estimated cost of $98.2 billion. According to the Pentagon, the cost increases are attributable to such factors as unanticipated inflation, engineering changes, estimating errors, and quantity changes.

TABLE 7.—COST DATA ON THE 47 MAJOR WEAPON SYSTEMS CURRENTLY BEING PRODUCED BY DOD

[In billions of dollars]

Service	Number of programs	Total cost		Cost growth		Authorized through fiscal year 1977	Requested fiscal year 1978	Balance

Source: ASD(C), "Selected Acquisition Reports," Feb. 14, 1977.

The high cost of modern weapon systems is demonstrated by the data for the fourteen programs listed in Table 8. These are the fourteen most expensive weapon systems in DOD. The average cost for each system is about $10 billion. As is indicated in Table 8, to modernize our strategic nuclear forces, the Department of Defense will have to spend $93.4 million on each new B–1 bomber and $1.6 billion for each new Trident submarine. The cost of purchasing new tactical aircraft for the navy will be $25.4 million per plane for the high-performance F–14 fighter and $16 million for the more austere F–18. Each new frigate (FFG–7) will cost the navy nearly $200 million, and each new attack submarine (SSN–688) nearly $300 million. The new high-performance air force F–15 fighter costs almost $17 million per unit, while its low-cost counterpart, the F–16, will cost almost $10 million per plane. The Army will spend $1.5 million for eacn new Main Battle Tank (XM–1) and about $0.7 million for each advanced attack helicopter (AAH).

Procurement costs will rise dramatically over the next five years. Between now and FY 1982, the procurement budget will nearly double over its FY 1977 level. By FY 1982, DOD will be spending $55.3 billion on procurement, an increase of $27.4 billion, or 98.2 percent. During the FY 1978–1982 period, procurement spending will increase at an annual rate of about 20 percent. This rapid rise will be brought about by three factors.

First, there is the high cost of replacing obsolete weapon systems. The B–1 is nearly twelve times more expensive than the B–52, a Trident submarine is five times more costly than the Polaris, the M–X mobile ICBM will be ten times more expensive than the Minuteman III, the F–14 is ten times more expensive than the F–4, and the XM–1 tank will cost about 2.5 times more than the M–60. These new weapon systems cost so much more not only because of inflation, but also because of their increased sophistication. Modern weaponry is entering a new technological age.

Second, the Department of Defense is facing a problem of bloc obsolescence. The procurement account has been underfunded for a decade. In the last half of the 1960s funds were diverted from new weapon systems to support the American effort in Vietnam. In the immediate postwar period, many programs were deferred or stretched out so that increasing personnel costs could be absorbed within a fixed defense total.

Third, the Soviet Union has increased the firepower of its strategic and general purpose forces by adding large amounts of new equipment.

TABLE 8.—MAJOR PROCUREMENT PROGRAMS

[In billions of dollars]

Program	Unit cost (millions of dollars)	Total cost	Authorized through fiscal year 1977	Requested, fiscal year 1978	Balance		Total
					Fiscal year 1979–82	After fiscal year 1982	
B–1	93.4	22.8	4.4	2.2	11.8	4.5	16.4

Source: ASD(C), selected acquisition reports, Feb. 14, 1977.

These procurement decisions can no longer be postponed. If the United States wants to maintain the mixed force of strategic nuclear weapons known as the Triad, it will have to buy new ICBMs, bombers, and submarines. The Minuteman, the B–52, and the Polaris submarine are nearing the end of their useful lives. If this nation wants to ensure control of the seas, new ships will have to be purchased. We can no longer rely on the ships built during World War II as the bedrock of our fleet. If we wish to have a viable tactical air arm, new planes will have to be purchased. Although the F–4 was an excellent plane for its time, it cannot last forever. If we wish NATO to continue as a credible force, the army must be provided with new Main Battle Tanks. Because the new systems are more capable, older weapon systems do not have to be replaced on a one-for-one basis. However, there does need to be a proportionate replacement program.

The most expensive portions of the procurement program over the next five years will be our aircraft and shipbuilding programs. The cost of these programs in the FY 1978–1982 period is laid out in Table 9. The four armed services proposed to spend nearly $83 billion to purchase new airplanes. Approximately $70 billion of this amount will be spent on tactical aircraft. This will allow the Pentagon not only to replace its obsolete planes, but also to increase the number of tactical aircraft by 100, from its present total of 5,200 to 5,300. The $12.9 billion projected for the B–1 will permit the air force to purchase 152 of these new strategic weapons.

TABLE 9.—AIRCRAFT AND SHIPBUILDING COSTS, FISCAL YEARS 1978–82

Source: Estimated from the fiscal year 1978 defense report, fiscal year 1978 budget, and ASD(C) selected acquisition reports, Feb. 14, 1977.

The Pentagon would like to spend about $50 billion over the next five years to purchase 157 ships. This would allow the navy to move toward its goal of a 600-ship fleet by the early 1990s. If this five-year shipbuilding program is approved, the navy will have about 575 active ships in 1985, 100 more than its present strength. About $8 billion of the navy's shipbuilding funds would go toward the purchase of eight new Trident submarines, a keystone of our strategic nuclear missile deterrent, while the remaining $40 million would finance attack submarines, major surface combatants, and their supporting ships. Table 10 outlines the shipbuilding program over the next five years.

Operations and Maintenance (O & M). Operations and maintenance funds are expended to buy ship and aircraft fuel; to provide for overhaul of ships, aircraft, and other weapon systems; and to purchase med-

ical supplies and services. For FY 1978, DOD is planning to spend $16.3 billion on these items. This represents an increase of $1.7 billion, or 11.6 percent, over FY 1977 levels. There are two reasons for this increase: the rising cost of fuel and supplies and the attempt to reduce the backlog of navy ships and aircraft due for overhaul. At the end of FY 1976 there were ninety-five ships, or 20 percent of the entire fleet. overdue for overhaul. Approximately 80 percent of this backlog was attributable directly to funding constraints. Similarly, about 25 percent of the navy's tactical aircraft are grounded because of a lack of spare parts. To reduce this trend, DOD wants to raise the navy's O & M accounts by $1.1 billion, or nearly 20 percent, for FY 1978.

Between now and FY 1982 the cost of O & M will rise by $5.5 billion. or 37.7 percent, to $20.1 billion, an average annual increase of $1.1 billion, or 7.5 percent. The major part of the increase will come in the navy's O & M account. The accounts of the other services will rise only to keep pace with inflation. This rise should enable the navy to reduce its backlog of ships overdue for overhaul to about fifteen and bring its aircraft readiness to above 90 percent by the end of FY 1982.

Research, Development, Test, and Evaluation (R.D.T. & E.) Like expenditures for procurement, funds allotted to R.D.T. & E. remained virtually stagnant in constant dollars and declined markedly in real terms in the FY 1970–1975 period. However, in FY 1976 they increased by $0.9 billion, or 10.5 percent, and in FY 1977 they rose by an additional $1.1 billion, or 11.6 percent. For FY 1978 DOD is proposing another increase of $1.4 billion, or 13.2 percent, over the level of the previous year. This will bring the amount of TOA to $12.1 billion, an increase of $3.5 billion, or 41 percent, over the level of just three years ago. This trend will continue through FY 1982. We project an average annual increase of nearly $1.3 billion, or 11.7 percent, throughout the next five years. This will raise R.D.T. & E. expenditures to $16.8 billion by FY 1982.

R.D.T & E. expenditures will increase for essentially the same reasons as procurement. A large number of the weapon systems in the inventory are obsolete. There are shortfalls in several areas. Before new, more expensive, and more sophisticated weapons can be procured, an extensive program of R.D.T. & E. must be performed. In addition, DOD must conduct a great deal of basic research if it wishes to maintain its present technological edge over the Soviet Union and if it desires to cope with potential breakthroughs by the Soviets which could render some of our weapon systems and doctrinal concepts obsolete. For example, a Soviet breakthrough in antisubmarine warfare (ASW) would place our Submarine Launched Ballistic Missile (SLBM) deterrent in jeopardy. Similarly, an increase in the accuracy of Soviet missiles could make our land-based ICBMs more vulnerable to a first strike.

In the next fiscal year, DOD proposes to spend $1.9 billion, or 15.8 percent, of R.D.T. & E. funds on its technology base, or basic research. Activities in this area will involve the physical, mathematical, environmental, engineering, biomedical, and behavioral sciences. The focus will be on determining the feasibility of concepts and principles for future weapon systems.

Approximately $2.1 billion will be spent on thirty-one different weapon systems which are only in an R. & D. phase, and an additional $2.8 billion on fifty weapon systems which are in both production and R. & D. About $3.7 billion will be devoted to areas not yet associated with a specific weapon program (for example, high-energy lasers and the space shuttle). The remaining $1.5 billion will be spent on program management and support.

Military Construction. Construction funds are used for two main purposes. First, they provide for the modification of existing structures and the building of new facilities at the 750 major and 5,300 minor installations maintained by the Department of Defense. For example, in FY 1978 DOD proposes to use part of its construction funds to build shelters for tactical aircraft and to enhance the capabilities of sites in the NATO headquarters complex to withstand blast damage. Second, these funds are used to build the new facilities which are required to support new systems, for example, the new naval base in Bangor, Washington, that will house the first ten Trident submarines.

For FY 1978, DOD is requesting $1.4 billion in construction authority. Not only is this amount about $1 billion, or 42 percent, below the level of FY 1977, it is also the lowest amount requested for construction since FY 1972. Not since that year has this account fallen below $1.6 billion. However, this drastic reduction does not portend a new trend in this area. It is only a temporary phenomenon brought about by a partial moratorium on domestic construction pending the completion of an evaluation of the entire DOD basing structure. The purpose of this evaluation is to identify those domestic defense installations which are essential for supporting the force structure and to phase out the others. The domestic base structure is now twice as large as it was during the Korean War, when the force structure was 76 percent larger. Moreover, since 1969 the Pentagon has been able to close only 80, or 9.6 percent, of its 830 major domestic installations despite a 40 percent cut in the size of the force. Estimates of the annual costs of keeping open unnecessary bases run as high as $4 billion.[11]

Unless there is a drastic closure of bases, the FY 1978 shortfall will probably be made up in FY 1979, when military construction will rise to $4.5 billion. This will make the FY 1978–1979 annual average about $2.9 billion. In the FY 1980–1982 period, construction funds will rise by another $0.7 billion, or 24 percent, to about $3.6 billion. This level of funds will be necessary to provide the required facilities at existing bases and to construct the additional bases necessary to support the new systems which will be introduced over the next five years.

Source: Fiscal year 1978 Budget, p. 53.

Miscellaneous. In addition to the five major activities just discussed, defense funds also provide for military assistance and civil defense. In FY 1978 these two activities will amount to $1.1 billion, $90 million for civil defense and the remainder for military assistance, about the same levels as in FY 1977. Throughout the FY 1978–1982 period the pattern will remain essentially unchanged. Barring any massive commitment by the American public to a crash program directed toward the upgrading of our civil defense posture in response to Soviet advances in this area, expenditures for civil defense are projected to increase to only $165 million by FY 1982.[12] Similarly, unless there is a drastic reversal in the attitude of the Congress and the American people toward providing military assistance to foreign governments, the level of expenditures for this program will drop gradually to about $1 billion by the end of the five-year period.

SUMMARY

As discussed above, the defense budget is normally broken down by budget title, program, and component. Let us summarize this discussion of the items for which DOD spends its funds by aggregating these items and displaying them by budget title, program category, and component.

Budget Title. Table 11 summarizes our projections by budget title for the FY 1977–1982 period. Analysis of that table reveals a shifting pattern of defense expenditures. The entire budget will rise by about 10 percent annually, but the driving force behind this increase will be investment rather than personnel. Procurement will jump at an average rate of nearly 20 percent, R.D.T. & E. by almost 12 percent, and construction by 10 percent. Except for military retirement, no other budget title will increase faster than the projected rate of inflation. Consequently, the share of the budget devoted to investment will increase markedly. The portion devoted to procurement will rise from 25.2 percent to 33.2 percent, while that spent on R.D.T. & E. will grow from 9.6 to 10.1 percent. All of the other budget titles will take smaller shares of the budget, especially military personnel, which will decline from 23.8 percent in FY 1977 to 19.7 percent in FY 1982. If these projections are accurate, this will mark the first time in over two decades that the military personnel account has consumed less than 20 percent of the budget.

The magnitude of this projected shift in the distribution of defense expenditures can be demonstrated by comparing the pattern of the post-1977 period to that of the pre-1977 period. As indicated in Table 12, during the FY 1970–1975 time frame the percentage consumed by military personnel and operations and maintenance functions remained high, while the percentage devoted to retired pay nearly doubled. On the other hand, the portion consumed by procurement dropped markedly, from nearly 26 percent of the budget in FY 1970 to below 20 percent in FY 1975.

Program. In 1961, Secretary of Defense Robert McNamara divided the defense budget into ten major program categories which he felt reflected the major mission and support objectives of DOD. His six successors have seen fit to use these same ten program categories in making their decisions about defense spending. Table 13 displays the defense budget in these program categories for the FY 1977–1982 period.

Source: Estimated from Fiscal Year 1978 Defense Report and Fiscal Year 1978 Budget

Analysis of this table reveals three striking facts. First, spending on strategic programs will rise dramatically and the portion of the budget consumed by this category will increase significantly. Over the next five years the cost of the strategic program will increase more rapidly than the cost of any other program except airlift and sealift. By FY 1982, the Pentagon could be spending about $17 billion, or 10.2 percent of its budget, in this area. This represents an increase of $7.2 billion, or 73.5 percent, over the level of FY 1977, or an average annual increase of $1.4 billion, or 14.7 percent, and will increase the portion spent on strategic programs from 8.8 percent to over 10 percent.

Not only is this a significant increase, but it is also a sharp reversal of the pattern which prevailed in the immediate post-Vietnam period. As indicated in Table 14, between FY 1970 and 1975 spending for the strategic program remained virtually level in constant dollars but dropped significantly as a share of the budget. The sharp increase proposed over the next five years will be brought about by the necessity to modernize the Triad and adapt to the new strategic doctrines developed over the past three years. Large amounts of funds are projected to purchase about 150 of the proposed 244 B–1 bombers and 8 of the proposed 13 new Trident fleet ballistic missile submarines, and to develop and purchase 100 of a proposed 300 of the new class of ICBM, the M–X. These new programs not only will modernize the Triad, but also will increase its effectiveness substantially, thus enabling the Triad to meet the demands of the broadened assured-destruction concept and the limited nuclear war option.

Second, spending on general-purpose forces will also increase significantly. As indicated in Table 13, over the FY 1978–1982 period, funding for this program will increase by $24.7 billion, or nearly 64 percent, an average annual increase of $4.8 billion, or 12.7 percent. This will increase the portion of the budget allocated to general-purpose forces from 34.6 to 37.4 percent and will reverse the pattern begun following the American withdrawal from Vietnam. As indicated in Table 14, between FY 1970 and FY 1975, spending on general-purpose or conventional forces increased very slightly in constant dollars but decreased significantly in real terms and as a percentage of the annual defense budget. Although general-purpose forces are the most manpower-intensive of the DOD programs, the projected increase over the next five years will be caused primarily by spending for modernization of weapon systems. To meet its inventory objectives, DOD needs to purchase about 5,000 new tanks, 157 ships, and 2,500 new aircraft. To do less not only would prevent it from meeting its objectives, but would increase the average age of its conventional weapon systems substantially.

Source: The Budgets of the U.S. Government, appropriate years.

Third, there will be a dramatic shift in program priorities over the next five years. As discussed above, the share of the budget devoted to strategic and general-purpose forces will rise significantly. Also increasing both in absolute and in relative terms will be expenditures for the other two combat-related categories, airlift and sealift, and for research and development. These four areas will increase their share of the budget from 54 percent to nearly 60 percent of the total budget. All of the other programs, which are primarily support, will not experience any real cost growth and will take up a declining share of the annual defense budget. This also reverses the trends of the FY 1970–1975 period, when areas like training and administration experienced most of the real growth.

Major Missions. Confining program analysis to the ten categories used by DOD over the past fifteen years can lead to some distortions. For example, the guard and reserves contribute to both the general-purpose forces and airlift and sealift missions. Similarly, R & D is conducted on both general-purpose and strategic systems. A more meaningful breakdown would be to combine all of the programs, except retirement and support of other nations, into one of the three essential missions of the department: general purpose, strategic nuclear, and mobility.

TABLE 15.—DEFENSE AUTHORITY BY MISSION AREA, FISCAL YEARS 1977–82

[Dollar amounts in billions]

Source: Estimated from data in Appendix of the Budget for Fiscal Year 1978.

Table 15 aggregates the budget into those mission areas for the FY 1977–1982 period. Analysis of this table reveals that general-purpose forces consume the largest amount of resources, about 70 percent. Strategic nuclear forces take about 18 percent of the budget, while mobility forces consume only 3 percent. Retirement and support of other nations account for the remaining 9 percent. During the next five years general-purpose forces will grow at a rate of about 9.8 percent a year, while maintaining a fixed share of the budget. Strategic nuclear forces and mobility forces will also grow significantly and will increase their share of the budget. The former will increase by almost 12 percent a year and the latter will grow by over 18 percent annually. As discussed above, retired pay will increase by 8.8 percent annually, but its share of the annual budget will remain fixed, while support of other nations will remain virtually the same in current dollars.

Source: Estimated from "Fiscal Year 1978 Defense Report" and "Fiscal Year 1978 Budget."

Agency or Component. Table 16 breaks down military spending by agency or component. As is indicated in that table, for FY 1977 DOD spent one-third of its entire budget on the Navy Department. The other two military departments consume another 55 percent, while the remaining 13 percent is spent on defense agencies like the Organization of the Joint Chiefs of Staff and on defense-wide activities like military retirement. This distribution pattern is likely to persist over the next five years. The budget for the navy will increase by $20 billion, or 55.9 percent, to $56.4 billion by FY 1982, an average annual increase of $4 billion, or 11.2 percent. This will increase the navy's share of the defense budget to almost 34 percent. The air force's budget will also grow rapidly. It is projected to increase by $17.4 billion, or 53.9 percent, an average annual growth of $3.5 billion, or 10.8 percent. The army will increase somewhat less rapidly than its sister services. Our projections foresee a total increase for the army of $13.5 billion, or 50.1 percent, over the next five years. Defense agencies and defense activities will increase at slightly above the projected rate of inflation.

As discussed above, the driving force behind the increase in navy and air force programs will be modernization of both strategic and tactical weapon systems. The navy will be modernizing its SLBMs and rebuilding its fleet, while the air force will procure a new manned bomber and a new ICBM, as well as refurbish its tactical aircraft. The navy will also experience a 3 percent growth in personnel to man its expanding fleet. The army's increase will be less affected by the cost of weapon modernization. Not only are the army's weapons less expensive than those of the other services, but also its manpower requirements are more intensive. Therefore, proportionately more of the army's increase will go toward funding rising personnel costs.

The pattern of agency expenditures projected over the next five years continues the trend begun in FY 1972. In that year, for the first time in the entire post-World War II period, the navy became the dominant budgetary department. Prior to the American involvement in Southeast Asia, the air force received almost half of the defense budget. During the war in Vietnam, the army received priority in the budget. The present dominance of the navy is caused by two factors: the high cost of rebuilding the fleet and the expanding role of the submarine in our strategic nuclear posture.

CARTER MODIFICATIONS

Because of the requirements of the timetable established by the Congressional Budget and Impoundment Act of 1974, the Carter administration had but one month to submit changes to a budget which it had taken the outgoing Ford administration about twenty months to produce. By way of contrast, the Kennedy changes to the FY 1962 Eisenhower defense budget were submitted over a six-month period. Nevertheless, on February 22, 1977, the new President proposed thirty-one specific changes to the Ford defense budget. Twenty-six of these modifications requested reductions in individual programs while the other five called for increases in specific areas. The net effect of the Carter changes was an overall reduction of $2.8 billion, or 2.3 percent, in Total Obligational Authority and $0.4 billion, or 0.4 percent, in outlays. Let us see how these proposals will affect the size and distribution of the defense budget during the FY 1978–1982 period.

Deletions. The new administration proposed reductions in twenty-six programs to achieve an overall cut of $3.4 billion in TOA. These modifications are outlined by program category in Table 17. Analysis of this table reveals six salient facts.

First, about $2.7 billion, or 80 percent, of the reductions were made in the area of tactical or conventional weapon systems. The new administration changed twelve major general-purpose programs and several minor ones. The strategic area was reduced by only $0.5 billion, and the so-called area of management and operating efficiencies accounted for $169 million in reductions.

Second, the overwhelming majority of the reductions were accomplished by deferring or stretching out existing programs. Only four of the twenty-six modifications involve actual program cancellations or terminations. These are the Lance missile, A–7E aircraft, and nuclear strike cruiser (CSGN) weapon systems, and the University of the Health Sciences. Savings in TOA for FY 1978, which will be accomplished by deferring development or production decisions or slowing down the rate of procurement, are not real savings. Such practices usually result in higher costs in the long run because of inflation and inefficient production rates. For example, it is estimated that the proposal of the Carter administration to stretch out B–1 production will eventually add $2.7 billion to the cost of the program.

Third, except for the cancellation of the nuclear strike cruiser program (CSGN), the specific program terminations and cancellations of the new administration are insignificant and inefficient when viewed in the context of their total program costs. For example, the cancellation of the Lance surface-to-surface tactical missile involves a savings of $78 million in FY 1978 and $6 million in the outyears, a total savings of $84 million, or only 8.3 percent, in a $1 billion program. Moreover, as a result of the cancellation, the army will have 360 fewer missiles in its NATO inventory.[13] Terminating the A–7E Corsair II saves $24 million, or about 1 percent, in a $2.3 billion program. However, the $24 million cutback will mean that the navy will be short six light attack planes, or one-half of an attack squadron, in its inventory. Eventually the navy will either have to buy more F–18s, which cost about $16 million per unit as opposed to the $4 million which each A–7E would have cost, or absorb the shortfall in aircraft.

Finally, closing the Uniformed Services University of the Health Sciences after it has just accepted its first class, recruited a faculty, developed a curriculum, and received accreditation and after the majority of its plant has been completed may save $14 million in new funds in FY 1978, but throws away about $72 million which was spent prior to this fiscal year. Moreover, eventually DOD will be liable for $50 million in order to terminate existing contracts for the project.

Fourth, several of the reductions are unrealistic, while others have little chance of being accepted by Congress and could lead to problems in the long run. For example, cutting spending for flight operations and intelligence activities cannot but impair readiness and security. Unspecified improvements in efficiency are not likely to alter the situation. Similarly, it is quite unlikely that the Congress will approve closing the University of the Health Sciences or dropping 50,000 naval reservists from drill-pay status. The creation of a University of the Health Sciences to train physicians and conduct research for the military was initiated by the Congress. The legislature is not likely to turn its back on a child of its own creation, especially after having voted ten times to fund the school. As for the Carter administration's proposed cuts in the naval reserve forces, during the second session of the 94th Congress the legislature overwhelmingly rejected a proposal by the Ford administration to trim 50,000 naval reservists from the rolls and, in the reports accompanying the FY 1977 appropriations bill, admonished the executive branch not to create instability in the naval reserve program by resubmitting the proposal.

In the unlikely event that Congress approves either of these reductions,[14] short-run savings will be realized, but the long-term results could be deleterious for the defense establishment. Even with the Health Sciences University in operation, the armed services are experiencing a shortage of medical doctors at the present time. Further shortfalls would affect dependents' health care and would thus have an adverse impact on the retention of military personnel. Likewise, expecting 50,000 men to stay in the naval reserves without the inducement of drill pay is sheer folly, especially when one considers that a 200,000-man shortfall already exists in many reserve components for which drill pay is now available. Indeed, the shortfall in the reserves is so serious that some officials have proposed drafting people for the reserves.

Fifth, while the Carter changes to the FY 1978 budget are clearly a holding action, they do give some hint of the defense policy of the new administration. Cancelling the nuclear strike cruiser and affirming the decision of the Ford administration not to build a fourth 90,000-ton-class super-carrier seem to indicate that the present administration is planning to emphasize a sea-control rather than a power-projection mission for the navy. Likewise, by slowing down the B–1 and the M–X missile programs, the Carter administration may be demonstrating its intention of moving away from the Ford administration's doctrine of having the capability for conducting a limited nuclear war. On the basis of this doctrine, which was enunciated by Secretary of Defense Schlesinger and affirmed by Secretary Rumsfeld, the Pentagon developed the capabilities to strike military targets (counterforce) as well as population and industry centers (countervalue). Harold Brown, the new secretary, has indicated that he apparently favors a return to the countervalue doctrine. For example, in presenting the Carter modifications to the Congress, the secretary expressed considerable skepticism about containing nuclear war once nuclear weapons had been used by either the United States or the Soviet Union. In Brown's opinion, "Any use of nuclear weapons would increase the risk of rapid escalation." [15]

Slowing down the B–1 and M–X programs may also indicate that the Carter administration will repudiate the newly developed assured-destruction policy of the previous administration.[16] The goal of a retaliatory nuclear strike, as envisioned by the Ford administration, was not only to inflict unacceptable damage on the Soviet Union, but also to retard significantly the ability of the U.S.S.R. to recover from a nuclear exchange and regain the status of a twentieth century military and industrial power more rapidly than the United States.[17]

As discussed above the Ford policy is significantly different from the assured-destruction policy of previous administrations. Under Presidents Kennedy, Johnson, and Nixon, assured destruction meant destroying approximately 25 percent of the Soviet population and about 50 percent of their industrial capacity.[18] This goal could be accomplished by destroying no more than the ten largest Soviet cities. It was estimated that this objective could be accomplished by a surviving force of 400 one-megaton equivalents.[19]

The Ford concept is much more demanding. It requires that our strategic nuclear forces be capable of attacking not only all the major Soviet cities but also all those widely scattered installations which could be important to a recovery effort. This would include destroying nearly all of the Soviet Union's military facilities. Such a policy must be supported by a large number of very accurate weapons. DOD estimates that about 8,500 warheads or weapons are required for

Footnotes at end of article.

adequate coverage of all mission targets.[20] Should the Carter administration decide to return to the previous concept of assured destruction, the budget implications might be considerable. Not only would the B–1 and the M–X programs be affected but also such other programs as the MK–12A warhead and the Trident II missile could be cut.

Sixth, the Carter campaign promise to cut the defense budget $5 to $7 billion from its FY 1977 level was ephemeral. Like John Kennedy, who decried the missile gap during his campaign only to discover, once in office, that no gap existed, Carter has apparently discovered that he could not cut defense spending by the promised 5 to 6 percent. Indeed, his FY 1978 budget is not only $10.2 billion, or 9.3 percent, higher than the FY 1977 budget, but it is higher than the amount that Ford himself was projecting during the 1976 campaign and higher than that proposed for FY 1978 by the outgoing director of the Office of Management and Budget. Moreover, if one considers the fact that many of Carter's reductions are cosmetic and that many may ultimately result in higher costs, his campaign promise rings even more hollow.

TABLE 18.—SUMMARY OF CARTER CHANGES IN FISCAL YEAR 1978 BUDGET TOTALS, BY MAJOR PROGRAM

[Dollar amounts in millions]

Military program	Fiscal year 1978, Ford	Changes		Fiscal year 1978, Carter
		Amount	Percent	
Strategic forces	$11,015	−$396	−3.6	$10,619
General-purpose forces	44,348	−2,313	−5.2	42,035
Intelligence and communications	8,239			8,239
Airlift and sealift	1,674	−17	−1.0	1,657
Guard and reserve forces	7,162	−50	−.7	7,112
Research and development	11,067	−251	−2.3	10,816
Central supply and maintenance	11,790	+226	+1.9	12,016
Training, medical, other general personnel activities	24,335	+51	+.2	24,386
Administration and associated activities	2,260	−25	−1.1	2,235
Support of other nations	1,259	−2	−.2	1,257
Total (TOA)	123,150	−2,277	−2.3	120,373

Source: ASD(C).

Additions. As indicated in Table 17, the new administration has also proposed five actions that will increase TOA in FY 1978. These additions, which total $0.6 billion, are designed to increase the current readiness and serviceability of U.S. forces. About $280 million, or 46 percent, of the funds will reduce the backlog of deferred maintenance on ships and aircraft, while $200 million, or 33 percent, of the funds will be allocated to the domestic construction projects which were deferred by the Ford administration pending a review of domestic base requirements. The remaining $125 million, or 20 percent, will go toward upgrading the operational and maintenance capabilities of U.S. facilities in Europe and for increasing the number of Civil Reserve Air Fleet (CRAF) modifications from four to eight.

Summary. Tables 18 and 19 display the Carter modifications by program category and appropriation title. As indicated in Table 18, the proposed modifications affect every program except intelligence and communications. However, the category of general-purpose forces is the only one affected to any significant degree. This particular program was cut by $2.3 billion, or 5.2 percent, below the levels of the Ford budget. None of the other programs was changed by more than 3.6 percent.

Footnotes at end of article.

As indicated in Table 19, the modifications proposed by the new administration affect eight of the eleven appropriation categories. Procurement and military construction are most heavily impacted. The former was reduced by $2.9 billion, or 8.3 percent, while the latter was increased by $0.3 billion, or 20.1 percent. None of the remaining affected areas was changed by more than 2.2 percent.

TABLE 19.—SUMMARY OF CARTER CHANGES IN FISCAL YEAR 1978 BUDGET TOTALS, BY APPROPRIATION CATEGORY

[Dollar amounts in millions]

Appropriation title	Fiscal year 1978, Ford	Change		Fiscal year 1978, Carter
		Amount	Percent	
Military personnel	$27,662	−$76	−0.3	$27,586
Retired pay	9,058	−2	−	9,056
Operation and maintenance	34,951	+189	+0.5	35,140
Procurement	35,143	−2,934	−8.3	32,209

PROJECTIONS

Projecting the size of future defense budgets for an administration which has been in power for only a few months is tentative at best. As discussed above, the Ford administration changed its mind about the defense budget no less than three times between January 1975 and January 1977. Moreover, since approximately two-thirds of the defense budget is controllable, it is comparatively easy to vary the defense total by slowing down or speeding up individual programs. Finally, the new administration has yet to make its national security policy intentions clear. To date the public statements and actions of President Carter and his advisers have been contradictory and confusing. However, the National Security Council and its subgroups are currently in the midst of a comprehensive review of our military force posture. The study, which is being chaired by Secretary of Defense Brown, was initiated by Presidential Review Memorandum 10 and is scheduled to be completed this summer. If this review should lead to alternative strategies and force postures, the defense budget could be changed significantly. Presidential Review Memorandum 10 might have the same effect on the defense budgets of the Carter administration as National Security Study Memorandum (NSSM) 3 had on the defense totals of the Nixon administration.[21]

Nevertheless, on the basis of the modifications which have already been made by the new administration, it is possible to project the size of TOA and outlays over the next five years. Table 20 presents a comparison of the projected Ford and Carter defense budgets for the FY 1978–1982 period. It reveals the somewhat surprising fact that, in spite of its reductions in the FY 1978 budget, the new administration is now committed to a program that will cause it to spend $2.2 billion more on defense and commit $1.6 billion more in TOA over the next five years than the previous administration had proposed. The Carter budgets would be lower than those of Ford in FY 1978 and 1979, but in the FY 1980–1982 period this situation will be reversed. This phenomenon occurs because thus far the new administration has really cut out only one major program, the nuclear strike cruiser (CGSN). Its other reductions are really program deferrals, and when these deferrals are made up, the costs will be higher.

TABLE 20.—A COMPARISON OF THE FORD AND CARTER DEFENSE BUDGETS, PROJECTED FOR FISCAL YEAR 1978–82

[In billions of dollars]

Category	Fiscal year—					Total, fiscal year 1978–82
	1978	1979	1980	1981	1982

Ford	123.2	135.4	145.8	156.7	166.8	727.9
Carter	120.4	134.2	146.7	158.8	169.4	729.5
Difference	2.8	1.2	−.9	−2.1	−2.6	−1.6
OUTLAYS						
Ford	110.1	121.2	133.7	145.5	156.3	666.8
Carter	109.7	120.2	134.0	146.5	158.6	669.0
Difference	.4	1.0	−.3	−1.0	−2.3	−2.2

Source: Figures for the Ford budgets are from fiscal year 1978 Defense Report, p. 8. Carter figures are author's projections.

The B–1 manned-bomber program is a case in point. The Ford administration had proposed to spend $14.0 billion on this program during the FY 1978–1982 period. These funds would have purchased about 150 of the strategic bombers. President Carter proposes to buy the same number of planes during this period; however, it will cost him about $16 billion because he has changed the production schedule. The previous administration had planned to buy 8 in FY 1978, 19 in FY 1979, and 32 in FY 1980. The new administration plans to procure 5 in FY 1978, 14 in FY 1979, and then make up the difference by jumping to 40 in FY 1980. Not only will inflation make the cost of a B–1 procured in FY 1980 higher than the cost of one procured in FY 1978 or 1979, but the abrupt jump in the level of production from 14 in FY 1979 to 40 in FY 1980 will drive up the price further. Thus, by deferring $0.7 billion in the FY 1978 and 1979 programs, it is estimated that the Carter administration will incur $2.7 billion in additional costs in the FY 1979–1982 period. Likewise, cutting the number of F–15s from 108 to 78 in FY 1978 will save $365 million in that fiscal year. However, that action will add $750 million to the program in the FY 1979–1982 period.

ISSUES

Every proposed defense budget generates controversy about its size and distribution of resources. There are always some who will argue that we are spending too much on defense in relation to our economy or other priorities. Others will contend that we need to spend more in order to maintain equivalence with our adversaries. Some, who accept the present level of defense expenditures, focus instead on the distribution and claim that funds are being spent on the wrong items, for example, manned bombers instead of ground divisions, or large combatants rather than small ships. Finally, there are always some who will contend that there is inefficiency, waste, or fat in the defense budget.

The FY 1978 budget is no different. Within hours of its publication, it was attacked as both too large and too small. Some critics have argued that it has too many of one kind of weapon system and not enough of another. Other critics contend that there is still too much waste and inefficiency in the budget and that good management could save billions. We will conclude this analysis by examining some of the more important and controversial issues raised by this budget. A complete analysis of all of the issues would replicate the 150,000-word annual re-

port or posture statement of the secretary of defense.

The Level of Spending. Is the level of defense spending for FY 1978 too high? Although there can never be a completely satisfactory answer to the perplexing question "How much is enough?" a meaningful response can be given if one looks at the size of the defense budget in relation to the budgets of previous years, to the overall national economic picture, and to the level of defense spending of our principal adversary, the Soviet Union Viewed in the context of these relationships, the answer appears to be no.

Even though the FY 1978 budget, as modified by President Carter, projects an increase of $10.2 billion, or 9.3 percent, over the level of FY 1977, the real increase in constant 1978 dollars is a more modest $4.1 billion, or 3.5 percent. Moreover, when viewed in constant dollars, defense spending is still below the level of FY 1964, the last pre-Vietnam year, and is on a par with the level of defense spending during the Eisenhower years. Furthermore, as a portion of the gross national product (GNP) and the federal budget, the FY 1978 defense budget is substantially below the levels of the entire cold war era. Not since before the Korean War has defense consumed such a small part of the federal budget or the GNP. Finally, the impact of defense spending on the economy is no more inflationary or deflationary than that of other forms of public spending, nor does money paid for defense work create fewer jobs than othre government spending. This is indicated by the fact that during FY 1978 defense spending will account for about 5.4 percent of the GNP and approximately 5.3 percent of total U.S. employment.[22]

Despite a real growth of 13.3 percent in the size of the defense budget in the FY 1975–1976 period, the United States is still spending less than the Soviet Union, if Washington's estimates are accurate relative to Moscow's expenditures in that area. Unfortunately, it is difficult to assess the accuracy of such statistics since little is known about the internal compromises arrived at and the preciseness with which pertinent data were obtained.

However, if one uses such information the dollar cost of Soviet military activities has exceeded that of the United States since FY 1972 (since FY 1969, if the incremental costs of our involvement in Southeast Asia are excluded from the defense total). Those dollar costs of Soviet defense programs are presently 35 percent more than the expenditures of the United States. Secretary of Defense Harold Brown has observed that the increased Soviet efforts of recent years have compensated for our higher levels of spending in 1955–1965, and we have some catching up to do.[23] It is contended that the Soviets are presently outproducing us in several areas of tactical weaponry and in many areas of strategic weapon.[24] Moreover, it is argued that intelligence data have confirmed that until two years ago we were underestimating the resources the Soviets were allocating to defense by about 50 percent.[25] Thus, a lower level of defense spending in the FY 1978–1982 period could make it difficult for us to maintain equivalence with the Soviet Union. Much will depend upon how the funds are distributed and which programs are funded.

Strategic Force Issues. Strategic nuclear programs do not consume anywhere near as large a proportion of budget resources as do those general-purpose forces. However, because of their importance, strategic issues have usually dominated the early days of each new post-World War II administration. In its first year in office, the Eisenhower administration took a "new look" at U.S. defense policy and decided to reduce expenditures for all of the services except the air force, which was exempted because the former army general wished to emphasize production of the B–52 bomber. In its eight years in office, the Eisenhower administration funded 744 of these long-range bombers which still play a major role in our strategic deterrent. Two months after taking office, John Kennedy increased the size of the Polaris submarine program by 50 percent and accelerated its production schedule by 100 percent (some have argued that this decision touched off a massive arms race with the Soviet Union). In the early days of the Nixon administration the key issues were whether to build an Anti-Ballistic Missile System (ABM), the B–1 bomber, and the Trident submarine. After much deliberation and congressional debate, all of these weapon systems were approved. These decisions decisively shaped the outcome of the SALT talks.

The Carter administration has had to decide on a production schedule for the B-1 bomber and a development schedule for the new M–X ICBM. It has decieded to slow down the production rate of the B–1 and the development pace of the M–X. These decisions involved comparatively small sums of money, but they could be as momentous as the early decisions of other administrations.

TABLE 21.—STRATEGIC FORCES OF THE U.S.S.R., SELECTED YEARS

Category	1965		1977		1982		Difference U.S.-U.S.S.R., 1982

The B–1 Bomber. The B–1 may well go down in history as the most thoroughly studied, analyzed, debated, and tested weapon system ever built by this nation.[26] The air force began exploratory studies for a successor to the B–52 over sixteen years ago. In 1969, after eight years of numerous government and aerospace industry studies, the air force finally issued a request for industry proposals to build a new bomber. Rockwell International was selected as the system contractor in 1970, and funding for the program began in that year. In 1974 the first prototype was tested, and actual procurement began in 1976. To date, some 6,000 hours of engine tests have been conducted and over 450 hours of flight time have been logged,[27] but the government has not yet made a firm commitment to the system.

During the past sixteen years the B–1 has been vigorously debated within the executive branch, Congress, the academic community, and the media. Its opponents have attacked the bomber as a symbol of the kind of wastefulness brought about by a military organization that is concerned more with its own survival than with the good of the nation. To these individuals, the air force's desire to build the B–1 is reminiscent of the navy's attempt to hold onto the battleship and the army's desire to perpetuate the horse cavalry. In their minds, the case for the B–1 is so weak that if the program cannot be prevented from becoming a reality, then there will be little hope of preventing the Pentagon from building almost any weapon system it wishes or of slowing down the arms race. The symbolic importance that the B–1 has acquired has added a great deal more emotion to the debate than normally surrounds defense controversies.

Opponents of the B–1 raise two related questions. Does the United States still need the Triad? Are 244 B–1s at a cost of $93 million each, or a total program cost of $22.8 billion, a necessary component of the Triad?

Table 21 outlines the most salient characteristics of the strategic nuclear forces of the United States and the Soviet Union. As indicated in that table, a decade ago the United States had an overwhelming advantage over the Soviet Union in every significant area: number of delivery vehicles, number of warheads, throw-weight, and equivalent megatonnage. Today this nation's advantage lies only in the number of warheads, of which it has about twice as many as the Soviet Union.

In the other strategic nuclear forces, the United States is not at a distinct disadvantage unless one compares only the missile forces of the two nations. Without its bomber force, the United States has less than half of the throw-weight and equivalent megatonnage, or destructive capacity, of the Soviet Union. The situation will become even more adverse by 1982. At the end of this five-year period, the Soviet Union will have cut significantly into the U.S. advantage in warheads and will have maintained its lead in

Footnotes at end of article.

the other areas. Moreover, if one excludes bombers, the U.S.S.R. will have virtually the same number of warheads as the United States.

At the present time, U.S. missiles are much more accurate than those of the Soviet Union, while Soviet missiles are much larger. Since accuracy is so much more important than yield in inflicting damage on a specific target, the United States is not yet at a distinct disadvantage, even if one considers only missiles. However, vast improvements in accuracy are possible within the existing SALT accords, while advances in throw-weight and yield are severely constrained. Therefore, the U.S. lead in the area of accuracy could disappear rapidly and this nation could fall far behind the U.S.S.R. in every area of missile capability. Moreover, as discussed below, the ICBM is becoming increasingly vulnerable.

As indicated in Table 21, approximately 50 percent of the throw-weight and equivalent megatonnage of the U.S. strategic force is contained in its manned bombers. Therefore, if this nation wishes to maintain anything approaching essential equivalence in the area of nuclear weapons, it should retain the bomber portion of the Triad.

The question then becomes, should the Pentagon spend $22.8 billion for 244 new bombers plus an additional amount for supporting equipment?[28] Would not some combination of a "stretched," or a slightly larger version of the present FB–111, modernized B–52s with new engines, and a 747-type standoff cruise missile carrier be more cost-efficient? Evidently the answer is no. A joint strategic bomber study, based on a realistic and highly detailed modeling of strategic bomber launch and penetration against a comprehensive target structure, concluded that forces consisting primarily of B–1s were more effective.[29] Therefore, the decision to procure the B–1 seems warranted in the present environment.

The MX–1 System. The ICBM is the only leg of the Triad which currently possesses a prompt, high-confidence, counterattack capability against a broad spectrum of both hard and soft targets. However, most analysts agree that by the mid 1980s, land-based ICBMs in fixed sites will be increasingly vulnerable. It is estimated that by 1985 the U.S.S.R. will be able to destroy two-thirds to three-quarters of our Minuteman silos, while the United States will be able to destroy about 57 percent of the Soviet ICBMs.[30] Upgrading the hardness of the silos can enhance the survivability of fixed-based ICBMs in the short term, but is not an adequate long-term solution. If the United States wishes to maintain the ICBM portion of the Triad, a new concept is needed.

Approximately five years ago, the United States began work on an advanced ICBM to be deployed in a mobile mode. This system, designated the MX–1, is now in its final stages of research and development.[31] The original timetable called for beginning production in 1978 and actual deployment in 1984. In its last days in office, the Ford administration accelerated the timetable for the M–X. The former President wanted production to begin in October 1977 and envisioned initial deployment in 1983. In order to accomplish these goals, he proposed to spend $0.3 billion in FY 1978 and $1.5 billion FY 1979 on the new ICBM. The Carter administration reduced the M–X program by $160 million for FY 1978. This would keep the system in research and development for another year and return the missile to its original 1984 initial deployment schedule.

The M–X is an awesome weapon. The missile will contain fifteen independently targeted warheads, each of which has a yield of 200 kilotons. Because of an advanced inertial reference system, the M–X will have a circular error of probability (CEP) of 300 feet (that is, its warheads will be able to fall within 300 feet of their aim point). In contrast, our present Minuteman III missile has only three independently targeted warheads, each with a yield of 400 kilotons and a CEP of 600 feet. Thus, the M–X will have 2.5 times the explosive power and twice the accuracy of the present Minuteman III. Present plans call for the purchase of 300 of these missiles at a cost of about $35 billion.

To ensure survivability, the M–X will be mobile. Each of the new missiles will be placed in a ten to twenty mile long trench system. A missile transporter-launcher will move at random intervals inside the trench, thus leaving a potential attacker almost totally uncertain of the exact location of the missile along the length of the trench.

The decision to develop, procure, and deploy the mobile M–X missile is a critical one. Because of its high yield and accuracy, it would be a significant counterforce weapon. Placing the weapon in a mobile mode will make verification of the number deployed almost impossible. These attributes of the M–X not only could be destabilizing for the arms race, but also could hopelessly complicate the SALT talks. Therefore, the Carter decision to slow down the M–X program pending the outcome of the next round of SALT talks makes a great deal of sense. If the Soviet Union shows similar restraint on its SS–18 and SS–X–16 ICBM programs, the decision will have been a wise one indeed.

Manpower Costs. As noted above, manpower costs still consume more than half of the entire defense budget. Those who would reduce the size of the budget or shift the funds toward weapons-modernization programs often look to this area to cut costs. The new secretary of defense has already indicated that he intends to develop a comprehensive package of proposals to yield significant long-range savings in personnel costs. In a briefing on the FY 1978 budget Secretary Brown remarked, "In the long run I am convinced that's where the real savings will come."[32]

However, those contemplating reductions in this area should bear two considerations in mind. First, the cost of compensation for current employees is no longer the driving force behind the rising defense budget. The massive "catch-up" pay raises for DOD's civilian and military employees, which were necessitated by the comparability legislation of the 1960s and the creation of the all-volunteer force (AVF) in the early 1970s, will not recur. At present, compensation levels for military and civilian employees are slightly above those of the private sector. Between now and FY 1982 personnel costs will rise only with inflation and will consume a declining portion of the budget. Second, although some savings are possible in this category, they are not very large. Moreover, many of the suggested reductions may cause significant difficulties in the areas of morale, recruiting, and retention, which could more than offset the short-term savings. This point can be illustrated by analyzing the recent report of the Congressional Budget Office (CBO) in this area.[33]

TABLE 22.—MANPOWER COSTS, FISCAL YEARS 1978–82
[In billions of dollars]

	Fiscal year—					Total fiscal years 1978–82
	1978	1979	1980	1981	1982	
Present system	56.5	60.0	63.2	66.3	69.3	315.3
Lowest option	55.6	58.4	61.2	63.7	66.3	305.2
Maximum savings:						
Amount	.9	1.6	2.0	2.6	3.0	10.1
Percent	1.6	2.7	3.2	3.9	4.4	3.1

Source: Congressional Budget Office, "The Costs of Defense Manpower," January 1977, p. xii.

In a January 1977 report on the costs of defense manpower, the CBO estimated that the maximum savings which could be squeezed from this area over the next five years would be $10.1 billion, or about $2 billion annually. As is indicated in Table 22, this represents a reduction of 3.1 percent in manpower costs and a savings of about 1 percent in the entire defense budget over the 1978–1982 period. The CBO would achieve its savings in five ways: increasing the efficiency of training, reducing enlisted turnover, introducing a salary system for military personnel, reforming the pay system of civilian employees, and making changes in the retirement system. While all of these actions are theoretically possible, most are both impractical and counterproductive.

The CBO points out that training costs could be reduced by $2.3 billion over the next five years primarily by shortening the length of recruit training, which now varies from five weeks in the air force to eleven weeks in the Marine Corps. However, such a step runs the real risk of undermining or weakening the socialization process of the military services. For example, about six years ago budgetary pressures forced the navy to reduce the length of its boot camp to seven weeks. Not long after, rioting took place on the aircraft carrier *Kitty Hawk*. Analysis of the incident demonstrated that the navy could not properly socialize many of its recruits in just seven weeks[34] and, as a result, the time in boot camp was lengthened to the present nine weeks. Declining numbers of available male recruits and improving national economic conditions are already forcing the armed forces to lower their standards.[35] Such a development argues for increasing rather than decreasing the length of recruit training.

The CBO estimates that $2 billion could be saved in the FY 1978–1982 period by reducing turnover rates. This is doubtless true, but their suggestion that DOD implement a salary system, which CBO estimates would also save $2 billion in military payroll costs, would probably increase turnover since many would perceive the change as further eroding their benefits.

According to the CBO, $3.5 billion could be saved in the defense budget over the next five years by instituting changes in the federal civilian compensation system. DOD would be affected significantly by such reforms, since it employs about half of the civilians who work for the federal government. However, the Pentagon cannot act alone in this area since the changes would affect all the civilians employed by the federal government. Moreover, the CBO proposals would probably run into heavy opposition from civil service unions like the American Federation of Government Employees (AFGE), which strongly supported President Carter in the last election and is quite influential with Congress.

Finally, the legislative budget office suggests reforms in the retirement system which could save $0.3 billion between now and FY 1982. These reforms would not be as sweeping as those recommended by the Retirement Modernization Act of 1972 or the Defense Manpower Commission Plan.[36] However, neither of these proposals would begin to save money until FY 1985. The CBO proposal would achieve immediate savings by: eliminating the extra retirement credits earned by enlisted personnel of the navy and Marine Corps, which now allow some of these individuals to retire after 18.5 years; taking away the real increase in the base of reserve retired pay which occurs between the time an individual leaves inactive duty and age sixty, when he begins receiving retirement benefits; and doing away with dual compensation for all retirees who work for the federal government. While there is little doubt that the entire retirement system

needs reform, equity demands that any changes not be retroactive. The three reforms recommended by CBO do not meet that test. Any attempt to implement them may only intensify the perception that benefits are being eroded and could be a disincentive for recruiting and retention for both the active and reserve forces. The amount of savings is so small that it does not seem like a prudent risk, especially in the light of the recent survey data which indicate that the military is losing its appeal to the nation's young men.[37]

General-Purpose Forces: Shipbuilding. Since the end of American involvement in Vietnam, the size, shape, and cost of the U.S. fleet have been areas of considerable controversy, concern, and confusion. In the minds of many people, the debate over naval forces has eclipsed the argument about strategic force levels as the primary issue in American defense policy.

Between 1969 and 1976, the size of the U.S. fleet declined from 972 to 476 ships. This decline was caused by three factors. First, a great number of ships which were built during World War II have now become obsolete. As late as July 1, 1970, no fewer than 327 ships in the active fleet were still of World War II vintage. Second, only a small amount of shipbuilding occurred during the years of the war in Vietnam. In order to prosecute the war, funds in the defense budget were diverted from investment to operations. As a result, the number of new ships funded annually for construction declined from an average of forty-five in the 1962–1967 period to eight in the 1967–1972 period. Third, the cost of replacing obsolescent ships skyrocketed. Thus, even when the funds for shipbuilding were increased, the amounts proved inadequate to stem the decline in the size of the fleet. Although expenditures for shipbuilding were restored to pre-Vietnam levels in real terms in the post-1972 period, this amount of funds can now purchase only fifteen ships instead of forty-five. For example, the Forrestal class aircraft carriers cost the navy $250 million each. The new Nimitz class carriers cost $2 billion each.

At the same time that the size of the U.S. fleet was declining, the size, capabilities, and operational radius of the Soviet fleet began to increase dramatically. Between FY 1968 and 1976, the number of U.S. surface combatants dropped by 50 percent, from 350 to 175. During the same period, the number of Soviet surface combatants grew by 20 percent, from 190 to 228 ships. In addition, the Soviets deployed their first three aircraft carriers, the 40,000-ton *Kiev*, capable of carrying V/STOL (Vertical/Short Take-off and Landing) fighters, and two Moskva class helicopter carriers. Finally, the Soviet Union began operating extensively in the Mediterranean, the Indian Ocean, the South Atlantic, and the Caribbean, as well as conducting coordinated worldwide exercises. Before 1965, the Soviet navy operated primarily in its coastal waters; today, it has an average of 150 ships operating outside this area every day of the year.

Although no objective observer has claimed that these developments made the Soviet navy superior to that of the United States, a consensus has developed that this nation ought to reverse the trends of the 1968–1975 period. Unfortunately, no clear consensus could develop over exactly how this should be done. It seems that every interested party within the executive and legislative branches has his own favorite shipbuilding program. During the past two years, confusion has reigned, as several alternative programs have been proposed simultaneously. These proposals differed over the size, type, and propulsion of future U.S. ships. Let us look at the different proposals in each of these areas.

The Joint Chiefs of Staff feel that the navy needs about 750 ships to meet its responsibilities. Since budgetary considerations make this requirement impractical, the Department of the Navy supports a program which would enable it to reach a level of 600 ships by the mid 1980s. According to Admiral James Holloway III, chief of naval operations, this is the minimum number of ships that the navy must have if it is to maintain its slim margin of superiority over the Soviets.[38] The navy's plan would require building 180 ships over the next five years at a cost of $55 billion.

The Ford administration could not agree on the size of the fleet. In mid 1975, former Secretary of Defense James Schlesinger approved a five-year plan that would have built 140 ships at a cost of $40 billion. In January 1976 his successor, Donald Rumsfeld, recommended building 111 ships at a cost of $36 billion.[39] The Schlesinger plan would have given the navy 550 ships by 1985, while the Rumsfeld proposal would have permitted the navy to increase to only 525. However, in May 1976 the National Security Council (NSC) recommended a plan to increase the navy to 575 ships by 1985, The NSC plan called for building 153 ships at a cost of $44 billion.[40] As noted above, in January 1977 the outgoing President recommended a program of building 157 ships over the next five years.

During 1976, shipbuilding proposals also emanated from Capitol Hill. Senator Robert Taft (Republican-Ohio) called for a massive ten-year shipbuilding program which would involve building 239 ships at a cost of $80.5 billion.[41] The CBO offered three alternative programs for the FY 1977–1982 period. These proposals ranged from building 34 ships at a cost of $2.2 billion to building 173 ships at a cost of $60 billion.[42]

There is also considerable controversy over the type of large combatants which ought to be built over the next five years. This debate has focused primarily on the aircraft carrier. Over the next five years, the navy would like to build two more 90,000-ton nuclear powered Nimitz class aircraft carriers at a cost of $2 billion each. This would give the navy six nuclear powered aircraft carriers. The navy's position is strongly supported by the House Armed Services Committee, which is influenced greatly by Admiral Hyman Rickover, the "father of the nuclear navy." The Ford administration vacillated on the question. In January 1976, Secretary Rumsfeld announced that he would put off the decision on a new Nimitz for a year.[43] In May 1976, President Ford announced that he welcomed the decision of the House Armed Services Committee to build a new Nimitz carrier.[44] In January 1977, the outgoing President changed his mind and asked for rescission of funds already appropriated for the Nimitz. In its place, he proposed building two 50,000-ton nonnuclear carriers. This decision was upheld by President Carter and the Congress.

Finally, there is the issue of the power source for major combatant vessels—submarines, aircraft carriers, and their escorts. Title VIII of the FY 1975 Defense Authorization Act requires that all major combatants be nuclear powered unless the President certifies to the Congress that it is not in the national interest for a particular ship to be so configured. In the past two years, debate on the merits of Title VIII has focused on the nuclear powered strike cruiser (CSGN). In the spring of 1975, the House added funds for a nuclear strike cruiser to the FY 1976 defense budget. President Ford supported the decision, but the ship was dropped in conference. The FY 1977 defense budget did not request a CSGN for that year, but it did project one in FY 1978 and another in FY 1981. The House again added a strike cruiser for FY 1977 but this too died in conference. The FY 1978 Ford budget sought to get long-lead funding for a CSGN, but these funds were deleted from the budget by the new administration on cost-effectiveness grounds. It is not clear whether the Carter administration intends to cancel the second strike cruiser as well.[45]

Up to now the questions of size, type, and power source of the U.S. fleet has been contested primarily on budgetary grounds. While dollars do have an impact on policy, they should not determine it. The real question that must be decided is the relative importance of the sea-control and power-projection missions of the U.S. Navy in regard to a European conflict. This nation must decide whether it wants to buy naval forces whose primary purpose is to ensure that the sea lanes can be kept open against potential Soviet opposition, whether it wishes to buy naval forces designed to approach and attack Eastern Europe in the face of heavy defenses, or whether it wishes to maintain the present balance between the two missions.[46]

A fleet oriented toward sea control would depend primarily upon the capability of its Anti-Submarine Warfare (ASW) forces to defeat the main threat to our control of the sea lanes, namely, the 75 nuclear and 198 conventionally powered Soviet attack submarines. Such a fleet would not need very many projection-oriented warships like large Nimitz class carriers, strike cruisers, and large destroyers. Instead, it would depend primarily upon smaller vessels such as frigates, fast missile boats, and medium-sized cruisers. However, a navy oriented toward a sea-control mission would maintain a power-projection capability against the type of low-threat environment found in most parts of the Third World.

On the other hand, a navy oriented toward power projection would need large nuclear powered cruisers and escorts to attack land-based military objectives. Such an orientation would require funding three new Nimitz class carriers, six strike cruisers, and fourteen large destroyers, equipped with sophisticated air defense systems, over the next five years. These twenty-three high-value ships would cost about $20 billion, or $4 billion per year. This would add an additional $14 billion to the cost of the present five-year program which already is projected at nearly $50 billion.

Finally, the navy could maintain the present balance between the two missions. This would require it to build one Nimitz carrier, two strike cruisers, and eight large DDG–47 desetroyers. The Ford administration apparently began to move in the direction of the sea-control mission by ending the Nimitz program and opting for a medium-sized carrier. However, by leaving in the budget two strike cruisers and ten DDG–47s, it was confusing the issue somewhat. President Carter leaned a bit more toward sea control by affirming the Ford decision on the large carrier and cancelling the strike cruiser. However, he too clouded the situation by leaving in the DDGs. The House still leans toward a power-projection role while the Senate tends toward sea control. Until the American political system decides the question of priorities, the shipbuilding issue will remain as muddled as ever, and the navy will remain the only service without an approved program goal.

Other General-Purpose Forces. In one sense, the other three services are in better shape than the navy. Each of these services has an approved force goal which is presently in being. The army has a force of sixteen active divisions, the air force twenty-six tactical air wings, and the Marine Corps three divisions and three air wings.

However, this does not mean that the other services are free of difficulties caused by budgetary constraints. Their problems may be placed into two categories. First, none of the approved force goals comes anywhere near meeting the desired objectives.

Footnotes at end of article.

For example, the JCS have recommended a twenty-five-division army to meet strategic objectives. Second, each of the services has significant shortfalls even within its present approved force structure. For example, the army's sixteen-active-division force has a large reserve component. At present, it has four National Guard brigades and eleven reserve battalions rounding out the sixteen "actice" divisions.[47] In addition, the army's divisions suffer from inadequate armored and mechanized equipment and a shortage of war reserve stocks prepositioned in Europe. The ground forces have only 50 percent of the required armored carriers and 60 percent of the authorized number of tanks.[48] Similarly, the air force now has only the organizational structure for twenty-six wings. The wings will not be at full strength until FY 1981. Moreover, the air force can reach its inventory objectives only by purchasing about 2,000 low-performance aircraft like the F–16 and the A–10 and retaining large numbers of F–4 fighters well beyond their planned replacement dates. Low-performance aircraft like the A–10 will have difficulty in fighting at night and in bad weather. In addition, there is a shortage of shelters for the tactical aircraft which would be sent to Europe during mobilization.[49] The Marine Corps' three divisions and air wings are handicapped not only by the same type of equipment shortages as the other services but also by inadequate numbers of amphibious lift ships to transport them.[50]
